Jerusalem being a spot of so much attraction to every nation under heaven, we here see every variety of costume, making the bazaars a continual carnival. One moment you are greeted with a garb betokening the highest civilization, and the next, with the coarse camel's hair garment of a Bedouin from the burning sands of the desert. At one step you meet the black silk wrappings of the Egyptian women, and the next, the ghostly white robes of her Syrian sister. But nothing can compare, in richness and beauty, with the flowing robes and full white turban of her lord and master. The wayfarer man wears a girdle which is so arranged that one end answers the purpose of a bag, in which he carries his money, valuables, and other small articles; and in his bosom may be found his balances, which every Oriental carries at all times, with which the coin is weighed and by which its value is determined—and if accompanied by his wife and children, you will be reminded of the words of Isaiah:—"They shall bring their sons in their arms, and their daughters shall be carried on their shoulders." The woman occasionally carries her child on her shoulders, with a water-skin on her back.

Along the dark and narrow alleys rather than streets we groped our way, now retreating within a door at the approach of the towering camel, and now hastily stepping out of the way of a string of donkeys trudging along under a load of brush of gigantic dimensions. This is intended for fuel, and reminds one of the expression used by our Savior:—"The grass which to-day is, and to-morrow is cast into the oven," a passage which greatly perplexes those living in a country whose wide-spread forests afford abundance of material for fuel. But in the Holy Land, which is so scantily supplied with trees, the passage is perfectly applicable, for in the absence of wood, necessity compels the people to burn brush, roots, dried grasses, and weeds of all kinds, so plentifully growing in the fields; and immense donkey-loads are daily brought to the city for this purpose. Thorns also, which grow in great profusion, are used as fuel, and explain the figures used in Ecclesiastes:—"As the cracking of thorns under a pot, so is the laughter of a fool;" and in Isaiah, "As thorns cut up they shall be burned in the fire."

There is a ditch in the centre of most of the streets, but there are no sidewalks and no pavements, for the unevenly laid stones do not deserve the name; nor are there any lamp-posts. At night you see here and there the dim flickering of a little earthen lamp of olive oil beside a reclining figure of a man, who lies sleeping upon a raised platform in front of his bazaar; and this is the only light one enjoys in a nocturnal walk through the city. Hence the necessity of carrying our own lamp—a necessity which is still further enforced by the regulation inflicting fine and imprisonment upon all who are caught in the street without a light after an early hour. The streets are lined with bare stone walls of prison-like houses, broken by a very few, and very small, latticed windows, and covered usually with arches, or pieces of matting, stretched from house to house—the walls generally ruined, and the matting always tattered. Thus, Jerusalem wears an air of gloom and misery, and its inhabitants move about in keeping with the wretchedness of the streets and houses. It is impossible to discern a glad face among them, and the camels carefully

plant their feet, noiselessly pursuing their way as if intuitively afraid of breaking the silent gloom. Suddenly, however, we enter a street where the people move more briskly—the camels are hurried along by loud threats from their drivers, and the shopmen still more loudly proclaim the merits of their wares. Country women are seated on the sides of the streets with baskets of fruits and vegetables. The shops of the dry goods vendors are nothing more than rows of small platforms, four or five feet square, with shelves arranged around them on which the goods are placed. The purchaser stands in the street, while the merchant indolently reclines on a rug spread over the platform. With utter indifference he lays aside his narghileh, and at first seems very careless whether we buy or not; but presently launches into great volubility on the excellence of his fabrics. Oriental bazaars have not the least pretensions to taste, but often make a great display of richly embroidered goods. A white handkerchief is unfolded, which, although embroidered in gold, is of the coarsest cotton, and tears in the opening. Speaking of taste, reminds me that, among other purchases of one of my companions, was a spoon of white cotton, with which she intended making up her robe of black silk!

Huge piles of slippers are tumbled from the shelves—some of the plain yellow morocco, without ornament, and others with embroidery and rosettes of pearls inclosing colored stones—embroidered jackets of purple—cotton velvet worked with tinsel and bright silks, or gold and silk braid—caps of scarlet cloth with high raised gold work, and tassels half a yard in length—striped silk ashes from Damascus—napkins perfumed with otto of rose, and embroidered in the corners—ready made trowsers, and red fez caps without seam. Calicoes are not only rare, but almost worthless, and their prices nearly as high as those of silks. Further on is a fancy shop, with sparkling cut glass narghilehs, and little coffee-cup stands of richly-embossed silver—Mohammed's prohibition of silver to the contrary notwithstanding. For those they charge a hundred piastres, or five dollars. Other trinkets of haughty use are here displayed, and next is the drug bazaar, where all kinds of spices, drugs and perfumes, are sold. Otto of roses, as well as rose water, made from the roses of Wady el Werd (valley of roses,) can be bought at a marvelously low price. Further on, the respectable Armenian is seen manufacturing small trinkets and trifles with his scanty supply of instruments, and those of the rudest manufacture. With them, however, he forms a ring, or sets an amulet, with wonderful skill. Interspersed among these are shops where bushels of beads are displayed, made of camel's bone, amber, sandal, and olive wood; then there are amulets, blood stones from India, and trinkets in pearl, made by the Bethlehemites, in imitation of the Church of the Holy Sepulchre, and a long catalogue of saints which are in great requisition among the devout pilgrims. Here and there a man may be seen standing by a small earthen furnace of embers, across which he throws wires strung with small pieces of mutton—a very popular dish. The bazaar is densely crowded with shrouded women and pilgrims from all parts of the world, and the air resounds with the screams of the camel and donkey drivers. Rooh, dabrac, wojoie, they cry—"stand aside, your back, your face," which, united to the babel of languages, and the fierce gesticulation, characteristic of Orientals, presents a scene of noise and confusion completely bewildering. Add to this the braying of donkeys, the growling of camels, the clattering of horses' hoofs on the uneven stones, one's care to avoid, at every step, the accumulated heaps of filth and debris, and the hot rays of the sun piercing through the ragged matting overhead, and the reader may be content with the picture without wishing to participate in the reality.—*Hadi in Syria*.

TURKISH GRAVE-YARDS.—The Turkish tombstone, if it mark the grave of a man, is surmounted by a turban, and the diversity of forms shows the different generations that have passed away.—These round-headed, turbaned stones have very much the appearance of dwarfish imps, and one almost expects a pair of goggle-eyes to be peering from beneath the well-executed folds of white or gray stone. Those erected for women are decorated with wreaths or bunches of flowers. Both kinds have inscriptions, and are often colored and highly gilded. Sometimes they are of a bright azure blue, richly decorated with gilt, and extremely beautiful.

An indiscreet person is like an unsealed letter, which everybody can peruse.

OUR INFLUENCE.

EVERY person, however humble his station in life, is destined to exert an influence, either for good or for evil, upon all who have intercourse with him. Even though he may not be aware of it, much good or much evil may be constantly flowing from our influence, which may not only last while we live, but continue through each succeeding year, to the end of time. Truly has it been said that "none stand alone." No person can say that he has no influence upon any other person,—that he is independent of his fellow-men, and that they are independent of him. Especially are the effects of good and bad influence apparent upon children. How many men there are, who, in moments of anger, and some from force of habit, and many merely for the pleasure of the thing, will often, in presence of their own and neighbors' children, make use of profane and vulgar language. If they were aware of the bad influence their words and actions may have on those who hear them throughout all the succeeding years of their life,—if they were aware of the awful responsibility resting on themselves,—if they were aware of half the evil they may be unconsciously doing, surely they would be more careful of their words and conduct.

How many parents there are who will sometimes tell falsehoods in presence of the young, without seeming to think that children, encouraged by their example, will often be tempted to do the same. There are many children who seem to think that their parents can do nothing wrong, and if they use vulgar and profane language, and tell falsehoods sometimes, they will think it to be no sin for them to do the same. When we think how much easier it is to learn lessons of evil than those of virtue, and how long the remembrance of a kind or unkind word or action remains, causing us to love or dislike the giver, then how important it seems that we should be very, very careful how we act in presence of others. It would be blessed to think that good effects are constantly flowing from our influence; that we are constantly exerting our influence for good; but it would be terrible to think that our influence is only for evil,—that by the means of our bad influence others are led to sin. This, indeed, would be a terrible thought. Then how very important it is that we should so live that our influence may do much good, and no evil; that we may appear as a ray of sunshine, imparting warmth and sunshine to all we meet. These remarks are particularly applicable to the youth who are just commencing active life. If we can do this we shall not live in vain, and none shall say that through our influence they have been induced to enter the downward road to misery, but many shall rejoice that our influence upon them has been a blessing.

Pittsford, N. Y., 1859.

W. H. H. PARSONS.

BLOWING.

MANY persons are addicted to what is very significantly termed "blowing." This senseless practice arises from a belief which is quite generally entertained by young men, too generally by older ones, that talking can liberalize meanness of speech and facilitate the operations of the mind. The supposition is that talk begets talk; well, we grant it, but talk is *nothing*, and *nothing* may beget *nothing* forever. The fallacy of this practice lies in regarding language as a primary faculty of the mind, whereas it is secondary.

Language is the vehicle of ideas—the channel through which thought is transmitted. It originates with thought—is its servant. As the thunder's peal is simply an announcement of the lightning's flash, so the sound of words is properly the echo of sense.

Unless words are allied to ideas they become mere talk, and talking is no more the ally of thinking than the shadow of a man is the man himself. Therefore, if we would speak fluently and forcibly, we must think fluently and forcibly. The deficiency in expression experienced by some is to be attributed, primarily, not to incapacity in the command of language, but to want of ideas. If you would do away with speechlessness, dissipate thoughtlessness. *Think*, for thinking is the very life of the soul.

Nothing but lack of judgment will permit a man to speak except as he is prompted by forces from within. No advice is more mistaken or unphilosophical than that which is frequently given to young men to speak, accompanied by the assurance that, if not interested to do so, it will benefit them to blow. If a man has anything to say he will not be troubled for words. *Ideas are self-clothed*,—they never come into the world naked. Yet the art of silence is mastered by few. There are many, too many, who have the presumption to bore humanity with frivolous prating. It is far wiser to counsel a man to think than to speak—for then he will speak uninvited, with an unction which ideas always inspire, and with a power which is ever engendered by thought, profound, original thought.

Blowing never issues from the lips of Rochester, N. Y., Aug., 1859.

A THINKER.

OMNISCIENCE OF GOD.—Nothing exists, moves or dies within the boundless universe unknown to God. Not a leaf of the forest expands from the bud, or trembles in the breeze; not a spire of grass springs up from the earth; not a flower puts forth its beautiful head that embalms the summer breeze with its fragrance; not a bird that cheers us with its musical notes as it happily flits from tree to tree, or chirps and flutters for fear or anxiety, unperceived by Him. There is not a human being, high or low, rich or poor, public or private, but that God knows of his existence and his circumstances.

Man can not do a deed, or even think a thought, in the most secluded part of the universe—whether it be good or evil, virtuous or vicious, but it is known by an Omniscent God.

He knows even our *innest* thoughts. How ought we, then, not only to avoid evil acts, but have our minds freed from the stain of sin.—*A. C. P., Smithville, N. Y., 1859.*

MOORE'S RURAL NEW-YORKER NEWS DEPARTMENT

ROCHESTER, N. Y., SEPTEMBER 17, 1859.

DOMESTIC NEWS.

Matters at Washington.

Mr. McLane, Minister to Mexico, arrived at Washington on the 11th inst., having left Vera Cruz on the 1st. Our Government had previously granted him two months' leave of absence. Reliable accounts just received, mention that Senor Fuente, who held the Cabinet office under President Comonfort's administration, has just been appointed Minister of Foreign Affairs, the duties of which were heretofore discharged by Senor Camacho, who remains in charge of the Home Department under the Constitutional Government. All our Consuls, with the exception of Mr. Black, of the city of Mexico, are everywhere officially recognized. The most friendly feelings are expressed by the Liberalists for the United States, from which they expect assistance against the reactionists. The Americans in Mexico, however, utter their surprise that so much indifference is manifested in this country towards the Liberal party, who continue to be enthusiastically animated by the hope of success, the immediate want of money alone crippling their energy. Notwithstanding this, troops continue to be raised for operations against the city of Mexico. Mr. McLane has returned without a treaty, but the matters at interest between the two countries are such as to leave no doubt of an early accommodation. If Senor Lerdo had been in Vera Cruz it is probable, according to the accounts from that city, that a convention or treaty would have been concluded.

The N. Y. Tribune's Washington correspondent states that the points of controversy between our Government and Great Britain, so far as General Harney's course in Oregon is concerned, are these: The island of San Juan has been occupied as a sort of common ground by Americans and a party of the Hudson Bay Company, which Company has now no legal existence. Some differences have arisen between these parties. Gen. Harney, at the request of the Americans, interposed with a small party of troops to decide a matter which properly pertains to the jurisdiction of the British and American Commissioners now on the ground, who are charged with the duty of running the boundary line. It is not apprehended that hostilities will grow out of the affair.

Gen. Harney has acquainted Lieut. Gen. Scott with all the circumstances attending his occupation of the island of San Juan. It appears that he had not been previously specifically instructed to take possession, but sent troops thither to protect the 25 or 30 Americans residing there who had been included in the taxation limits by the authorities of Washington Territory. Our Boundary Commissioner, Campbell, has no doubt about the island belonging to the United States, but the British Commissioner made issue, and hence the protest of Gov. Douglas. This subject excites much interest in official and diplomatic circles.

Some time ago Captain Stone made a full statement to our Government of the circumstances attending the expulsion of himself and other Americans from Sonora. This act of Gov. Peschiera being clearly a violation of the provisions of our treaty with Mexico, proper measures have been taken for the protection of United States citizens in that quarter, and instructions are now on their way for that purpose.

Personal and Political.

Ex-Gov. WALLACE, one of the oldest residents of Indianapolis, and late Judge of the Court of Common Pleas, died of apoplexy on the 4th inst.

The New York Republican State Convention met at Syracuse on the 7th inst. A committee on organization was appointed, a report submitted by them was adopted, and the following permanent officers chosen: President—William A. Wheeler, Franklin. Vice-Presidents—1st District, Augustus F. Dow, James Davis; 2d, Lucien Birdseye, J. G. Wilkin; 3d, Peter Crespell, Jr., A. B. Olin; 4th, Peter Keese, A. Backus; 5th, Joseph Fayle, F. E. Spinner; 6th, J. B. Williams, R. Franchot; 7th, John Wiley, E. M. Parsons; 8th, H. S. Comstock, Milton Smith. Secretaries—1st Dis., J. H. White, Wm. Orton; 2d, Luther Caldwell, Park Godwin; 3d, J. S. Anable, W. J. Humphrey; 4th, W. Lansing, T. V. Russell; 5th, John Wilkinson, John Cantwell; 6th, G. J. J. Barber, Lauren Fowler; 7th, G. C. Buell, E. G. Lapham; 8th, S. Pettibone, A. N. Cole.

The following nominations were made by the Convention: Judge of Court of Appeals—Henry E. Davies, of New York. Secretary of State—Elias F. Leavenworth, of Onondaga county. Comptroller—Robert Denniston, Orange county. Attorney General—Charles G. Myers, St. Lawrence county. State Engineer—Orville W. Story, Allegany county. Treasurer—Philip Dorsheimer, of Erie county. Canal Commissioner—Ogden N. Chapin, Albany county. State Prison Inspector—David P. Forrest, Schenectady county. Clerk of Court of Appeals—Chas. Hughes, Washington Co.

The following were reported as members of the Republican State Central Committee for the ensuing year: 1st Dis., James Kelly, Benj. F. Maniere, James W. Nye. 2d, Rollin Sanford, F. W. Lord, E. M. Madden. 3d, John L. Schoolcraft, Chas. L. Beale, Charles R. Richards, 4th, Edward Dodd, Wm. A. Dart, Thomas R. Horton. 5th, John Wilkinson, Henry Fitzhugh, S. D. Hungerford. 6th, Wm. Smith, G. J. J. Barber, H. C. Goodwin. 7th, S. C. Cuyler, R. Van Valkenburgh, H. S. Wells. 8th, E. G. Spaulding, E. R. Reynolds, W. Bristol.

The annual election of State officers in Vermont took place on the 6th inst. Holland Hall, the present Governor, was voted for by the Republicans and Opposition, and John G. Saxe was the Democratic nominee. There was no unusual interest manifested, and the returns indicate the re-election

of the Republican State ticket, by about the same majority as last year; also, a small Republican gain to the Legislature over last year. The vote for Governor in 71 towns stands for Hall, 12,314; for Saxe, 5,123. The same towns last year gave Hall 11,105, and Saxe 5,163. Hall gains, therefore, over last year's vote in these towns 1,049. Returns from 165 towns gives the Republicans 144 and the Democrats 17. In four districts there is no choice.

The Opposition and American Conventions of New Jersey met at Trenton on the 7th inst. Chas. S. Olden was nominated by the Opposition on the third ballot for Governor, receiving 379 votes out of 579 cast. A Committee of Conference was then sent to the American Convention, with the request that they adopt Mr. Olden as their candidate. The ballot was taken, and Mr. Olden nominated by 93 to 63.

The Rev. James Robeyn, pastor of the Reformed Dutch Church in New Brunswick, N. J., died at his residence in that city on the morning of the 7th inst.

The Democratic Convention of St. Mary's Co., Md., held on the 27th ult., adopted a resolution that no nomination be made by the party in that County for the approaching fall elections, but that "the aspirants for all the offices, be allowed to present themselves individually for the suffrages of the people, and that each and every citizen be recommended to cast his vote in obedience to his own views and sentiments, without the trammel and dictation of unnecessary and arbitrary Conventions."

A LAW AND ORDER MEETING called by 200 merchants, mechanics, business and professional men of Baltimore, assembled in Monument Square on the 8th inst., to deliberate on and devise the means of rescuing the city from its present condition, and restoring the supremacy of law and order. The vast Square was densely crowded, and all of the avenues leading thereto were thronged with masses of orderly, respectable and influential citizens. The meeting organized, on motion of Chas. D. Hinks, by calling to the Chair William H. Woodworth, of the well known firm of Woodworth & Co. A preamble and resolutions were read, setting forth in clear and emphatic language their social and political evils, condemning Club rule, and proposing effective measures to ensure a fair expression of the sentiments of the public at the ensuing election, by protecting the purity of the ballot box, and placing in nomination capable and fearless men, in opposition to the nominees of the political Clubs. The resolutions provide for a Committee to call on the Mayor and demand the appointment of reliable men as Judges at the next election, and the appointment of a special police force to attend the polls, keep them clear, and emphatically disavow party fear; and empower a special committee to nominate, irrespective of party, the most respectable men for the officers shortly to be elected. The papers state that law and order has been fully vindicated, and the most determined opposition to rowdies and lawlessness been established, which already has overawed the majority of the disturbers of the public peace.

The people of Nebraska are ambitious to take rank as a State. The Democratic Territorial Convention passed the following resolution:

Resolved, That by virtue of the provisions of the Treaty of 1803, for the purchase of Louisiana, and by the provisions of the Federal Constitution, the "inhabitants" of this Territory have the right to demand admission into the Union, as of right, and we are in favor of such admission, as a Sovereign State, with such boundaries as the people may prescribe, as "soon as possible," and we believe that that time has now arrived.

News Paragraphs.

Sixty-two iron furnaces in the neighborhood of Portsmouth, Ohio, and in Kentucky, turn out a yearly aggregate of pig iron estimated at 155,000 tons, valued at \$4,650,000. The number of hands employed at these furnaces is stated at 6,200, receiving the total sum per month of \$155,000. The iron trade is quite a feature in the Sciota Valley and its neighborhood.

During the display of the Aurora, on Thursday night week, in Boston, the telegraph wires were worked for about two hours without the usual batteries, the messages being transmitted with the Auroral current. The effect of the Aurora is to neutralize and augment the usual batteries alternately, making the current at times too strong for the magnets. This is the first instance on record of more than a word or two having been transmitted with the Auroral current.

Georgia is probably the lightest taxed State in the Union. Its State tax is only two-thirds of a mill on the dollar. A man owning \$10,000 of property pays only \$6.62 taxes. Georgia is one of the most flourishing States, also, rapidly rising in manufactures as well as in agriculture.

The Island of Bermuda is fast becoming a vast market garden for the city of New York. The export of potatoes for the last season to that city shows an increase of nine thousand bushels. The exportation of onions has reached over eight hundred thousand pounds, while that of tomatoes amounted to four thousand five hundred and ninety-two boxes. More than sixty vessels were engaged in carrying the above mentioned produce.

Tax tide water receipts for the season up to September 1st, show a decrease in wheat and flour equal to 1,727,380 barrels of flour. Owing to the increase in other articles the receipts of tolls do not show a corresponding falling off. The deficiency from last year is less than \$300,000, with a large fall business to come, to offset against a very light after-harvest traffic last year. The canal revenues for the season will equal, and perhaps exceed those of 1858.

The "season" at Saratoga is over. Fashion and folly has mainly left the Springs. According to the Saratogian the leading hotel registers foot up 23,064 visitors in a period of seventy-three days from June 20th, the commencement of the season. This is 25 per cent. increase on last year, and very much the largest of any former season. The aggregate of the season, including the number which stopped at boarding and private houses, is 32,000.

MEXICAN NEWS.—The dates from Vera Cruz are

to the 25th inst. Mr. McLane returned to Vera Cruz on the 22d ult., and presented Mr. Buchanan's ultimatum to Juarez, demanding the immediate ratification of the treaty. There is nothing important from the Capital. General Degollado had ordered the troops at Tampico and its immediate neighborhood, to march to San Louis Potosi, which is to be the general rendezvous of the Liberals. He intends attacking the Capital in October. All the Pacific coast was in the peaceable possession of the Liberals. General Vidori was organizing his forces at Nuevalon to march against the Indians and Americans.

SALT INSPECTION.—The Syracuse Journal says the quantity of salt inspected on the Onondaga Salt Springs Reservation, for the four weeks ending August 27th, 1859, was as follows:—At Syracuse District No. 1, 212,178 bush.; Salina District No. 2, 462,818; Liverpool District No. 3, 67,263; Geddes District No. 4, 175,484. Total, 917,484. The whole amount of salt inspected on the Onondaga Salt Springs Reservation, from January 1st, 1859, to August 27th, is 3,507,371 bushels. The whole amount inspected during the same time in 1858, was 3,698,995 bushels. Decrease, 191,624 bushels.

NORTHERN FARMERS EMIGRATING TO VIRGINIA.—A large body of land—82,000 acres—lying in the counties of Highland, Randolph and Pendleton, Va., has been sold for \$60,000, or 80 cents per acre, to a Northern Emigration Company, whose design is to settle upon it.

FROM BUENOS AYRES.—Advices from Buenos Ayres of the 10th of July, state that active hostilities had commenced between that State and the Argentine Confederation. Two Buenos Ayrean war vessels had been fired on off Rosario, and an Argentine war schooner had been captured on the other side. The American steamer Ascension, with Mr. Zancy, our Minister, on board, had also been fired on from Rosario, having been mistaken for a Buenos Ayrean vessel. Satisfactory explanations, however, followed.

FOREIGN NEWS.

GREAT BRITAIN.—There is no news of political importance. Queen Victoria was about to pay her annual visit to Scotland.

The Board of Trade returns for July, show an increase of exports £291,000 for the month, and £2,816,000 for the last seven months, over the same period of last year.

The potato blight is said to be committing considerable ravages in some parts of Ireland.

At a meeting of the Great Ship Company the Directors were authorized to issue the remaining capital, £20,000, so as to dispatch the Great Eastern on her voyage free of debt. It was also determined not to insure the vessel at present, leaving the proprietors to insure their respective risks if they thought best. Mr. Lever had renewed his offer to charter the ship for her first voyage, on still more liberal terms. The offer is stated, but it is presumed was not entertained.

The Atlantic Telegraph Company recently deputed Mr. F. C. West, an Engineer of considerable experience in testing and experimenting on telegraph cables, to proceed to Valentia and examine the present state of the Atlantic Cable, and his report is published in the English papers. After detailing the scientific result of his experiments, he concludes as follows:—"I am of the opinion that a serious fault exists about 263 statute miles from Valentia, measured along the cable, and that the cable between that spot and this shore is comparatively perfect. The trouble is, from here we cannot now decide whether the cable is mechanically severed; and all attempts to detect the reception of the most intense currents from the opposite shore, have since proved fruitless, still, from various circumstances attendant on the decline of the insulation, there is every reason to believe that the continuity both of the cable and conductor is perfect. Whether any other faults exist beyond the one alluded to, it is impossible to ascertain by tests from Valentia. The fact that signals received from Valentia, were always better than those received from New Foundland, proves undoubtedly that the worst insulation has always been near Valentia. Therefore it seems probable that if the fault that exists on this coast, which very likely forms the principal cause of leakage, would be removed, the insulation would be so far improved as to render the cable again available for signalling, provided the fault which is said by those who have tested from New Foundland to exist near Trinity Bay, was removed."

FRANCE.—A Berne telegram of the 24th says that according to intelligence from Zurich, the French and Austrian Plenipotentiaries had regulated a settlement of the affairs of Lombardy with the consent of the Sardinian Plenipotentiary, and that the arrangement is expected to be confirmed by the different sovereigns. The affairs of the Duchy are to be treated of directly between the Courts of Paris and Vienna. The French and Sardinian representatives were in consultation on the 24th. The impression prevailed that the Conference would be successfully concluded early in September. Austria is said to have modified her instructions with her Representatives. There were constant arrivals at and departures of Couriers from Zurich.

The rumor of a duel between Gens. Canrobert and Neil, which prevailed when the Africa sailed, proved unfounded.

The Paris Monitor contains the following:—"The Emperor having ordered that the army be placed from a war to a peace footing, the Minister of War has given orders that from September 20,000 men should return to their homes, whose terms of service expire in 1859. Moreover, furloughs of three months will be allowed to those who are in that class of exceptional cases provided for by the statute of 1832.

In several of the wine growing districts the yield will be below the average, while in other parts there is great abundance.

AUSTRIA.—Letters from Vienna had expressed the apprehension that the difficulties of the Italian question will not be settled at Zurich, and give as report, the furloughs granted the Austrian soldiers returning from Italy had been suspended, and

that seven out of twelve of the Austrian corps de armee are to be placed on a war footing.

The Augsburg Gazette says that the Austrian Military Schools are to be completely re-organized on the model of those in France.

PRUSSIA.—The Berlin correspondent of the London Times says that owing to the complication of the affairs of Italy, the Prussian government is favorable to a European Congress, and the acknowledgement that France and Austria are the arbiters of Europe, if mighty questions are allowed to be decided by the Zurich Conference. No immediate change was expected in the health of the King.

A Prussian journal says Lord John Russell had addressed a dispatch to the British Minister at Berlin, expressing a wish for compact accord between the two Cabinets on all present questions of European politics. The same paper says that the understanding between Prussia and England is still more intimate.

ITALY.—The object of the defensive league by the provisional governments of Tuscany and Bologna, and the Dictatorship of Modena, is stated to be to prevent the restoration of the fallen government, in maintaining internal order, and to lay down the basis of an assimilation in their institutions.

The King of Sardinia, in returning thanks for a medal presented to him by a private society, says: That his efforts were always concentrated for the great national cause, that he lived for it and was ready to die for it. That although difficulties and misfortunes might arise, they would certainly be surmounted, that in view of the wisdom and good order now displayed in the Duchies of Romagna, it was impossible to go further, as he might have wished. He pledged his best efforts for the welfare of Italy.

The mission of Prince Poniatowski to Italy had attracted attention. It was supposed that Napoleon had sent him to carry on the intrigue set on foot by L. Reissert.

The London Times strongly urges the Tuscans to be prepared to constrain aggressions, even if they have to fight, and points to Garibaldi as a noble champion for them of the Washington school.

The Council of Ministers at Turin, at which the King of Sardinia presided, had decided that before accepting, even provisionally, the provinces which desire to be annexed to Piedmont, it was proper to consult the Allied Powers, particularly France.

A number of distinguished veterans had been sent as Representatives to the European Powers. It is said they had issued a long address, in which they say the conduct of Austria has not changed since the peace.

INDIA.—Bombay dates of July 21st, reached England. Estimates of the number of European troops who intend to avail themselves of permission to retire, reached from eight to ten thousand. There was a rumor that Sikh cavalry were following in the wake of Europeans and growing disaffected, but it is not corroborated.

Calcutta dates of the 16th, and Hong Kong of the 5th, were telegraphed to Trieste. A strong force was stationed on the frontier of Oude to prevent, if possible, the inroad of rebels into that country.

COMMERCIAL.—Breadstuffs.—Very dull. Richardson, Speace & Co. state that the weather had been stormy and unfavorable for the crops, but the harvest was almost over. Flour very dull and easier, but quotations unchanged. American 10@12s. Wheat very dull. Red 6@6s. White 9@9s. Corn steady. Mixed and yellow 5@5s. White 7@7s. Provisions declining. Pork heavy and nominal. Lard quiet but steady.

Clippings from Foreign Journals.

The British army at present consists of 246,412 men, of whom 119,551 are stationed abroad. This includes the whole available force, militia, volunteers, rifle corps, enrolled pensioners, &c.

The annual report of the registration of births, deaths and marriages in England, has just been printed. The births for the past year have been in excess by 243,256; and the deaths also exceed those of previous years by upwards of 20,000.

The North China Herald notices the marriage of a couple of Chinese Christians, by the Rev. K. C. Wong, a Chinese minister, as the first instance in which all the parties concerned were at once Chinese, Christian and Protestant. The bride was entirely hidden under the red robes, crown-shaped head-dress, and the red crape veil of the Ming Dynasty. There was music and a profusion of garlands and flowers.

Victor Hugo has published the following, dated Guernsey, Hauteville House, Aug. 18, 1859:—"No one will expect that, so far as I am personally concerned, I should give a moment's attention to the thing called an amnesty. While the state of France remains what it is, my duty will be to protest it absolutely, inflexibly, eternally. Faithful to the engagement I have made with my conscience, I shall share to the last the exile of liberty. When liberty returns, I will return."

VICTOR HUGO.

GREAT COLLECTION OF GEOLOGICAL WONDERS.—Many of our readers will remember reading in the RURAL, during the past two years, extracts of several letters written by our townsman, Mr. HENRY A. WARD, while on a Geological Tour in the Old World. The fruits of this excursion are abundant and wonderful, and have been exhibited for some days past in the large Hall over the Rochester Savings Bank. The museum of wonders—for such it really is—comprises a great amount and variety of minerals, fossils, specimens of mummies, and other curiosities, collected chiefly in Europe and Africa during the past few years. The variety of rock formations of the old continent are an unusual treat to Geologists, and we observed that our venerable friend, Prof. Dewar, while describing them to visitors a few days ago, seemed to have renewed his youthful vigor and enthusiasm. The fossils from the Paris Basin, under and about that great city, are in the finest preservation and of the highest beauty,—not to be found to the same extent and variety in any other collection in this country. The large collection, numbering thousands of specimens, is not only wonderful, but most honorable to the perseverance, indomitable energy and scientific knowledge of the possessor. A volume would not suffice to describe the collection; it must be seen to be appreciated.

The News Condenser.

- The U. S. Navy at present has 88 vessels and 3,400 seamen.
- In opium eating, the United States is now said to beat China.
- The Presidency of Hayti is to be changed to a Dictatorship.
- Baron E. Rothschild, from Germany, is at present in New York.
- There are thirteen thousand uniformed volunteers in Pennsylvania.
- A man recently died in a Philadelphia prison from the effects of cold.
- The cranberry crop is said to be an almost total failure in Minnesota.
- The great Blue Lick Springs of Kentucky have been sold for \$16,000.
- There are 7,800 paupers in the different almshouses of New York city.
- California is the scene of no hot political fight as ever was known in America.
- Several newspapers are advocating the English custom of advertising births.
- Wm. C. Conant proposes to issue a penny religious daily in the city of New York.
- It is estimated that the tobacco crop of Connecticut this year will be worth \$1,000,000.
- First Assistant Engineer Roberts has resigned his position in the United States Navy.
- Kansas, with her present boundaries, will make a State more than twice as large as Ohio.
- Half a million pounds of cheese were shipped from New York to Great Britain last week.
- Two specimens of the Texas horned frog have been received at the Smithsonian Institute.
- Mention is made of much injury to the potato crop in some parts of Connecticut by the rot.
- The export of gold from this country, over imports, within ten years, has been \$305,000,000.
- Klueck's Herman, a German weekly paper issued by him in London, has been prohibited in Austria.
- The number of arrivals at the Saratoga hotels this season has been 23,000, or 4,000 more than last year.
- The women of Boston have contributed \$2,500 to Prof. Agassiz's "Museum of Comparative Zoology."
- They have the "stump-milk" mounds in Cincinnati. The Mayor is engaged in an investigation.
- During the last three months 4,747 children have died in New York—an average of over fifty per day!
- About 1,300 cords of wood were consumed on the Lockport branch of the Central Road, on the 6th inst.
- There is talk of erecting an equestrian statue to the memory of Gen. Jackson, in Western Tennessee.
- There are 6,000 dentists now practicing in the U. S. They cause an awful sight of aching during a year.
- Mlle. Rosa Bonheur has undertaken the pictorial illustration of a work on the "Agriculture of France."
- There are twenty thousand country houses in England, each larger than the President's house at Washington.
- The Illinois farmers are complaining that the wheat crop does not average as much per acre as was expected.
- An expense of sixty millions of dollars is to be incurred in fitting the English Navy for more efficient service.
- Within the limits of New York and Kings counties there are 402 churches, seating comfortably 335,000 persons.
- Thirty Mormons, male and female, arrived at New York on the 3d inst., from Liverpool, on board the ship Atlantic.
- A vessel drawing nearly eight feet water has passed through the improved channel between Quebec and Montreal.
- For the first time since the peace of Villafranca not a single English newspaper was seized in Paris on the 30th ult.
- Rev. A. Blackburn, eight years editor of the Presbyterian Witness, published at Knoxville, Tenn, died on the 23d ult.
- There are only two white women in the valley of Walker's River, California, and there are about 150 white miners.
- It is reported that Ruskin has written a series of lectures with the intention of delivering them in the United States.
- A. T. Stewart, of New York, proposes to give a million towards founding an Asylum for Widows and Indigent Women.
- The project of effecting a junction between the Caspian Sea and the Sea of Azoff is now the subject of much conversation.
- Charles H. Mann, Secretary of the Territory of Washington, died at Olympia on the 2d of July, in the 29th year of his age.
- A company of Zouaves has been formed in New Orleans, their commander having served in one of the corps in the Crimea.
- An Arkansas paper says that many of the girls in that State grow six feet high. They must be uncommonly well cultivated.
- The N. Y. Times numbers fifty-three actual suicides within the last six weeks, with twenty more unsuccessful attempts.
- The French Government have determined to include in the accomplishments of the army a knowledge of the art of swimming.
- Messrs. Hoe & Co., of New York, have recently manufactured and shipped a six-cylinder press for the Sydney Herald, Australia.
- The Baltimore Patriot says that the property of the late George Brown, who died in that city last week, is estimated at \$4,000,000.
- It is reported that Stevenson, the celebrated English engineer, received \$225,000 for the plan of the Victoria Bridge at Montreal.
- It is said that Mr. Dickens is not coming to America. He cannot afford to leave England and "All the Year Round" for any price.
- The frost of Monday night week was quite severe in some places around Concord, N. H.,—sufficiently so to kill corn, potatoes and squash vines.
- The Sixty-ninth regiment of New York are going to present a horse and trappings to Gen. Niel, of the French army, he being of Irish descent.
- During a religious procession in Ajaccio, Corsica, the dresses of eleven young ladies took fire from the candles. One of them died from her burns.
- A message was sent by telegraph, on Wednesday, from an Albany office to Kansas City, and an answer received within the short space of six hours!
- The Supreme Court of N. Y. has decided that a divorce obtained in Indiana, when the party goes to procure said divorce, and then returns to N. Y., is valid.

AGRICULTURE RURAL LIFE EXCELSIOR LITERATURE SCIENCE ARTS NEWS

TWO DOLLARS A YEAR.]

["PROGRESS AND IMPROVEMENT."]

[SINGLE NO. FOUR CENTS.]

VOL. X. NO. 39.]

ROCHESTER, N. Y.,—FOR THE WEEK ENDING SATURDAY, SEPTEMBER 24, 1859.

{WHOLE NO. 507.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

TERMS, IN ADVANCE:

Two Dollars a Year—\$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for \$5; Six, for \$10; Twelve, for \$20; Twenty, for \$40; Forty, for \$80; Eighty, for \$160; and one free, for \$20; Twenty, for \$40; Forty, for \$80; Eighty, for \$160; and one free, for \$20. Club papers sent to different Post-offices, if desired. As we pre-pay American postage on papers sent to the British Provinces, our Canadian agents and friends must add 12½ cents per copy to the club rates of the RURAL. The lowest price of copies sent to Europe, &c., is only \$2.50—including postage.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

INQUIRIES AND NOTES.

The Siphon.

HAVING been a subscriber to your valuable paper, and never asked any questions, I beg leave now to ask a few. Will a siphon work on the following conditions:—Suppose a cistern eight feet deep, with a pipe from its bottom to within a foot of the surface, of sufficient depth to be safe from frost, and carried a distance of eighty feet, in a descent to an outlet six or eight inches lower than the bottom of the cistern, will it work well? Can it be gauged at its outlet to run a large or small stream, at pleasure? Will it be likely to freeze? What kind and size of pipe will be most suitable for watering twelve or fifteen head of cattle?—J. P. MILES, Grimsby, C. W., 1859.

The Siphon would work under the circumstances described. Make the long arm as long as possible. The only difficulty with the siphon is that water contains air, and where the pipe is small and long, and the current through it slow, air is apt to collect at the highest part of the pipe and stop the force of water. We would not use pipe with less than one inch bore, and then reduce the orifice at the end where it discharges, leaving it only as large as required for the wants of the cattle. Reducing the pipe at this point causes a steady flow of water. Running water will resist a good degree of frost, but in extreme weather it would freeze, no doubt, unless well protected.

Bones for Manure.

CAN you, or some of the RURAL correspondents, inform farmers who have no convenience for grinding old bones, how they can render them an available manure by using sulphuric or some other acid?—E. W. B., Borodino, N. Y., 1859.

It is difficult to make bones available as manure without being pulverized, for sulphuric acid will not act effectually on the bones unless they are first reduced to almost a powder. Bones can be easily reduced to this state by burning, but by this process their value is lessened, for nearly one-third of the bone is composed of gelatine or glue, which decays quickly in the soil, forming ammonia. Before many years we shall doubtless have machinery for grinding bones in most towns, and then farmers will begin to learn the value of bones as manure. Perhaps the best way at present is to burn the bones and convert the ashes into superphosphate of lime, by placing 100 pounds in a hoghead, then adding 5½ gallons of water and mixing well, and then 58 pounds of sulphuric acid. Stir quickly with a stick, so as to thoroughly mix, and it will froth and foam, and soon become too thick to move. After a few days it will become dry enough to handle. Bones soften by being boiled in lye, and boiling in water makes them soft while hot, and brittle when cold, when they may be broken up with a heavy sledge hammer, and used in small pieces. It should be remembered that the finer the bone is broken the more rapid the decay, and the more immediate the effect.

Thatching.

Will you, or some of your many correspondents, please give through your columns a minute description or directions of the mode of thatching stacks of hay and grain, out-buildings, &c., and oblige—A RURAL READER, Cranford Co., Pa., 1859.

Some of our friends will please give us their experience in thatching. The following is the method recommended by a Western correspondent of the *Gardener's Monthly* for thatching out-build-

ings:—"I have used rye-straw and also what we call here 'elough grass.' This latter material is very abundant in low prairie lands, and forms a cheap, substantial and durable roof for out-buildings, and as timber is scarce, is found to be quite an 'item' in economy.

In thatching, I nail or spike slats or laths to the rafters about one foot apart, allowing the thatch to be about three feet long from the band, more or less, according to the length of the straw. I then prepare the thatch by binding the thatching material (the band near the butt) rather loosely in bundles about six inches in diameter, and then dividing it in the middle with the hands, twisting the band, bringing one half clear over, (see figs.

1, 2, 3,) so as to form two bundles bound together with one band. This plan binds the thatch so tightly, that there is no danger of its drawing out, and also makes it of a flat shape, so as to lay better. In putting it on, lay the thatch on the lath, butt end up, so that the band comes just above the lath or slat, and taking enough straw on one side, say the left, for a convenient band, twist it, bring it down under and around the lath, and then over the thatch, drawing it tight, and adding from the right side another portion of straw, twisting as before, to make a continuous band; bring it under the lath and over the thatch, as before, and still adding from each side a portion of the bundle, (see fig. 4,) and thus continue until the course is ended. There fasten the band as in binding grain.

The first course turn butt downwards, to make the eave. For the ridge, having a lath spiked on top,—separate the thatch in the middle, and stride it across, and with a continuous band bind it fast, taking care to keep it compact as you proceed. Finish by raking well and cutting off the ends at the eave."

FORAGE AND FERTILIZING PLANTS.

PERHAPS we could not do our readers a better service at this time than to call their attention to a few forage plants not generally cultivated in this country, but which are found valuable in other parts of the world, and are at least worthy of a trial here. That the man is a great benefactor, who can make two blades of grass grow where before only one was produced, is become an axiom. To accomplish the same result by the introduction or dissemination of a new plant, is, of course, equally beneficial.

LUCERNE—*Medicago Sativa*.

LUCERNE has been grown to some extent in this country, though not extensively, and cultivators differ much in opinion in regard to its value, probably from difference of treatment, soil, &c. ALLEN says "it is one of the most productive plants for forage ever cultivated," and we know some who would fully endorse this opinion, but it requires a rich soil, a dry subsoil, and careful cultivation. It is a perennial plant, and may be cut several times during the season, and is, therefore, very valuable for green fodder, and cases are reported in this country where it has produced over six tons of dry feed. FLINT says there are fields near Boston, in which it is now growing with great luxuriance, and giving good crops, the seed of which was sown in 1824. From the same author we quote the following paragraphs:

It does not endure a climate as severe as red clover, requiring greater heat and sunlight; but in a latitude equally suited to both plants it would be somewhat difficult to say which should have the preference. In some respects it is decidedly superior, as in being perennial, and consequently remaining long in the soil. Lucerne sends down its tap roots in mellow soils, to enormous depths,

having been found in sandy soils thirteen feet in length. The leaflets are in threes, obovate, oblong, toothed, the flowers pale blue, violet, or purple, the fruit in downy pods, having two or three twirls.

The cultivation of lucerne is somewhat more difficult than that of clover for the first year, requiring a soil thoroughly mellowed and prepared by clean and careful tillage; and the want of proper attention to this point has led to partial failures in the attempts to raise it in this country. It suffers and languishes in compact clay soils, and does not flourish in light soils lying over an impermeable subsoil, which prevents the water from running off. It will never succeed well on thin soils. But in a permeable subsoil, consisting of loam, or sand or gravel, its roots can penetrate to great depths, and being nearly destitute of lateral shoots, provided with numerous fibrous rootlets, or radical off-shoots, imbibe their moisture and nutriment in layers of soil far below the average of other plants. In this respect it differs materially from clover. For lucerne, a suitable subsoil is of the utmost consequence. For the short lived red clover, a suitable surface soil is more important; a want of care and deep tillage, especially a neglect to break through and loosen up the hard-pan wherever it exists, will inevitably lead to failure with lucerne. But when the soil is suitable, it will produce good and very profitable crops for from five to ten or twelve years, and, of course, it does not belong in the system of short rotations.

But notwithstanding the large quantity of succulent forage it produces, its effect is to ameliorate and improve the soil rather than to exhaust it. This apparent anomaly is explained by the fact that all leguminous, broad leaved plants derive a large proportion of their nutritive materials from the atmosphere, and that a vast quantity of roots are left to decay in the soil when it is at last broken up, varying, of course, with the length of time the plant continues in the soil, while the luxuriant foliage serves to shade the soil and thus to increase its fertility. Much of this rich foliage is scattered and left to decay, as is the case with all similar plants at the time of harvesting, and the growth of the aftermath is also usually very considerable. The fact that it actually increases the fertility of the soil for other plants, has often been proved and may be regarded as fully established. A soil which would bear only a medium crop of wheat at first, produced a greatly increased quantity after being laid down to lucerne a few years till its roots had enriched the soil.

Lucerne is cultivated in Chili and grows wild in the utmost luxuriance in the pampas of Buenos Ayres, where it is called Alfalfa, which is simply the common lucerne, slightly modified by climate, and may be regarded as a variety.

The seed of lucerne, when fresh and good, is yellow, glossy and heavy. If the seeds are white, it is an indication that they are not ripe. If they are brown, we may infer that they have been subjected to too strong a heat to separate them from their husks. In either of these cases, it is not safe to purchase or to rely upon them. The same may be said of clover, and it is desirable to try them by a simple method which will be indicated hereafter in speaking of the selection of seed. As the seeds of lucerne are somewhat larger than clover seed and the plant tillers less, it is necessary to sow a larger quantity per acre. It may be sown in the spring along with grain crops, as clover often is, and not a very large crop should be expected the first year.

When properly managed, the number of cattle which can be kept in good condition on an acre of lucerne, during the whole season, exceeds belief. It is no sooner mown than it pushes out fresh shoots; and wonderful as the growth of clover sometimes is, in a field that has been lately mown, that of lucerne is far more rapid. Lucerne will last for many years, shooting its roots—tough and fibrous almost as those of liquorice—downwards for nourishment, till they are altogether out of the reach of drouth. In the dryest and most sultry weather, when every blade of grass droops for want of moisture, lucerne holds up its stem, fresh and green, as in the genial spring.

I am convinced, also, that the failures of attempts to cultivate lucerne with us may be ascribed, in nearly every instance, to an improper selection of soils, and am inclined to think that a more accurate knowledge of the plant and a more careful observation of its habits of growth would lead to its more general adoption as an economical forage plant.

I have procured fine specimens of lucerne in various parts of this State, where it is very successfully cultivated, but on too limited a scale to determine its comparative value as a farm crop.

SPURRY—*Spergula Arvensis*.

SPURRY is an annual plant, and its character is so well shown in the engraving that it will need no

description. This plant is somewhat grown in France, but more so in Russia, where it is extensively grown for green fodder and hay. Its principal use in England is in enriching soils too poor to produce clover. There are no soils so poor as not to grow spurry well, and as it is ready to turn under in eight weeks, or for pasture in six weeks, the most barren soils can be very rapidly improved

SPURRY IN FLOWER.

by its use. VAN YOGHT says, "it is better than red or white clover, the cows give more and better milk when fed on it, and it improves the land in an extraordinary degree. If the land is to lie several years in pasture, white clover should be sown with it. When sown in the middle of April it is ripe for pasture by the end of May. If eaten off in June the land is turned flat and another crop is sown which affords fine pasture in August and September. This operation is equivalent to a dressing of ten loads of manure per acre. The blessing of Spurry, the clover of sandy lands, is incredible when rightly employed. By alternating these crops with rye, it will reclaim the worst lands, and yield nearly the same benefits if pastured off by cattle, while it adds materially to the advantages of other manures applied at the same time." When we have seen clover fields, half bare, particularly on the more sandy knolls, because the clover would not "catch" on account of the poverty of the soil, we have often wished that Spurry might be tried as a fertilizer. For the worn-out lands of the South, we think it would be valuable.

WHITE LUPINE.

THE WHITE LUPINE is not grown in this country as a field crop, that we are aware of, but like the Spurry, we think it might be introduced to advantage. It is much grown in the South of Europe, on fallows, to be plowed in when in flower and green. It derives its name from *lupus*, a wolf, in allusion to its voracious qualities; that is to say, it exhausts land rapidly of its alkaline constituents. This very circumstance, however, renders it peculiarly useful for the agricultural purpose to which it is applied. Its long tap-roots strike deep into the ground, take up whatever they find there, and hence, when the plant is restored to the ground, the alkaline matters absorbed are left near the surface, instead of being buried where shallow rooting crops cannot find them. It, moreover, produces a very considerable quantity of mere vegetable matter, the decay of which adds to the fertility of the soil. The bitter seeds are of little value. Near Paris this crop is not sown earlier than the middle of April; it is, in fact, incapable of bearing frost; the periods of sowing must therefore be necessarily regulated by the climate of the country. According to M. VILMOIR, the green manure yielded by the plant is excellent. The

seeds, soaked in water, form a good cattle food; and the young plant is readily eaten by sheep. One of the chief advantages of its cultivation consists in its thriving upon very bad land, such as sandy gravels, and thin clays, upon which it produces a very profitable effect.

"WHAT KILLS THE BEES?"

BY PROF. KIRLAND

Messrs. Editors.—This question is an important one to the practical apian. During the winter season he is liable to heavy losses through the operation of several causes. The answer furnished by J. J., in the RURAL of the 2d inst., is satisfactory, so far as it goes, but as he has substituted an effect for the cause, he leaves unexplained the remote, or antecedent cause.

What insidiously reduces the numbers of a rich and previously numerous colony of bees and brings them, at the approach of winter, into a condition in which they will perish from cold and starvation, in the manner explained in the communication of J. J.? In some instances this may be effected by the loss of a queen. Late and small swarms are liable to die of starvation, and the impression of cold, but they are not surrounded with an abundance of stores as was the case with the stocks of R. S., of Wesleyville.

During the early days of bee-culture in Ohio, before the intrusion of the moth, a German remarked to me, that in autumn he killed, not only his weak and superannuated colonies, but likewise all those which abounded with an excess of honey. Surprised at the latter clause of his assertion, I inquired as to his motive for thus doing. He replied that, "Fat sheep and fat bee colonies of autumn are certain to die before spring." Experience and observation have convinced me of the truth of his assertion, but the rationale of it, was, for a long time, not as clear, till it was subsequently explained by Mr. R. C. ORIS of Wisconsin. To many it may still seem a paradox, after his explanation is given, yet, there is no doubt of its correctness.

Many a colony of bees perishes from an excess of prosperity. This insect is one of the most avaricious of animated beings, and never fails to improve an occasion to collect the largest quantity of honey possible. During seasons peculiarly favorable, its avidity to accumulate prompts it to fill every cell of the combs with honey and bee-bread, and under such circumstances it frequently occupies all of the workers' cells, and leaves none for breeding purposes. Of course, few eggs are laid by the queen, and the necessary recruits of young brood are not produced to supply the rapid diminution of that variety, which takes place at the close of the season. The approach of winter finds the colony reduced in numbers, exhausted in strength, and in a condition to perish in the manner explained by J. J.

Your readers will no doubt request the suggestion of a remedy to counteract, in its approach, such an unfavorable result. Permit me to anticipate their request, and point out the only available method of saving such degenerating colonies.—In the first place, to insure complete success in managing bees, it becomes necessary to employ some plan of a hive which will give entire command over its internal structure and its contents, and bring them under the inspection of the eye, and within reach of our fingers. Any hive which affords these facilities is well advanced towards perfection in its model. All others, which lack in these particulars, should be rejected as incomplete, however favorable they may appear, in other points of view. LANGSTROTH'S I prefer to all others. Having our bees thus arranged we are able at any time to ascertain their exact condition. The attentive apian will ever keep himself apprized of it. If, during the period of honey gathering, he finds the cells too much infringed upon by deposition of honey, he should at once transfer two or more of the cards of comb thus filled, into the upper story of the hive—an act which, of course, requires those cards to be movable, and that he should have perfect control over the bee-hives and comb. The places thus vacated must be supplied with empty frames, in which the tenants of the hive will at once commence building new comb, some portions of which the queen will occupy with her eggs. But so great will be the avidity of the workers for accumulating stores, that they will sometimes destroy those eggs and persist in filling their places with honey, in the newly formed combs.

This avaricious tendency may be entirely corrected by commencing early in the spring and taking away all supplies of surplus honey, and supplying boxes or frames in the upper story for receiving the surplus which shall be collected during the progress of the season. This course will leave the combs in the lower story vacant for the

use of the queen, and the process of depositing stores in the upper story will afford occupation to the busy workers.

Early in October every card should be examined, and if the bees have not already constructed a passway through its center, for winter use, one should be formed by the aid of a small but long-bladed knife.

J. P. K.

Cleveland, Ohio, 1889.

SUBSOIL AND DRAINING PLOW.—INQUIRY.

MOST EXCELLENT RURAL.—Some of your readers wish still more information upon the above instrument. The Plow advertised in Vol. X, No. 33, and noticed favorably in the same Rural, possesses great advantage to the buyer. Do you think it the best thing of the kind for a farmer to buy, as it regards easiness of draft, strength of form, and reasonableness of price?

Until we have got ahead somewhat in the use, and means of indispensable improvements, all complicated and high cost machines must be left with the makers, or remain beyond the reasonable demands of small farmers. I must so believe from what observation I can make among such farmers, and from my current experience in business, as well as from my experience in the practical wants of farming and the variety of ways outlays are here needed. Our first improvements must be done with respect to the greatest profit for the least outlay.

And as to subsoiling, and draining, we know, by the condition of our land, and the uncertain growth of some crops, directly affected by surface water and drought, that this business must be done or no profit be realized. Then, the profits must be so slow with that work performed with the mechanical aids necessary, as to leave such venture some farmer burdened with privation and pecuniary harassment. Will the makers of the labor-saving tools and machines look to this a little more?—not strive to supply simply what we shall like to try, and may be pleased to want, but what will best perform profitable labor for a price that can be spared for that particular branch of work?

But more directly of the Plow. Besides, giving your opinion of the best, or the certain practical utility and economy of it, I desire to know if such plow may with any advantage have a hole drilled in the rear and bottom part to receive a coupling hook that shall attach a pear-shaped ball to draw in the ground and leave a channel for little water-courses? Can we so subsoil and profitably drain any of our land, and for what uses would a plow so prepared be of value? And if of value, how large a ball and to what extent would that probably increase the draft?

W. D. B.

Oswego Co., N. Y., 1889.

REMARKS.—Instead of answering the above, we should prefer to publish a reply from the pen of JOHN JONSTON, Esq., or some other person who is practically familiar with every branch of the subject. The inquiries are important, and as correct answers to them would benefit many readers, we trust Mr. J., and others competent from experience, will respond.

MOWING AND MOWING MACHINES.

MESSRS. EDWARDS.—With your permission I will give RURAL readers a sketch of my experience in mowing. Last year, not feeling able to buy a machine, and my neighbor, who owns an old fashioned "Ketchum," offering me the use of his, on condition that I would mow his grass, I availed myself of the opportunity, and mounted the machine as a "raw hand." The grass was heavy, the "dead furrows" very deep, and the meadows had not been properly prepared, by having all the small stones removed and the large ones marked by setting a tall stake by them as signals, so I found a great hindrance in consequence of the breaking of "sections" and "guards." And in crossing the furrows, the "finger-bar" would drop in suddenly, with a jar, and in rising out the knives or "sections" would suffer from cutting the soil or gravel. I procured three plates of an old buggy spring about 18 inches long, and laying them upon each other in the usual way, had them bolted upon the "finger-bar" near the other end, so as to have them drag behind, forming a kind of shoe for the bar to run on. This was a decided improvement, far better than a wheel or roller, as the trembling motion caused by a roller is utterly avoided, and the bar shoots across the furrow avoiding all injury to the knives, by cutting the ground on the opposite side, while the whole expense does not exceed 75 cents. Nevertheless, the old machine would sometimes clog, and I heard so much about improvements, and better machines, &c., &c., that I got rather "sick of the old thing," and hoped I could get a better one by another season. "Times," however, getting "no better pretty fast," I had to take the old machine again.

A few weeks since I spent several days in my native town of Niagara, and there attended a kind of "social" mowing match. One of my old acquaintances had been trying to find out the best machine, in contemplation of buying one. The "agents" finding out the state of his mind came around "quite thick," and arguments ran high, the result of which was the said match. Three different machines were on the ground, and party spirit was up. I was much amused, and reminded of times gone by, (the time just before Major Jack Downing flourished,) and if the time has arrived when awards are wrought into pruning hooks, surely "Hurrah for Jackson" is altered into "Hurrah for the Ketchum," &c., &c., and I have no objection to the change.

I am satisfied that decided improvements have been made on all the machines within the last two years, and it is very difficult to decide which is the best, especially when we listen to interested agents; yet I have seen none but would be improved by this simple little sliding shoe; and one thing now is certain, that my old machine is decidedly better than I thought it was, for I mounted the seat and cut between four and five acres on a very rough field, and got through at 11 o'clock A. M., and that without sharpening the knives during the operation. But the secret was, I had, early in the spring, cleared the meadows of all obstructions that could

be removed, and had marked such as would be hid in the grass, and could not be remembered; and in mowing two or three days this year, I have not broke a single section or guard, while last year I broke several every day on the same fields. For success, very much depends upon the preparation of the ground, and very, very much depends upon getting used to the machine, and knowing how to keep it in order. Many a first-rate machine is abandoned on account of a want of skill in using it.

Williamsville, N. Y., 1889.

ABOUT WINTERING STOCK.

EDS. RURAL NEW-YORKER.—As much is being said about the scarcity of fodder, I wish to give the public, through your paper, a sure way to "help it hold out." It has been my experience that stock kept warm and dry, will thrive with one-fourth less feed than when exposed to "the fury of a winter's storm." Now, brother farmers, if you are short for fodder, instead of buying hay at exorbitant prices, to be fed out of doors and perhaps trampled in the mud, just expend a trifling sum for lumber, and batten up all the crevices about your stables, and make some good mangers, and underpin your barn—making it, as the sailors say, "all taut,"—then keep your cattle in there most of the time while the snow is on the ground. Having done this, go and expend two, three, or five dollars more for blankets for your horses, and employ an idle hour in fastening on suitable straps and buckles to keep them on, and you are rigged to brave a hard winter with thirty tons of hay, where before you needed forty. But, to make the thing sure, I will add that you'd better get you a good feed cutter, (if you have none), and use it as much as you can. Don't say you can't afford it, or that it "won't pay." Take my assertions, and figure up and see if it won't pay. And I dare say I can find thousands within the circulation of the RURAL, who will endorse my experience. But, knowing that I am not advancing any new doctrine, I will not occupy any more room in your valuable paper.

G. M. L.

Vernon, Oneida Co., N. Y.

REMARKS.—The above advice is orthodox and timely. We have rarely published more good sense in so little compass. Those interested would do well to heed the suggestions.

GRAIN GROWING IN MINNESOTA.

EDS. RURAL NEW-YORKER.—Noticing in the RURAL the remarks in regard to the grain growing qualities of other States, I thought that it would be no more than justice to our young State to briefly notice her capacity in that respect.

The crops in Minnesota this season are the best I ever saw. Wheat, rye and oats, were well headed and just as thick as they could stand. Have seen some pieces very badly lodged by their own weight. Wheat rusted a very little in some localities. The farmers are well satisfied with the abundant harvest they have reaped this season. They are busily engaged threshing now, and a finer berry I never saw; it is plump and white; and yields well.

Our corn was bitten by the frost last week, so that corn on low, wet grounds, that were planted late last spring, is very badly injured. I should judge that there is twice the number of acres under cultivation this year that there was last year. And, having a better yield this year than last, if grain should bring a fair price this fall, we shall come out all right. We are rather poor, financially, but taking into consideration our soil and climate we are rich. Taking everything into the account I think this State will rank with the first class of grain growing States.

L. M.

St. Anthony, Minn., Sept. 13, 1889.

CABBAGE WITH CORN.—Mr. Brooks, of Princeton, Mass., at one of the Legislative Agricultural Meetings in Boston, alluded to the practice of planting cabbage among Indian corn. He knew an instance where cabbage was planted in alternate rows with corn, and the cabbage sold for \$150 per acre.

Inquiries and Answers.

CEMENT WATER PIPE.—Inquiry.—My neighbor, Mr. PARKS, appreciating the value of a constant and convenient supply of water for farm purposes, has conveyed a spring by means of wooden pipe, which answers his purpose well, but he is desirous of information concerning cement pipe. Will some one tell him how to make it, and also advise as to its comparative merits?

—Since writing the above I have talked with some gentlemen in Cold Creek, Alleg. Co., (not in the stream, exactly,) who have constructed some half a mile of this pipe. They used one bushel water lime to three of sand, put their mortar into a trough some four feet long, three inches deep, three inches wide at the top and two at the bottom, made of half inch boards. This being filled with mortar was turned into a ditch some two feet or more in depth; then a round rod was pressed into the mortar an inch or so in size; with trowels the mortar was neatly closed over the rod; a little dirt was then put on to the mortar, and after waiting a few moments the rod was drawn out, and the same thing repeated till all the pipe was laid. They suspect some defect in their method, for when they let on the water two or three weeks after, the pipe gave way in several places, the cement not being sufficiently hard. Should the dirt be put on to the mortar immediately, or should it harden first? Is there danger of the pipes cracking from the unequal pressure of the dirt, especially in passing from soft ground to hard? How deep should cement and other pipe be laid in the ground, &c., &c.?

—H. T. B., Pearl Creek, Wyoming Co., N. Y.

TO MAKE A LIME-KILN.—Will some of the numerous and intelligent readers of the RURAL give us the best plan for building a lime-kiln for burning from three to five hundred bushels of lime at a burning? We have plenty of wood and the best of stone, but don't know how to put them together.—ELIAH H. ANDERSON, Williamson Co., Texas, 1889.

RYE.—Inquiry.—A friend of mine has heard that you may sow rye in fall, and may feed it during the following summer, and the year after harvest a good crop—if you can get it. Can you get it, is the question? What are the advantages and disadvantages of sowing rye for feed?—H. T. B.

Rural Spirit of the Press.

Pigs more Profitable than Hogs.

A CORRESPONDENT of the Country Gentleman makes the statement that it is more profitable to fatten pigs than hogs, and presents the following facts and figures to prove the verity of his assertions:

Having tried an experiment with both kinds the past season, I am disposed to give you the result, hoping that others may try a like experiment—upon a more even scale as to the season of the year—and report through your paper. In this way farmers may, through the medium of an agricultural paper, increase their annual income more than ten times the cost of such a paper.

In September, 1887, I bought two pigs at \$3 each, and kept them until December 14th, 1888, which was the time they were butchered. They had been fed about 60 bushels of shelled corn—about one-half of it ground and scalded, the other half of it having previously been fed in the ear. The feed, other than corn, is in both experiments offset against the manure made by them. They weighed respectively, when butchered, 332 and 344 pounds. On the 26th of August, 1888, I bought two pigs, bred by the same sow, and at the same price. They were fed mostly upon sweet apples, with a few raw potatoes and a few nubbins of corn, until December 15th. I then commenced feeding them upon corn boiled until soft, and fed cold. This kind of feed was continued about two weeks, when it was changed to scalded meal, which feed was continued until February 8th, when they were butchered. Their respective weights were 237 and 244 pounds. They had been fed about 25 bushels of shelled corn, in forms as above described. The old hogs were about seventeen months, and the pigs three days less than seven months old when killed. Valuing the corn at 80 cents a bushel, and the pork at eight cents a pound, the account stands as follows:—Old hogs, Cr. \$52, Cr. \$54.03; pigs, Cr. \$24, Cr. \$38.64.—It will be seen that the pigs yield a profit of \$14.64, while that of the old hogs is only \$2.08, to say nothing of the extra time and trouble in taking care of the old ones.

Balky Horse—Balky Master.

The following exemplification of the effects of good or ill-treatment on animals we extract from the American Stock Journal: a farmer of irascible temper, &c.

A farmer of irascible temper came into possession of a very fine animal, of most docile disposition. When the farmer purchased him he was highly pleased with his bargain. For some weeks the animal worked admirably; but as the owner became accustomed to the brute, his irascible temper would display itself, and occasionally in his anger he would punish him severely for the most trifling fault. In a few months the animal became irritable and balky, at times quite unruly. The farmer, who could not see how much injury he was doing himself, continued his brutality. The result was as might be expected—a really valuable brute was spoiled. He became nervous and dangerous. The farmer was in despair, and would have been glad could he have found a purchaser for him at a third or fourth of what he gave for him. A neighbor of the farmer who saw how he had maltreated the beast, offered to accept him at the owner's terms, which were not hard. Now, mark the end. The new proprietor was a man of kind but firm disposition. He at once commenced treating the animal as if he could be reached by reason. The horse, experiencing a difference between his present and former treatment soon recovered his temper. He ceased to fear and tremble at every one who approached him, and in less time than it took to spoil him, he was brought back to his original docile disposition. His former owner learned for the first time that more labor can be gotten out of any animal by kindness than by brutality. But whether it mended his irritable disposition or not, we are unable to say.

Soiling Cattle.

At a recent meeting of the "Harvest Club," at Springfield, Mass., this subject was presented for discussion. From the report of the Springfield Republican, we extract the following:—Soiling, or the summer feeding of cattle, was discussed. It was believed to be the most economical way, on costly level lands, to feed cattle with green food through the summer in stalls. In this way they can be fed more regularly, the manure is collected and saved, and they will give more milk, except for about two weeks after the twentieth of May when feed is freshest. A cow can be kept on an acre of rich ground an entire year by this process. If this practice were generally adopted, it would save much division fencing. Corn, clover, barley, millet and rye are the principal changes of food. Fall rye is the earliest greens procurable for this purpose. Barley stands frost better than some of the others. Millet and corn are better if wilted before feeding. Two cows have been kept well in this way, on one and a half rods of clover a day. Corn will not produce as much milk as clover, but it will be richer. Pasturing is, of course, the most natural way, and on this account soiling, except to a limited extent, is not recommended for young stock. Lands worth only \$10 per acre had better be pastured.

HEATING NEW MILK.—The Dairyman's Record gives the opinion that the heating of new milk to near the boiling point, just after it is drawn from the cow, is preferable to allowing it to stand for a time before heating, and thinks both butter and cheese are improved in flavor by so doing, "because the animal odors which are objectionable would be expelled," and goes on to say that "tasteless and leathery" cheese is caused by manufacturing under too high a temperature rather than from high heating before manufacturing.

DOGS AND BELL SHEEP.—An Indiana sheep farmer says, that a number of sheep wearing bells in any flock, will keep away dogs—he would allow ten bell sheep to every hundred, or hundred and fifty. When sheep are alarmed, they run together in a compact body, in which act all the bells are rung at once, which frightens the dog, or makes him think some one is on his track—so he leaves without taking mutton.

Agricultural Miscellany.

WEATHER, CROPS, &c.—The weather of last week was quite unfavorable for corn and other crops—one or two days being decidedly Boreas and Equinoctial. A frost occurred on Wednesday night, though the clouds and winds prevented serious results. Corn, buckwheat, &c., were somewhat affected, but we hear of no material damage. On Tuesday and Wednesday the weather was quite unfavorable for Ag. Fairs, and diminished the interest and attendance in some localities. The present week opens very favorably—with a bright sunshine, and much warmer temperature. This will help corn, and, if it continues through the week, prove most beneficial to the many Societies which held their Annual Exhibitions the present week.

FAIRS NEXT WEEK.—State Fairs are to be held the ensuing week (Sept. 25–30) as follows:—Indiana, at New Albany; Pennsylvania, at Pottsville; Wisconsin, at Milwaukee; Georgia, at Atlanta; and Canada West, at Kingston. N. Y. County Fairs—Cattaraugus, Erie, Greene, Madison, Monroe, Oneida, Ontario, Oswego, Putnam, Steuben, St. Lawrence, and Wyoming. New York Union and Town Fairs—Brookfield, Canaseraga, Coventry, Dryden, Fredonia, Oxford, and Trumansburg. For particulars as to days and places, see former numbers of the RURAL.

THE BROOKPORT UNION FAIR is to be held Oct. 11, 12, and that of Homolock Lake, on the 13th and 14th.—Lorox, at Oneida, Sept. 30, Oct. 1.

THE NATIONAL FAIR.—The exhibition of the U. S. Ag. Society, held at Chicago last week, is universally pronounced a great success in all departments. Hon. MARSHALL P. WILDER, of Boston, for many years President of the organization, and who was present at the show on the 18th, informed us on his return that the exhibition was altogether the best, as well as the most successful and profitable, ever held under the auspices of the Society. In the Stock Department, particularly, the display was large and superior. The weather was fine on the opening days (Monday and Tuesday) and the entries numbered some 8,000, including 1,500 Agricultural and Mechanical Implements. President TRIGGIAN formally opened the Fair on Tuesday, in an appropriate address, and speeches were made by Senators CHITTENDEN and DOVOLAS. The number of visitors on the 15th was estimated at 50,000—on the 16th, 85,000, up to which time the receipts were about \$30,000. The entire receipts would probably reach \$40,000. The exhibition of the Steam Plows of FAWKES, of Pa., and WATERS, of Detroit, attracted great attention—while a trot over the Garden City Course between Flora Temple and Princess was hardly less popular. Judging from all accounts we conclude the Fair has proved all that could be expected by the officers and friends of the U. S. Society—the show, attendance and receipts being extraordinary.

The Chicago Journal, received since the above was written, says of the Fair:—"It is an entire success in both quality and extent, as well as pecuniarily to the Society. All the departments of the Fair are full—some of them overflowing. In the Live Stock department, we find great variety, and some of the noblest animals we have ever laid eyes on. It has never been equaled. In the departments of Mechanics, Agricultural Implements and Machinery, there is an almost endless variety of wonders, master-pieces and ingenious contrivances for doing every kind of labor-facilitating. In the Fine Arts Hall, there is much to admire; a number of excellent photographs, and not a few other specimens of artistic handiwork, skill and taste. And the Floral Hall is like a garden in the midst of Paradise—a brilliant gem, set in all the colors of the rainbow. Viewed from any standpoint, regarded in any light, this Seventh Fair of the National Agricultural Society far surpasses any of its former exhibitions, and is ahead of any general Agricultural and Mechanical Show that has ever been held in this country. It is a noble triumph—an honor to the Society, a credit to the exhibitors, and a glory to the nation. We rejoice to see so many people present from abroad to witness this grand display. Almost every State in the Union is represented among the visitors, and the attendance from the Western States especially is numerous."

THE VERMONT STATE FAIR, at Burlington last week, attracted a large gathering. A telegram dated the 14th, says:—"The show of horses, cattle and sheep is good. The mechanical and floral display is not large. A splendid exhibition of Howe's Scales attracts great attention." Gov. BANKS, of Massachusetts, delivered an address on Thursday, and the Fair closed on Friday.

THE ILLINOIS STATE FAIR was a success, as we stated last week, but so many matters are pressing upon our pages that we must omit reports received concerning this and other exhibitions. It is said the \$8,000 prize for steam plowing was not awarded, on account of the condition of the ground at the time FAWKES made his trial before the Executive Committee. The trial is adjourned until FAWKES returns from the American Institute Fair, New York, where he exhibits this week.

SCHUYLER COUNTY FAIR.—A friend writes us that the Fair of the Schuyler Co. Ag. Society—held at Watkins, last week—was decidedly successful. He says, substantially, that Schuyler Co. was formed in 1854, and the Society organized the same year. The first Fair was held in 1855, since which there has annually been an increase in interest, attendance and receipts. Being a small county, with no large villages or manufacturing establishments, of course its Fairs could not be expected to compare with those of other counties, in some respects, yet the show of implements and manufactures, grains, vegetables, &c., would do credit to any county, while the display in the Fruit and Floral line was peculiarly attractive. In this department, aside from a fine variety of other flowers and fruits, Mr. Geo. TREMPER presented 45 varieties of dahlias and 23 of roses. The show of Stallions and fine woolled Sheep was worthy of praise. Of the former there was a better display than ever before in the county, and it is doubtful whether a superior exhibition of Stallions will be made at any Co. Fair in the State. In fine woolled sheep our shows have always been particularly attractive, and there was the usual display of as good as the State can produce. The specimens were from the flocks of B. G. Burritt, Noble Cleveland, John Woodward, J. H. German, Luther Cleveland, Wm. Ayers, and Wm. Sprowls. Our county is behind neighboring ones in the possession of good cattle, and the show of Short-horns was not as good as last year. Of Oxen there was a greater show, however, while Swine and Poultry were represented to a limited extent. The Address, by Rev. T. K. BRUCE, of Elmira, was a regular Beecher effort, and well received.

THE CHAUTAUQUE COUNTY FAIR, held at Jamestown last week, is reported to have been fully equal, if not superior, to either of its predecessors. A friend who was present says the Fair was largely attended, and that the exhibition was most creditable in all departments—while the show of Stock was superb. A Union Agricultural and Mechanical Fair is to be held at Fredonia next week, and a Town Fair at Clymer the week following, (Oct. 5, 6.)

THE "UNION FAIR," held at Medina last week, was a complete success. The Medina Tribune says:—"The attendance was very large, and the display of Stock, Agricultural Implements, useful inventions, vegetables, specimens of art, &c., &c., exceeded any other exhibition of the kind ever witnessed in this section of the State. The gathering of people was very large—by far the largest ever witnessed in the county of Orleans." The total receipts were \$1,300.

OSWEGO CO.—ITS AGRICULTURAL FAIRS, &c.

LAST week we had the pleasure of spending several days in Oswego County, and of attending the Fair of its Rural County Ag. Societies—at Mexico and Fulton. The excursion afforded us an opportunity of traversing a considerable portion of the county, and of revisiting a section with which we were somewhat familiar thirty years ago. Many of the towns had greatly improved, agriculturally and otherwise, since our last visit—better roads, fences, buildings, etc., appearing on all sides, while the farms indicated marked progress in culture and husbandry. This remark is especially applicable to most of the towns we were enabled to observe particularly—viz., Granby, Hannibal, Mexico, New Haven and Volney—and we were glad to learn that other portions of the county were in the track whereon glides the car of improvement.

THE FAIR AT MEXICO—held Sept. 13–15—was largely attended considering the unfavorable weather, while the exhibition was creditable. We were present only one day (the 14th), yet saw abundant evidence of the existence of a laudable spirit of enterprise and improvement among agriculturists and community generally. The Society's Fair Grounds are finely located, comprise fourteen acres, and embrace a good exhibition building and business office. The land and improvements cost some \$3,500. The Fair was quite successful. We were assured that the attendance was never larger, that the receipts exceeded those of last year, while the exhibition was better in some respects. The show of Stock was very good, and included a dozen fine Short-horns, owned by Mr. MARRAS, of Sandy Creek. A string of 15 yoke of working oxen, from the town of New Haven, deservedly attracted much attention. A. W. ECKHART, Esq., of the same town, exhibited the best trained yoke of oxen we ever saw—their performances, unyoked, eliciting universal admiration. The principal exhibition building—combining Floral and Domestic Halls—was most beautifully decorated with overgreens, &c., the finest arrangement we ever saw at a County Fair. The ladies of course decorated the Hall, and also made an excellent display of Domestic Manufacturers and fine handwork, &c. The display of Fruits, Flowers, &c., though not large, was creditable. Among the contributions, Mr. G. H. STONE, of Scriba, exhibited 36 varieties of apples and 26 of pears—mostly fine, well grown specimens. We were unable to examine the various departments of the exhibition particularly, and of course can only speak of it in general terms. But, creditable as was the show, we were more pleased with the People in attendance—and the simple fact that thousands were present during such unfavorable weather (the high winds and chill atmosphere rendering the day the most unpropitious of the season), gave assurance that they were imbued with the proper spirit to advance Rural Improvement. We never so deeply regretted the lack of powerful voice and lungs as on rising to address, under unfavorable circumstances, the large and fine audience by whom we were surrounded. But of this it does not become us to speak. During our brief sojourn in Mexico we saw much that was gratifying, and many persons whose personal acquaintance we were glad to make. Mr. President EARL, Treasurer CONKLIN, and other officers and many citizens whom we had the pleasure of taking by the hand, appeared to be men of the right make and metal for the cause and the occasion. Mexico is a fine, pleasantly located village of some 1,500 inhabitants—has a beautiful and successful Academy, many fine residences, and must be a pleasant place to reside.

THE FAIR AT FULTON (or Oswego Falls),—Sept. 13–16, four days—was a decided success in most respects. The day we attended (the 15th) the number present was estimated at from ten to twelve thousand, the weather being very favorable for both exhibitors and visitors. On entering the fine grounds (containing about 15 acres, and situated on the shore of a beautiful lake), we were surprised at the extent and variety of the exhibition, and the large number in attendance,—and soon learned that the surrounding country was not only well represented, but that hundreds had arrived by railroad from the cities of Syracuse and Oswego. The Stock had been removed from the grounds, but the departments of the exhibition which we witnessed were much better than we had anticipated. Our attention was first attracted to a good display of Ag. Implements and Machinery—including D. C. CUMING's Power Hay and Corn Stalk Cutter in operation. It is an excellent machine (as recently noticed by a RURAL correspondent), and we were glad to learn was being somewhat extensively manufactured by J. E. DUTTON & Co., of Fulton. The display in the large tent devoted to Fruits and Flowers, Domestic and Fancy Articles, Fine Arts, &c., was exceedingly creditable in quantity, quality and variety, and worthy the attention and commendation it received. In fruits, flowers and floral ornaments, needle and fancy work, and specimens of the fine arts, the exhibition was very attractive, including many things worthy of special notice. Among the novelties we examined a Portable Mercantile Barometer, of TURNER's patent, which we think will prove a long-sought desideratum for agricultural purposes, and of which we may have more to say in future. Also, a floral ornament, consisting of a case of flowers, moss, &c., perfectly dry and so preserved as to retain their original colors. The process is said to have been discovered by Mr. MARTIN OSBORNE, of Fulton, and is certainly very ingenious and apparently successful. A superior specimen of Penmanship (including a fac-simile of a bank note, portraits, &c.) was exhibited by S. M. BASSETT, of the Syracuse Comm. College; we never saw its equal. The show of Dairy Products, Vegetables, Grain, &c., (in another spacious tent), was quite large and excellent—better than we have seen at many County Fairs in the most favored localities. We observed a superior sample of Tea Wheat, from a crop grown by Mr. STRANAUAN, of Granby, which produced 8½ bushels per acre. Several persons present considered the Tea the best variety of spring wheat, especially for light soils. Much attention is given to wheat culture in Oswego Co., of late, the yield proving very good,—mostly spring varieties. There were many things, in both tents, worthy of notice, but we cannot even enumerate them. The displays elsewhere—including a Regatta on the lake, and a trial of Fire Engines on its shore—were interesting and attractive. But here, as at the Mexico Fair, the People themselves were the best part of the exhibition—and we don't say this because they listened attentively and approvingly to a long address, and appreciated it above its merits, but because we admired their spirit, cordiality and appearance. We were most happy to meet and take by the hand scores of thinking, enterprising and progressive Men—including a number of the friends of our boyhood—and shall long remember the occasion and reunion with pleasure. To the officers of the Society—and especially to Mr. Secretary SAMPSON, editor of the Patriot & Gazette—we are indebted for more than ordinary courtesies during our brief stay in Fulton and Oswego Falls, (places divided only, let us here explain, by the Oswego River.) Of Fulton, its appearance, bustle, &c., we purpose to speak hereafter; and also of other towns visited.

In conclusion, we may remark that our visit to Oswego and its prominent Fairs impressed us most favorably,—and that, from the spirit of emulation and enterprise manifested, we are not sure but the people can creditably and permanently sustain two County Ag. Societies; on that point, however, we may hereafter take the liberty of offering one or two suggestions.

Written for Moore's Rural New-Yorker.
A HEART-GLIMPSE, WHICH MAY GOD PITY.
BY AMANDA T. JONES.

O'er desert wilds she strayed,
And the sand beneath was hot,
There was neither dew shade,
Pleasant fruit nor kindly grot.

Ah! so gleefully she went,
Burdened with her youth's lone years;
Strength and will alike were spent—
All but hope was quenched in tears.

Lo! at length a garden fair
Lay inviting by her side,
Pleasant fruits were smiling there
By cool rivers deep and wide.

Presently a face looked out,—
'Twas a pleasant, puzzling face,
But she had no heart to doubt
For the beauty of the place.

Sick and weary of the sand
Where her toiling feet had been,
Pleading, stretched she out her hand,
And the Unknown led her in.

By the fountain's smiling side,
By the fruit trees, green and tall,
To the rivers cool and wide—
Led her there, and that was all.

Famished, parched the streams she eyed,
And the fruit that hung so high;
All her longing spirit cried,
"Feed me, feed me, or I die!"

"At the fountain let me quaff—
See! its precious wave how clear!"
Heard she then a taunting laugh—
Saw she then a mocking sneer.

Snobers upon that puzzling face
Filled her soul with fear and doubt,
From the pleasant, blooming place,
Then the Unknown led her out.

'Twas but one more drop of woe,
Strength and will had gone before;
Now, as she through wilds doth go,
Hope walks with her nevermore.

Black Rock, N. Y., 1859.

Written for Moore's Rural New-Yorker.
A LIFE SKETCH.

"The Lord is my shepherd, I shall not want," and gently closing the book of eternal truth the stricken, tearful mourner, clasping her hands in prayer, peacefully murmured "Father, Thy will be done." Angel wings fanned softly that pale, care-worn brow. Joyfully they attuned their golden harps to sweeter praises, as they noted the peaceful calm which, like a sunbeam of light, flitted across her sorrowing heart, as she trustingly stayed her hopes upon the blest promises of her Heavenly Father. One by one, the silken ties which joined her heart to earth had been ruthlessly rent asunder, until now she was left to tread life's thorny pathway alone. Despair had spread her black wing over her once fond hopes until, with an aching, almost hopeless heart, she turned to the immutable promises of her neglected God. It was there she found balm for her sorrowing heart, and for a brief season earth and its gloom were forgotten in the contemplation of the wondrous beauties of that glorious home along whose golden shores the Angel of Death never wanders,—where clouds never dim the azure skies,—but the light of an eternal sun ever reigns.

But, sitting in the gray twilight hour, her thoughts wander from the future, to the dead past. Bright dreams of long vanished years rush o'er her soul with mighty power, and as Memory unlocks her gilded casket, and, true to her trust, brings to her mind the treasures of "long gone years," reminiscences of happy youth come up before her laden with far-off sweetness, when life, was filled with sunshine, and earth seemed a blooming Eden. And as her thoughts wander back through the long vista, she beholds the cherished friends of her youth who surrounded her in her vine-wreathed home where, joyous as a forest-bird, she gaily carolled her childish songs untroubled by care.

Alas! how great the change of a few short years. Fond parents, whose loving hearts would gladly have shielded her from sorrow, have now finished the journey of life, and have gone to that promised land of rest where evermore the majestic anthem, "Worthy the Lamb," rolls on, in which their voices unceasingly join. A fond sister, and brother too, once gladdened that happy home, but where now are they? One, in the youth and beauty of early womanhood, ere yet the roses paled upon her cheek, closed her eyes in dreamless sleep, and the willow which has long wept above her grave still sings her requiem. The other, wearying of the home of his childhood, and longing for more exciting pleasures, long years ago bid adieu to its scenes, and crossing the billowy deep, roamed in foreign lands; and for weary months and years the restless, ever trackless ocean has borne upon its bosom no tidings of his existence to his watching sister. Weary of waiting, imagination has pictured for him a grave amid the coral forests of ocean's fathomless depths, or beneath the green grass of a stranger land. Thus, one by one, had the friends of her girlhood departed, until he alone was left, who at the hymenal altar had breathed vows of constancy and protection until "Death them should part." Unbroken for awhile were these premises, but the tempter, wine, won the fond husband from the peaceful home to dark haunts—the gateway of eternal ruin. Many a lonely, weary hour, did she, the neglected wife, watch for the coming footsteps of the degraded inebriate, until, amid the darkness of one never-to-be-forgotten midnight hour, stranger hands bore him to his home a loathsome corpse. Alone, and unprepared, he had met the fearful summons of death. His brain

crazed with the demon, Alcohol, he had gone to meet his God. Ah, with what unutterable anguish did she bend over the form of him who, in the nobility of manhood, won her heart's fondest affections but to blight her life with misery. Loaded with grief, and without a hope in the promises of her Heavenly Father, despair, with a crushing weight, seemed to rest upon her broken spirit, until with only a mother's love she roused herself to live for her child. Around him did the golden chain of her affection entwine until he seemed a part of her very life. And not until the waxes lids were closed in death, and the willow wept "o'er his little green grave," did she realize that she had made for herself an idol of clay,—that her God in loving kindness had broken the last tie that bound her heart to earth, had transplanted the bud of youthful promise to a purer clime; where, amid elysian bowers, his tiny feet might walk the flowery paths of Paradise, and his loving spirit nestle upon a loving Savior's bosom.

Thus, while the curtains of night have been wrapping earth in shadows, her soul has been wandering back over the dead years of the past, reading upon their truthful scroll the remembrance of life's blasted hopes, and bitter lessons. Yet she rejoices that by the cup of sorrow quaffed to its dregs, she has been taught to look from perishable joys to Him who is the Way, the Truth, and the Life, to such as trust in Him.—Though for her earth has lost its brightest pleasures, yet, with the eye of faith, she has learned to look up to that home above, where "the weary find rest,"—where the burning tears which have burst from the deepest fountains of grief may yet sparkle as gems of rejoicing in the crown of those who, in patient endurance, bear meekly the burdens of life, trusting in His unerring wisdom, "who doeth all things well." MARION.

Wilson, N. Y., Sept., 1859.

THE LIGHT OF A CHEERFUL FACE.

THERE is no greater every-day virtue than cheerfulness. This quality in man among men, is like sunshine to the day, or gentle, renewing moisture to parched herbs. The light of a cheerful face diffuses itself, and communicates the happy spirit that inspires it. The sourest temper must sweeten in the atmosphere of continuous good humor. As well might fog, and cloud, and vapor, hope to cling to the sun-illuminated landscape, as the blues and moroseness to combat jovial speech and exhilarating laughter. Be cheerful always. There is no path easier traveled, no load but will be lighter, no shadow on heart or brain but will lift sooner in presence of a determined cheerfulness. It may at times seem difficult for the happiest tempered to keep the countenance of peace and content; but the difficulty will vanish when we truly consider that sullen gloom and passionate despair do nothing but multiply thorns and thicken sorrows. It comes to us as providentially as good—and is as good, if we rightly apply its lessons; why not, then, cheerfully accept the ill, and thus blunt its apparent sting? Cheerfulness ought to be the fruit of philosophy and of Christianity. What is gained by peevishness and fretfulness—by perverse sadness and sullenness? If we are ill, let us be cheered by the trust that we shall soon be in health; if misfortune befall us, let us be cheered by hopeful visions of better fortune; if death robs us of the dear ones, let us be cheered by the thought that they are only gone before, to the blissful bowers where we shall all meet, to part no more forever. Cultivate cheerfulness, if only for personal profit. You will do and bear every duty and burden better by being cheerful. It will be your counselor in solitude, your passport and commendation in society. You will be more sought after, more trusted and esteemed for your steady cheerfulness. The bad, the vicious, may be boisterously gay and vulgarly humorous, but seldom or never truly cheerful. Genuine cheerfulness is an almost certain index of a happy mind and a pure, good heart.—Selected.

WHAT'S IN A KISS.

"MOTHER, mother, kiss," pleaded a little cherub boy, with blue eyes, anxiously searching his mother's unusually serious face, as she tenderly laid him upon his soft, warm bed, and lovingly folded the snowy drapery about him. "Do kiss me, mother!" and the rosy lips began to tremble, the tear drops to gather in the pleading, upturned eyes, and the little bosom heaved with struggling emotion. "My little son has been naughty to-day," replies the mother, sadly. "How can I kiss those lips that have spoken such angry words?" Too much, too much! Dutiful mother, repent! The little heart is swelling, breaking with grief; tumultuous sobs break from its agitated bosom; the snow white pillow is drenched with penitent tears, and the little dimpled hand is extended so imploringly. Relent! 'Tis enough! Once more the little head is pillowed upon the maternal bosom—once more the little cherub form is pressed to that mother's aching heart, and the good-night kiss of forgiveness is given two-fold tenderer. A few moments, and the sobbings cease, the golden head drops, the weary eyelids close, and the little erring one is laid back upon his couch, penitent and humbled by one kiss from mamma. What's in a kiss—a simple kiss? Much—very much. More potent than the sceptre. Who has not felt its magic influence? 'Tis the lover's tender pledge of undying constancy; 'tis a bond of friendship and fidelity, and not only is it dear to the youthful and ardent, but also to old age—to the withered heart and blossomless cheek.

Mr. MOTHER.—It is truly said—the first being that rushes to the recollection of a man in his heart's difficulty, is his mother. She clings to his memory and affection in the midst of all his forgetfulness and hardship induced by a roving life. The last message he leaves is for her, his last whisper breathes her name. The mother as she instills the lesson of piety and filial obligation into the heart of her infant son, should always feel that her labor is not in vain. She may drop into the grave, but she has left behind her influences that will work for her. The bow is broken, but the arrow is sped, and it will perform its office.

THE SONG OF THE BROOK.

From the spring beneath the beech tree,
Where the babbling waters rise;
There began my wayward wanderings,
'Neath the blue of summer skies.

Like a thread of liquid crystal,
By some fairy fingers spun—
Lengthening out my tiny current,
Day and night I tireless run.

Through the meadow, where the daisies
Fleck the emerald turf with snow,
With the sunshine on my bosom,
Singing merrily I go.

Through the wood, with troops of shadows
Dancing to the restless leaves;
Where the wild vines o'er me streaming
Many a quaint, weird chaplet weaves.

And the sun, like golden rain drops,
Filters through the oaken screen,
Where the moss beds and the lichens
Edge my path with tints of green!

Down the rocky hillside sliding
In and out, from stair to stair,
Till, midway the rocks o'er sweeping,
One swift plunge, the last I dare.

Then, from out the white foam stealing,
Past the mill I make my way,
Where the ponderous wheel hangs dripping,
Green with moss for many a day;

Underneath the little foot-bridge
Where the sunburnt children fish,
With their bare feet dangling downward
For my cooling lips to kiss.

Hiding in the rocky shadows,
Shining by the dusty way;
Murmuring by the lowly cottage,
Whispering 'neath the turtles gray,

Chiming this refrain forever,
As I tinkling ripple on;
'Tis the heart we bear within us
Maketh life a sign or song.

REMEMBRANCE.

When we reflect how many millions have died and been forgotten—how many even of the later dead seem to have but an occasional place in the thoughts of those by whom they had most reason to expect to be remembered—how, after a few days of mourning for the departed, the happy recover their cheerfulness and the busy resume their industry, and so far as may be judged by outward signs, life goes on with the survivors much as before—we are apt, thinking only of external evidences of change, to limit the effect on families and communities of a withdrawal of one of their number from the scenes of this life, to a more or less poignant and lasting grief for their loss. But it is impossible for a great sorrow, such as the removal of a near relative or friend, to fall upon even the gay and thoughtless, without conferring certain spiritual benefits—without destroying some illusions, and perhaps in some sort compensating the sufferer for what he has lost by leading him to place additional value on what remains. True, when deprived of a portion of our earthly treasure, we are apt, for a time, to underrate what is left, and just so it is in regard to our family relationships. The removal of one member makes us feel that the world is empty, and that there is nothing left worth living for; and, somehow, this feeling stands so justified to our minds, that we are distressed, and even experience a sense of guilt when we first become conscious that we are beginning to be again attracted by what formerly interested us. But when the great shock is over, and Death has fairly shown us how little claim we really have to what we call our own—for not until we experience a separation of this kind do we realize the possibility of its occurrence—when agonizing grief has subsided into a tender and regretful remembrance, when the sense of impoverishment at the thought of a loss of earthly companionship has given place to a feeling of increased interest in the society above, then the oftener our thoughts go down into the graves of buried kindred, the more deeply do we feel the insecurity of our hold on the living, and, in anticipation of the time when they too may be gone from our midst, they stand to us in the relation of "blessings that brighten as they take their flight."

The workings of Time are so gradual that its effects generally fall on us unheeded, unless some ruder, sharper stroke than usual makes a gap that succeeding years may, indeed, overrun with a high growth of leaves and branches, but cannot fill up nor conceal. Such a shock does our tree of life sustain, when one accustomed to lend it friendly shelter and support is suddenly uprooted by its side, and suffering stamps all the painful details of separation on our minds with a distinctness that years cannot diminish. An event of joy is lived through and forgotten; or, if remembered, it presents itself as a single complete fact; an experience of sorrow, if it ever leaves us, continually comes back with all the dread circumstances attending its occurrence. If that sorrow has been caused by the sickness and death of friends, we live over, again and again, in memory, our first uneasiness at the altered looks of the invalids—our growing consciousness of their danger, which we contemplated in silence, not having the heart to speak of it—the trying alternations of hope and fear—their own and our final conviction of their approaching end—parting words—mutual promises of remembrance—the last breath when life went out, and the hope and heart of the watcher died with it—the dreary details of preparation for consigning the remains to their last resting place, and the almost insupportable duty of laying away the body to mingle with the dust. Afterward, when the violence of grief has abated and the

work of remembrance begins, abating from many words concerning the departed, even to those whose sorrow for them is equal to ours, it is in thought only that we recall with pleasure the thousand traits of look, manner and conversation of them when living, and dwell, with mournful interest, on the incidents of their death. And though we do not think of them as lying in the grave-yard, deep in the earth, yet, feeling that there is something there very precious to us, affection and duty prompt us to pay one outward tribute of respect to the memory of the lost by sometimes visiting the spot where the remains are buried.

But we need not go to their graves to be nearer our dead. It is vain to think of bringing back the presence of the departed more vividly than in the places where we have been accustomed to see them, and where we miss them most.—Probably few of us have any distinct recollection of seeing our deceased friends in the neighborhood of their graves half a dozen times in our lives, and then on occasions of too much sadness to admit of their coming prominently before us when the scene presents itself to our minds. So, when we visit the spot where the dust of our dead reposes, thinking to more successfully invoke their presence there than elsewhere, though we feel that beneath the stones bearing their names lies something very sacred, yet nothing about us naturally calls up memories of the quiet sleepers. It requires an effort to associate their personalities with surrounding objects. But at home everything suggests thoughts of them—the door-stone that has echoed their footsteps, and the threshold they have crossed hundreds of times; the earth they have walked on, the sky they have looked up to, the air they have breathed, and the sunshine that has warmed them—all seem tinged with their presence. The sights and sounds of Nature that meet our senses hint to us that they approach the dwelling-places of the dead with an air of softness and refinement they never show to the living. To our imagination, the birds sing over their graves with a sweeter, tenderer note, the stars look down with a serener light, the rain descends with gentler force, and the snow falls with unconscious stillness. And nowhere is the faith that we shall see the dead again so strong as in the home where they have lived, and where they have faded from our sight. Musing on their occupation in the upper world, we seem to see them with the countenances they wore in health, greeting old and new friends, shaking hands and smiling as they used to so cordially, and the pleasant fancy strikes us that they will come back by-and-by and tell us where they have been, what seen and heard in their journeyings in the lovely lands beyond the sky. Nowhere, not at their graves, can we think so often, so naturally, so familiarly, so hopefully, of the dead as at home.

South Livonia N. Y., 1859.

PATIENT WORKERS.

Who does the most good? This question is not easily answered. Such men as Luther, and Wesley, and Edwards, and Wilberforce, and Howard, are prominent among the great workers in the world. But who knows that they really excelled thousands of others whose names have never been mentioned in history? They were made prominent by the circumstances around them; and perhaps their success depended more upon the agency of unknown persons, than upon their own power. Very likely their position depended more upon others than upon the success of their own efforts. It is not always the man who applies the torch to the loaded cannon, who deserves the honor of the execution which it does. Hosts of workers must have toiled long, hard, skillfully and successfully before him, or his torch, and flesh, and the smoke, and the noise would have amounted to nothing. To him who stands out the most prominently, who stirs up the greatest excitement, and makes the most noise, the least credit is often due for the result attained.

If we look at the surface of things men would seem to be pitched into life, as vast heaps of wood, coming down by mighty rivers, are brought together in rafts, pitched and tossed every whither,—no harmony, no apparent relation among them. Everything in life seems to be jumbled together, if we look at the fitness of things. Men of fine and tender feelings are placed in circumstances where there is nothing to satisfy their wants; men of aptitude for learning and thought are compelled to remain in ignorance; men of feeble minds are called to stations where strong wills are needed, and strong men are placed where their strength is of no avail. In the midst of all these difficulties and discordances, what a fierce and fiery time men would have of it, if it was necessary that they should worry over disagreeable duties; if there were no way of their avoiding to fret and fume over every ledge of difficulty which lay across their life.—Becher.

REV. SIDNEY SMITH ON ENJOYMENT.—Mankind are always happier for having been happy—so that if you make them happy now, you make them happy twenty years hence by the memory of it. A childhood passed with a due mixture of rational indulgence, under fond and wise parents, diffuses over the whole of life a feeling of calm pleasure, and in extreme old age is the very last remembrance which time can erase from the mind of man. No enjoyment, however inconsiderable, is confined to the present moment. A man is the happier for life from having once made an agreeable tour, or lived for any length of time with pleasant people, or enjoyed any considerable interval of innocent pleasure; which contributes to render old men so inattentive to the scenes before them, and carries them back to a world that is past and to scenes never to be renewed again.

A BEAUTIFUL thought is suggested in the Koran: "Angels, in the grave will not question thee as to the amount of wealth thou hast left behind thee, but what good deeds thou hast done while in the world, to entitle thee to a seat among the blest."

The policy that can strike only while the iron is hot, will be overcome by the perseverance that can make the iron hot by striking.

Written for Moore's Rural New-Yorker.
M I N E .
BY STEPHEN FORBES.

Or all the words whose thrilling sound
Strike through the spirit's depth profound,
With echoes far and fine,
What carries more of heavenly bliss—
What more of deadly sin than this—
This one word—*Mine*?

Through vaulted gloom are feebly shed
Dim lantern rays, upon a head
Where woe and sin combine,
No light his mental dark may cheer—
The miser counts his gold in fear,
And murmurs "*Mine*!"

Drives before his palace stands,
And gazeth forth on fertile lands,
With trees, and corn, and vine,
And o'er his shaven face the while
Creepeth a cold and selfish smile
As Pride says "*Mine*."

Dark Livoras, with flaming hate,
Ascends, still glorying in his fate,
Some mountain's rocky spine,
Flows the sad tale of crime and woe,
Sees blood and tears forever flow,
And thinks—"*'Tis Mine*."

Not so, for God, whose equal light,
Through golden day and silver night,
On all the world doth shine,
Says lovingly, and wears the look,
Whence sun and stars their radiance took,
All these are "*Mine*."

"*Mine*!" 'Tis the golden key of Love!
The heart's barred doors before it move,
And need no other sign,
The lover clasps his plighted bride,
With this one link of Faith and Pride,
"Thou wilt be *Mine*!"

O, Heavenly Rest! I yearn and pray
To see the morning of that day—
That dawn of light Divine—
When Faith shall fade in glad surprise
And Peace upon my heart shall rise,
Forever *Mine*!

O, loving Father! O, Father of All!
O, Holy Spirit Mystical,
Jehovah, One and True!
I walk in strength and hope below,
For even here I gladly know
That Thou art *Mine*!

Utica, N. Y., 1859.

THE WORDS WE SPEAK.

Our words are imperishable. Like winged messengers, they go forth, but never to be recalled—never to die. They have a mighty power for good or evil through all time; and before the great white throne they will be swift witnesses for or against us.

The words we speak have a mighty power; and there are words angels might covet to utter. There are words of comfort to the afflicted. There are sad hearts that need comfort everywhere, and there are words of blame and cold indifference, or feigned sympathy, that fall like lead upon the stricken spirit; and there are blessed heart-words of cheer, which bear up the soul and enable it to look out from the dark night of its troubles, and discern the silver lining of the gloomy cloud.

There are words of counsel to the young, to the tempted, the erring. Speak them earnestly, affectionately, and though the waves of circumstance may soon waft them away from your observation, yet such is God's husbandry, that if uttered in faith and with prayer, He will take care that on an earthly or heavenly shore the reaper shall rejoice that he was a sower.

There are kind words; how little they cost, how priceless they are! Harsh words beget harshness; and fretful words, like a certain little insect, sting us into a feverish impatience. But who can resist the charm of kind, loving words? The heart expands beneath them as to the sunshine, and they make us happier and better.

Then there are cheerful words, and why should we dole them out with such miserly care? They ought to form the atmosphere of our homes, and to be habitual in all our social intercourse. We have so many weaknesses, so many crosses, so much that is down-hill in life, that the habit of thinking and speaking cheerfully is invaluable.

But there are other words against which we should pray, "Set a watch, O Lord, before my mouth; keep the door of my lips." There are words of falsehood and deceit. They lurk in our expressions of civility, our professions of friendship, our transactions of business. How early do children, even, begin to weave a web of deceit, and how carefully should those who train them watch against this sin, and, by example and precept, teach them always and everywhere to speak the truth.

There are slanderous words—how mischievous they are! There are the words of the tale-bearers, that breed suspicions and jealousies in neighborhoods, and between families. There are envious words and flattering words, and flattering words, which are no better. Then there is the long list of idle words, or by-words, as they are called.

But there is another class of words to which we would gladly refer—they are the words of eternal life. Cornelius sent for Peter that he might speak words to him. What blessed words those were! Will they not be remembered with joy by both speaker and hearer throughout all eternity? As we pass along through the world, God will often let us speak a word for Him; and if we seek His aid, He will make it a word of power and comfort, a word in season, to him that is weary.

"Speak gently; 'tis a little thing
Dropped in the heart's deep well;
The good, the joy, which it may bring,
Eternity shall tell." [Bullard.

There is many a man whose tongue might govern multitudes, if he could only govern his tongue.

The Reviewer.

THE FRENCH REVOLUTION OF 1789, as viewed in the Light of Republican Institutions. By JOHN B. C. ABBOTT. With One Hundred Engravings. [8vo. pp. 499.] New York: Harper & Bros.

This is a beautiful book, elegantly and profusely illustrated. As the title shows, it gives the history of the French Revolution, which commenced 1789, until the establishment of the consulate under NAPOLEON, in 1799. The history of no nation, for the same length of time, is more fearfully interesting and instructive than that of the French, during what has been fully denominated "the reign of terror," for it is a history of horror, causing the blood almost to chill in the veins at its simple recital. The nation publicly declared there was no God—that Reason was the French Deity—and it seems as if the Almighty, to punish them for their folly and impious presumption, left them to themselves to try their boasted reason; and like demons they thirsted for each other's blood, until the soil of France was soaked with human gore—until a million of men and twenty thousand women, and more than that number of prattling children, had fallen victims to the blind fury of the French people and their blood-thirsty leaders. Virtue, honor, intelligence, innocence, and childhood, afforded no protection—in fact, the highest honor, and the greatest virtues were considered crimes worthy of death. The guillotine became a plaything—the beheading of men a pastime, and of beautiful women and innocent children, a glorious fête, calling forth the air-rending shouts of the multitude. The author and the artist have portrayed these scenes in a truthful manner, though the former is disposed to apologize for these atrocities, on account of the oppression which the people endured previous to the revolution. He quotes many things said by French authors in palliation, who, of course, are anxious to save their country as much as possible from this disgrace. But the understanding of the reader will admit of no apology for such human butchery. Even ROBERT PIERRE, the most cruel of all the Jacobin leaders, who ruthlessly murdered his nearest friends, it is attempted to whitewash into a pretty decent kind of a man, though of a very mysterious and inexplicable disposition. We would settle that matter by writing him down a fend. There is a good deal of special pleading in behalf of the revolutionists. Sold in Rochester by D. M. Dewar.

TEXT AND HARMONY: Notes of an Oriental Trip. By CAROLINE PAINE. [12mo. pp. 300.] New York: D. Appleton & Co.

The reader of the volume bearing the above title, if desirous of accompanying the author, must go back to 1850 and make one of the company on board the American steam frigate Mississippi as that noble vessel enters Constantinople, the harbor of the Bosphorus. Here a few weeks are well spent in visiting the various objects of interest in the city and its environs, observing the habits and customs of the people, and then once more upon the waters for Alexandria, passage being secured in an Austrian steamer. At this latter port, preliminaries are arranged for the voyage up the Nile—pretty villas and gardens, charming groves of date, palm, and other trees, soon give place to sterile deserts—stretching as far as the eye can reach—and the peaks of the Pyramids. By-and-by boat-life is exchanged for the dwelling-place of the Arab, and all objects made notable in either sacred or profane history receive due attention. The extent of the trip is indicated by the appellation of the book, and if the reader takes views from the same standpoint as the author, the parties cannot fail being mutually agreeable. Rochester—ADAMS & DABNEY.

FROM DAWN TO DAYLIGHT; OR, THE SIMPLE STORY OF A Western Home. By A. M. L. WILSON. [16mo.—pp. 389.] New York: Derby & Jackson.

"To shorten some of the lonely hours of a tedious convalescence, and to gratify and amuse my children," remarks the writer, "I prepared this sketch of the life of a dear friend." A clergyman's wife chanced to peruse the manuscript, and felt that, if published, it might lead laymen to perceive how easily, by kindness, consideration and prompt payment, they could strengthen their Pastor's hands, or, on the contrary, paralyze all his efforts and energy, by negligence, thoughtlessness and selfishness, hence, it was given to the press. The narrative, we are informed, is literally true, the only resort to fiction being in giving that which a people should do, instead of what they did or did not do. If the lady can thoughtfully peruse this volume, and still remain lax in the specialties to which it is devoted, we have striking modern examples of the folly of "casting pearls before swine." Rochester—STEELE, AVERT & CO.

ITALY AND THE WAR OF 1859. With Biographical Notices of Sovereigns, Statesmen, and Military Commanders; Description and Statistics of the Country; Causes of the War, &c. By JOHN DE MARGHERITA, author of "The Last Days of Pompeii," "The Match Girl," "Parisian Pickings," &c. With an introduction by Dr. R. S. HICKSON. Philadelphia: With Map and Portrait. [16mo.—pp. 892.] Philadelphia: G. G. Evans.

An interesting work, written by a lady acquainted with the scenes which she describes and many of the actors in those scenes. Most of the facts in regard to the war have been given in the papers, but here they are furnished in a form for preservation, and in their proper connection, so that the causes and effects of the different movements are readily understood. The author's description of Italy and its political divisions—the power, territory and importance of each, is particularly interesting. For sale by the publishers.

Books Received.

THE ANATOMY AND PHYSIOLOGY OF THE HORSE: With Anatomical and Questionable Illustrations. Containing, Also, a Series of Examinations on Equine Anatomy and Physiology, with Instructions in Reference to Dissection, and the Mode of Making Anatomical Preparations. To which is added Glossary of Veterinary Terminology, Toxicological Chart, and Dictionary of Veterinary Science. By GEORGE H. DADD, M. D., V. S., author of "The Modern Horse Doctor," "Cattle Doctor," &c. &c. New York: A. O. Moore & Co. Rochester—DARROW & BRO.

A NATURAL PHILOSOPHY: Embracing the Most Recent Discoveries in the Various Branches of Physics, and Exhibiting the Application of Scientific Principles in Every Day Life. Adapted to the Use of Schools, and for the Use of the Public, with or without Apparatus, and accompanied with Full and Complete Illustrations. By G. QUACKENBUSH, A. M. Principal of the "College School," N. Y.; author of "First Lessons in Composition," &c. &c. [16mo.—pp. 450.] New York: D. Appleton & Co. Rochester—LIBRARY HALL, General Agent.

LIFE OF COL. DAVID CROCKETT. Written by Himself, comprising his Early Life, Hunting Adventures, Services under Gen. Jackson in the Creek War, Eloquent Speeches, Career in Congress, Triumphant Tour in the Northern States, and Services in the Texas War. To which is added an Account of Col. Crockett's glorious death at the Alamo, while fighting in defense of Texas Independence. By the Editor. [16mo.—pp. 405.] Philadelphia: G. G. Evans.

Spice from New Books.

A Slight Misconception.

"These are where the boys sit for College," said the Professor to Mrs. Partington, pointing to the High-School House. "Did they?" said the old lady, with animation; "and, if they sit for College before they went there, didn't they fight afterwards?" "Yes," said he, smiling, and favoring the conceit; "yes, but the fight was with the head, and not with the hands." "Butted, did they?" said the old lady, persistently. "I mean," continued he, "that they wrestled with their studies, and went out of College to be our ministers and doctors." "Ah!" said she, "I never knew that people had to wrestle to be ministers and doctors before." They moved on, Mrs. Partington pondering the new idea, and like and Lion striving for the possession of the old lady's umbrella—"Knitting Work," by RUTH PARTINGTON.

Congressional Candidates.

CANDIDATES for Congress,—self-trumpeters. In addressing the electors it is amusing to observe how invariably, and how very impartially, each candidate, when describing the sort of representative whom the worthy and enlightened constituents ought to choose, draws a portrait of himself, blazoning the little nothings that he had achieved, and, sometimes, like the Pharisee, introducing a sting at his opponent by thanking heaven that he is not like yonder Publican. For the benefit of such portrait painters, I will record an apposite anecdote of Mirabeau, premising that his face was deeply indented with the small-pox. Anxious to be put in nomination for the National Assembly, he made a long speech to the voters, minutely pointing out the precise requisites that a proper and efficient member ought to possess, and, of course, drawing as accurate a likeness as possible of himself. He was answered by Talleyrand, who contented himself with the following short speech: "It appears to me, gentlemen, that M. de Mirabeau has omitted to state the most important of all the legislative qualifications, and I will supply his deficiency by impressing upon your attention, that a perfectly unobjectionable member of the Assembly ought, above all things, to be very much marked with the small-pox." Talleyrand got the laugh, which in France always carried the election.—"The Tin Trumpet," by PAUL CHATFIELD, M. D.

Adversity a Blessing.

ADVERSITY is very often a blessing in disguise, which by detaching us from earth and drawing us towards heaven, gives us, in the assurance of lasting joys, an abundant recompense for the loss of transient ones. "Whom the Lord loveth he chasteneth." Many a man in losing his fortune has found himself, and been ruined into salvation; for though God demands the whole heart, which we could not give him when we shared it with the world, he will never reject the broken one, which we offer him in our hour of sadness and reverse. Misfortunes are moral bitters, which frequently restore the healthy tone of the mind, after it has been cloyed and sickened by the sweets of prosperity. The spoiled children of the world, like their juvenile namesakes, are generally a source of unhappiness to others, without being happy in themselves.—*Ibid.*

Education in China.

THE boys commence their studies at six or seven years of age. In China there is no royal road to learning, but every boy, whatever his rank, takes the same class-book and submits to the same training. The school room is a low shed, or a back room in some temple, or some attic in some shop where each boy is supplied with a table and a stool, and the teacher has a more elevated seat and a larger table. In the corner of the room is a tablet or picture of Confucius, before which each pupil prostrates himself on entering the room, and then makes his obeisance to his teacher. He then brings his book to the teacher, who repeats over a sentence or more to the pupil, and he goes to his place repeating the same at the top of his voice till he can repeat it from memory, when he returns to his teacher, and laying his book on the teacher's table, turns his back upon both book and teacher and repeats his lesson. This is called backing his lesson. In this way he goes through the volume till he can back the whole book; then another, then another, till he can back a list of the classics. The boys in the school, to the number of ten to twenty, each go through the same process, coming up in turn to back their lesson, and he that has a defective recitation receives a blow on the head from the master's ferule of bamboo, and returns to his seat to perfect his lesson. The school teachers are usually unsuccessful candidates for preferment and office, who, not having habits for business or a disposition to labor, turn pedagogue. They receive from each of the pupils a given sum proportioned to the means of the parents, and varying from three to ten or twelve

dollars a year from each pupil, and perhaps in addition an occasional gift of fruits or food.

The schools are opened at early dawn, and the boys study till nine or ten o'clock, when they go to breakfast, and after an hour or so return and study till four or five o'clock in the afternoon, and then retire for the day. In winter they sometimes have a lesson in the evening.

The first book is called the Trimerical Classic, which all Chinese boys begin with, and which some of their commentators have called a passport into the regions of classical and historical literature. We should as soon think of putting a copy of Young's Night Thoughts into the hands of a beginner with the expectation of seeing him master it. These young Celestials are not expected, however, to understand what they read, but simply to memorize, and occasionally write out some more simple character, and perhaps after two or three years' reading and memorizing, they begin to study the sentiments of the author. The sons of tradesmen and mechanics seldom study long enough to master the classics, but gain a smattering of books, and learn to read and write the language sufficient to keep accounts, and gain a little knowledge of mathematics, when their education is ended. Such boys, and they constitute no small portion of school boys in China, as they grow up, retain the sound of many characters, but are unable to explain the meaning of a page in any common book. Three or four years of schooling forms the sum of their education, and that is insufficient to give any one a practical knowledge of their written language.—"The China Mission," by WILLIAM DEAN, D. D.

THE BANK OF ENGLAND.

"The buildings cover about three acres of ground. Many of its rooms are copied from the classic models of Greece and Rome. The employees number about one thousand. Several of the officers reside in the bank. The notes redeemed each day are checked, canceled and put away in boxes. After keeping them ten years they are burned. The accumulations of the last ten years, now in the vaults of the bank, amount to three thousand millions of pounds; and yet any one of these notes can be referred to in a minute, and the history of its issue and its return given. The bank does all its own printing, and several presses are kept busy. Everything is done by machinery—the note is not touched by the pen before it goes out. I held in my hand, yesterday, one note for a million of sovereigns!"

In the bullion-room ingots of gold were piled up like cords of wood, and silver bars in vast mountains. The machines for detecting light coin, and for cutting them, are exceedingly curious and yet simple. Every banker's deposit is weighed, and all the light pieces cut nearly in two and returned next day. The system of the bank is as perfect and exact as clock-work. And yet in spite of all precaution, some small forgery is almost daily detected. But since the great forgery committed by Axtell, for \$280,000, the bank has not lost any very heavy sums; although in 1822 capital punishment for the crime was abolished, when the 'old fogies' predicted that everybody 'hard up' would turn forger.

In the specie department of the bank there are bags and boxes of sovereigns and half-sovereigns enough to make a miser mad; there are mountains of mint drops, for which millions are sighing, and lying, and perpetrating all conceivable crimes! I was asked to lift a big bag of sovereigns, and for once, I must confess, I felt a sovereign disgust for money.—*Col. Fuller.*

OUR COUNTRY—NOW AND THEN.

Eighty-three years ago, when the fifty-two signers of the Declaration of Independence, "appealing to the Supreme Judge of the world for the rectitude of their intentions," declared "that these United Colonies are, and of right ought to be, free and independent States," but few of the most sanguine of that day dreamed of the extent and greatness which their country would attain in the comparatively brief space of three-fourths of a century. Then there were thirteen sparsely populated colonies; now we have thirty-three powerful States, and several large Territories on the threshold of membership. The following statistics, showing the means and degrees by which the great Empire of the West has been

ORDER.

ALLEGRETTO.

1. We have a time for e - very thing, And e - very thing in time; A time to work, a time to sing: Yes! now our voi - ces chime.

2. The time to play, we ne'er for - get: We love to have it come. The time to sleep, the time to eat, They help make up the sum.

3. We have a place for all our things, And all our things in place; A place for hats, and hoops, and strings, And one where we may race.

4. A place for books and ink and pen, When stu - dy hours are o'er: We put them up with care; and then, We're off to play once more.

5. But when we hear the tin - kling bell Which says that school's be - gun, We leave the play we love so well, And for our pla - ces run.

YOUNG RURALIST.

"I CAN'T DO IT."

Yes you can. Try, try hard, try often, and you will accomplish it. Yield to every discouraging circumstance and you will do nothing noble or great. Try, and you will do wonders. You will be astonished at yourself, and your advancement in whatever you undertake. "I can't" has ruined many a man; has been the tomb of bright expectations and ardent hopes. Let "I will try" be your motto in whatever you undertake, and if you press onward steadily, you will accomplish your object, and come off victorious.

St. Jerome, O. W., Aug., 1859. ROBERT SHAW.

AUTUMN.

THE rosy hours of Summer are past, the clouds look heavy, the rain begins to fall. Solemnly the rough and uneven wind passes through the boughs that overhang the old cottage, with its mournful sound. It brings back to recollection the absence of loved friends that we have greeted under the same roof, especially those loved ones that are sleeping beneath the faded flowers and the withered grass of Summer. They are gone like the Summer, never to return.

Experience prompts us to begin to provide for winter, which seems impatient of delay. The winter is a blessing—a time for the improvement of our minds—a time when we should view the past year's labors, that we may know how to improve the next. In the hurrying time of Autumn just begun, let us pause and say farewell to the past beautiful Summer.

Allensville, Ind., 1859. S. H. C.

A SKETCH.

In a beautiful vale was a girl so fair that the lilies blooming there could not compare with her in beauty—her song so sweet that even angels bring their harps and bend to listen to her music; and her heart was tender as her song. One day as she strayed amidst the beauty of her loved vale, there came to her an angel of pale countenance and stern look, and said to her, "Maiden, leave thy fair home; come to the valley of Death; thither go I." And she followed him, weeping.

The valley was cold, and dark, and drear—no flower bloomed in beauty there—all were pale, faded ones. And the beautiful maiden wept. The pale angel pitied her, for she wept. So, he drew before her eyes a silver band, and she did not see the mist nor the darkness. Still she did weep—for she was blind. The angel pitied her, and he drew his icy fingers over her heart-strings, binding them fast; so fast that she could not feel sorrow.

Then she lay so still—so pale—the angel pitied her, for she was dead,—and he knocked upon a gate, high and broad, and of pure pearl. Responsive to the angel's call it opened wide. Then spake he to the fair maid, "Maiden awake; lo! here's thy home; a Temple more beautiful than THESALY's fair vale. The maiden awoke, caught up the song that angel's song, passed through the gate of pearl, and ever more in a land of glorious beauty blessed the angel Death.

Hillsdale, Mich., Aug., 1859. BESSIE DAY.

NIGHT has its song. Have you ever stood by the sea at night, and heard the pebbles sing and the waves chant God's glories? Or have you ever risen from your couch and thrown up the window of your chamber and listened? Listened to what? Silence, save now and then a murmuring sound, which seems sweet music then. Have you not fancied that you heard the harp of God playing in heaven? Did you not conceive that you stars, that those eyes of God looking down on you, were also mouths of song; that every star was singing of its Almighty Maker, as it shone, and his lawful, well-deserved praise which are loud to the heart, though they be silent to the ear.

POWER or INTEGRITY.—Reproaches have no power to afflict the man of unblemished integrity, or the abandoned profligate. It is the middle compound character which is alone miserable; the man who without firmness enough to avoid a dishonorable action, has feeling enough to be ashamed of it.—*Selected.*

LAZINESS begins in cobwebs, and ends in iron chains.

TWO MAXIMS FOR YOUTH.—Do everything in its proper time. Keep everything in its place.

YOUTH'S CORNER.

TO CORRESPONDENTS.—In answer to inquiries on the subject we would state that all Enigmas, Problems, &c., should be accompanied by the real names of the authors and correct solutions in order to receive attention.—that we charge just nothing for publication of any correct and proper contributions, but reject all matters of an advertising, or personally glorifying tendency. "A word to the wise," &c.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I AM composed of 23 letters.
My 16, 8, 15, 4, 9, 14 is king of Spain.
My 21, 14, 8, 21, 14 is a vegetable.
My 14, 2, 15, 8, 23, 9, 14, 15, 6, 8, 18 is a bird.
My 10, 9, 12, 21, 18 is a lady's name.
My 20, 5, 6, 18, 17 is a very useful article of furniture.
My 10, 5, 2, 3, 21 is a man's name.
My 11, 5, 22, 18 is a boy's plaything.
My 8, 21, 17, 19, 18 is a domestic quadruped.
My 19, 23, 18, 16, 9, 21 was a celebrated Roman general.
My 7, 21, 19, 10, 21, 1 is one of the most celebrated cities in Europe.
My whole was a distinguished historian.
Waterloo, N. Y., 1859. MARY E. BLOUNT.

Answer in two weeks.

For Moore's Rural New-Yorker.

PROBLEM.

A LADY had a circular dinner which would hold a certain number of cakes, each 55-100 inches in diameter, very nearly. How many cakes would it hold? What was the diameter of her dinner? What fraction of the dinner was unoccupied by the cakes?
Granger, Alleg. Co., N. Y., 1859. O. L. CODYRSC.

Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN No. 505.

Answer to Miscellaneous Enigma:—A cat in gloves catches no mice.
Answer to Geographical Enigma:—Constantinople.
Answer to Arithmetical Problem:—\$228 95-100.
Answer to Algebraical Problem:—964.

MOORE'S RURAL NEW-YORKER

NEWS DEPARTMENT.

ROCHESTER, N. Y., SEPTEMBER 24, 1889.

DOMESTIC NEWS.

Matters at Washington.

It is said the failure of the treaty between Mexico and the United States was owing to the respective differences relative to the clause for the protection of the right of way proposed to be given to this Government—the latter claiming to be the best judge when such protection should be undertaken by itself, and the Mexican Government holding the right that it should be exercised only in the event of Mexico being incompetent, and after application for that purpose.

Further reliable advices from Vera Cruz, dated August 31st, state that the Constitutional Government had paid the full amount of the French claim out of the customs, being one of fourteen hundred thousand dollars. This money came into the hands of N. Gabriel, the French Minister, who had failed to distribute it in the manner provided in the Constitution. There was reason to believe in official quarters that he intended to invest it in a private enterprise with Miramon. Much indignation continues to be expressed against him by the French residents.

The State Department has received information from our Minister at Berlin that Christian Earnest, an American and naturalized citizen, who had been compelled by force to enter the Moravian army, had, upon the remonstrance of the United States government, been discharged from service.

However much our Government may be impressed with the truth that the island of San Juan belongs to us, there appears to be no doubt but that the Government of Great Britain and the United States will instruct their agents to act with the utmost circumspection, in view of a satisfactory adjustment of the existing differences. It will be recollected that Secretary Marcy, four years ago, said that the title ought to have been settled before. Either party should exclude the other by force, or by the exercise of complete and extensive sovereign rights within the disputed points. This was the substance of his letter to Mr. Crampton, at that time representing Her Majesty's Government, and to which much importance is now attached. From all that can be ascertained in well informed circles, it is reasonable to infer that no serious difficulties are likely to result between the two countries. If any danger at all is apprehended, it is consequence of the well known intrepid character of Gen. Harney. Col. Hawkins, of the British army, on the 13th inst., brought dispatches concerning the dispute, to the British legation, and then left for New York to take passage for England, with dispatches from Gov. Douglass to Her Majesty's Government on the same subject.

Gen. Scott left Washington on the 16th for New York, and will sail on the 20th for the Pacific. The present delicate and complicated state of affairs at San Juan, growing out of Gen. Harney's movements, require great care and caution on the part of our Government to prevent a collision. The Cabinet, in conference with Gen. Scott in regard to the matter, suggested the propriety of sending some one there who was less impetuous and more prudent than Gen. Harney. Gen. Scott at once informed the President that he would go, and that as soon as his instructions were prepared he would be ready to start.

Personal and Political.

The Democracy of New York met in Convention at Syracuse on the 14th inst., for the purpose of putting in nomination a ticket to be supported at the coming election. The attendance was exceedingly large, and the proceedings anything but harmonious. After considerable discussion, and something that very much resembled a general old-fashioned row, the following ticket was nominated by one section of the party:

For Secretary of State—David R. F. Jones, of Queens. For Comptroller—Sanford E. Church, of Orleans. For Attorney General—Lyman Tremaine, of Albany. For State Engineer and Surveyor—V. R. Richmond, of Wayne. For State Treasurer—Isaac V. Vanderpool, of Erie. For Canal Commissioner—W. I. Skinner, of Herkimer. For State Prison Inspector—Noble S. Elderkin, of St. Lawrence. For Judge of Court of Appeals—Alexander S. Johnson, of Albany. For Clerk of Court of Appeals—John L. Lewis, Jr., of Yates.

The ticket belonging to the other section was similar, except for Clerk of Court of Appeals, for which position Edward Timpson, of New York city, was chosen. Mr. T. resigned, and the ticket was finally adopted as above.

The following State Committee was appointed:—1st District, W. D. Kennedy, New York; Peter B. Sweeney, New York; 2d, Aaron Ward, Westchester; James Craig, Kings; 3d, Peter Cagger, Albany; F. C. Laffin, Ulster; 4th, R. H. Cushman, Montgomery; R. G. Stone, Clinton; 5th, J. Stryker, Oneida; W. Johnson, Oswego; 6th, H. Hubbard, Chenango; H. A. Beebe, Tioga; 7th, L. A. Ward, Steuben; E. P. Ross, Cayuga; 8th, Dean Richmond, Genesee; A. P. Lanning, Erie.

The death of the Hon. T. L. Harris, of Illinois, left a vacancy in the next Congress. Gov. Bissell has issued a proclamation for a special election, to be held on the 8th of November.

The Hunterdon Republican, published at Flemington, the residence of Col. Clark, the "straight American" nominee for Governor of New Jersey, says Col. Clark received the official announcement at Camden, for the first time, on Friday last, and that on the same day he addressed a letter to the Chairman of the Committee appointed to inform him of his nomination, declining to be a candidate of that faction.

The Democrats of Massachusetts held a State Convention at Worcester on the 15th inst. The State ticket nominated is as follows:—Governor—

Benjamin F. Butler, of Lowell. *Lieut. Governor*—R. C. Bemis, of Springfield. *Secretary of State*—Samuel W. Bowen, of Adams. *Treasurer*—Geo. Demarest. *Auditor*—James E. Easterbrook, of Worcester. *Attorney General*—D. H. Mason, of Dedham. The Convention was quite harmonious.

The annual election for Governor and members of the State Legislature of Maine, took place on the 12th inst. Lot M. Morrill, the present Governor, was the Republican candidate, and Mannassah H. Smith the Democratic nominee. The returns indicate the re-election of Governor Morrill, and an increased Republican supremacy in the State over last year.

The Republicans of Wisconsin have put in nomination the following ticket:—Governor—A. W. Randall, of Waukesha. *Lieut. Governor*—B. G. Noble, of Walworth. *Secretary of State*—L. P. Harvey, of Rock. *Treasurer*—S. D. Hastings, of Trempealeau. *Attorney General*—James H. Howe, of Brown. *Bank Comptroller*—G. Van Steenwyk, of Columbia. *State Prison Commissioner*—Hans Heg, of Racine. *Superintendent of Public Instruction*—G. S. Pickard, of Grant.

News Paragraphs.

LIBERIA dates to July 12th have been received. The President, embarking on the new war vessel, Quail, had gone to visit some of the more distant settlements. Forty-two emigrants, of the McDonough household, had arrived from New Orleans. Public and business affairs were advancing favorably.

In the Theological Seminary connected with the Illinois State University, are fourteen Scandinavian young men, preparing for the Lutheran ministry, viz.:—One Dane, five Swedes, and eight Norwegians. They are under the charge of Pastor Ebsjorn, Professor of Theology and Scandinavian languages and literature.

At Old Point Comfort, a party of United States soldiers are trying to wear out a gun weighing 15,000 pounds. It is loaded with 10 pounds of powder, and carries a ball weighing 125 pounds. It has already been fired more than a thousand times. Near it are two guns which were fired 2,500 times at Pittsburg. The object of the firing is to test the durability of the iron, and the gun will be discharged until it becomes useless.

Wm. OWNEY, of Southampton county, Va., died a few days since, aged one hundred years and five months. He was engaged in the battle of Brandywine, and also at Petersburg, Va., when Arnold paid that town a visit. The old soldier had never taken medicine in his life, and in his last illness positively refused to have it administered.

During the present season, six steamers have been totally lost on the Missouri river; the Monongahela, W. C. Sombart, Sallie West, Kate Howard, Morning Star, and D. S. Carter. Some of these boats were nearly new; and the loss aggregates over two hundred thousand dollars.

At Sidney Davis' clothing establishment in Bangor, a spring gun is set at night for the benefit of burglars, but on Wednesday morning a careless clerk forgot the concealed weapon and received a charge of shot in one of his legs.

The telegraph is now so extensively used for correspondence that the revenue of the post-office department is a million dollars less annually than it would otherwise be.

The fight with the Mohave Indians by Major Armistead was a rather serious affair. The Indians came running up, yelling and whooping, and charged fearlessly, the bravest of them coming up to within ten or fifteen yards of the muzzles of the rifles; these, however, paid dearly for their temerity, the steady and well-directed fire of the men held them in check, when, after thirty minutes hard fighting, Major A. ordered the company to charge them, which was done. The Indians broke in every direction, perfectly discomfited; not a yell or sound of any kind was to be heard from them after this; the victory was complete. It is supposed that some fifty or sixty Indians were killed. Of the Major's force three men were slightly wounded.

The Milwaukee Sentinel gives the names of 101 newspapers, English and German, published in Wisconsin, and adds:—The aggregate weekly issues of these papers is over 80,000, and we are assured that the three or nearly four million copies that form the grand total every year are printed on materials made in the State, four-fifths of all the paper being manufactured in Wisconsin.

On Friday week the Brooklyn post-office was entered and nearly five hundred letters were opened, and about \$8,000 purloined, as was ascertained from the rifled envelopes strewn upon the floor. More may have taken, but only that amount had been ascertained. No clue has yet been discovered to the robbers.

It may be a curious fact for some of our readers to know that the regular weekly consumption of flour in this city is fifty thousand barrels, or a little over seven thousand barrels per day. So says the N. Y. Sun.

A WASHINGTON dispatch contains a rumor that the recent Costa Rican Revolution was in a great measure the work of the British Minister, Sir Wm. Gore Ouseley, who had failed to gain President Mora's assent to a treaty proposed to him.

In an article upon diamonds, in Harper's Magazine, it is stated that the best quality of silex, which enters into the composition of the admirable imitations of diamonds made in Paris, is found in Rhode Island, and is exported to France for that purpose.

A MAMMOTH balloon is being made in New York by a Mr. Lowe. He is going to try to cross the Atlantic, and expects to reach London in forty-eight hours.

TELEGRAPHY TO CALIFORNIA AND UTAH.—Arrangements are in progress for the extension of a line of telegraph from St. Louis to Fort Smith, 500 miles on the overland route to California, and also from St. Louis to Atchison and Utah. This will give us California news three or four days earlier than now, and news of events in Utah and Kansas the same day they occur.

JAPANESE MATTERS.—We have news dated on the 5th of June from Japan. The Emperor had

ordered that the cities of Jeddo, Nagasaki, Simoda and Hakodadi should be united by telegraph, and a line was being built from Jeddo to his summer residence. All the vessels of the Imperial fleet were to be turned into steam propellers, and one of them, the Nippon, had already left on a voyage of discovery manned by a native crew, and native engineers. An American having discovered a copper mine, was permitted to work it on promise to divide the proceeds with the government.

SAWING MACHINES.—Although this useful invention has been widely advertised and talked about, few people realize into what general use they have come. Here and in England it is computed that no less than 200 different patents have been granted, and that 1,500 or 1,600 are sold weekly, at prices ranging from \$5 to \$500, and that the whole number in use is near 150,000.

FROST AND SNOW IN NORTHERN NEW YORK.—The frost of the 14th inst., did its work thoroughly in Chateaugay and vicinity. Potatoes and all other vines were cut to the ground. The degree of cold was so great as to form a hard crust on the ground. There were snow and hail storms.

IRISH REMITTANCES HOME.—It is authoritatively stated that the amount of money remitted home by Irishmen, residents in America, the last year, for the purpose of assisting their friends to immigrate, was \$2,360,000. The ten preceding years the amount remitted was \$43,650,000.

INDIAN MASSACRE.—The Utah papers furnish an account of another massacre of a party of emigrants by Indians. The affair happened July 24th on Raft river, Oregon, where the emigrants were attacked by Shoshones and his men, and one woman of the emigrants killed and seven wounded, (some not expected to live.) The Indians then robbed the wagons of \$1,700 in money, and drove off a large quantity of their stock. The attacking Indians were the same party who were recently severely chastised by troops under Lieut. Gray.

FULTON'S VOYAGE.—The Albany Journal says:—"The Dean of Ripon, in England, has very recently died. By his decease, the Hon. John Q. Wilson, of this city, becomes the last survivor of the party of cabin passengers who accompanied Robert Fulton in his first steamboat journey from New York to Albany. The Dean was afterwards remembered in this country, the degree of Doctor of Laws having been conferred on him by Columbia College, on motion of Bishop Watson. When the Persia had its trial trip, this gentleman was one of the specially invited guests, as having been associated with the earliest successful steam voyage. Between the equipment of the North River and that of the Great Eastern, is a development of an invention which, not often in the world's history, it is given to one life to witness."

SHARP PRACTICE UPON FEMALES.—One of the most successful and meanest efforts at rascality that was ever heard of was brought to light on the 7th inst. in New York. From the revelations it appears that a sharper, named Williams, in Philadelphia, advertised for a number of young ladies to go South to fill situations as teachers of music. Fifteen young women were accepted by the advertiser. They were to have remunerative employment in the families of wealthy Southern planters, and in every respect their future prospects were of the most flattering description. It was simply stipulated by the advertiser that the ladies should defray in part their expenses to their respective destinations. On arriving in New York, en route for the South, the sharper took charge of the baggage of the ladies, collected from them about one hundred and fifty dollars for their fare in the steamship, and while they were waiting patiently at the hotel for him to conduct them on board, he decamped with his plunder. His race was a short one, however, being overhauled at Washington, and he is now safely lodged in jail in New York city. It is to be hoped that he will meet just punishment,—a few years in the State Institution at Auburn is what he richly merits.

FOREIGN NEWS.

GREAT BRITAIN.—The report was in circulation at Gibraltar on the 27th of August, that the Emperor of Morocco was dead, and that a serious affray had taken place on the Island of Ceuta, between the Spaniards and Moors. Troops were called out. Seven thousand Moors had collected, and at last accounts these parties were in a fight on the 26th, and several were killed on both sides.

The English mail steamer Indus was fired on twice from the Spanish fort at Tarifa, on the 27th of August, while her ensign was flying. At the second fire a large round shot fell within 50 yards of the steamer.

It is suggested in the London papers that the firing on the steamer Indus, from Tarifa, was for the purpose of learning the state of affairs at Ceuta.

FRANCE.—The Paris telegram of Friday, says the French Government has instructed Turkey that France would support the Suez Canal project.

A letter from Paris says the Queen of Spain had sent to the various Courts of Europe a protest against the eviction of her cousin from Parma. Cols. Charras and Barber refused the Emperor's amnesty—the former in a furious invective against Napoleon.

The Newfoundland mail at Paris brought the announcement of a full triumph of the French Admiralty over the English, in the question concerning the fisheries.

A Paris letter says there is no doubt that the Zurich Conference will disagree about many points touching the peace of Villa Franca, and the opinion is growing stronger every day that a Congress may be held.

At a meeting of the Zurich Plenipotentiaries on the 1st of September, the regulation of the Lombardian frontiers and separation of the civil and ecclesiastical jurisdiction was discussed.

It was reported at Paris on Thursday that Metternich, the Austrian Ambassador, was about to leave on a visit to Vienna.

Uneasiness was felt in Paris on account of the Zurich Conference, and rentes declined.

AUSTRIA.—Advices from Vienna state that Austria had decided to discount that portion of the

Anstrian debt which is to be apportioned to Lombardy, and also sell the public domains.

ITALY.—Advices from Italy state that the people are becoming impatient at the inactivity of the Zurich Conference, and the various contradictory reports, touching their doings, also state that Piedmont demands from Austria the cession of Mantua and Peschiera.

The first National Assembly of the Romagna was opened at Bologna, Sept. 1st, by the Governor General, who, in a speech, congratulated the people on the alacrity with which they had hastened to the electoral districts to record their votes. He had, he said, provided for the defense of the country against aggressions from all sides, by forming a league with the neighboring States.

A letter from Bologna states that at the popular elections the priests deposited their votes as freely as the citizens, and the result was an immense majority in favor of the liberal party, which goes against the establishment, on any conditions, of the temporal power of the Pope. The aristocracy was at the head of the movement.

The finances of Romagna were in excellent condition, and there was no doubt that the new government would be able to go on without a loan.

Since the overthrow of the temporal power of the Pope, the banditti and the smugglers, who had infested the Romagna, had entirely disappeared.

RUSSIA.—Advices from Russia state that the expedition into Daghestan had been completely successful. A company had been formed in St. Petersburg for the construction of the Commercial Fort there on a large scale. The government had ordered three corps de armie, under Prince Gortschakoff, to be placed on a peace footing.

SPAIN.—Accounts from Madrid state that Spain had withdrawn her Consul from Tangier, and decided to demand satisfaction at Morocco for outrages at Ceuta. Orders had been given for the formation of an expeditionary corps of 10,000 men.

Later advices from Madrid state that Gen. Pitt will command the expedition fitting out against the Moors.

A cyclone passed over Calcutta on the 25th of July, and 40 vessels, including two steamers, were lost in the river Hoogly. Immense damage was done on shore, and many lives were lost. No particulars.

Clippings from Foreign Journals.

Four crosses of the Legion of Honor were bestowed by Louis Napoleon on the Paris Press on the occasion of the grand fete. The Emperor's well known antipathy to newspapers precludes the idea that the French press has been "crossed in love."

The coal consumed in Manchester, England, and its environs, for motive steam power, is 80,000 tons per day, and is equal in power to 1,200,000 horses. The trans-Atlantic steamers consume 700,000 tons per year, and in the manufacture of gas 10,000,000 tons per year. It is estimated that England alone could furnish coal enough for the consumption of the whole of Europe for 4,000 years.

The latest English Court gossip is that the Duke of Rutland has offered marriage to Princess Mary, sister of the Duke of Cambridge, who had accepted him; but that the head of the family, viz.: the Queen, forbids the match. Both parties arrived at "years of discretion," years ago, but Princesses, less fortunate than dairymaids, cannot marry the man of their choice. It is stated to be the settled policy of the Crown to have no marriages in the Royal Family except with other Royal Families.

LION HUNT, the veteran essayist and poet, is dead, at the age of 75. He was the intimate personal friend of Lamb, Coleridge, Hazlett, Shelley, Keats and Wordsworth. He was for many years editor of the London Examiner, and its liberal tone drew on him the persecution of the Government. The two Hunts were prosecuted and sentenced to pay a fine of £500, which the costs of the defence made a sum of £2,000, and to be imprisoned two years in Horsemerger Jail. After his connection with the Examiner was broken off, he engaged in numerous literary enterprises, and wrote books, more or less of which are to be found in every library. He was a genial and discriminating critic, and one of the most chatty and agreeable of English essayists. In 1847, Queen Victoria, perhaps as an atonement for the persecutions he had endured from her uncle, granted him a pension of £200 per annum.

When railways were in their infancy in England it was supposed that they would injure the estates through which or near which they ran, and the English Cabinet Minister, Mr. Labouchere's father, received the compensation of \$150,000 for an imaginary detriment of this sort. After his death, his son, finding that there was no injury to the estate from the vicinity of the railway, but to the contrary, refunded the \$150,000.

The London Advertiser gives the following curious news in its Paris correspondence:—Engineers have been sent to Cologne to survey the whole line of posts, thence to Calais, that they may fix on a spot for the formation of a seaport sufficiently spacious to contain a fleet of fifty transports, and the Minister of Marine had notified his subalterns that fifty transports, each capable of containing 2,000 men, must be ready and waiting on the coast opposite Dover, by the commencement of the ensuing year. The writer says that this statement reposes on excellent authority, and that full confidence of its authenticity has been telegraphed to the English Government. He throws out the conjecture that the French alterations with Belgium will supply a pretext for a rupture with England. This story was regarded as a ridiculous "canard."

OBITUARY.—We regret to announce the death of Mr. REUBEN B. WARREN, of Alabama, Genesee Co., known to many of our readers as an enthusiastic amateur Horticulturist, and an ardent friend and promoter of Rural Improvement. Mr. W. died on Saturday last, after a brief illness, at the age of 88 years. He was highly esteemed, and will be sincerely lamented.

—The telegraph announces that C. H. WITMAN, Esq., one of the most respectable and wealthy citizens of Suspension Bridge, was drowned there on Saturday last. Mr. W. was a most earnest and influential friend of the RURAL and its objects, and an estimable citizen. He was between fifty and sixty years of age.

The News Condenser.

GRIEF.

Tears' good in tears, or they had not been sent
By Him who is all good! It is not wise
To keep our sorrows in our hearts up-bent,
When we can give them freedom from our eyes.

The storm-cloud only darkens our fair earth,
Until it falls down in gentle rain;
And then what wondrous beauties have their birth;
So, when the heart is overcharged with pain,

We see a shadow upon every good;
But let our heavy sorrows have their way,
And as they well into a tearful flood,
What comfort may not come? Ah, who can say?

Grief hath a mission holier than joy—
It moves the selfish, and it warms the cold;
A common sorrow will even pain destroy,
And change the king and beggar to one mold.

Our griefs should make us gentler to our kind,
And as we comfort need more comfort pay;
So using sorrow, we our tears shall find
Have washed some grossness of our souls away.

Story Teller

THE TWO HOMES.

TWO MEN on their way home met at a street-crossing, and they walked on together. They were neighbors and friends.

"This has been a very hard day," said Mr. Freeman, in a gloomy voice. And as they walked homeward they discussed each other, and made darker the clouds that obscured their whole horizon.

"Good evening," was at last said hurriedly, and the two men passed into their homes.

Mr. Walcott entered the room where his wife and children were gathered, and without speaking to any one, seated himself in a chair, and leaning his head back, closed his eyes. His countenance wore a sad, weary, exhausted look. He had been seated thus for only a few minutes, when his wife said, in a fearful voice:

"More trouble again."

"What is the matter now?" asked Mr. Walcott, almost starting.

"John has been sent home from school."

"What?" Mr. Walcott partly rose from his chair.

"He has been suspended for bad conduct."

"Oh, dear?" groaned Mr. Walcott, "where is he?"

"Up in his room; I sent him there as soon as he came home. You'll have to do something with him. He'll be ruined if he goes on in this way. I'm out of all heart with him."

Mr. Walcott, excited as much by the manner in which his wife conveyed the unpleasant information as by the information itself, started up, under the blind impulse of the moment, and going to the room where John had been sent on coming home from school, punished the boy severely, and this without listening to the explanations which the poor child tried to make him hear.

"Father," said the boy, with forced calmness, after the cruel stripes had ceased, "I wasn't to blame, and if you will go with me to the teacher, I can prove myself innocent."

Mr. Walcott had never known his son to tell an untruth, and the words fell with a rebuke upon his heart.

"Very well, we will see about that," he answered, with forced sternness, and leaving the room he went down stairs, feeling much more uncomfortable than when he went up. Again he seated himself in his large chair, and again leaned back his weary head and closed his heavy eyelids. Sadder was his face than before. As he sat thus, his eldest daughter, in her sixteenth year, came and stood by him. She held a paper in her hand.

"Father," he opened his eyes, "here's my quarter's bill. Can't I have the money to take to school with me in the morning?"

"I am afraid not," answered Mr. Walcott, half in despair.

"Nearly all the girls will bring in their money to-morrow, and it mortifies me to be behind the others." The daughter spoke fretfully. Mr. Walcott waved her aside with his hand, and she went off muttering and pouting.

"It is mortifying," said Mrs. Walcott, a little sharply; "and I don't wonder that Helen feels annoyed about it. The bill has to be paid, and I don't see why it may not be done as well first as last."

To this Mr. Walcott made no answer. The words but added another pressure to the heavy burden under which he was already staggering. After a silence of some moments, Mrs. Walcott said:

"The coals are all gone."

"Impossible!" Mr. Walcott raised his head and looked incredulous. "I laid in sixteen tons."

"I can't help it, if there were sixty tons instead of sixteen—they are all gone. The girls had hard work to-day to scrape up enough to keep the fire in."

"There's been a shameful waste somewhere," said Mr. Walcott, with strong emphasis, starting up and moving about the room with a very disturbed manner.

"So you always say, when anything runs out," answered Mrs. Walcott, rather tartly. "The barrel of flour is gone also; but I suppose you have done your part with the rest in using it up."

Mr. Walcott returned to his chair, and again seating himself, leaned back his head and closed his eyes as at first. How sad, and weary, and hopeless he felt! The burdens of the day had seemed almost too heavy for him; but he had borne up bravely. To gather strength for a renewed struggle with adverse circumstances, he had come home. Alas! that the process of exhaustion should still go on—that where only strength could be looked for on earth, no strength was given.

When the tea bell was rung, Mr. Walcott made no movement to obey the summons.

"Come to supper," said his wife, coldly.

But he did not stir.

"Are you not coming to supper?" she called to him as she was leaving the room.

"I don't wish for anything this evening. My head aches very much," he answered.

"In the dumps again," muttered Mrs. Walcott to herself. "It's as much as one's life is worth to ask for money, or to say anything is wanted."

And she kept on her way to the dining-room. When she returned her husband was still sitting where she had left him.

"Shall I bring you a cup of tea?" she asked.

"No, I don't wish for anything."

"What's the matter, Mr. Walcott? What do you look so troubled about, as if you hadn't a friend in the world? What have I done to you?"

There was no answer, for there was not a shade of real sympathy in the voice that made the queries, but rather of querulous dissatisfaction. A few moments Mrs. Walcott stood behind her husband, but as he did not seem inclined to answer questions, she turned away from him, and resumed the employment which had been interrupted by the ringing of the tea bell.

The whole evening passed without the occurrence of a single incident that gave a healthful pulsation to the sick heart of Mr. Walcott. No thoughtful kindness was manifested by any member of the family; but on the contrary, a narrow regard for self, and a looking to him only that he might supply the means of self-gratification.

No wonder, from the pressure which was on him, that Mr. Walcott felt utterly discouraged. He retired early, and sought to find that relief from mental disquietude in sleep which he had vainly hoped for in the bosom of his family. But the whole night passed in broken slumber and disturbing dreams. From the cheerless morning meal, at which he was reminded of the quarter's bill that must be paid, of the coals and flour that were out, and of the necessity of supplying Mrs. Walcott's empty purse, he went forth to meet the difficulties of another day, faint at heart, almost hopeless of success. A confident spirit, sustained by home affections, would have carried him through; but unsupported as he was, the burden was too heavy for him, and he sank under it. The day that opened so unpropitiously closed upon him a ruined man!

Let us look in for a few moments upon Mr. Freeman, the friend and neighbor of Mr. Walcott. He, also, had come home weary, dispirited, and almost sick. The trials of the day had been unusually severe, and when he looked anxiously forward to scan the future, not even a gleam of light was seen along the black horizon.

As he stepped across the threshold of his dwelling, a pang shot through his heart, for the thought came—"How slight the present hold upon all these comforts." Not for himself, but for his wife and children was the pain.

"Father's come!" cried a glad little voice on the stairs the moment his footfall sounded in the passage, then quick, pattering feet were heard—and then a tiny form was springing into his arms. Before reaching the sitting-room above, Alice, the eldest daughter, was by his side, her arm drawn fondly within his, and her loving eyes lifted to his face.

"Are you not late, dear?" It was the gentle voice of Mrs. Freeman.

Mr. Freeman could not trust himself to answer. He was too deeply troubled in spirit to assume at the moment a cheerful tone, and he had no wish to sadden the hearts that loved him by letting the depression from which he was suffering become too clearly apparent. But the eyes of Mrs. Freeman saw quickly below the surface.

"Are you not well, Robert?" she inquired, tenderly, as she drew his large arm-chair toward the centre of the room.

"A little headache," he answered, with a slight evasion.

Scarcely was Mr. Freeman seated ere a pair of hands was busy with each foot, removing gaiter and shoes, and supplying their place with a soft slipper. There was not one in the household who did not feel happier for his return, nor one who did not seek to render him some kind office.

It was impossible, under such a burst of heart-shine, for the spirit of Mr. Freeman long to remain shrouded. Almost imperceptibly to himself gloomy thoughts gave place to more cheerful ones, and by the time tea was ready, he had half forgotten the fears which had so haunted him through the day.

But they could not be held back altogether, and their existence was marked during the evening by an unusual silence and abstraction of mind. This was observed by Mrs. Freeman, who, more than half suspecting the cause, kept back from her husband the knowledge of certain matters about which she had intended to speak to him, for she feared they would add to his mental disquietude. During the evening she gleaned from something he said the real cause of his changed aspect. At once her thoughts commenced running in a new channel. By a few leading remarks she drew her husband into conversation on the subject of home expenses and the propriety of restriction in various points. Many things were mutually pronounced superfluous and easily to be dispensed with, and before sleep fell soothingly on the heavy eyelids of Mr. Freeman that night, an entire change in their style of living had been determined upon—a change that would reduce their expenses at least one-half.

"I see a light ahead," were the hopeful words of Mr. Freeman as he resigned himself to slumber.

With renewed strength of mind and body, and a confident spirit, he went forth the next day—a day that he had looked forward to with fear and trembling. And it was only through this renewed strength and confident spirit that he was able to overcome the difficulties that loomed up, mountain high, before him. Weak despondency would have ruined all. Home had proved his tower of strength—his walled city. Strengthened for the conflict, he had gone forth again into the world and conquered in the struggle.

"I see light ahead," gave place to "The morning breaketh."—Orange Blossoms.

THE TRUE LADY.

We have noticed that some young ladies are never found engaged in domestic labor. Call at their homes at any time of day, and you do not find them performing housework. They are frequently found embroidering, making a lace collar, practicing on the piano, or doing nothing. We infer that they seldom or never attend to domestic labors, or else that they suddenly quit the kitchen when the door-bell rings, lest they should be caught with a broom or rolling-pin in their hands. It is well-known that many young ladies detain visitors a half-hour in the parlor, before they emerge from their chambers, arrayed like Paris dolls. No person out of the families ever saw them in a kitchen-garb. The principal reason is, they think it is not lady-like. Says Mr. Arthur:

A friend of ours, remarkable for his strong good sense, married a very accomplished and fashionable young lady, attracted more by her beauty and accomplishments than by anything else. In this, it must be owned that his strong good sense did not seem very apparent. His wife, however, proved to be a very excellent companion, and was deeply attached to him, though she still loved company, and spent more time abroad than he exactly approved. But, as his income was good, and his house furnished with a good supply of domestics, he was not aware of any abridgment of comfort on this account, and he therefore made no objection to it.

One day, some months after his marriage, our friend, on coming home to dinner, saw no appearance of his usual meal, but found his wife in great trouble instead.

"What is the matter?" he asked.

"Nancy went off at ten o'clock this morning," replied the wife, "and the chamber-maid knows no more about cooking a dinner than the man in the moon."

"Couldn't she have done it under your direction?" inquired the husband, very coolly.

"Under my direction! Goodness! I should like to see a dinner cooked under my direction!"

"Why so?" asked the husband. "You certainly do not mean that you cannot cook a dinner."

"I certainly do, then," replied his wife. "How should I know anything about cooking?"

The husband was silent, but his look of astonishment perplexed and worried his wife.

"You look very much surprised," she said, after a moment or two had elapsed.

"And so I am," he answered, "as much surprised as I should be at finding the captain of one of my ships unacquainted with navigation. Don't know how to cook, and the mistress of a family!—Jane, if there is a cooking-school anywhere in the city, go to it, and complete your education; for it is deficient in a very important particular."

We need not speak of the result, except to say that it was good. But we ask the reader, if this young wife was more of a lady for not knowing how to cook a dinner? Would it not have been far more commendable in her to have been able to cook at such a time of necessity? If it is a woman's mission to be mistress of the family, then it is her business to know how to wash, and cook, and sew. Is a captain qualified to guide a ship, if he is ignorant of navigation? Is a man prepared to manage a large mercantile establishment, if he has not learned the merchant's business? Would a college faculty welcome a man to the professorship of Greek, who had never studied it? Then, what shall we say of a female who occupies the place of mistress of the family, without knowing how the work thereof should be done? We say it is a dishonor to her. She is less a lady for this inexcusable ignorance.

Madame Roland could prepare her husband's meals with her own hands, and at night delight the most literary company of France by her brilliant powers. Mrs. Washington, the mother of the General, always attended to her domestic affairs, even in the presence of the most distinguished guests. Lafayette paid her a visit before his departure for Europe, in the fall of 1778. He was conducted to her mansion by one of her grandsons.

"There, sir, is my grandmother," said he, as they approached the house. Lafayette looked up, and saw her at work in the garden, "clad in domestic-made clothes, and her gray head covered with a plain straw hat, the mother of his hero." She gave Lafayette a cordial welcome, observing:—

"Ah, Marquis! you see an old woman—but, come, I can make you welcome to my poor dwelling, without the parade of changing my dress." Mrs. Martha Washington, the wife of the General, was no less distinguished for her management of household affairs. She was "a good seamstress, a good cook, and a good mother." She understood every department of domestic labor, and was every ready to do what circumstances required. Mrs. Troupe, the accomplished wife of a captain of the British navy, once visited her, and she gave the following account of Mrs. Washington's appearance:

"Well, I will honestly tell you I never was so ashamed in all my life. You see Madame —, and Madame —, and myself, thought we would visit Lady Washington; and as she was said to be so grand a lady, we thought we must put on our best bibs and bands. So we dressed ourselves in our most elegant ruffles and silks, and were introduced to her ladyship. And, don't you think, we found her knitting, and with a check apron on!—She received us very graciously and easily, but after the compliments were over, she resumed her knitting. There we were, without a stitch of work, and sitting in state; but General Washington's lady with her own hands was knitting stockings for her own husband." Noble example for a woman of high position to set! In such circumstances her check apron was more ornamental than the "ruffles" and "silks" of her fair visitors, and her knitting-needles more becoming decorations than a profusion of jewelry.

No girl can become a true lady without knowledge of household duties. Whatever may be her literary proficiency, and her social qualities, without the ability to do house-work, if necessity demand, her education is defective. A young girl was presented to James I., as a prodigy in literary attainments. The person who introduced her, boasted that she understood the ancient languages.

"I can assure your Majesty," said he, "that she can

both speak and write Latin, Greek and Hebrew." "These are rare attainments for a damsel," said James; "but can she spin?" She might be familiar with the lore of ages, but without a knowledge of household duties, she lacked an important acquisition. So we ask of the richly attired and accomplished young woman, who can read French, thumb the piano, and move bewitchingly in fashionable company, can she do house-work? If she cannot, she is not a model lady.

"There's a spot of earth supremely blest,
A dearer, sweeter spot than all the rest;
Here woman reigns; the mother, daughter, wife,
Strews with fresh flowers the narrow way of life;
Around her knees domestic duties moor,
And freeds pleasures gambol at her feet!"

600,000 ACRES OF HANBAL AND ST. JOSEPH RAILROAD LANDS.

For Sale on Long Credit and at Low Rates of Interest. These lands granted by Congress to aid in constructing the Road, to a great extent within Six Miles and ad within Fifteen Miles of the Road, which is now completed through a country unsurpassed in the salubrity of its climate and fertility of its soil. Its latitude adapts it to a great variety of products than land either north or south of it, rendering the profits of farming very certain and steady than in any other district of our country. Its position is such as to command at Low Rates of Freight both to the North and South. To the Farmer desiring to better his condition, to parties wishing to invest money in the West, or in any search of a prosperous home, these lands are commended. For full particulars apply to J. H. HUNT, Land Commissioner Hanibal and St. Joseph Railroad, 605-13th St. Hannibal, Mo.

NOT A HUSBAND.—Wanted, one or more Young Men in each State to travel, to whom will be paid \$30 to \$75 per month, and expenses. For particulars, address with stamp, M. B. ALLEN & CO., Plattsburgh, N. Y. 604-13th

SANFORD'S FEED MILL.—This remarkable Mill has been improved in size, capacity and strength, and fully tested as to its working power, so that I can safely recommend it to be built. It will grind from five to eight bushels of corn per hour, and many other kinds of grain much faster. Many improvements have been made to it, and I am now prepared to fill orders for the largest size. All kinds of grain, from the common cast-iron rotary mills are obtained by this Mill. Only about two horse-power, with 200 revolutions per minute, is required. Price of largest size, now ready, with cast-iron frame, \$40. Smaller sizes will be ready, and prices will vary, according to size, from \$20.00 to \$40.00. R. L. HOWARD, Manufacturer, Buffalo, N. Y. 604-13th

A. FAHNESTOCK & SONS

OFFER GREAT INDUCEMENTS AT THE TOLEDO NURSERIES.

Nurserymen and others wishing to purchase small stock for the West and South, would do well to call and examine the following desirable articles, offered at the lowest rates: 100,000 Apple Trees, 5 to 7 feet, very fine. 200,000 Apple Trees, 3 to 4 feet, very fine, \$50 per 1,000; by quantity, \$40 per 1,000. 300,000 Apple Trees, 1 year from graft, \$25 per 1,000; by quantity, \$20 per 1,000. 500,000 Apple Trees, grafted this coming winter and sent out in the fall at \$6 per 1,000; when 20,000 are taken at \$5 per 1,000. 30,000 Standard Pears, 1 year old, very strong, from bud, \$25 per 1,000; \$15 per 1,000. 25,000 Dwarf Pears, 1 year old, very strong, from bud, \$12 per 1,000; \$10 per 1,000. 9,000 Standard Plums, on plum stocks, 1 year, \$20 per 100; \$18 per 1,000. 15,000 Cherries, Standard, 5 to 7 feet, very fine, \$15 per 100; \$10 per 1,000. 15,000 Cherries, Standard, 1 year old, very fine, \$12 per 100; \$8 per 1,000. 15,000 Houghton Gooseberries, from cuttings, very strong, \$25 per 1,000. 40,000 Currants, (in 12 varieties,) very low; Red and White Dutch, \$40 per 1,000. 15,000 Lavender blackberries, \$8 per 100; \$6 per 1,000. 10,000 Concord and Victoria Rhubarb, \$10 per 100; \$5 per 1,000. 20,000 Angers Quince Stocks, \$15 per 1,000. 80,000 Isabella, Catawba and Clinton Grape Vines, 1 year, \$30 per 1,000. 15,000 Isabella, Catawba and Clinton Grape Vines, 2 years, \$40 per 1,000. 20,000 Standard Rose Stocks, \$25 per 100; \$20 per 1,000. 50,000 Norway Spruce, 1 foot, \$50 per 1,000. 20,000 Norway Spruce, 18 inches, \$40 per 1,000. 10,000 Hybrid Spruce, best sort, strong, \$12 per 100. 1,000 Herbaceous Perennials, \$15 per 100. 1,000 Silver Maples, \$15 per 100. 500 Tulca, or Adam's Needles, \$15 per 100. With a large stock of Raspberries, Peaches, Apples and Nectarines, also, Ornamental Trees, Shrubs, Evergreens and plants, in quantities. Disas, Concord, Rebecca and Delaware Grape Vines, the lowest price. Our New Descriptive Fruit and Ornamental Catalogues, as well as our Wholesale Price List, is now out of press, and will be forwarded to order on receipt of a postage stamp for each. As communications promptly responded to, and orders solicited as early as possible.

A. FAHNESTOCK & SONS.

Toledo, Ohio, Sept. 5, 1893. 505 Steew

GUANO.—The superiority of Phosphatic over Ammoniacal Guano, in restoring fertility to worn-out lands, is now well understood. The subscribers call the attention of Farmers to the Swan Island Guano, which is rich in Phosphorus and Organic Matter, and its superiority is unquestioned.

For sale at \$30 per ton of 2,000 lbs., and liberal discount will be made by the cargo.

Circulars, with directions for use, may be had on application at our office.

FORSTER & STEPHENSON, 65 Beaver Street, New York.

494-1800w Agents for The Atlantic and Pacific Guano Co.

MANN'S COMBINED REAPER AND MOWER,

WITH WOOD'S IMPROVEMENT.

For the Harvest of 1893.

The subscriber begs to inform the public that he continues to manufacture this popular machine, and pledges himself to produce an implement that will fully sustain its former reputation, as being the best combined mowing and reaping machine, and inferior to none, either as a Reaper or Mower.

It has had a steady and increasing popularity from the first, and is now the most popular of all the reaping machines.

It is carried off the highest honors at the great National Field Trials at Ithaca, in 1887, and amidst all the competition and trials of 1893, came out with more and better established popularity than ever before.

The general principles peculiar to this machine, and upon which it is constructed, have proved so successful that there has been no attempt to change them.

The main effort during the last year has been to improve its mechanical construction, to make it stronger and more durable, and maintain its reputation as the leading and most acceptable machine to the largest class of farmers in the country.

Warranted capable of cutting from 10 to 15 acres of grass or grain per day, to a workmanlike manner.

Price of Machine ready for use, according to width of cut, and its adaptation in size and strength to different sections of the country, from \$125 to \$150, delivered here on the cars.

Manufacturer and Proprietor, Rootick Falls, N. Y.

WOODS' MOWER.

Patented February 22d, 1893.

During the six years I have been engaged in the manufacture of the Woods' Combined Reaper and Mower, I have given much thoughtful attention to the construction of what I foreman would be a great want of the Farmers—a lighter and cheaper machine expressly for mowing, than had yet been made.

And now, after the most thorough and repeated experiments and trials in every variety of field, and in all kinds and in every condition of grass, I am prepared, with entire confidence, to offer to the farmers and dealers of the United States, the great desideratum in this department of Agricultural labor-saving machines—a Mower, superior to its capacity for good work to any hitherto introduced, of easy draft, light, cheap, and durable.

This machine I now offer as my latest invention, to meet a special want of farmers, and to place within the reach of all, a Mower that for practical working, cheapness and simplicity, will be a great rival.

I build Two Horse and One Horse Mowers. The Two Horse Mower weighs 425 lbs., and cuts a swath four feet wide, 100 ft. long, (600 ft.) and cuts a swath three and a half feet wide, 80 ft. long, (400 ft.) and cuts a swath three and a half feet wide, 60 ft. long, (300 ft.)

For a more full description of the Mower, reference is made to my Pamphlet, which will be furnished on application.

With each machine will be furnished two extra guards, two extra sections, one wrench and oil can.

Warranted capable of cutting ten acres of grass per day in a workmanlike manner.

Price of Two Horse Mower.....\$70

One Horse Mower.....\$50

I continue as heretofore, and with greater success than at any previous time, the manufacture and sale of Mann's Patent Combined Reaper and Mower with Woods' Improvement.

Manufacturer and Proprietor, Rootick Falls, N. Y.

PRASE & EDWARDS, 94 State St., Albany, New York, for Albany County and vicinity.

MOORE'S RURAL NEW-YORKER

AGRICULTURE RURAL LIFE EXCELLENCE LITERATURE SCIENCE ARTS NEWS

TWO DOLLARS A YEAR.

"PROGRESS AND IMPROVEMENT."

[SINGLE NO. FOUR CENTS.]

VOL. X. NO. 40.

ROCHESTER, N. Y.,—FOR THE WEEK ENDING SATURDAY, OCTOBER 1, 1859.

[WHOLE NO. 508.]

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the Important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it so judiciously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal,—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

OUR GRASS LANDS.

THE fact that the grass crop of the country is a failure, comparatively speaking, calls upon the thinking agriculturist for a solution of the causes which have led to so deplorable an issue, and, if the fault may in any degree be justly attributed to the growers, to point out such defects and their remedy. The responses to inquiries, made previous to the time of mowing, as to the prospects of the hay crop, were, almost invariably, "Old meadows will not pay for cutting—new will furnish a medium yield." That atmospheric influences seriously affected the growth and development of the grasses during the past season there can be no doubt; but why this difference between meadows laid down to the crop years ago and those more recently seeded. A lack of vitality is plainly perceptible—is this the result of age, or the inevitable consequence of the violation of natural law by the possessors of the soil.

Grass forms the staple crop of the country—neither cotton nor wheat can successfully claim supremacy in competition with it. While first in position and pecuniary worth, it demands less care than any other, and, we very much fear, obtains only a tithe of what it actually needs. Year after year the land is denuded of its vernal drapery with scarcely an atom of return in the form of an equivalent. Ten after ten of hay is taken from the soil, and if any fertilizing material is furnished it, it too often comes in paltry pinches. We have frequently heard individuals, after submitting to the manipulations of some dexterous torsorial professor, remark that "the shave just received was fully a week under the skin," and the mowing performed upon seven-eighths of the land in grass, partakes altogether too much of this characteristic. Nor does the evil stop here.—Thanks to some genial shower, and the tenacity with which the grass clings to life, new appears shoot up, when the cattle are "turned in," and the "fall feed" is secured, too frequently at the expense of future crops. This has been the usual course, and there is less room to hope for the entire abandonment of so exhausting a process the present fall than for many years past. A scarcity in the mow appeals with an urgency that is almost irresistible when there is a chance for a day's fodder in meadow or pasture, and all those who seek immediate results will speedily acknowledge its potency.

The remedy for the evils we have glanced at thus briefly is very apparent. As this crop is our mainstay its needs should meet a more generous recognition, and instead of annually depleting the soil, the great object should be to keep up the average of fertility. Nor can we begin to award our lands what is justly due them too early. With a large number the spring time of the year may be considered a more "convenient" and appropriate season—but we think that a top-dressing of plaster, ashes, bone-dust—anything that can be readily appropriated to the wants of the plant, would prove a profitable investment, if applied just now.

The various styles of management adopted by those whose efforts are crowned with success are always worthy of careful examination, and to the thoughtful investigator yield a rich reward for the labor expended. Recognizing the verity of this statement, we present the modes of operation pursued by various individuals in keeping up the

condition of pasture and meadow land, and the results thereof.

In the Transactions of the N. Y. State Ag. Society for 1856, Mr. WALRATH, to whom was awarded a farm premium, states that he uses a composition of six bushels of bone ashes, one bushel of plaster, one of slaked lime, one-fourth bushel salt, a small quantity of sulphur, pounded bones, &c., as a top-dressing for general purposes. The cost is about twenty cents per bushel, and is used at the rate of two or three bushels to the acre on grain and meadows. Upon one field, about an acre in extent, under cultivation for ten years, this combination was used without other manure, and the result was a constantly increasing product. The best crop was wheat—yield, thirty bushels to the acre. It was then seeded with clover and timothy, and the season previous to the date of the Report, (1855,) it produced two crops of hay; the first of two tons, the second of one. The average of yield of Mr. W.'s mowing lands is about two and one-half tons per acre.

R. J. SWAN, of Rose Hill, Seneca Co., to whom was awarded the first premium of the Society in 1857, annually mows about sixty-five acres of grass, and makes an average of two and one-half tons of hay per acre. Sows twelve pounds of clover seed upon each acre of wheat, in latter March or early April, six quarts of timothy being applied in Autumn soon after wheat sowing.—Uses plaster as a top-dressing for grass lands—sown broad cast with a machine—advantages of so doing are uniformly great and decided, for if any part of the field is neglected, the error is manifest to the eye by the inferiority of the neglected spot.

GRASSHOPPERS.—A NEW BEAUTY IN FIGS!

HITHERTO even the most elaborate essays on farm stock (see the N. Y. Tribune,) have scarcely noticed Grasshoppers at all. Why is this? They make up in numbers what they lack in size, and in diligence what they want in dignity. My neighbor, who thinks his black cow is worth more than any "Duchess" of the royal line, would see at once that, being "natives," they could not expect to be noticed except incidentally or accidentally—but I am bound to count them in. A thousand times more numerous than all our horses, cattle, sheep, pigs and poultry put together, and sometimes costing more to keep them! They have been slighted, decidedly. Who is acquainted with them? Will some naturalist please treat them scientifically?—Meantime, I propose to treat them practically.

First, then, they eat up a ton of grass to the acre; they stripped the beans in my corn as bare as bean poles; they have appropriated a wide border in the oat field; they have taken the foliage from young fruit trees; in short, they have stuck their noses into about everything. Perhaps they are accusing me for what I have taken; but then I planted the beans and hoed them. I'll back out of that argument, for I recollect that those who do the most work have the least rights here. Waving all ethical and legal questions—they have got my fodder, how shall I get them?

Fowls, whose acknowledged duty is to lay, hatch, and be killed, have been put after them from time immemorial, and it has been observed by discreet housewives, that the more grasshoppers the more eggs, and the more growth. What we have got from the grasshoppers, except through biddy's agency, is mere nothing. While we devise other ways of making them available, we may make improvements on this. They do not in the main (it may be through defects of early education,) deem it a duty to come into the hen-yard or the adjacent ground to be eaten; should we not train the hens and turkeys to a wider range of travel? Walk through the meadows and pastures distant from the buildings at the height of the grasshopper season, and a cloud of these winged predators is before you continually—a hundred greedy hens, each with a dependent family, would do large execution here!

Old folks are apt to complain of a sad want of discipline—"now-a-days," having "Young America" mainly in their eyes; discipline in its vast bearings and extent is for the future. Our domestic animals should be trained to go where, and do what, we bid them. Fowls should be sent to pasture and brought back like our cows; then the grasshoppers in our back fields will be gathered in. Pigs, too, may help us in turning grasshoppers to account. A woman Out West writes to her friends in Allegany county, that she is fattening seventeen hogs on grasshoppers, and they are doing well. The hogs were shut up, as I was informed,—how she got the grasshoppers to them, the world at large ought to know!

Going very early into the fields, I was more surprised than delighted at finding my own pigs there before me, picking up the grasshoppers, which were stiffened with the cold, and eating them with manifest relish. "A new beauty in

pigs," I exclaimed—"What admirable sagacity in choosing the right time for your business, and how expert in finding the object of your search!" I felt to forgive their forwardness in opening the gate and going into our garden to appropriate the food which was intended for other members of the family. From this let it be inferred that our pigs, as far as possible, should have access at the proper season to those fields where grasshoppers are thickest.

Must this "Nineteenth Century" stop here?—beyond what pigs and poultry can do, can nothing be done? "The spirit of the age" breaks out in spots, viz.—in Wyoming county, where the grasshoppers are caught in large sheets of cotton cloth or other nets, are immersed in hot water and then, being dead, are dried and kept for future use. What returns on the outlay I have not heard. Indeed the market value of grasshoppers remains to be established. The Herald has a daily agony or exultation over the falling or the rising fortunes of spelter or spermaceti, but it is nowhere in the grasshopper market.

I have squeezed a large grasshopper in my fingers (a rough and summary analysis,) to judge of its substance and consistency, and I have guessed he was about equal, in nutritive value, to a kernel of corn—but I did not calculate how many to the acre. One thing is certain, some land has produced more value in grasshoppers than anything else. I recollect to have heard that a calculating Yankee (men are sometimes too sharp,) conceived the idea of driving the devastating hordes of grasshoppers out of his own lots into those of his neighbors. He got rid of his grasshoppers, but was sued in the courts of law and paid heavy damages and costs! Perhaps we might profit by his experience in driving—always being careful which way we drive!

Take a lot of noisy, hair-brained, rollicking fellows, who don't fit to drive anything else—put one at each end of a long rope, and supply the company with bushes, tin-pans and long poles, and my word for it, the grasshoppers will retreat before them! (not because these fellows have any real courage, but the grasshoppers would be deceived by their violent pretences,) and so suffer themselves to be driven into some tight place where they might be made available as herein before set forth. If Napoleon, and the Empress with her hoops, would go out and catch a few, it might be made a fashionable pastime, and so we could get something out of the unproductive classes. By another year let us be prepared for decisive action.—H. T. S.

HOUSE BUILDING.—NO. VI.

PROBABLY no single feature about country buildings conveys the idea so readily whether they are houses or barns as the presence or absence of chimneys. There is no place where the outlay of a little money will make as great a difference in the thing itself, or in the general appearance of the building, as on the chimney top, yet there is no other one thing about country houses that receives so little attention. Perhaps this article may induce those farmers who read it, and are now engaged in building what they desire to be good houses, to allow the mason an extra half day or day to finish off the chimneys in a more tasteful style, if possible, than the smoke spouts protruding from nine-tenths of the farm houses in the country.

FIG. I.—CHIMNEY TOPS.

Fig. I illustrates four different patterns, and the variety would be endless, were the masons only determined and their employers willing that every new top should be from a new model. The principles to be observed are simple. The size and proportion depends upon the number and situation of the flues. The main characteristic of the building should be embodied in the chimney top, and there should be a base and cornice to the one as well as to the other. To plaster the inside adds one half to the durability. When a building is in the Italian style, and the roof a square or hip roof, it seems almost impossible to make them look well without some kind of finish at the top. A simple way is to flat off the top, and make a deck about one-third the size of the building, and surround it with a balustrade, as at Fig. II. Another way is to put up an observatory, and when the building is of considerable magnitude,

and the view is increased by the extra elevation, it is, perhaps, as good a way as any, if you are not so unfortunate as to make it appear (like many we have seen,) as if it had been added up out of the building. This may be avoided by using heavy brackets at the corners, extending down to the roof, as shown at B, Fig. II.

FIG. II.—BALLUSTRADE, OBSERVATORY AND VENTILATING CAPS.

Undoubtedly a great majority of those who are building houses have become convinced by what they have read within the last few years, that to provide a dwelling with thorough ventilating arrangements, is in every sense of the word worth while, yet it is quite doubtful whether more than one in every ten will expend the first farthing toward insuring a good supply of that cheapest of all things, pure air. At C and D, Fig. II, I have shown two different forms of Ventilating Caps—the latter would also make a suitable bell turret for a farm house. I fear it is too generally supposed that to erect such a cap is all that is necessary to secure a proper ventilation, but such is not the case. It depends entirely upon the holes and flues, about which I will give my theory hereafter.

FIG. III.—VERANDAH AND PORCH, SKETCHES.

At Fig. III are shown some specimens of verandah and porch work, which will be found much cheaper, quite as useful, and nearly as pretty, if not as grand, as a great portico with large columns, pediment, and a half-moon window blind in the gable, painted green.

At A is a new style of verandah, the posts and frieze being simply plank, with the edges cut into the proper form, and the corners chamfered. At B is shown a similar post with braces added.—Such work is easily got up—it harmonizes well with natural embellishments, such as vines and roses, about which horticulturists and landscape gardeners talk so much, and is much more durable than skeleton work of inch boards. At C is shown an elevation of a porch, designed to have a seat on each side, lattice work above, and temporary shutters and door for winter. The posts need not be over six inches square, chamfered at the corners. At D is a plan for projecting gable, supported by brackets, suitable for outside doors or French windows; and at E another, still cheaper, yet better than nothing.

J. E. S.
Pompey, Onondaga Co., N. Y., 1859.

EUROPEAN AGRICULTURE.

PLOWING VS. SPADING.—In his recent "Letters on Modern Agriculture," Baron VON LIEBIG thus remarks upon the peculiarities of these two processes of preparing the soil:

The common plow breaks and turns up the soil without mixing it; it only displaces, to a certain extent, the spots on which plants are already grown. But the spade breaks, turns, and mixes it thoroughly.

As the smallest portions of food cannot of themselves leave the spot in which they are held firmly fixed by the soil, we can understand what immense influence must be exerted on its fertility by its careful mechanical division and thorough inter-

mixture. This is the greatest of all the difficulties which the agriculturist has to overcome.

If a field is to produce a crop, corresponding to the full amount of food present in it, the first and most important condition for its accomplishment is, that its physical state be such as to permit even the finest rootlets to reach the spots where the food is to be found. The extension of the roots in every direction must not be obstructed by the cohesion of the soil. Plants with thin delicate roots cannot grow on a tenacious heavy soil, even with abundance of mineral food. These facts explain in a very simple manner one of the many favorable effects of green manures on such soils, and enable us to understand the reasons of the preference given in many cases, by agriculturists, to fresh, over rotten, farm-yard manure. The mechanical condition of the ground is, in fact, remarkably altered by the plowing in of plants and their remains. A tenacious soil loses thereby its cohesion; it becomes brittle, and more readily pulverized than by the most careful plowing; and in a sandy soil a certain coherence is introduced among its shifting particles. Each stem of the green manure plants plowed in, opens up by its decay a road by which the delicate rootlets of the wheat plant ramify in all directions to seek their food. With the exception of their combustible elements, the ground receives from the green manure plants nothing which it did not previously contain; and these, of themselves, would have no effect on the increase of the crop, without the presence in the soil of the necessary mineral food.

"ENGLAND A THIRD LARGER."—Under this caption, the London Morning Chronicle indulges in a strain of pleasantness, the perusal of which will give us all a hint worthy of reflection. The early maturity of stock is the subject treated, and the Chronicle remarks:

One of the most noticeable features in these annual cattle shows is the increasing juvenility of the animals exhibited. Early maturity is rightly considered among the most valuable qualities of every food-producing beast. As increasing the total supply of provisions for the national commissariat, rapid growth and speedy fitness for the market are qualities which every breeder of stock should cultivate in his oxen and sheep, as diligently as the market gardeners compete for precedence with their peas and strawberries. Space and time, as philosophers tell us, are often convertible terms. The man who can ripen two crops or fatten two animals in the same period formerly required for one, has accomplished, practically, the same result, and earned the proverbial blessing bestowed upon him who "has made two blades of grass grow where only one grew before."

In this respect wonders have been already accomplished, and every year, if we may judge from the prize specimens, the animals which supply our tables with their pieces de resistance are younger and younger. What would the farmers of the last century have said if they were shown enormous sirloins only twenty-two months old, or expansive "saddles," whose defunct proprietors uttered their first bleat last spring twelve months? Still greater precocity is exhibited among the highly edible, if not very poetical, tribe of pigs. At Birmingham, there were on view several groups of "fast" young porkers, who have actually completed their education, and fulfilled all the duties for which they were called into existence, within a period of eight or nine months. Barely three-quarters of a year old, they have completed their career, and will bequeath a rich estate of bacon to their residuary legatees. Since our island area is limited, we must contrive to effect the same increase of production by economizing time which the dwellers in vast continents obtain by extending the breadth of cultivation. The discovery that a well-ordered rotation of crops could save the necessity of leaving fields in fallow every third year, practically added thirty per cent. to the wheat-bearing lands throughout the country. The early maturity now attained in "stock" is equivalent to a similar extension in the pastures. The modern improvements in agriculture have made England a good third larger, so far as regards its food-producing capabilities.

MANNER OF MILKING.—From an article on the "Dairy" in the Irish Farmers' Gazette, we make the following extract:—The manner of milking exerts a more powerful and lasting influence on the productiveness of the cow than most farmers are aware of. That a slow and careless milker soon dries up the best of cows, every practical farmer and dairyman knows. The first requisite of a good milker is, of course, the utter cleanliness. Without this the milk is unendurable. The udder should, therefore, be carefully cleaned before the milking commences. The milker may begin gradually and gently, but should steadily increase the rapidity of the operation till the udder is emptied,

using a pail sufficiently large to hold all, without the necessity of changing. Cows are very sensitive, and the pail cannot be changed nor can the milk stop or rise during the process of milking without leading the cow more or less to withhold her milk. The utmost care should be taken to strip to the last drop, and to do it rapidly, and not in a slow and negligent manner, which is sure to have its effect on the yield of the cow. If any milk is left it is re-absorbed into the system, or else becomes caked, and diminishes the tendency to secrete a full quantity afterwards. If gentle and mild treatment is observed and persevered in, the operation of milking appears to be one of pleasure to the animal, as it undoubtedly is, but if an opposite course is pursued—if, at every restless movement, caused, perhaps, by pressing a sore teat, the animal is harshly spoken to—she will be likely to learn to kick as a habit, and it will be difficult to overcome it afterwards. To induce quiet and readiness to give down the milk freely, it is better that the cows should be fed at milking-time with cut food, or roots, placed within their easy reach. The same person should milk the same cow regularly, and not change from one to another, unless there are special reasons for it.

TO PREVENT CATS KILLING CHICKENS, &c.—In the new London paper *Once a Week*, Miss HARRIET MARTINEAU, is publishing a very interesting series of sketches, entitled, "Our Farm of Two Acres," in one of which sketches she gives the following as a sure preventive against the killing of chickens or birds by the cats:—When a cat is seen to catch a chicken, tie it around her neck, and make her wear it two or three days. Fasten it securely, for she will make incredible efforts to get rid of it.—Be firm for that time, and the cat is cured—she will never again desire to touch a bird. This is what we do with our own cats, and what we recommend to our neighbors; and when they try the experiment, they and their pets are secure from reproach and danger henceforth. Wild, homeless, hungry, ragged, savage cats, are more difficult to catch; but they are outlaws, and may be shot with the certainty that all the neighbors will be thankful.

HUNGARIAN GRASS.

EDS. RURAL NEW-YORKER.—Some weeks since I read a short article in your journal from the pen of my friend, the Hon. A. B. DICKINSON, on the subject of Hungarian grass. He is a man to whom I am indebted for many valuable hints on agriculture, and I have ever considered him a strong practical man on such subjects. I confess I was somewhat surprised at his view, as they were so contrary to my little experience and observation. I would like to know how he comes to the conclusion that it is nothing but the old-fashioned millet, and that it is no better than banyard grass for stock. I aver, without the fear of contradiction from any practical cultivator of the two kinds, that it has no more similarity than has barley and spring wheat, and that you can no more amalgamate the two kinds by sowing the mixed seed of them together in the same field than you can of other grain; nor is the kernel of the two kinds any more similar in appearance than that of barley and spring wheat.

As to banyard grass I yield to him the palm, having had no experience in the use of it as food for stock. My ambition as a farmer has always been to wage a war of extermination against its growth. Its good qualities for stock I will not therefore speak of, but I may perhaps venture a reason why I prefer the Hungarian grass as a crop to the banyard variety.

Early in the season of 1858, having seen favorable notice of it in several journals, I ordered a bushel of the seed from a seed store in New York, and paid the bumping price of \$5 per bushel of 50 lbs., (reminding one of the days of China tree corn and Rohan potatoes.) The grass seed I divided with my neighbors, retaining only six quarts for myself, which I sowed on one side of my barley field, it being on wheat stubble ground, and no manure. I cut from two-thirds of an acre over two tons and put it into my barn and fed my lambs (some eighty in number) a foddering of it every noon. At first they did not seem to relish it, but within a week they ate it with avidity, always picking for the heads first. I also fed other stock with it with the same success. My lambs improved apparently as well as they would had I given them the same quantity of oats in the sheaf.

Last spring I sowed on oat stubble ground with a slight dressing of manure, one acre and two-thirds. It came up nicely before the disastrous frost and by that was entirely killed. I re-sowed and harrowed in the second time, which has produced me over six tons, that is housed in good order, for which I would not take less than \$12 per ton, while I sell good hay for ten.

I have said I had no experience in banyard grass as food for stock but some in its destruction. One fact must be obvious of the superiority of the Hungarian to the banyard as feed. The head of the Hungarian is very tenacious in holding on to its seed, not shelling in the process of cutting and securing. It is very hard to thresh, the most so of any grain I have ever attempted to thresh, thus bringing with it to the feed rack all that it has produced, while the banyard variety cannot be cut and cured without the loss, almost entirely, of its seed, thereby greatly reducing its value as food. Again, the superiority of the Hungarian over its competitor, is the fact that you are in no danger of its becoming a noxious weed to curse your grounds and damage your future crops—no more so than oats or wheat. To raise it you must sow it every season as it will not lie in the ground over winter and propagate the next season, but leaves the ground clean for a future crop. I have recently seen an article in the *New York Observer* from a western writer, saying that it foundered horses and stiffened the limbs of horned cattle. Such cases I presume are isolated, and in my own mind is no more argument against it than against oats or corn, which will do the same thing if overfed to stock for a long time. I would not advise the entire feeding of sheep or other stock on it no more than I would of oats or other grain in the sheaf, but feed it as you do other grain in the straw and you will have like beneficial results.

I am not very enthusiastic about Hungarian grass as a crop, and do not advise its culture to the exclusion of others, (banyard excepted,) but I would place it with other crops for food for stock. For a small farmer, who has but little meadow land to spare, an acre or two will prove of great value; and to large farmers I would say, try it for yourselves. A neighbor of mine has sowed some ten acres on muck bottom land, and is now harvesting the crop, which is a large one, a part of it being estimated by some farmers as high as five to seven tons to the acre. I think it over-estimated.

You will pardon the length of this article as it is the first I have ever offered to the public on Agriculture, and feel desirous that Hungarian grass should not be smothered in its infancy in this country before its merits are fully tested.

Yours truly,
JAS. H. HORTCHUKIN.
Pittsburgh, N. Y., 1859.

HEN STATISTICS.—PROFITABLE POULTRY.

EDS. RURAL NEW-YORKER.—A relative of mine has six hens and a rooster of the breed known as Black Poland. They were hatched June 1st, 1858, and commenced laying the 25th day of December following. Up to the first day of September inst., there had been laid seventy-six dozen eggs, worth, at a moderate estimate, ten dollars. The whole amount of feed purchased for them during the same time was four bushels of oats and one of corn, at an expense of three dollars. Besides this they have had crumbs and other refuse from the table of a small family. Most of the time they have been confined to a small yard and barn.

It will be seen that these hens have averaged an egg each every forty hours since they first commenced laying, and that the net income from these equals the legal interest on one hundred dollars. Of course the hens have not been permitted to lose any time raising chickens, a pleasure which they are more willing to forego than any other breed I know of. The laying season is nearly over, but my friend expects to realize eighty dozen from them before the year comes round. She says she gave the hens a stint on the start to lay sixty dozen, but they accomplished that so easily she increased it to eighty. They are in a fair way to accomplish all that is required of them.

If any of the readers of the *RURAL* can beat the foregoing hen statistics, let them send on their facts and figures.
C. C. B.
Syracuse, N. Y., Sept., 1859.

PLOWING.—MY MODE.

MESSES. EDS.—As I believe in progress and improvement as well as the rest of the boys, and having read the late numbers of the *RURAL* with much pleasure and benefit, I would beg permission to offer a few suggestions about plowing. There are a great many ways of plowing, as there are for doing almost all agricultural work, but in my opinion there is only one right way, however little it is followed. You see a great many large farms, and to judge how all the work is done on them, you need look no farther than the plowing. Here is a man plowing in a field of forty acres, we will say. Now, the mechanic and artisan both have rules in performing their business, but this man has no rule; he starts from one side at no particular place, for the other side, and by dint of many crooked strides and a much crooked furrow he arrives at the opposite side, without trespassing, it may be, on his neighbor's land. But I will give my way and have done.

Place off an equal distance at both ends—say ten paces, for the first land, so that it will not be too wide for back-furrowing. Set a stake at the opposite end, and another about six rods from it. Make a mark with the foot at the place you start from; before starting tie a loop in each line, so that they shall be tight. Take hold of the plow handles, and do not look back. A. WALKER.
Millon, Rock Co., Wis., 1859.

WINTER FALLOWING.—INQUIRY.

MESSES. EDS.—I saw in the *RURAL* of Sept. 17th an article on winter fallows, and as I am young in scientific farming, and decidedly opposed to doing a thing half way, I thought I would consult you and your many correspondents in regard to it. I have an orchard just in its prime, that has been rather badly dealt with. The soil has been badly run, and one day a man got in with an axe and made sad havoc among the trees. Two years ago it was sowed to clover and timothy, and has given good crops. The soil is loam with a mixture of gravel. Now, will winter fallowing work on this for corn? My plan would be to plow about the middle of October, and leave in furrows until spring; then, as soon as the ground would work in the spring, go and harrow and plow just before planting; giving it a dressing of barn yard manure to be plowed under, and then, after it is plowed, give it a dressing of swamp muck, or deposit from water, mixed with lime, to be harrowed in. I wish to know if the sod will rot so that the grass will not be troublesome in the corn, and if lime and muck will work well together, and how much unsalted lime is best to be applied per acre on land that is not used to such treatment, and if there is any manure within reach of ordinary farmers that would be better.

Yates Co., 1859. YOUNG FARMER.

SORGHUM "STILL LIVES."

In the *RURAL* of Sept. 17th, is an article upon "Sorghum—where is it?" The writer thinks he has got Sorghum and Sorghum men in a tight place. He says—"How is Sorghum?" but more particularly, "where is it the current year?"

To these questions I can say that Sorghum is growing, that I have some over ten feet high, and if W. B. P. will wait till November next, for a small consideration I will send him a barrel of Sorghum Syrup, grown in 1859, on the 42-45 parallel. Then he can taste, see, smell, and handle, and believe that it is no humbug, and that it will be a standard crop as long as corn is.

Let anti-sorghum men who are short for sweetening, send on their orders for syrup. That will be facts, and Sorghum men won't dodge.
Skanectates, N. Y., Sept., 1859. W. E. CLARK.

Rural Spirit of the Press.

Breaking Colts.

A warrior in the *Country Gentleman* says:—"As some of your subscribers are troubled with their horses hugging the reins, I will give you my method of breaking colts. First, I put on a high part mouth bit,—(bride with no blind;) put on the harness one hour in the forenoon, and one in the afternoon, with breechen straps hanging about the legs—crupper-pad six inches round. Do this for one week, tying him on both sides of the stall, reined moderately. Then change the bit to a chain-bit, placing him between the poles of a double-wagon, between two steady farm horses, and have him so regulated by the reins that he can neither pull too much nor fall back—the old horses having control over him by the breechen and reins. Keep him in daily, till he learns all that is necessary when he is spoken to, seldom driving off of a walk. Never hitch a young horse to a harrow, plow, or cultivator, till he is thoroughly at command in the wagon—which will take often six months. Drive with blinds if the colt is timid or lazy.

If disposed to kick in handling, tie up his head as high as possible alongside of the barn, and then give him a white birch bush till he can be handled quietly. One good dressing will do the business. Biting a colt as some do, and allowing him to walk about the yard, I have found to spoil him. Standing quietly afterwards, when my colts are broken they need no hitching, however wild when taken in hand, but are trusty in all respects. Never give a colt in the hands of a brute of a man to break, if you ever expect him to be docile, for like gets like—a mulish man turns out a mulish horse.

If you wish a serviceable horse, four years is as young as he should be deemed a horse; he can be well broken before that by my method, with little hindrance about a farm, and is worth three horses that are put to draft at two past.

P. S.—You will perceive the pad of the crupper being made large, not only breaks the colt of that hugging practice in putting on the crupper, but he carries a better tail, and has never the power to hug the reins, and if disposed to bolt, a few rods with the reins with a chain-bit, will quiet him for that. Never check a young horse too much when walking in harness, for it is apt to spoil his reach and give him a hitching gait."

Coal Ashes as a Fertilizer.

We have noticed several communications and editorial discussions in that valuable Agricultural paper, the *New England Farmer*, remarks the editor of the *Boston Commercial Bulletin*, upon the properties of coal ashes as a fertilizer. To solve the question affirmatively would be of great importance to farmers and gardeners, especially those living in the vicinity of cities and towns where coal is used for fuel. Without any pretensions to a practical knowledge of the subject, we are tempted to give our experience in a small way. Upon a half acre of land, partly in grass and partly cultivated, we have tried the experiment as follows, with great success:

In November we cleared out of the cellar ashes made the previous season from seven tons of anthracite coal, mixed with the ashes of one-half cord yellow pine wood used in kindling; to this was added equal parts of horse manure and loam, well mixed together. A part of this was used at the time upon a piece of grass ground more than twenty years in the sward, put on about two inches thick as a top-dressing, which has this year produced two crops of fine grass, in place of white weed and other nuisances, and the ground has shown no signs of being affected by the dry weather. The balance lay in a heap till spring, and was used on the cultivated ground, both for spreading and in the hill.

RESULTS.—While in former years the early potatoes planted from the same kind of seed have invariably rotted before the time for digging, this year there has been the most productive crop of the largest and best quality. The sweet corn averages nine feet in the stalk, the leaves of a clear green, and the ears perfectly filled, and so with all the other vegetables in the garden. We believe coal ashes have been rejected without a fair test. The great hue and cry made about their destructiveness to the trees on our Common, instead of leading to careful investigation, resulted in a summary condemnation. The same result might have followed, if lime, plaster, or even wood ashes had been used, as the coal ashes were,—to the depth of two feet or more, unmixed with loam or sand. We hope the experiment will be fairly tested, as everything which helps build up the farmer's manure heap is beneficial not only to him, but to those who depend on him for their vegetables.

Use of the Check Rein.

THE N. E. FARMER makes some excellent suggestions upon this subject:—"Any person whose attention has been called to the subject, and who still persists in the use of a tight check rein, ought to have his head placed in a similar position to that which he has cruelly subjected the horse. If I were the Grand Sultan, every man who torments his horse with a check rein, should hold his arm at right angles with his body for an hour at a time, once in twenty-four hours, as long as he continued the use of the check rein. The practice of drawing in the heads of team horses, by means of this pernicious strap, is especially cruel. The horse, in endeavoring to expend his strength, needs the free and natural use of his head and neck. The cramping position now enforced, is alike severe and injurious to horses, and in business, and should be eased off till nature is at free play."

NEW AGRICULTURAL JOURNALS.—We are in receipt of *The Farmer and Gardener*, a neat appearing monthly just commenced at Philadelphia, Pa., by A. M. BRANGLER, at one dollar a year. It has the look of success, but so many agricultural journals have been started, temporarily flourished and died in Phila., that this must be regarded as an experiment. We have also received the first number of *The Western Farmer's Magazine*, an octavo monthly of 82 pages, published by BIRDALL BROS., Chicago, Ill., at \$1. While we wish success to all meritorious enterprises, we hardly think such a monthly as the *Magazine* can succeed, or is required, while so good a weekly as the *Prairie Farmer* is in the field.

Agricultural Miscellany.

THE WEATHER proved most unpropitious for the Fair held last week. A heavy rain storm prevailed on Tuesday, Wednesday and parts of Thursday over a large area of this State, so that the County and Town Fairs were seriously damaged. In several instances the exhibitions were continued through Friday, thus securing one fair day. The present week opens warm and sunshiny—with a promise of fine weather for the shows and farm operations.

P. S.—Tuesday.—Another rain storm has set in, and we fear the week will be unfavorable for Fairs, &c.

N. Y. STATE AGRICULTURAL COLLEGE.—We learn that at a meeting of the Trustees of this Institution, held at Ovid on the 23d ult. Maj. M. E. PATRICK was unanimously elected President of the College, and signified to the Board his acceptance of the appointment. This is a most important and progressive step—one which cannot prove otherwise than highly gratifying to the friends of the College and all acquainted with the appointee, who, in many respects, eminently qualified to discharge the duties of the responsible position. A graduate of West Point, and for many years in the Army, Maj. PATRICK has the reputation of being an excellent and thorough disciplinarian and executive manager—essential requisites for the head of such an institution. Moreover, he is a practical man, having retired from the service many years ago, and devoted himself to the practice and science of Agriculture. Under his supervision we may confidently hope that the Agricultural College will soon regain the reputation lost by the appointment and administration of his predecessor, and prove more than an experiment. Considering the appointment eminently fit and proper,—calculated to inspire confidence and give the Institution a prestige of success,—we congratulate the Board, and friends of Agricultural Education, upon the election and acceptance now announced.

—We are informed that the College building is progressing to completion—will be under roof in two or three weeks—and preparations for finishing the inside are already progressing.

THE RURAL FESTIVALS.—Fairs—of the present Autumn are attracting unusual attention in all parts of the country. From the great National Show at Chicago to the humblest Town Fair, the exhibitions thus far held seem to have been largely attended and richly enjoyed by contributors and visitors. Our exchanges from nearly all parts of the Union contain gratifying reports of these exhibitions, which are annually augmenting in numbers, usefulness, and popularity as occasions of festivity or "harvest home" celebrations.

—We have often urged the importance of Ag'l Fairs as affording recreation and needed holidays to the great producing class of the country, aside from their usefulness in promoting improvement and the pecuniary interests of individuals and community. On this point the *New England Farmer* of last week well says:—"The agricultural exhibitions which are now being held come very opportunely to relieve the tedium of the long interval between Independence and Thanksgiving Days, which, with Fast day, constitute almost the sole relaxation allowed to themselves by the inhabitants of New England. The pursuit of the 'almighty dollar,' which is often held up as a reproach against the Americans as a people, allows of no recreation to the overtasked powers of mind and body. Too little relaxation from labor, and too close confinement to the counting-room or work-bench, we believe, are productive of more physical evil than any other cause. We do not mean to advocate idleness nor extravagance, but we think that we have too few holidays for our real welfare. We are, therefore, a zealous advocate of the farmers' festivals, aside from their value from an agricultural point of view, as they afford us the desired opportunity of refreshing our wearied bodies, and enjoying a rational and profitable enjoyment."

BOUGHTON WHEAT.—We have received a very fine sample of this wheat, grown by Mr. WM. R. DUTCH, of Nunda, Livingston Co., N. Y. One bushel was sown about the 25th Sept.—winter-killed a good deal, and the yellow birds destroyed at least one-third of the crop. It produced fourteen bushels by measurement, and weighed 65 lbs. per bushel. Mr. D. has sown the fourteen bushels, and hopes to have a fine crop next season.

—Speaking of Boughton Wheat, Mr. JOHN HOLMES, of Hurst Hills, Saratoga Co., writes us that he last year obtained a bushel from Baltimore, and sowed it about Sept. 1st, on oat stubble, plowed once and without any manure. Balance of field sowed at same time with Mediterranean. Nearly the whole field wintered well. From the bushel of Boughton he obtained sixteen bushels of wheat weighing 64½ lbs. to the bushel. It was harvested ten days earlier than the Mediterranean. Mr. H. says he is so well pleased with the result that he shall sow (or has sown) his entire crop of Boughton this fall. He hopes to hear from all who have tried new varieties of wheat the past year.

TRANSACTIONS OF A FARMERS' CLUB.—We are indebted to the Publisher, D. ATKIN, of Little Falls, for a well printed octavo volume of 257 pages, entitled "Essays and Discussions on Agriculture, before the Farmers' Club of Little Falls. Edited by the Secretary of the Club. Published by Resolution of the Association." The work is mainly comprised of Essays and Remarks read and delivered by members of the Club, and which evince much intelligent investigation and successful practical experience. It is certainly highly creditable to all concerned. The simple fact that such a volume of Transactions is issued by the modest Farmers' Club of a quiet town in Mohawk Valley, is one of the best "signs of the times" we have noted for months, and most encouraging evidence that the cause of Rural Progress and Improvement is quietly but surely advancing. Success to all Farmers' Clubs!

VICTORY TOWN FAIR.—We learn from Mr. D. L. HALEY, Secretary, that the Victory (Cayuga Co.) Fair, Sept. 22d, was one of the most pleasant ever held by the Society. The show of Stock, of all kinds, was full and fine. The exhibition of Fruit was not beaten in the county, and there was a decorative display of flowers and fancy articles. Of Vegetables the show was the finest ever seen at town or county fair. An excellent address was delivered by Dr. H. H. PLUMB, followed by some sound, practical remarks from H. S. HARRIS, Esq., on Drainage,—who also, on behalf of a Viewing Committee, reported a general and encouraging improvement through the Town under the influence of the Society, and especially noticed two instances of successful swamp drainage—one of 8 and the other of 11 acres.

CURING CORN FODDER.—In a recent letter Mr. NELSON PAYNE, of Auburn, says:—"I have formerly bound my corn and lost much of it. Last year I tried an experiment in curing corn down for fodder. It may be cut with the mower or with the scythe; when wilted put it into cocks (using forks) until cured. When mowing away for winter use it is a good plan to put alternately a layer of corn and dry straw."

AG. FAIRS NEXT WEEK.—State Fairs are to be held Oct. 4-7, as follows—New York, at Albany; Michigan, at Detroit; New Hampshire, at Dover. New York Union and Town Fairs—Olympic, Oct. 5, 6; Livonia, 6th; Hammond, Oct. 6, 7; Pavilion and Covington, 8th.

NEW YORK STATE FAIR.—PROGRAMME.—The 19th Annual Fair of the N. Y. State Ag. Society is to be held at Albany next week. The Show Grounds are on the Albany and Troy McAdam road, about one mile from the city limits, where the Business Office will be open for entries, sale of tickets, &c., on Monday. We annex the Programme of the Fair:

Tuesday, Oct. 4.—Arrangements for exhibition completed and visitors admitted. Judges are deputed to report themselves at the Business Office.

Wednesday, Oct. 5.—Judges will be called at 9 o'clock—receive their books of entries and commence their examinations. Exhibition of Cattle, Horses, Sheep, Swine and Poultry; Implements and Machinery in operation; Trial of horses in the rings prepared for the purpose. Cattle will be examined in the rings prepared for them, and prizes allotted by the Judges before the cattle leave the rings.

Thursday, Oct. 6.—Exhibitions continued: Plowing and Spading Machinery; Floral, Mechanical, Domestic and Dairy Halls; Paintings, Engravings, &c., open for examination.

Friday, Oct. 7.—Prize Animals will be publicly exhibited under the direction of Maj. PATRICK, General Superintendent. At 1 o'clock the Address by Hon. JOHN A. DIX. At the close of the Address the Preliminary will be announced, and paid by the Treasurer at the Business Office on the Grounds.

The Executive Committee will meet every evening at the State Agricultural Rooms. Public entertainments will be held every evening at the Lecture Room of the Society, in the State Agricultural Buildings, corner of State and Lodge streets. Maj. PATRICK, General Superintendent, will have charge of the arrangements for carrying out the Fair in all the departments. The President will have his Office on the Fair Grounds, where every attention will be given to the guests and visitors who may be present.

THE ONONDAGA CO. FAIR.—at Syracuse, Sept. 30-32—was rendered mesagre by the almost continuous rain during the first two days. We visited the Fair Grounds on the 31st, but the exhibition of Stock, Implements, &c., was all in vain. Among the few implements, Sawwood's Binder was the most noteworthy. It is said to be practical and perfect by those who have used it—doing the work of five men; it costs some \$30, and is readily attached to a reaper. A new wire-rope horse-rake—on wheels, with seat for driver—was shown by J. GAINES, Jr., of Fayetteville, and had the appearance of being a good thing. A self-regulating windmill, operating a pump, worked admirably and attracted much attention. It was invented and manufactured by quite a young man—E. W. MILLS, of Amber—and can be furnished at a cost of \$30. Indoors we found a fair display of Fruits, Vegetables, Dairy Products and Domestic Manufactures. Among the fruits, C. PORN, of Syracuse, exhibited 16 varieties of Grapes grown under glass—a very fine and creditable display. We met some progressive farmers and horticulturists—Hon. Geo. GENDRE, S. N. HOLMES, Esq., and several officers and members of the Society—but the attendance of exhibitors and visitors was very limited. Indeed, bad as was the weather, the show and attendance were not what we anticipated in good old Onondaga, and we fear some cause other than the temporary storm—perhaps the reign of General Apathy—must be assigned for the apparent lack of interest manifested.

CORTLAND COUNTY FAIR.—It was our good fortune to pass two days at and in the vicinity of this Fair, held on the grounds of the Society, between Homer and Cortland, last week. The weather being unpropitious during the three days selected for the exhibition, it was continued through Friday. On visiting the Fair Grounds—Thursday morning—we were agreeably surprised to find quite a fine exhibition in most departments, and a large attendance, notwithstanding the unfavorable weather. The fine grounds contain 18 acres, and are pleasantly situated, being nearly equidistant from the villages already named. The finely-decorated Floral Hall comprised a creditable exhibition of Fruits, Flowers, and Vegetables, with some good samples of Grain; also, a fine display of Domestic and Fancy Manufactures, and several pencil drawings, oil paintings, &c. We can hardly do more than speak of this and other departments of the Fair in general terms; and though we observed many things worthy of commendation, can only note a few. Mr. WILLIAM M. BOSTON, of Scott, exhibited 33 varieties of apples (from over fifty cultivated) and 10 of pears. Messrs. J. M. SCHRAMMHOFF and J. P. BARBER, of Homer, made a good display of grapes grown under glass—including some of the finest clusters we ever saw. In the floral department, Mr. PARIS BARBER, of Homer, (a gentleman of fine taste in that line) was a prominent contributor. Of Tools, Implements and Machinery there was quite a large and excellent display—much better than we expected to see, even in fair weather. Messrs. S. D. FREEB of Cortland, and J. W. & A. BRONS of Homer, were the most prominent exhibitors, each making a very creditable show, including leading articles of the best manufacture. EMMETT'S Horse Power, Threshor, &c., was shown by E. W. CADY of Dryden, and a new Cheese Vot by D. W. MAPLES of Homer. There was a large display of Stoves, Tin-ware, &c., principally by Geo. MURRAY of Homer, and S. D. FREEB of Cortland—and an excellent show of Harnesses, &c., by CHAS. H. WHEATON of Homer. Most of the Live Stock had been removed from the grounds. We however saw eleven full blood Devons and six grades, exhibited by Mr. JOHN CORP, of Free-town—a very fine herd, including several superior animals, such as bull "Jupiter," and cows "Fanny," "Nancy Dawson," and "Leonora." J. HENRY CORP (a lad of 15), had an admirably trained yoke of three year old steers, (grade Devons) Mr. LYMAN MURDOCK, of Venice, Cayuga Co., exhibited a yoke of fat cattle—grade Short-horns—which were taken all in all the finest pair of fat cattle we have seen. They are six years old, said to actually weigh 6,400 lbs., and to have gained 3,700 lbs. in 37 months. They were sired by the Short-horn bull "Genosco," from the herd of J. B. WADSWORTH, of Livingston Co. An exhibition of Deers, owned by Col. CHOCKER, of Binghamton, attracted much attention—and the deer chase, on the grounds, was an exciting affair. But we cannot particularize further. Considering the unpropitious weather the Fair was remarkably successful, in both display and attendance, evincing the right spirit and action on the part of the people of the county. Both Thursday and Friday the grounds were thronged with persons of the right class—intelligent, enterprising and progressive producers—and we were glad to make the personal acquaintance of many whom we had only known previously on paper. And we may add that the attention and reception given by a large audience to the address of a junior in years and experience, (and delivered under unfavorable circumstances,) was both complimentary and gratifying.

—We would fain add some "sight notes" relative to the pleasant villages of Homer and Cortland and the beautiful valley in which they are situated, but time and space forbid details. A drive through the villages, and a portion of the surrounding valley, in company with Mr. PARIS BARBER—a zealous and most favorably of Rural Improvement—impressed us most favorably. The villages, with their fine academies, churches and residences, are both beautiful, while the adjacent countryside presented a charming appearance. The combined valley and hill farms of Messrs. Barber, Hobart, Hiltchell, Hawley, Hubbard, Merrill, Goodell, Bullard, Chamberlain, Randall, and others in the vicinity of the two villages, possess beauties and advantages rarely found in so small a compass. But we must close this hastily penned and imperfect notice.

HORTICULTURAL

FRUIT GROWERS' SOCIETY OF WESTERN NEW YORK.

Fall Meeting.—Morning Session.

This Annual Autumn Meeting of the Fruit Growers' Society of Western New York was held in Rochester, on Thursday, the 22d ult. The President, B. H. HODGE, took the chair at 11 o'clock, and at that time there was a large attendance of members from abroad, which was largely increased during the afternoon. Many members brought with them specimens of fruit, and the show of grapes was exceedingly fine.

After the reading of the proceedings of the last meeting, the Committee on Subjects for discussion presented their report, which was accepted and the subjects were discussed in the order presented.

SUMMER PRUNING OF THE GRAPE.

Does summer pruning of the grape hasten the maturity and improve the quality of the fruit, and add to its size?

H. E. HOOKER said all experienced grape growers know that the grape must be summer pruned, or it will become a thicket of leaves and branches, impenetrable to the sun. He did not think, however, that severe summer pruning hastened, but rather retarded early ripening. Vines that extend their branches into trees generally ripen specimens in this situation earlier than on the trellis. The object of summer pruning is to improve the size and quality of the fruit.

B. H. FISCHER supposed the object of summer pruning was to throw the sap into the fruit, which otherwise would be used in the extension of the vine, and in this way the fruit was not only enlarged, but came to maturity earlier. That was his experience.

W. P. TOWNSEND, of Lockport, thought there was no difference of opinion in regard to the necessity of summer pruning. The only question was as to the extent to which it should be carried. His own impression was that we should heed a little the teachings of nature in this respect, and it is known that the sap tends to the extremities. There may be so great a development of top as to retard the ripening, but on the other hand he was satisfied too severe pruning also retards the maturity of the fruit. His neighbor, Mr. PAINE, had concluded to let his vines make their natural growth, as he thought he had lost several crops by following the usual method of shortening the main branches and side shoots.

W. B. SMITH, of Syracuse, would in part agree with Mr. TOWNSEND, but we must start right—following a somewhat natural course from the commencement. If the vine is planted in common soil, without manure, and it is allowed to take its course, only having trees or something to which the tendrils can attach themselves, and keep the branches extended, we shall get a crop of fair grapes, though not large. But when we plant a vine in a rich, highly manured soil, and attempt to confine it to a trellis of ordinary dimensions, summer as well as winter pruning is necessary, or the whole becomes a swamp of foliage and branches, when the fruit will never ripen. The only question is, at what time is it best to prune, and to what extent.

Dr. BARNOR, of Dansville, said it was difficult to give specific rules and say how much to prune, but his experience was, that as a general thing it was safe to remove one-half the fruit and one-half the wood and foliage, and the half that is left will give more weight of grapes than though the whole was allowed to remain. Dr. UNDERHILL, of Croton Point, pruned on this system.

Mr. HENDERSEN, of Macedon, said that if pruning was carried to such an excess as to affect the health of the vine, it would of course injure the fruit. We must, in our pruning have regard to the health of the vine. It was generally believed that the sap must be elaborated by the leaves before it is in a condition to be used by the fruit. The removal of too many leaves would of course be injurious to both vine and fruit.

Dr. BARNOR said if too much wood was allowed to remain the sap would be exhausted by its natural increase. Ringing showed the advantage of giving the fruit a full flow of sap.

Mr. MOORE, of Lockport, said, with proper pruning, the buds may be fully developed, so as to secure a crop of grapes every year, and yet not forced to break in the autumn prematurely.

Mr. RINGENBURG, of Lockport, practiced the spur system of pruning somewhat, and had very good success with the renewal system. Sixty-seven vines, three years old, (Isabella) averaged 10 lbs. of fine grapes each. From one cane five feet long cut 35 pounds of fruit.

S. B. AINSWORTH had experimented a good deal with grapes—pruned them and left them unpruned, and had in his own mind established these facts. Let the vine take a natural course and it will bear very well for a few years. A neighbor and experienced grape grower, Mr. WILCOX, had a very large vine, which had been allowed to grow naturally, although it was spread out so as not to be over crowded. It is now so large that it does not make as much new wood as a young vine would. It bears a good many grapes—the quality is not good, and they do not ripen as early by ten days as on those vines that receive a good summer pruning. Had 39 vines growing, all treated alike, except three, which are not pruned. These three made a heavy mass on the trellis, four feet thick at the top. Did not get three pounds of grapes from these three vines, they were poor, mildewed and worthless. The other thirty-six produced a bountiful crop—last season at the rate of 16,000 pounds to the acre—some of the bunches as solid and compact as *Miller's Burgundy*.

Mr. B. SMITH, of Syracuse, inquired if the canes on the pruned vines ripened as well as on the unpruned, so as to endure the winter.

Mr. AINSWORTH replied that the canes were larger and better ripened than on the unpruned vines. Know of one old vine in his neighborhood that had grown at random for many years and produced no ripe fruit, when it was taken down and pruned by Mr. WILCOX, since which time it had borne magnificent fruit. Some of the bunches were shown him and he dared not call them Isabella at first, without knowing where they were grown, for they were as large as Black Hamburgs.

One gentleman stated that the Hon. Mr. PORTER, of Naples, always took his vines from the trellis in the fall and covered them with about two inches of earth, and the result was that they started earlier and ripened earlier than vines that were left uncovered.

The discussion of this question was continued at some length, but nothing of special importance was elicited.

Afternoon Session.

VARIETIES OF GRAPE FOR GENERAL CULTURE.

Can any other variety of Grape beside Isabella be recommended for general cultivation in Western New York?

Mr. HOAG would recommend the *Hartford Prolific* Grape. Had cultivated it for four years and found it four weeks earlier than the *Isabella*, growing by its side, while it is more productive and about equal in quality. It is good eating by the first September. Cultivated in the open ground, trained to stakes, it always ripens. We hear of a great many ripe *Isabellas*, but always find upon examination that they are in some peculiarly favorable situation, by the side of a house, &c. In ordinary places *Isabella* is not fully ripe one year in ten. *Hartford Prolific* is said to drop badly, but if exposed to the sun it is less liable to drop. Mr. H. would add the *Delaware*, which with him was ripe the 10th of September, and a better grape than any other. Had fruited the *Concord* for two years. It is a very fine grape, although not quite equal in quality to *Hartford Prolific*. Ripens ten days or two weeks before the *Isabella*. The *Diana*, although not fully ripe until after the *Concord*, ripens a few berries very early and they are fine flavored, sweet and delicious. The *Perkins* is fully three weeks earlier than the *Isabella*, is probably a seedling of the *Catawba*, with same flavor. *Rebecca* is said to be a feeble grower, but had not proved so with Mr. H.

P. BARRY—This is a subject of importance and one wherein caution and experience too are necessary. Very few cultivators in Western New York can speak from experience as to the qualities of these sorts for general, extensive, and profitable culture. Gentlemen must try them thoroughly, in the vineyard, as well as in the garden, and then we shall know if they prove really hardy and productive, and if they ripen early. Out of the whole number of what may be called new grapes, I have not sufficiently tested any variety except the *Diana*. The *Diana*, I believe, is a grape possessing all the qualities which are required for a profitable and popular grape. When ripe it is of most delicious quality—so that one cannot be wrong in recommending it. Our *Delawares* are not ripe. Gentlemen import them from Southern Ohio for exhibition. I have seen *Delawares* in other gardens, in the city, not ripe. Still, the *Delaware* is a delicious little grape, and a very important acquisition. *Rebecca* I don't think will ever be profitable, because the vine suffers in the summer from the sun. It shows all the delicacy and tenderness of a foreign grape. By the side of the *Delaware*, on the same trellis, the *Rebecca* shows tenderness, while the *Delaware* is perfectly hardy. *Concord* I think is going to be a valuable grape, although of nothing like so fine a quality as some think. A few days earliness just saves it from being discarded. *Hartford Prolific* is entirely destitute of acidity at any stage of its ripening, and that is one of its defects. When *Hartford Prolific* and *Isabella* are equally ripe one is sour and the other sweet. And here Mr. B. drew a distinction between sourness and acidity, showing that an acid grape should not be therefore condemned. The *Hartford Prolific* drops from the bunch, which is a serious defect for market purposes. *Northern Muscadine* is a little earlier and drops worse. On the whole, until we had larger experience, Mr. B. would only recommend one sort for general culture, and that was the *Diana*. But every gentleman's garden should have the *Delaware*.

Mr. HOOKER thought we had some grapes which were worthy of general and extensive cultivation, but with our present experience it was probably not best to make out a list. With our present experience, as to the *Delaware*, there is no doubt but we shall find it a desirable grape, it is so hardy and so productive. On his own premises the *Delaware* is fully ripe upon an open trellis. Where the *Isabella* is unripe and unfit to eat, the *Delaware* is good. Certainly I should say it is a fortnight or three weeks earlier than the *Isabella*. The *Hartford Prolific* is the earliest grape that I have ripened, and for my own use is a very good grape. The *Concord* follows shortly after the *Hartford Prolific*, and though I cannot praise it very highly, still it ripens two weeks or more earlier than the *Isabella*. The *Rebecca* I have no confidence in whatever, its leaves burn so much in summer. The *Diana* is a grape which I esteem very highly; a good deal better every year I know it. The fruit is very rich and delicious and the vine is a great bearer.

Mr. C. L. HOAG remarked that *Delaware* ripened with him about the 10th of September. In Lockport they were esteemed far superior to the *Diana*, in every respect except size. One two-year-old vine produced one hundred clusters of grapes.

Mr. E. MOORE, of Lockport, thought the *Delaware* worthy of cultivation by all the gentlemen here, but *Delaware* is not nearly as large as the *Diana*. The *Diana* is a very strong grower, also. *Delaware* is very valuable for garden purposes. Liked the *Delaware* grape, but, until we know it better, no farmer should set out an acre of it. *Diana* is equally as hardy as the *Isabella*, and a greater bearer. The wood is shorter jointed, and consequently there are more buds to fertilize. Another advantage, it ripens earlier, and ten days before it is ripe it is as good as the ripest *Isabella*. The *Diana* will hang upon the vines to the very end of the longest season without dropping.

B. HODGE, Esq., thought this a most important

inquiry. With him three-fourths of the season, and more, the *Isabella* does not ripen. It is poor, insipid, in fact worthless. There is consequently a sort of grape mania for some better grape. Hundreds and hundreds of seedlings are and will be brought forward which must prove to be worthless; and our society must be very careful in pronouncing upon any sort of grape. The public mind is anxious to know if we yet have any good variety; any sort equal to the *Isabella*, and ripe earlier, and if we have got such a grape or can get one, it will be a great gain. People call the *Isabella* ripe as soon as it begins to turn a little brownish; but the *Isabella* when fully ripe is a dead black, as black as any *Concord* grape upon the tables to-day.

P. BARRY, Esq., had neglected to mention that old and deservedly favorite grape the *Clinton*. The gentleman is now in the room who introduced it to public notice and named it. Although a small grape it has one distinguishing excellence, it never drops, whilst it ripens early. Bunches were ripe two weeks ago. The fruit can be kept until New Year's day, and at that time in good condition. Long keeping seems to work a change in the fruit and take away its acidity, so that it becomes a delicious little grape. Another thing it is most easily propagated, and will run and bear everywhere whether pruned or not. If we of Western New York ever turn our attention to wine making, the *Clinton* will be the grape we shall use for the purpose.

ALVAN COVAY had kept the *Clinton* grape into February, and it seemed to be a characteristic of the variety that the longer we kept them the sweeter they were.

Mr. HOAG here remarked that the *Diana* was a most excellent keeper and did not drop from the bunches.

S. H. AINSWORTH spoke of his friend Dr. MINER, who in the eastern part of Monroe County, had raised fruit from *Diana* vines for five years. The *Diana* was a most excellent grape, ripening earlier than the *Isabella*, and the Doctor liked it so well that he extended his vineyard to 500 vines. Cultivated in the same manner, and trained upon the same trellis with the *Isabella*, the vines bore as much weight of fruit as the *Isabella*, and far better in quality, while in time of ripening it was earlier. On the same premises where he had never got a ripe *Isabella*, the *Diana* had ripened and ripened fully every year for five years, and "in quality far superior." Had raised the *Clinton* more years than the *Diana*, and until after frost comes its acidity makes it worthless, as a table grape, by the side of the *Diana*.

The Society then by a unanimous vote recommended the *Diana* grape for general cultivation in Western New York.

BEST PEARS FOR WESTERN NEW YORK.

What varieties of Pears have proved productive and of good quality throughout Western New York, in all localities?

Vice-President Wm. BROWN SMITH, of Onondaga Co., was called to the chair.

B. HODGE, Esq., spoke of the *Bartlett*, as coming early into bearing, whether on pear or quince, and possessing most of the good qualities that a good pear should have. The *Flemish Beauty* wants picking early, and should not be allowed to ripen on the tree, but let it be picked early and it is very delicious. In Buffalo, *Steven's Genesee* was liked very much, and it is very successful. As to the *Seckel*, no one could say too much in its praise.

W. P. TOWNSEND said *Louise Bonne de Jersey* grown as a dwarf, exceeds any variety in productiveness that he had ever cultivated. *Duchesse d'Angouleme* is also exceedingly fruitful, but neither of these varieties succeeds as well upon the pear stock as on the quince. The only fault with the *Vicar of Winkfield* is that it bears too abundant, and we must thin the fruit a little. Among the newer pears, though the *Howell* promised to be one of the most valuable fruit. The fruit averages the size of *Bourne Dick*, is of a bright color, of fine appearance and of first rate excellence. *Tyson*, where known, is a universal favorite, an abundant bearer either as a standard or dwarf. Mr. T. didn't know but that if he were compelled to select one variety from all the others, he would select the *Brandywine*. It ripens about the same time as the *Bartlett*. The tree as a dwarf, is inclined to grow too luxuriantly, and requires severe pruning. As to the *Belle Lucrative*, any body that has ever eaten them need not have a word said about the quality. The great fault in cultivators of the pear is that they neglect to pick their fruit soon enough, and in ripening the texture becomes woody and fibrous instead of juicy and rich.

E. W. HENDERSEN—With me the *Washington* pear exceeds all others. Fruit of the highest flavor, and every year a full crop.

S. H. AINSWORTH—Would add to what friend TOWNSEND has said about the *Tyson*, that the fruit is very fine and that the tree bears a full crop. With proper trimming as a standard it bears young, while as quince it always bears young and well. *Bartlett*—fruit is fine, succeeds well and bears young. *Flemish Beauty*—Concord with Mr. T. that it should be picked early, for if it has a fault it is to rot at the core and drop. The tree is a beautiful tree and makes a rapid growth. *Belle Lucrative* is very fine and sweet. *Seckel* had succeeded in Ontario County to his knowledge well. John Dixon of Canandaigua brought the first tree to that section, and it has always borne each year. Don't think there is any tree that will excel the *Seckel* as to the quantity of fruit unless perhaps the *Bartlett*, and the fruit sells at \$18 per barrel. The *Virgaleu* in Canandaigua and Wyoming Valley grows and ripens without cracking. There are two or three trees fifty years of age in Wyoming, the fruit of which often sells for more than \$20 per barrel, and the trees bear very full. *Louise Bonne de Jersey* had done well with him. Had a tree now twelve years old with a barrel of fruit upon it. Of this variety the fruit is at least one-third larger upon dwarfs than on standards.

P. BARRY said this preference among pears is a very difficult question to decide. The three principal requisites was that the trees should be hardy and productive and the quality of the fruit good. *Duchesse d'Angouleme*, although not as good on standards as on dwarfs, at first, continues to improve on the pear stock, as the tree grows older, for twenty or thirty years. The *Virgaleu* Mr. B. would not leave out of the list. Whenever the fruit is good it brings a high price, and is very popular. *Beurre Giffard* is good, but must be gathered early. *Rosheer* grows and ripens everywhere, and does not crack. *Tyson* is an excellent pear and a superb tree, worth growing for its beauty alone, if it never bore any fruit. *Flemish Beauty* is one of the No. 1 varieties. *Beurre d'Anjou* will keep a month longer than *Virgaleu*, and is a capital fruit. *Sheldon* is one of the finest of all pears, and although it will not grow on quince, it makes a most superb growth on pear. For winter pears would recommend *Lawrence* and *Winter Nelis*. In answer to questions Mr. B. said he would not recommend *Vicar of Winkfield* for general cultivation. People would not prune the tree, or keep the fruit properly. Would recommend the *Essex* *Beurre* for gentlemen who cultivate well. It is a tree that needs care and then it is one of the finest winter pears, in fact, the best.

BEST MANURE FOR TREES, &c.

What are the best manures for the Apple, Pear and other fruits, and what are the best means to renovate old apple orchards?

W. P. TOWNSEND remembered how the old orchard got all mossy, and his father set him to scrape the bark of the trees. After working a while he got sick of it, and told his father if he would let him take the team and draw some manure to the old orchard he could scrape the trees without injuring the bark. He drew in upon those premises an average of half a load to each tree; next year

the bark began to peel, and of course to bring with it the moss, and they increased in vigor. That summer turned the hogs in upon the orchard, and they pretty thoroughly rooted it all over. Even to the tops of the trees the old bark has started, and the body had all the thrifty and vigorous look of young trees. The fruit that used to be half or three-fourths wormy is now fair, smooth and free from vermin. By investigating the trees he destroyed the insects that had destroyed the fruit. Common barnyard manure was best for trees. Had tried it for pear trees also. It should be applied in the fall and then you get the benefit in the next two years' crop. Apply 35 loads to the acre every year in the fall.

Mr. LAKOWORTHY thought that in heavy clay grounds much would be useful to lighten it up.

BLACK RASPBERRY—CULTURE AND VALUE.

The Black Cap Raspberry—what is its value as a market berry, and the best modes of its cultivation?

H. E. HOOKER—This Society has heard, at a former meeting, a very elaborate report by Mr. H. N. DONNELL about the cultivation of the *Improved Black Cap*, and needs not that I should add to it. I am persuaded, from my own experience in cultivation, that it is destined to be a very popular and a very useful fruit; there is scarcely any one of the small fruits which is so valuable, and the improved sort is larger and more productive than the wild one, and is eminently desirable; very good for table use, and for all cooking purposes, for jellies, tarts, pies, for drying—in short, for all the numerous purposes for which a housekeeper buys berries, this is unequalled. More of them could be sold in the market than could be sold of strawberries. It is a very handsome dish, no hulls to be picked out, no dirt to be washed off, and they have thus far brought a higher price than strawberries. Mr. H. considered it eminently profitable and worthy the attention of all fruit growers. Should be planted in rows six or eight feet apart, (eight feet apart is best), and the bushes three feet apart in the rows. First year do all the cultivation with a horse cultivator. The following spring tie the plants to a trellis or to a stake. The cases of the second year make a growth of five or six or seven feet high, sometimes even eight or nine feet, but they ought in that case to be headed off at six feet high. To support these, form a wire trellis about four feet high.

B. H. FISCHER thought there was no necessity of the trellis spoken of by Mr. HOOKER. Grow good strong canes, and in the spring these should be cut back to a point where they are stiff and will bear the weight of the fruit without support.

B. HODGE had some experience in the cultivation of the Black Cap Raspberry and was satisfied that it is one of the best of the small fruits. The danger in cultivation was in their inability to get the plants too thick. Thought with Mr. HOOKER that rows eight feet apart and plants three feet apart in the row was best. Would caution cultivators against a certain portion of the plants which are barren. These can be very easily distinguished by an eye well versed in the matter, and they must be rooted out. After the fruit has been gathered in the autumn the old canes should be cut out and it then gives a chance for the new plants to come up from the crown of the old. Agreed with Mr. HOOKER that the trellis was the best plan for cultivating them. There seems to be a sad want of attention to this plant. The Chicago market has been supplied from Cincinnati and Kentucky, and we had even brought them to Buffalo from Cincinnati at \$4.00 per bushel. In my estimation it is a very desirable fruit indeed, and immediately follows the strawberry.

Col. E. C. FROST had cultivated the *Yellow Cap Raspberry* for the last ten years, and thinks that it grows stronger and is really more productive than the *Black Cap*, and that the fruit is better flavored.

BLACKBERRIES—VALUE AND CULTURE.

The New Rochelle and other blackberries—what are their value, and the best methods of pruning?

Mr. BARRY, being called upon, said the Blackberry was easy of culture, productive, and needs a good soil to produce fine fruit, the richer the better. The *New Rochelle* were good when fully ripe, but preferred the *Dorchester* for quality, though it was less productive.

S. H. AINSWORTH said Mr. MINER, of Honey Falls, had grown a seedling trailing Blackberry from seed, which was large, productive and of excellent quality. In fact, he had two seedlings of about equal quality, and of the same character, one about ten days earlier than the other. Had been acquainted with this fruit for three years. It is like our wild trailing blackberries, but a vast improvement, and much sweeter than either *New Rochelle* or *Dorchester*. Perhaps it was not quite as productive as the former. Berries three-fourths of an inch in diameter, and an inch and a quarter, or more, in length. One of the varieties was apt to form a few imperfect berries, and this was the only drawback.

Mr. MINER, being present, was called upon for facts in regard to his seedling blackberries. He said the flavor was excellent, better than *New Rochelle* or *Dorchester*. Thought quite as productive as the former. Had two sorts which he considered good, one ten days earlier; the early variety always had perfect berries; on the late sort a few berries would not be perfect. Had raised thousands of seedling blackberries, from the Michigan running Blackberry, but obtained only these two that he considered worthy of cultivation. Planted three feet apart one way and eight the other. Had them in cultivation six years. Will produce at the rate of fifty bushels to the acre. They make a large growth, some running twenty feet, and always ten or twelve. Cut them back to about six feet and wind to stakes and fasten. The fruit in this way is on the outside, where it can be easily picked. The new wood is allowed to trail on the ground. Propagated from the tips of the branches, the same as the Black Raspberry. Never knew an inch of the wood to be killed by the winter.

CURRANTS—BEST VARIETIES AND CULTURE.

What are the best methods of cultivation, and which are the best varieties of the currant for cultivation?

Mr. BARRY's opinion being asked in regard to Currants, said he had nothing to offer particularly new or instructive. The Currant needed plenty of manure and shortening one-third, or thereabouts, of the bearing branches. The *White Grapes* and *Victoria* he considered the best currants. The *Versaillaise* is said to be as large as *Cherry*, and of better quality. The *Cherry* is large, quite solid, but is not a shy bearer, as it has been called sometimes, if properly treated.

H. E. HOOKER thought for market purposes the *Cherry* was the best currant; its fine size and appearance make it sell well. It is the most popular variety with the growers around New York.

Mr. AINSWORTH found the *Cherry Currant* very productive far superior in this respect to *White Grapes* or *Victoria*. It also hangs on the bushes a long time after ripening.

The best Black Currant for cultivation was inquired for, when Mr. BARRY said there was little difference between the *Black English* and *Black Naples*, and Mr. HOOKER thought the *Black Naples* the most productive.

At about 10 o'clock, P. M., after voting that the Annual Meeting should be held in Rochester, the Society adjourned. Next week we will notice the fruits on exhibition.

PRESERVING FLOWERS.—Is there any method of preserving flowers, after cutting them, by waxing the stems, or otherwise, so that they will last during the winter, or longer, retaining color, &c., &c.—take, for instance, the *Asters*? Can they be preserved? Please answer through next *RURAL*.—A. E. T. Tonawanda, Erie Co., N. Y., 1890.

We know of no way of preserving *Asters* or similar flowers. Waxing the stems does no good. The *Amaranthus*, *Amorbia*, and other everlasting flowers, are the things for winter bouquets.

CATERPILLARS IN WINTER.

Messrs. Eds.:—During the latter part of the month of January last, while moving bay, (Clover and Timothy,) from a stack, and which had been cut and cured the previous summer from the grounds of a young bearing orchard, the entire bottom of the stack, which rested upon loose boards thrown upon the ground, and consisted of a stratum of about two feet in thickness from the ground was found to be literally alive with *Caterpillars*. They were not the product of an accidental nest or two, but as numerous interspersed through the compact mass as the clover and grass heads themselves. In size, about an inch long and apparently having been hatched and at work a considerable length of time, and most of them being enveloped, or partially so; in their web fastened to the spears of hay and resembling in appearance, myriads of spiders nests. The blades of clover and grass were eaten to shreds, even where seemingly most solid and compact, and their excrement was so plentiful as to resemble, when sifted upon the snow, quantities of coarse gunpowder.

I should account for the phenomena of their singular position, by the eggs having been deposited on the standing grass by insects from the trees, though great care has always been exercised to prevent their getting even a foothold in said orchard, and for their premature hatching, by heat and moisture (proceeding from a layering of damp spoiled hay thrown down for a bottom to the stack,) extending upward through the mass above, about as far as the insects were found, as is evident from its partial discoloration and somewhat musty condition. Whether or not their operations were for the most part carried out before the commencement of winter, which was hardly of sufficient severity to interfere with their operations in so snug a habitation, I am unable to determine, most of them having the appearance of being in a rather quiescent state, but not all. Some were enased in web, others at liberty and full of life and activity. To all appearance, they had, at least, been put to but little inconvenience by coming into existence under circumstances so unpropitious and unlike their natural habits and requirements, of air, sunshine and locomotion.

Syracuse, N. Y., 1890.

A. L. PAATT.

APPLES.—Everywhere a failure. The apple disease is as fatal and wide spread as the potato disease in its fullest vigor. Everywhere trees are dying—the leaves turn yellow, the twigs dry up, the fruit drops off, or, if it hangs on till mature it is gnarly and only half size, very often wormy. Fine apples, of full size, smooth skins, and good flavor, are the exception, not the rule, in all the region that sends fruit to this city.—N. Y. Tribune.

REMARKS.—This will sound very strange to many of our readers in this section of Western New York, where apples were never more abundant, and never more free from blight and insects of every kind. Apples, however, are almost or an entire failure in many parts of the country, and those who have a good crop of fall and winter fruit will be able to sell them at a good price. Full *Pippins*, *Twenty Ounce*, &c., are now bought here by dealers at \$1.50 per barrel, which is quite low. Apples that will keep should not be sold at this price. The story that "everywhere trees are dying—the leaves turn yellow, the twigs dry up," &c., sounds a good deal like romance—we don't believe it.

COLORING RECIPES—KEEPING TOMATOES.

Eds. *RURAL*:—Being much pleased in reading the many recipes in your valuable paper, I will contribute my mite, as I think that I have a cheaper, easier, and more permanent recipe for dying Orange than the one that you published. I would be pleased to have some one give me through the *RURAL*, a recipe in full for dying a bright, permanent red on cotton, as rag carpets are all the fashion these hard times.

TO COLOR ORANGE.—Take one ounce of annatto, and two ounces of copperas. Put them both into weak lye. When they are dissolved, put in about two pounds of cotton cloth, and let it stand in an iron kettle on the stove, where it will be hot, a day or two.

TO COLOR BLUE ON COTTON.—One ounce of extract of logwood; 1 oz. of verdigris; $\frac{1}{2}$ oz. of alum to 3 lbs. of yarn—boil all an hour and a half, then boil all same length of time in strong soap suds.

A GOOD WAY TO KEEP RIPE TOMATOES.—Pick ripe tomatoes and put them in a barrel in a cold cellar or ice-house, then cover them with water, putting a teaspoonful of good salt to a pailful of water. Put a board and weight over them to keep them under. Serve them as fresh from the vine. Should they be too salt to suit your taste, soak them in cold water several days, after pricking them with a fork.—R. A. B.

APPLE CUSTARD, CAKES, &c.

Messrs. Eds.:—Having read and tried some of the excellent recipes that have been published in the *RURAL*, I thought I might send a few that are good.

SUGAR CAKES.—One and one-half cups sugar; 1 egg; $\frac{1}{2}$ cup butter; $\frac{1}{2}$ cup sweet milk; 3 teaspoons cream tartar; 1 do. soda, and flour enough to roll thin—bake on tins.

APPLE CUSTARD.—Pare and quarter a quart basin full of sour apples, stew and mash fine, then add one teaspoon coffee sugar; the whites of 6 eggs, beaten to a stiff froth; flavor to the taste; beat all together and serve with sweetened cream.

Will some *RURAL* reader please send a recipe for keeping hams and shoulders after they are smoked, and oblige.—C. I. S., Mill Creek, Erie Co., Pa.

LITTLE ROSE.

Sun comes with fairy footsteps—
Softly their echoes fall;
And her shadow plays like a summer shade
Across the garden wall;
The golden light is dancing bright,
Mid the mazes of her hair,
And her fair young looks are waving free
To the wooing of the air.

Like a spiritual fawn she boundeth
So gleefully along;
As a wild, young bird she caroleth
The burden of a song;
The summer flowers are clustering thick
Around her dancing feet,
And on her cheek the summer breeze
Is breathing soft and sweet.

The very sunbeam seems to linger
Above that holy head,
And the wild-flowers, at her coming,
Their richest fragrance shed.
And oh, how lovely, light and fragrance
Mingle in the life within!
Oh! how fondly do they nestle
Round the soul that knows no sin.

She comes, the spirit of childhood—
A thing of mortal birth;
Yet bearing still the breath of heaven
To redeem her from the earth;
She comes in bright-robed innocence,
Unsoiled by blot or blemish,
And passeth by our wayward path,
A gleam of angel light.

Oh! blessed things are children—
The gifts of heavenly love—
They stand betwixt our world-hearts,
And better things above;
They link us with the spirit-world
By purity and truth,
And keep our hearts still fresh and young
With the presence of their youth.

ALLIE DAYTON.

Mrs. DAYTON deflected children, so she said,—so, too, said her actions, and every little one in the neighborhood wondered if she was ever a child, and, if so, they wondered if she used to hate herself as bad as she now did them! Mrs. DAYTON boasted that she never had her nicest plums and peaches stolen by the little urchins as they came from school—no, not she—and as to the children—why, they had not the least doubt but that she would "cut their ears off," if they dared to come near the house, for she had told them that she would, and they believed her fully capable of performing the act. Mrs. DAYTON said it was owing to her "good government" that they did not trouble her as they did the other neighbors—well, perhaps it was!

Mr. DAYTON was a mild, peaceable sort of a man, who believed in Woman's Rights because he was afraid to believe any other way, and always allowed his wife to do just as she chose to, because, forsooth, it so happened that he couldn't help himself. Poor Mr. DAYTON! Many a night did he go to his dreary home tired and weary, and found there no balm for his troubled heart, and naught to give his spirit cheer, and instead of a kind welcome from his wife, he was greeted with harsh words and useless complaints. Poor man! Two years passed away, and now the cottage walls resounded with the merry voice of childhood. Every one wondered at the oddity of Dame Nature in fashioning such a dainty little figure as ALLIE DAYTON, and then setting her down in the little red cottage of the shoemaker. True, it was strange, but how wise, for she came like an angel messenger into that home, wiping out all the evil there.

She was indeed as beautiful a flower as ever bloomed this side of Paradise, with flaxen curls, deep blue eyes, a forehead as fair as the pure lilies that blossomed beside the cottage door. Her lips were cherry-red, and cheeks rich with the hue of the rose. Her spirit was like the snow-flake, chaste and pure—and thus she played in that old cottage, softening the harsh nature of Dame DAYTON, and shedding abroad the light in the dark places of her father's heart. More beautiful she grew, and yet more beautiful, and the village people opened wide their eyes in amazement to think that this could be the child of Mrs. DAYTON, and many shook their heads gravely as they pointed to the blue veins in the clear forehead, and whispered of a "mound in the graveyard!"

She grew to be an idol in that cottage, worshiped even above Him who made her and placed her there. Often when her mother's face was pale and distorted with passion, little ALLIE, the household angel, would climb upon her lap, and with her little soft hand would smooth the wrinkled forehead, and say,—"God will be angry with mama," though where she learned that holy name I know not, unless 'twas from the lips of her father. 'Twas wonderful what a change came over that household when ALLIE entered it. It softened the mother's nature, and made her ashamed of her harshness—made her more womanly and gentle, and made her love her husband more. And the father—O! the sunshine soon chased the shadows from his heart, and he loved his home more and more after baby ALLIE came to cheer it.

Thus the days and months passed on, and the cottage was re-built, and flowers were planted before the door, and neat green blinds adorned the windows; the curtains were looped back with blue ribbons, and a bright, new carpet covered the parlor floor, and in fact you would hardly say it was the "Dayton Cottage," for the old folks said "we must make ALLIE's home pleasant." Gentle ALLIE. They saw not the shadow that was even then trailing along the landscape—knew not of the angel that was even then watching and waiting beside the cottage door! One bright morning ALLIE's voice was not heard in the house,

save as it moaned painfully, and the patter of tiny feet was missed on the stairs. ALLIE was ill, and ere the noon-day shadows rested on the door-sill, the angel had borne her to Heaven—had snatched the pure flower from that cottage home, and left the hearth desolate. Of there were sad hearts that wept above her tiny form, and as they turned away from that little mound in the churchyard, the father and mother almost longed to rest there too. 'Twas sad to watch their grief and suffering when they laid her away in the ground, and when they had reached their desolate home the humbled wife said, as she smoothed the grey locks of her husband, "she was only lent us for a little while, to purify our hearts and make us better, and now let us be happy in each other, for, though we may not forget our ALLIE, we may live to meet her in Heaven!"

Years have passed. The cottage still stands, but the inmates are not the same that they were years ago. ALLIE's father and mother rest side by side in the churchyard—they have gone to meet their child in the Garden of God.

Brighton, N. Y., 1859.

NETTIE NETTLE.

THE RIGHT TRAINING OF WOMEN.

THE Church of England Review has an article on Female Education, from which we take the following:

Much remains to be done in winnowing out of peoples' mind ridiculous ideas of a certain purely fastidious style of living, without which it is impossible to keep house. There are plenty of young men who have yet to unlearn the foppery of expenses disproportionate to their means, and the sordidness of luxuries which feed not self-respect, but gluttony and pride. The possibility must be secured to daughters and young sisters growing up to be rational, appreciative companions; girls who, if they ever marry, will choose and value their husband for what he is, and be interested in his calling and his opportunities for observation; women who will estimate the grave and sweet realities of wife and motherhood beyond any accident of precedence or superfluity. By dismissing false and foolish notions of respectability, by refusing the cheap fascinations of a paltry education of display, by discountenancing restraints misdirected or too rigorous, by cultivating an intelligent and unassuming mode of intercourse, by a careful foresight in assisting young people to prepare themselves for the exertion and cost of one day being the centre of a peaceful, hospitable home; in these and other ways much may be done to remove obstructions to that gradual acquaintance, and that unaffected respect and attachment which lead on to happy marriage.

In the meantime it may be well to think, with not only the sympathy, but the veneration they deserve, of among those who will never marry; to assist in multiplying the too few occupations suitable to women, or open to them; above all, not to preach by implication or otherwise, that a woman's life need ever be dwarfed to a negation, consumed miserably away by causes absolutely out of her control. There are women strong enough to keep their womanly dignity and sweetness, and to organize around them the moral elements, at all events, of an independent existence. They whose steps are feeble need the more to be helped, rather than hindered in the struggle with their fainter and more yielding self. If they fall here, is it all certain that in wedded life their lot would have been suspicious? Alas! how many a faltering will has been bent and "given" beneath sanguine, unfulfilled resolutions, to reclaim and humanize the husband, who has pulled the wife down to his mean wretched level. Marriage is not lottery; but it is mere willful blindness to forget that in all its higher aspects, it may be woefully inverted or appallingly debased. Not all the grand provisions of tender ties and gracious instincts which surround one of the greatest of Divine ordinances, will make people pure or happy who insist on being peevish or frivolous, or worldly, sensual and devilish.

Wedded life is a great and holy mystery, and a source of power for good, often far beyond estimation; but unless there be at least one soul filled with unselfish love, and strong in an unflinching faith, the formal union of two persons is no guarantee whatever for a will ennobled, or affections enlarged and cleansed. And the faith which so works by love can make a sunshine in a shady place, without an infant's or a husband's eye to look into. The harmonies of a developed and transfigured womanhood, have been set many a time to other music than that of wedding bells. She who is enthroned never, under any roof, in a mother's holy sovereignty, may earn the right in many a house of compelling every soul to love her. She will create or find an atmosphere in which to keep, unwithered, and it full pulsation, "the heart out of which are the issues of life." Her hands will redeem the time, and her brain not be idle. Living singly, yet not solitary, when she dies it will not be till, "smote" by many a touch of gratitude and cheerful, reverential sympathy, "the cord of self has, trembling, passed in music out of sight."

WOMEN AND PICTURES.

Is, indeed, women were mere outside form and face only, and if mind made up no part of her composition, it would follow that a ball-room was quite as appropriate a place for choosing a wife as an exhibition-room for choosing a picture. But, inasmuch as women are not mere portraits, their value not being determinable by a glance of the eye, it follows that a different mode of appreciating their value, and a different place for viewing them, antecedent to their being individually selected, is desirable. The two cases differ also in this, that if a man select a picture for himself from among all its exhibited competitors, and bring it his own house, the picture being passive, he is able to fix it there; while the wife, picked up at a public place and accustomed to incessant display, will not, it is probable, when brought home, stick so quietly to the spot where he fixes her, but will escape to the exhibition-room again, and continue to be displayed at every subsequent exhibition, just as if she were not become private property, and had never been definitely disposed of.—Hannah More.

A WINTER THOUGHT.

BY CAROLINE A. HOWARD.

Evening fell cloudy and drear,
And the wild November wind
Howled deep in the forest near
Like some fierce demon confided.

And silently through the night,
On the hills and vales below,
Drifted, serenely and white,
The fair and beautiful snow.

It seemed the bridal of Autumn,
And Winter, the bride-groom hale,
Over the trembling maiden,
Threw softly the wedding veil.

Or, rather, to me it seemed,
As earth lay shivering and bare,
Robbed of her verdure of leaves,
And pierced by the sharpened air;

That, even as Charity
Covereth the sins of all,
Some plying angel stooped
And let his pure mantle fall.

Dedham, Mass., 1859.

Choice Miscellany.

HOPE AMID DECAY.

To say that decay is engraven on all below, is to repeat a truth which is indelibly written on the tablet of every heart. From the cradle to the grave, the experience of man has been regret and disappointment. Too soon the smiling infant weeps o'er its broken toys,—the youth is called to mourn for friends stricken from his side are the departed hopes of his childhood's days are buried from his memory. The noble breast of manhood heaves with deeper sighs, for that period, also,—is the victim of sure decay, and old age bows in sorrow, when the summer of his life past, and his harvest is not gathered in. It is truly wise

To seize the moments as they fly,—

Bright gems, which careless men pass lightly by.

Ere care has lured the feet of childhood from their sunny track, or vice laid captive the pure heart of youth, decay has marked them for his own. He scruples not to pluck the bride from the altar, or the miser from his gold, while the crown of glory that the conqueror wears, or a hoary wreath from the brow of age, rest alike upon his laureled head. The drooping lily and the towering oak bend beneath its fitful blasts, and the works of man crumble to the dust. Gentle spring greets us in her emerald mantle, and summer follows in her train. Gladness fills the earth, and beauty crowns the pinnacle of Nature; but alas!—mourning and sighing are heard in the valleys, and wailing on the hill-tops. Sad Autumn is the messenger of woe:

"Lady Summer fair and cold,

Pale and dead is lying."

Withered flowers and falling leaves follow her to the grave; and the snows of Winter cover her resting place.

Decay is stamped on every page of history, and oblivion marks the records of antiquity. Where is Rome,—proud Rome, whose queenly form rose majestically above the nations of the earth?—Where is Sparta, with her wise law-givers and her noble sons? Athens, the loved home of philosophy and art—her ancient glory has departed, and wisdom has found an asylum in other lands.

It is night, and the calm, beautiful stars come out one by one, until myriads of shining orbs gem the vaulted arch of heaven. We behold, and are filled with admiration, with wonder and with awe. As we turn from the saddening details of this earth-life of a day, to the contemplation of these stupendous monuments of nature, what wonder, that to us, imperishable beauty veils the skies, where Divinity has left His impress on every twinkling star. Like sinless angels clothed in garments of unsullied purity they ministered to our fettered spirits until an undefinable longing to be freed from the prison house of clay, to soar through the regions of space, till arrived at the "shores of heaven" we should cross

"Creation's last boundary stone,"

and be ushered into the presence of Deity, to behold the consummation of Infinity, to fathom the mysteries of Eternity. To appearance, they change not as they move on in their allotted course, age after age, but we have every reason to believe, that there, also, Decay is busy at his work of desolation.

But have we yet marked the boundaries of his wide domain? To the great and glorious mind is reserved the end and consummation of decay. Here, the aspirations of this universal tyrant must cease. There is nothing greater but Deity Himself. Since the fall of man, the history of mind has been a struggle, successful or unsuccessful, against the tendency of this part, immortal though ever dying, to degenerate in purity and fitness to be called the likeness of its Maker. Here, Decay, alone, has his perfect work. In the material world, it is but a change, for annihilation is the only weapon which the conqueror cannot yield.

Hope pervades all nature. Winter, white and barren, gives place to the vigor and freshness of vernal bloom. The lovely hues of Summer are matured in the fruitful Autumn and repose again until the resurrection morning of the year, when, at the voice of the angel sepyr, and the touch of the faithful sunbeam, they shall spring again into new-robed life, sublime in its simplicity and almost holy in its purity.

The spheres shall be destroyed and the elements dissolved, but there shall be "a new heavens and a new earth wherein dwelleth righteousness." The lost soul is the only work which the finger of God shall not re-touch with more than its created glory. The mind, in pursuing the path of pro-

gress marked out by its architect, rises in towering magnificence above every monument of Nature. "The righteous bath hope in his death."—In the vision of Minna, what was the passing of the broken archway, and the inevitable descent into the dark waters below, when the mist was lifted, and his eyes beheld the beautiful islands on the bosom of yonder ocean. So, what is death, when afterward is the more enduring life, the grand, the mighty, the inconceivable greatness of the soul to be revealed? Untrammelled with the littleness, the darkness, the obscurity of matter, spirit communes with spirit, and takes its flight, for the never-to-be-reached infinitude of Divine wisdom. Surely, we have reason to hope amid decay.

"Of the night comes starry splendor;
Of sorrow, faith is born;
And on the steps of midnight
Treads close, the rosy morn."

Pittard, N. Y., 1859.

JANE E. H.

THE ART OF NOT HEARING.

THE art of not hearing should be taught in every well-regulated family. It is full as important to domestic happiness as a cultivated ear, for which so much money and time are expended. There are so many things which it is painful to hear—many which we ought not to hear, very many which, if heard, will disturb the temper, corrupt simplicity and modesty, detract from contentment and happiness; that every one should be educated to take in or shut out sounds, according to their pleasure.

If a man falls into a violent passion, and calls me all manner of names, the first word shuts my ears, and I hear no more. If, in my quiet voyage of life, I find myself caught in one of those domestic whirlwinds of scolding, I shut my ears, as a sailor would furl his sails, and making all tight, scud before the gale. If a hot and restless man begins to inflame my feelings, I consider what mischief these fiery sparks may do in the magazine below, where my temper is kept, and instantly shut the door.

Does a gadding, mischief-making fellow begin to inform me what people are saying about me, down drops the portculis of my ear, and he cannot get in any further. Does the collector of a neighborhood's scandal ask my ear as a warehouse, it instinctively shuts up. Some people seem anxious to hear everything that will vex and annoy them. If it is hinted that any one has spoken evil of them, they set about searching the matter, and finding out. If all the petty things said of one by heedless or ill-natured idlers were to be brought home to him, he would become a mere walking pin cushion, stuck full of sharp remarks. I should as soon think of thanking a man for emptying upon my bed a bushel of nettles, or setting loose a swarm of ants in my chamber, or raising a pungent dust in my house generally, as for bringing in upon me all the tattle of careless or spiteful people. If you would be happy, when among good men, open your ears; when among bad, shut them. And as the throat has a muscular arrangement by which it takes care of the air passages of its own accord, so the ears should be trained to an automatic dullness of hearing! It is not worth while to hear what your servants say when they are angry; what your children say after they have slammed the door; what your neighbors say about your children; what your rivals say about your business, your dress, or your affairs.

The art of not hearing, though nought in the schools, is by no means unknown, or unpracticed in society. I have noticed that a well-bred woman never hears an impertinent or a vulgar remark. A kind of discreet deafness saves one from many insults, from much blame, from not a little apparent connivance in dishonorable conversation.—Selected.

CHARACTER AND REPUTATION.

I WILL draw a distinction between character and reputation, which are not synonymous. A man's character is the reality of himself; his reputation, the opinion others have formed about him; character resides in him, reputation in other people; that is the substance, this is the shadow; they are sometimes greater or less. If a man be able to achieve things beyond his time, his reputation will be different from his character. He who seeks reputation must not be beyond the times he lives in. It is important to men beginning life to know which they want—character or reputation. To build a character is a work of time; as ships are built on one element and used in another, so character is formed in youth and home for after life. Reputation is easily got; it is generally charlatanism, taking many forms—as that of the patriot, a tribe numerous as mosquitoes, who like them, lean and hungry, suck all the blood they can, but make none—who live on suction. In a man, as in a ship, the material must exist originally; a man naturally mean may be improved, but never will be a noble man. Reputation may be made for a man; character must be made by him, with labor and time, and it cannot be taken away. The antagonism between the two is not so great as the disproportion. Thus, a man, if wise, will be content to be considered wiser; he is like a shadow three times in size; like a bank that issues three paper dollars for every one in specie they have; if worth a quarter he likes to be called worth half a million, until the assessor brings him to his senses. He will disclaim "popularity," but claim the same thing under the name of "influence;" but it is what God made a man and he makes of himself which determines his influence; the weights never ask a favor of the scales; a thousand pounds will weigh down five hundred by their natural force. So he speaks of "prudence." Prudence is coincident with rectitude, and there have been men against the grain of life all their days, who yet were most prudent men. He substitutes love of approbation for love of truth. Thousands lose their characters to save their reputation.—Selected.

Each day brings its own duties, and carries them along with it; and they are as waves broken on the shore, many like them coming after, but none ever the same.—Fruits of Leisure.

HUNGERING STILL.

Sources of all comfort here below,
My heart goes out still after thee—
Hungering, thirsting, I would know
Thy righteous will concerning me.

I would be Thine, asleep, awake,
And not repine whatever Thy will;
But meek, submissive, learn to take
The cup, and drink, and bless Thee still.

And as my old desire is this,
O Lord, reveal that will entire,
And fill the heart that longs for bliss
With rapture as it rises higher.

Wilson, N. Y., 1859.

K.

THE TWO IDEAS.

THE two ideas, reduced to their simplest forms, may be expressed in a word—Self-love of Christian love. We take all the forms in which men love the world, with the objects which they pursue, and the motives which animate them, and they are all resolved into one idea—that of self. Power, learning, fame, wealth and influence—in the palace, and in the hamlet—in halls of legislation, or in the humblest walks of life, in a kaleidoscopic change, and a constant transmigration of circumstances, are only manifestations of the selfish principle, when not accompanied by a spiritual life. This self-love is the most insidious and delusive of all the evil tendencies of the corrupt mortal nature, and is the last and hardest to be removed. It lies deep in the human heart, with its roots so closely entwined with every fibre, that it requires nothing less than the miraculous work of a spiritual new birth to eradicate it. What is true of the individual is true of the world. The great carnal principle of selfishness, and the attachments of the earthly and material, must all be broken up before the world can be regenerated.

On the other hand, the Christian's great purpose is to live out of and beyond himself. He becomes elevated by the very nature of his new impulse; and he moves on a higher plane in the duties of his daily life.

So will it be when the world shall be brought to the point where it will undergo the moral transformation which is to come. The work will not be accomplished by a transition like that of darkness into the daylight and the noontide. Sunbeams do not tear up the giant oaks of a hundred years, nor melt down pyramids, nor dissipate the debris of a mighty flood. The old institutions of despotism, hoary with age, and moss-covered by time, will not be removed by songs or smiles. The grasp of power, so firmly held by men, will not be relaxed by fancies or by rainbows. The mercenary pursuits of men who know no motive but self-aggrandizement, will not be relinquished without a struggle. Kingcraft, priestcraft, and moneycraft, of whatever name and degree, will resist the forces which are now working to remove them; and the world will become the battle field for the contest between the spirit of selfishness and the spirit of Christ. Men may pray, "Thy Kingdom come!" But we sometimes think that that were that kingdom to come, in answer to our prayers, we should not be prepared to receive it, because of the violence with which it would uproot selfish and material interests.—Christian Intelligencer.

DARK HOURS.—There are dark hours that mark the history of the brightest years. For not a whole month in many of the millions of the past, perhaps, has the sun shone brilliantly all the time. There have been cold and stormy days every year. And yet the mist and shadows of the darkest hour disappeared and fled heedlessly. The most cruel ice fetters have been broken and dissolved, and the most furious storm loses its power to harm. And what a parable is this in human life—of our inside world, where the heart works at its shadowing of the dark hour, and many a cold blast chills the heart to its core. But what matters it? Man is born a hero, and it is only in the darkness and storms that heroism gains its greatest and its best development, and the storm bears it on more rapidly to its destiny. Despair not, then. Neither give up; while one good power is yours, use it.—Disappointment will not be realized. Mortifying failure may attend this effort and that one—but only be honest and struggle on, and it will work well.

SOUND DOCTRINE AND GOOD COUNSEL.—A theological critic says:—"Religion is not the straight-jacket system of the Pharisee, nor the semi-sensualism of the Liberalist, but denying ourselves of all ungodliness and worldly lusts, and living righteously, soberly and godly." "rejoicing in hope, patient in tribulation"—the sweetest and most precious enjoyments of all religion being the results of tribulation, and the fruits of self denial.

Learn in childhood, if you can, that happiness is not outside but inside. A good heart and a clear conscience bring happiness; no riches and no circumstances alone can ever do it. Alexander conquered all the world, and then, far from being happy, wept because there were no more worlds to conquer.

THE SABBATH is like unto the great oasis, the little grassy meadow in the wilderness, where, after the week day's journey, the pilgrim halts for refreshment and repose; where he rests beneath the shade of the lofty palm-tree, and dips his vessel in the waters of the calm, clear stream, and recovers his strength to go forth again upon his pilgrimage in the desert, with renewed vigor and cheerfulness.

THE HOLY CITY.—If we saw our Father's house and that great and fair city, the New Jerusalem, which is up above sun and moon, we would cry to be over the water, and to be carried in Christ's arms out of this borrowed prison.—Rutherford.

EDUCATIONAL

Written for Moore's Rural New-Yorker.
PERSEVERANCE.

Nothing valuable is to be gained without labor and patience, and a few faint efforts after intellectual culture, never rendered him who put them forth either learned or great. There have been but few who did not, in childhood or youth, possess ardent aspirations for learning, and picture to themselves the great things that they were to accomplish in after-life. But how few carry out their plans. The failure is often owing to the want of perseverance. They become discouraged at the difficulties that they have to contend with, and give up the task they have undertaken. There are difficulties in the way of the accomplishment of any noble object, and the greatest natural endowments do not free the possessor from the necessity of persevering toil if he would become truly learned. There are those who profess to make men learned, (at least in some branches of literature,) in an easier method than any with which our fathers were acquainted; but it may be doubted whether any person has ever yet found his way into the temple of knowledge by walking in the path which those individuals have marked out. He must have a wonderful intellect who can acquire a knowledge of Spanish or German in twelve lessons; and yet certain professors would be happy to inculcate such ideas with the masses. If we would lay up a store of valuable knowledge, we must devote much time to its acquisition.

How much encouragement there is for persevering effort. Perseverance has enabled others to surmount great obstacles. Sir Isaac Newton, in childhood, was thought uncommonly dull, and he ascribed the greatness of his attainments and discoveries in after-life, more to his perseverance than to the natural superiority of his mind. Dr. Adam Clarke's childhood was very far from being characterized by any remarkable display of aptness at gaining knowledge; yet his perseverance placed him among the most learned men of his age. Who has not heard of Demosthenes being hissed from the stage when he first attempted to address the people. Three times was it repeated before they would listen to him, yet his perseverance rendered him the greatest orator that Greece ever produced. It was not until after long years of training, that Cicero won classic fame. Even those who are the favorites of the masses, have often been indebted, in no small degree, to this peculiarity of character for the position they occupy. Goldsmith had his "Traveler" on hand for nine years, and his "Deserted Village" six or seven years. Moore often labored upon a song for two or three weeks before he deemed it finished.

Reader, the Hill of Science is before you. There you gather the richest fruits, if you will only toil up the rugged steep on which they grow; but it is vain for you to dream of plucking them, without persevering labor. You will never gain the fruits by wishing them within your grasp. You must clamber up if you would get them, and the reward is worth the labor. When you have once gained the victory, you will be fitted to be more useful than you could otherwise be, and the possession of knowledge will open to you sources of happiness that are unknown to uncultivated minds. Oak Creek, Wis., 1859. S. L. LEONARD.

SELF-EDUCATION.

Education may be called a knowledge of facts, be they mental, physical or spiritual, which have been collected, one time or another, in different ways, for the supposed benefit of the person or persons acquiring the same. Mind is the fundamental principle upon which all this superstructure of knowledge is to be based, and that it is dependent upon self to what extent these facts are to be accumulated and received, we will briefly endeavor to show.

Let us first consider mind itself, which works by reception, retention and reflection. Under the last, (reflection,) we will include instinct and intuitive perception. Not that instinct is reason, but it partakes of so much of it that it is difficult, if not impossible, to draw the true line of distinction unless it is to be admitted that beasts, birds and insects, along with man, are imbued with at least the elements of reason. And intuitive perception is, in reality, a higher method of reasoning than the common one—or by a combination of principles instead of ideas—Wharves's opinion to the contrary, notwithstanding.

In the reception of knowledge the mind opens, as it were, to take inwardly what has been grasped by perception, outwardly. Memory retains this knowledge, and then comes reflection, a bending back of the mind abstractedly, or, through comparison, upon itself, or facts within and known, for the production of other facts or knowledge which yet remains unknown.

But viewing these ideas in any way, or in whatever manner one may choose, and applying them, or any part of them, to man,—even to beasts, birds, insects, individually or collectively—they are governed more or less by will, and are sometimes strenuously and powerfully influenced by it; and are inherent in the individual be it who or what it may. Knowledge can not be crowded upon the mind until permission of the will has been secured, and as soon as that has been done there is no coercion about it, for the mind then receives the knowledge independently of its own accord. The will may lie quiet and dormant, or it may be forcibly excited; may be careless and indifferent, or on the alert and engaged in immediate action; may be irresolute and fickle, or determined and steady; and it is still part and parcel of the individual, and door-keeper of knowledge and education.

Knowledge may be gathered by actual observa-

tion, or by reading and adopting the opinions and ideas of others. It may be found in doors, or outdoors; in private, or public; at home, or abroad; in the common school, in the college, or in the great school of life's experience—the world at large—and it is immaterial whether by one or more, any or all, of these ways, means and influences combined, it is, in fact, still dependent upon self. And for these reasons, and these alone, it seems we may rest assured that, in the abstract, all education is no more and no less than self-education. J. J. W.

SCHOOL-ROOM ETIQUETTE.

MANNERS react upon the mind that produces them, just as they themselves are reacted upon by the dress in which they appear. It used to be saying among the old-school gentlemen and ladies that a courtly bow could not be made without a handsome stocking and slipper. Then there is a connection more sacred still between the manners and affections. They act magically upon the springs of feelings. They teach us love and hate, indifference and zeal. They are the ever-present sculpture-gallery. The spinal cord is a telegraphic wire of a hundred ends. But whoever imagines legitimate manners can be taken up and laid aside, put on and off, for the moment, has missed their deepest law. Doubtless there are artificial manners, but only in artificial persons. A French dancing-master, a Moonsie Turveydrop, can manufacture a deportment for you, and you can wear it, but not till your mind has condescended to the Turveydrop level, and then the deportment only faithfully illustrates the character again.

A noble and attractive every-day bearing comes of goodness, of sincerity, of refinement, and these are bred in years, not moments. The principle that rules your life is the true posture-master. Sir Philip Sidney was the pattern to all England of a perfect gentleman, but then he was the hero that, on the field of Zutphen, pushed away the cup of cold water from his own fevered and parched lips, and held it out to the dying soldier at his side. If lofty sentiments habitually make their home in the heart, they will beget, not perhaps, a factitious and finical drawing-room etiquette, but the breeding of a genuine and more royal gentility, to which no simple, no young heart will refuse its homage. Children are not educated till they catch the charm that makes a gentleman or lady. A coarse and slovenly teacher, a vulgar and boorish presence, munching apples or chews at a recitation like a squirrel, pocketing his hands like a mummy, projecting his heels nearer the firmament than his skull, like a circus clown, and dispensing American saliva like a member of Congress, inflicts a wrong upon the school-room, for which no scientific attainments are an offset. An educator that despises the resources hid in his personal carriage, deserves, on the principles of Swedenborg's retribution, *similia similibus* to be passed through a pandemonium of Congressional bullying.—Rev. F. T. Huntington.

THE TEACHING OF PHYSICAL SCIENCE.

If the term education may be understood in so large a sense as to include all that belongs to the improvement of the mind, either by the acquisition of the knowledge of others or by increase of it through his own exertions, we learn by these results what is the kind of education science offers to man. It teaches us to be neglectful of nothing; not to despise the small beginnings, for they precede of necessity all great things in the knowledge of science, either pure or applied. It teaches a continual comparison of the small and great, and that under differences almost approaching the infinite—for the small as often contains the great in principle as the great does the small; and thus the mind becomes comprehensive. It teaches to deduce principles carefully, to hold them firmly, or to suspend the judgment—to discover and obey law, and by it to be bold in applying to the greatest what we know of the smallest. It teaches us first by tutors and books to learn that which is already known to others, and then by the light and methods which belong to science, to learn for ourselves and for others—so making a fruitful return to man in the future for that which we have obtained from the men of the past. Bacon, in his instruction, tells us that the scientific student ought not to be as the ant who gathers merely, nor as the spider who spins from her own bowels, but rather as the bee who both gathers and produces.—Prof. Faraday.

I WAS ONCE YOUNG.—It is an excellent thing for all who are engaged in giving instruction to young people, frequently to call to mind what they were themselves when young. This practice is one which is most likely to impart patience and forbearance, and to correct unreasonable expectations. At one period of my life, when instructing two or three young people to write, I found them, as I thought, unusually stupid. I happened about this time to look over the contents of an old copy-book, written by me when I was a boy. The thick up-strokes, the crooked down-strokes, the awkward jointing of letters, and the blots in the book, made me completely ashamed of myself, and I could at the moment have buried the book into the fire. The worse, however, I thought of myself, the better I thought of my backward scholars. I was cured of my unreasonable expectations, and became in future doubly patient and forbearing. In teaching youth, remember that you once were young, and in reproving their youthful errors, endeavor to call to mind your own.—Selected.

INFLUENCE.—It is not position that gives influence, it is character. What men are, determines their power over others, not where they are: themselves, not the places they stand in. When Diogenes had been captured by pirates, and was about to be sold as a slave in Crete, he pointed to a Corinthian, very carefully dressed, saying, "Sell me to that man; he wants a master." His wish was granted him; and the event demonstrated his sagacity. Character overcame position: that man bought a master in buying Diogenes!

MEXICO ACADEMY, - MEXICO, N. Y.

DURING a recent excursion in Oswego county, we sojourned a day in the pleasant village of Mexico, and visited the Academy represented above. We believe this institution is the oldest of its class in that section of the State, having been organized in 1820 and incorporated in 1826. The building is commodious and beautifully situated. The Academy has five Professors and about one hundred and fifty pupils. Many of the best students are pursuing a thorough classical course, preparatory to entering College. We are assured that special attention is given those preparing to teach, and that the Academy annually sends out from sixty to eighty Common School teachers. The

Principal informs us that there is not a groggery or saloon in the village, and that none are allowed, so that students are removed from the temptations and associations of large towns, while they have superior educational advantages at a comparatively small expense. The Academy Reading Room is well furnished with periodicals—there are two flourishing Literary Societies, and a large Reading Association connected with the institution. The Academy Building is a fine brick edifice, of recent construction, ninety-six feet long, fifty feet wide, and three stories high. Prof. J. D. STEELE, a competent and enthusiastic instructor, is Principal of the Institution.

ANECDOTES OF WILD GEESSE.—NO. III.

LAST season among my wild geese was a small, deformed-looking bird, that seemed an outcast, as none would mate with her, and standing awkwardly upon one foot she kept aloof from the flock, displeasing me so much that I seriously thought of killing her; but "handsome is as handsome does," and so in her case, as you will perceive before I get through. I had but one pair of tame geese, and during the season the goose laid a large number of eggs, only sitting upon the last nine. As fast as she had laid a sufficient number, I took them away and set them under hens, and out of the whole number I was fortunate enough to get about forty goslings.

The first hen came off, and in her rambles about the fields she was constantly attended by the deformed wild goose before mentioned. They seemed to agree very well, and vied with each other in showing their pupils attention. I watched with much curiosity this strange alliance, and could not account for the attachment, until one fine morning, wandering near the pond, the wild goose with but little persuasion induced the little ones to follow her into the water, to the consternation of the old hen, who, like fussy people we often meet with, bustled and flew about, clucking and cackling, entreating and entreating, in the most flattering language; then, forgetting herself, coming out in fierce old granny's tones, threatening to demolish them if they did not obey her on the instant—but all to no purpose. The little ones were as comfortable on the water as a duck's foot in the mud, and to add to her heart-rending agony, the goose, ahead of the little troopers bowing and smirking, led off for a remote part of the pond to get rid, now that her object was accomplished, of her very disagreeable non-aquatic neighbor; nor for a week did I see her back on that side of the pond. The poor old hen looked mournful enough for a few days, and then went to laying again. As fast as the other hens came off, the wild goose would make her appearance with her adopted children, and with her own, assisted by their influence, but a short time would intervene before she would entice the goslings away from the hens and introduce them to their proper element, no more to return to the guardianship of Madam Hen.

Finally, when the old goose came off, very proud of her offspring, and in her maternal pride flying at every dog and stranger that made their appearance, she was doomed to be constantly haunted by the presence of the wild one, who would not be driven away. Resistance, in the way of fighting, and angry looks, did not seem to intimidate her, who only tried the harder to steal away her children; and when the tame goose, finding they were disposed to abandon her bed and board, she like a true martyr, concluded to make the best of a bad matter, and accompanied them.

All summer long this regiment, headed by the wild one, with the old tame one bringing up the rear, could be seen upon my pond, adding to its beauty and greatly to my happiness. Very seldom in the daytime would they leave the water, while the night was spent feeding upon barley sprouts, and as it neared maturity, the heads. Not once did they make their appearance in my door-yard, and finding they were doing well, I gave up feeding them. In the fall I had a better flock of geese than ever before. In previous years I had fed my goslings twice a day, and but for the ugly-looking wild goose, they would have eat up half as many dollars as there was heads.

One of the Rural's occasional contributors related an anecdote sometime since, which appeared in the *Saturday Evening Gazette*, with which I will conclude this article.

"TAM LOVES OF GEESSE.—Though Rome was

saved by the cackling of geese, their reputation has never been enviable, for to style a man a goose implies a very low estimation of his abilities. But geese have many redeeming features, and our friend Dr. WIGHT, of Dedham, who is a goose fancier, tells a thousand singular instances of their habits. He has one noble old gander, who has refused even the leap-year advances of the most beautiful goosy on the pond, and has maintained celibacy (on account of the bad example of his owner, we presume) through many years. The doctor owned a pair which for several years renewed their pledges of mutual faithfulness, and seemed to exhibit a constancy most remarkable, giving promise of at least a silver wedding of fidelity. A friend sent to the doctor two beautiful females of the same species, which he placed on the pond; and when mating time approached, the old gander, won by the beauty of young Miss Goose, deserted his old companion, and paid his devotion at the new comer's shrine. The deserted one refused all food, and her kind owner carried her to the house, where by petting she regained her appetite. After some days, thinking that her heart was healed, he carried her to the pond. When within sight of the water the false one with his new bride came sailing by, when the divorced glanced at him, gave one quiver, and died in her owner's arms! A. W. K.

REMARKS.—In a previous number our correspondent made the following inquiry:—"Let me ask if you, or any readers of the Rural, have ever seen or heard of a white wild goose? Two of my friends that have been in California insist upon it that they have seen with wild geese, white ones, and more than that, have killed them. I cannot understand how this can be, and think they must have been mistaken."

To this we have received the following reply from an old resident of Oregon and California:

FRIEND MOORE:—Please say to E. W. K. that white wild geese are very plenty in portions of Oregon and California. In the Rogue River Valley of Oregon, I have seen thousands of white wild geese. I can produce testimony of hundreds, if wished for.—Dartford, July, 1859.

From a gentleman in Saline county, Missouri, we have also received the following information:—"There are two kinds of wild geese in this county, a large kind and a small one, we call *Brant's*, some of which are perfectly white, except the three first feathers in the wing, which are black. I have a friend who has a half dozen which he has had for several years. Some they crippled and the others they have raised from them. They are not very numerous, but are occasionally seen with the dark ones."

THE BEDOUINS.

It is a curious fact, observes the London Quarterly, that while the Christian Missionary has made his way to every part of the globe, and has taught with more or less success, he has never succeeded in mixing with the Bedouins. They wander over a region which, from physical causes, can be inhabited by none others but men following their mode of life. From earliest times every effort has been made to reduce them to subjection, and to render their haunts by human skill fitted to receive a settled population. Canals and water courses were carried as far as human ingenuity could devise, and where water could reach, there the land was conquered. But there remained beyond a large region which the Bedouin could call his own. There he is to be found still, as we see him represented on the walls of Assyrian palaces, riding his swift dromedary; we read him in sacred history, suddenly appearing as a robber in the midst of the quiet cultivation of the soil, and as suddenly returning unharmed before their well trained legions during the height of their power; he remains to this hour unchanged in his manners, his language, his arms, and his dress. It is this unchangeableness which renders a Bedouin so interesting a study. He is the only link between the earliest ages of mankind and the present time—like a single, strange animal, connecting the actual world with some geological period.

YOUNG RURALIST.

THE DIGNITY OF LABOR.

[The following is the conclusion of an article for the Rural from the pen of our correspondent, S. B. R.—Ed. Rural.]

WHAT though it be true that labor is a necessity—what though it be conceded that labor is a motive power, impelling the drive wheels of life and existence—what though we be told that labor most oft appears in tattered garb, besotted with dust and browed by winds and sun—what though she be gloveless and arrayed in ten-penny stripes, and bearing all over her person the indices of sturdy toil, is there not attached to industrial pursuits,—to agricultural and mechanical skill and labor,—a dignity that most forcibly commands our respect and challenges our approval? Where is the coxcomb, so lost to consistency—where the aristocratic dunce, so bereft of common sense,—as to wish to tear from labor that crown of dignity which is hers by eternal birth-right? Labor degrading! Let burning shame mantle the cheek of him who sacrilegiously utters so base a scandal.

The civilizing influences of well-directed labor are immensely great. Labor is the recognisance of that beautiful law of reciprocity which obliges all to return an equivalent for their living, in the world's great exchange. The law of labor is absolute, and extends to all classes. The affluent must labor with the hand of charity to raise the fallen and mitigate the sorrows of the poor; and the poor, who are subservient to material circumstances, must and will, by the stimulus of necessity, put forth efforts for self-preservation. All are held to the law of productive or beneficent effort, however varied the springs of action in the different classes. None are independent of the other. As THOMSON has sweetly sung:

"All are needed by each one,
Nothing is good and fair alone."

Without labor there can be no true development. No matter if the necessities of our being impel to it. They are the dynamic forces that move the sinewy arms to all manly enterprise, all great achievements. I repeat, the great law of labor has its spring in necessity,—a wondrous and beautiful necessity, which fires up the mightiest impulses,—which unfolds the best faculties of our natures,—which arouses and dignifies the whole man, and clothes him with a power that moves the world.

The universe can present no finer instance of God-like dignity, than an intelligent being, laboriously tasking his great powers in the production of food for the race, or subjugating the material forces of nature, and laying them under contribution to the benefit of humanity; one on whose forehead the beaded sweat glistens more gloriously than a coronet of royalty; one out of whose toil spring all the marshaled utilities of commerce, wealth, civilization, and the attendant retinue of art, the triumphal car of invention, and the pageantry of science—a grand procession of peace, power and plenty, transforming the arid earth to a fruitful Eden. Steadily and surely, as the seasons go and come, as the clouds pour down their watery treasures, and as the earth revolves, sweeping annually around its great centre, labor is sowing the seed, garnering the sheaves, founding cities, establishing marts of trade, whitening all the seas with commerce, and from age to age, unrolling a gorgeous panorama of achievements and victories. S. B. R.

"Spring Side," Middlebury, Vt., 1859.

TRIMMING FRUIT TREES, &c.—We are very fond of reading your paper, and find much pleasure in its perusal. I want to ask some questions. When is the best time to trim fruit trees, apple trees in particular? Is it beneficial to trim cherry trees? I want to know if anything will cure hooves in horses? I have tried a recipe that came in the Rural, but found no benefit.—A. G., Penn Yan, Sept., 1859.

REMARKS.—Trim apple trees late in the winter, say March, but don't trim for the fun of the thing, or because you happen to have a sharp saw and knife, or a little leisure time. Trim for the benefit of the tree, and have the object you aim at well settled in your mind. Cherry trees seldom need pruning, or are benefited by it. The leaves may be helped by judicious feeding, and some medicines produce temporary relief, but the heaves in horses, like the asthma in man, is difficult to cure—perhaps impossible.

DESPISING RIDICULE.

I KNOW of no principle which is of more importance to fix in the mind of young people, than that of the most determined resistance to the encroachments of ridicule. Give up to the world, and to the ridicule with which the world enforces its dominion, every trifling question of manner and appearance; it is to toss courage and firmness to the winds, to combat upon such subjects as these. But learn from the earliest days to insure your principles against the perils of ridicule; you can no more exercise your reason if you live in the constant dread of laughter, than you can enjoy your life if you are in the constant dread of death. If you think it right to differ from the times, and to take a stand for any valuable point of morals, do it, however rustic, however antiquated, however pedantic it may appear; do it, not for insolence, but seriously and grandly, as the man who wore the soul of his own bosom, and did not wait until it was breathed into him by the breath of fashion. Let men call you mean if you know you are just; hypocritical, if you are honestly religious; pusillanimous, if you feel you are firm; resistance soon converts unprincipled wit into sincere respect; no aftertime can tear you from those feelings which every man carries with him who has made a noble and successful exertion in a virtuous cause.—Sidney Smith.

TO RURAL AGENTS, SUBSCRIBERS, &c.

THE RURAL NEW-YORKER enters upon a New Quarter this week, and we embrace the occasion to notify its Agents, Subscribers and other friends that single and club subscriptions—either for a year, or three months, on trial—are now in order and respectfully solicited. To those who know and appreciate the paper, we need only say that the quarter upon which we now enter, and the ensuing volume, will be worthy the enviable reputation the Rural has attained—and all others are invited to give it a careful examination. It has thousands of ardent and influential friends, each of whom will, we trust, make some effort (during the ensuing few weeks and months) to augment its circulation and usefulness in their respective localities—and now is the best time to commence the canvass. As liberal Premiums and Gratuities will be given for Clubs, &c., as last year. See Prospectus on next page.

TERMS, IN ADVANCE:

FOR ONE YEAR.	FOR SIX MONTHS.
One copy, 1 year, \$2.00	One copy, 6 mo., \$1.00
Three copies, 1 year, \$5.00	Three copies, 6 mo., \$2.50
Six copies, 1 year, \$8.00	Six copies, 6 mo., \$4.00
Ten copies, 1 year, \$12.00	Ten copies, 6 mo., \$6.00
Twelve copies, 1 year, \$14.00	Twelve copies, 6 mo., \$7.00
Twenty copies, 1 year, \$22.00	Twenty copies, 6 mo., \$11.00
Thirty-two copies, 1 year, \$32.00	Thirty-two copies, 6 mo., \$16.00

ROCHESTER, N. Y., OCTOBER 1, 1859.

DOMESTIC NEWS.

Matters at Washington.

The Navy Department, on the 24th ult., ordered a telegraphic dispatch in confirmation of the establishment of the total loss of the steamer Fulton, and has ordered a Court Martial to inquire into the facts attending the disaster.

The Washington Times correspondent says:—"I ascertain it to be a fact that the British government has ordered a distinguished military commander to San Juan Island, with instructions similar to those furnished Gen. Scott by our government. Both officers go out to preserve peace; and as their reputations are made, they can afford to prevent a collision."

Secretary Floyd has improved in health since his sojourn at Old Point Comfort.

Gen. Jessup, Ordnance Master and General of the U. S. Army, is lying very ill in New York.

It is rumored that Major Cross has been acquitted by the Court Martial, but as the papers of the case have been transmitted to Secretary Floyd for consideration, the rumor is a mere surmise.

Baron Stoeckel, the Russian Minister, now absent in New York, has lately had a diplomatic set-to with Secretary Cass, relative to the traders in Russian America, and their objectionable monopolies.

Mr. McLane anticipates leaving for Vera Cruz on the 23d of October, unless negotiations shall be transferred to Washington, as urged by Senors Mata Ledro and President Juarez.

Perry McD. Collins, Esq., Consular Agent at Amoor River, Asiatic Russia, has arrived in Washington, and expects to return in the course of a few days thither, by the way of St. Petersburg. It appears from his statement that American Commerce at the Amoor river is steadily increasing, several ships having sailed from the United States this year to participate in its rich trade. Mr. O. gives a brilliant account of the growing trade of this newly developed region. The Amoor is the Mississippi of Northern Asia, being navigable for 2,600 miles. The climate is like that of North-western Canada. The Russian Government is making every effort to increase the wealth and importance of that portion of its Empire.

General Lamar, Ex-Minister to Costa Rica, Nicaragua, and who has been on business here ever since his return from Central America, left Washington on the 20th ult., for his home in Texas.

An increase in our naval force in the Pacific is contemplated, in consequence of the San Juan Island dispute.

Notwithstanding the failure of Congress to make an appropriation for the Post Office Department, the latter has so far been enabled to transact its business without serious difficulty. However, the balance due to the contractors up to July 1st, after deducting their usual collections from the Post Office, and after that time the entire amount of their pay must be suspended until Congress shall provide the necessary relief, so as to entitle them to pay until the 1st of October, and by the terms of their contract sixty days more must expire before their accounts can be finally settled, which will postpone the day of payment till December 1st, within less than a week from the regular meeting of Congress. According to contracts, payments are due in November for the quarter ending on the 30th September, and in February for the quarter ending 31st December.

Personal and Political.

The Opposition in Louisiana have nominated Thomas J. Wells, of Rapides, as their candidate for Governor.

NAT. B. BAKER, the last Democratic Governor of New Hampshire, is a candidate for the Legislature in Iowa, where he lives as a quiet farmer.

The Secretary of the American State Council, and some twenty other members of the late American Convention, in a card over their own signatures, repudiate the doings of that body, and announce their determination to act for "the true interests of the country" in the future.

WM. H. HOOPER, the new delegate to Congress from Utah, was formerly a merchant in Galena, Ill. He is a native of Maryland, went to Galena in 1834, but was unsuccessful in business, and for some years ran a steamboat on the Upper Mississippi and the Missouri. Eight or ten years since he joined the Mormons, and has been latterly a leading man among the Saints in Utah. In politics he has always been a Democrat.

The Massachusetts Republicans held their State Convention last week. Gov. Banks was re-nominated by acclamation. Eliphalet Trask was re-nominated for Lieut. Governor. Oliver Warren, for Secretary of State; Moses Tenney, for Treasurer; H. Phillips as Attorney General, and Charles White as Auditor, were all re-nominated. The Convention was large, harmonious and enthusiastic.

The returns of the Maine election from three hundred and twenty-four towns foot up as follows: Morrill, Republican, 45,980; Smith, Democrat, 35,815. Morrill's majority, 10,115. Morrill's majority in these towns last year was 8,006—the vote standing for Smith, 42,637; for Morrill, 50,648. The decrease upon the vote of last year, thus far is, Smith, 6,892; Morrill, 4,712. The remaining towns will throw from 16,000 to 18,000 votes.

THERE was held in Syracuse on Wednesday week, a State Temperance Convention, at which a nomination for State officers was made, as follows: For Secretary of State—Geo. W. Clark, of Monroe; for Comptroller—S. W. Brewster, of Oswego; for Canal Commissioner—M. W. Skiff, of Allegany; for State Engineer and Surveyor—S. A. Beers, of Kings; for Treasurer—L. J. Ormsbee, of Onondaga; for State Prison Inspector—R. I. Ketchum, of Broome; for Judge of the Court of Appeals—W. Goodell, of New York; for Clerk of the Court of Appeals—G. W. Brockett, of Oswego.

The American Convention assembled at Utica on the 20th ult. A nominating committee was appointed by the Chairman, Mr. Brooks, of New York, and the following ticket reported:—Secretary of State—David R. Floyd Jones, Democrat; Comptroller—Robt. Denniston, Republican; Treasurer—Philip Doraheimer, Rep.; Attorney General—Chas. J. Myers, Rep.; State Engineer—Van R. Richmond, Dem.; Canal Commissioner—W. J. Skinner, Dem.; State Prison Inspector—N. S. Elderkin, Dem.; Judge of Court of Appeals—Henry E. Davies, Rep.; Clerk of Court of Appeals—Chas. Hughes, Rep. After considerable skirmishing the ticket was endorsed.

News Paragraphs.

The Toronto Leader says "that a century of British dominion has done next to nothing towards the absorption of the French Canadians. Though Lower Canada swarms with colleges, there is not one in which the English language is made part of the course. It is absolutely and universally ignored."

The Savannah Republican says, our oldest inhabitants tell us that most all the fruits of the tropics were had here at one time. Orange trees were grown here in their greatest perfection, though now the frosts seldom allow a tree to attain its natural growth, and a ripe orange is rarely obtained in the open air. These facts show the great changes that our climate has undergone in the short space of a life-time or less.

The Anti-Sabbatarians held their first formal public meeting at the Volks Garden, in the Bowery, New York, on Tuesday evening week. The New York Times says it was largely attended, mainly by Germans. An elaborate series of resolutions were submitted and adopted, and many speeches were made, the burden of which was an emphatic condemnation of all efforts to enforce the Sunday laws.

The law prohibiting Chinamen from emigrating to California has been pronounced unconstitutional, and their number, now 60,000, is rapidly increasing.

A MAN succeeded last week in walking across the bottom of the Schuylkill river at Philadelphia. With a perfect rig of submarine armor he waded down below the water, and in about twenty-five minutes made the crossing. His progress through the water was indicated by a slight bubbling and rippling as he passed along.

The people of Canada are endeavoring to raise the funds for the erection of a Crystal Palace at Hamilton, and with every prospect of success. The building is to be erected under the auspices of a joint-stock company, and to be called the "Ontario Palace of Industry."

The Duke of Cambridge, Commander-in-Chief of the British army, has set sail for Vancouver's Island, to look into the boundary difficulties there. Gen. Scott has started for the same destination for a like purpose. The two old soldiers will doubtless have a pleasant time together.

In the middle of the road between Niagara and Queenstown there stands an old oak tree, which possesses considerable historical interest from a tradition connected with it. It is, that in one of his pedestrian excursions to the Falls, the "Bard of Erin" sat down under its wide-spreading branches, and composed the "Wood-pecker Tapping." It goes by the name of "Tom Moore's Oak." It is gradually yielding to the destroyer of all things, has lost all appearance of vitality, and is fast becoming a bare, verdureless ruin.

The plain old mansion at Baton Rouge, La., long the residence of Gen. Taylor, was recently torn down. It was an old house. When the Fort of Baton Rouge was taken by the Spaniards under Don Benardo de Galvez, in 1779, it was the residence of Col. Dixon, the English commander.

The Brooklyn Park Commissioners are considering a project for combining several pieces of ground on the Heights into one large Park of 1,200 acres,—which is larger than the Great Central Park of New York.

MR. ALONZO HITCHCOCK, of Chicago, claims to have been the inventor of the Armstrong gun, for producing which an Englishman was honored with the title of nobility.

IRON freight cars are coming into use on the Ohio Railroad. Four or five have been constructed, and are found to answer well. The entire car weighs only 11,500 pounds, while an ordinary wooden baggage car weighs from 14,500 to 16,500 pounds.

AMONG the premium stock exhibited at the Chicago Fair, were three babies born at a birth—two boys and a girl—children of Joseph and Teresa Ondastroke. A silver spoon was presented to each, and quite a large collection taken up and paid to the parents.

FOREIGN NEWS.

A LARGE number of steamers from European ports have arrived during the week, and the news received, a condensation of which we present below, will be found of considerable importance:

GREAT BRITAIN.—The great event of the day had been the departure of the Great Eastern steamship for sea.

The Nova Scotian brought out news that the vessel had proceeded down the Thames as far as Purfleet on the 7th, and anchored there for the tide of the following morning. Her departure, accompanied by four powerful tugs, two at the bow and two at the stern, gave rise to a scene of the greatest enthusiasm on the Thames, which was continued from all the prominent points. Capt. Harrison and the mates, experienced Thames pilots, directed the motions. Mr. Scott Russell was on the bridge directing the action of the engines, both of which, screw and paddle, were under steam. Capt. Comstock, of the Collins steamer Baltic, stood aft to transmit directions to the men at the wheel, the new steering apparatus not being completely fitted. The very first turn in the river demonstrated that the ship was as completely under command as a river steamer, and the only difficulty to contend with was the sharp curves in the stream. She steers as easily as a wicker boat. Her engines were found capable of starting her or arresting her motion, literally almost by a single motion of the hand.

On the 8th the Great Eastern got up steam and weighed anchor, and at 3 40 A. M., started from Purfleet for the North. As on the preceding day, she was accompanied by tugs, and the enthusiasm along the river, particularly at Gravesend, was very great. On arriving at Chapman's, the tugs were cast off and the great vessel was left to herself. Increased speed was then got on her, simply to give her good steering way and move her engines readily, but with no view to try her power. In ten minutes, however, says the correspondent of the Times, she set at rest all doubts as to her being the fastest vessel beyond comparison in the world, employing less than two-thirds of her power in her worst trim, being six inches down by the head and too high out of the water to permit her paddles or screw blades to work perfectly, and with a very strong tide against her, she ran a distance of fifteen statute miles in fifty-four minutes. The engines worked with astonishing ease, and there was scarcely a vibration perceptible. Before anchoring, the vessel was put about and went completely round in less than three-quarters of a mile.

On the afternoon of the 9th, when the Great Eastern was off Hastings, a feed pipe casing, in the forward funnel, exploded with terrific force, blowing the funnel into the air and tearing to pieces the grand saloon and lower deck cabins, and otherwise damaging the internal fittings to the amount of £5,000. Three firemen were found in the rubbish in a dying state, and soon expired, and eight others were injured, two of whom subsequently died. The guests had just quitted the grand saloon, where they had been dining. The explosion was of terrific force, yet the Great Eastern not only resisted it, her frames sustaining no injury whatever, but it made so little difference in her movement that her engines were not stopped until she reached Portland. (It may be proper to state, (some misunderstanding having occurred, from a confusion of names,) that the Portland now enjoying a visit from the Leviathan, is in the county of Dorset, England.) The coroner's inquest had commenced, and the evidence showed, first, that the supply of the boilers through the water-jacket was stopped because of a failure in the auxiliary pumping power, and secondly, a tap in a stand-pipe, which acts as a safety-valve, had been turned, apparently intentionally, so that the pipe was useless prior to the accident. The performance of the vessel was satisfactory, and she was almost without motion, while large vessels in her vicinity were pitching and tossing in a stormy sea.

The London Post has an editorial on the report that Gen. Harney had taken possession of the Island of San Juan or Belibue, in Puget's Sound. It considers it possible that another boundary dispute may arise, and says that the occupation of an island which is still *sub judice*, is the exercise of a power to which the British Government cannot tamely submit, and hopes that no concessions will be made which are inconsistent with the dignity of the country or the security of the gold regions.

A new reform movement, under the auspices of Mr. Cobden and others, had been started. Some of the master builders in London had yielded to the men.

FRANCE.—A Paris letter in the *Independence Belge*, says that the Emperor made peace merely for the purpose of putting down the naval supremacy of England, and unless she submits quietly to have her naval estimates fixed by France, there must be war. The *Belge* asserts that France is making vigorous naval preparations for the coast defenses.

Relaxation of the press system was said to be under the serious consideration of the French Government.

Attempts, it is said, were being made to arrange an interview between the Emperor Napoleon and the King of Belgium. Prince Napoleon had gone to Switzerland, and it was supposed his journey had reference to the intended interview between the Emperors.

The Paris correspondent of the London Times, writing on the 31st, of the Zurich Conference, adds nothing except that they are every hour expecting to come to an abrupt close without any result worth talking about. The Duchies are, of course, a great difficulty, and there appears to be no possibility of any agreement. The Emperors have agreed as to the proposition that relates to the technical meeting of the three Dukes, but divide as to the means of settling about it. Austria would not object to force. France desires to employ moral suasion, which does not appear to have made much progress, while Piedmont is still ready to accept the annexation spontaneously offered. Now the case is this—If Piedmont arise, will Austria recognize the war? If Austria recognizes the war, will France once more fly to the relief of an old ally?

The latest intelligence is to the effect that the King of Belgium had gone to see Napoleon at Biarritz—it was supposed in reference to the difficulties between France and Austria.

The Governments of France and England, it is said, have agreed that a European Congress on Italian affairs is necessary.

The members of the Zurich Conference continued to have occasional interviews, although a formal suspension of the Conference has occurred. The English Government has presented a note, drawn up in a friendly style, requesting explanations as to the subject of the concentration of troops at Algeiras, in the immediate vicinity of Gibraltar.

ITALY.—The National Assembly of Parma unanimously voted the exclusion of the Bourbons and the annexation of Parma to Sardinia.

It is said that Victor Emanuel was discharging his army, but the men are supplied with passports into Tuscany and Modena, where they will swell the army of Central Italy.

The vote in Parma on annexation to Piedmont, resulted in its favor—63,000 to 500.

The conclusion was general on the Continent that the answer of Victor Emanuel to the Tuscan deputation, in regard to annexation to Piedmont, was preconcerted with Napoleon. The council of the different districts had officially proclaimed to the people of Turin, that the Tuscan deputies had presented a deed of annexation to the Sardinian Government.

Victor Emanuel received the Tuscan delegation on the 3d. To their address he thanked them for their expressed wish for annexation, but said its accomplishment could not take place by negotiation, and hoped Europe would not refuse to practice towards Tuscany that mark of redressing grievances which it has under less favorable circumstances practiced towards Greece, Belgium and the Danubian Principalities.

The National Assembly of Bologna, on the 7th, adopted a resolution declaring that the people of Bologna desire annexation to the Constitutional Kingdom of Sardinia, under the sceptre of Victor Emanuel. Bologna was illuminated in honor of the event.

The Tuscan Government had issued a decree enacting that the arms of the late Grand Ducal family shall be obliterated from the government stamp, and that the latter shall remain blank until further orders.

The correspondent of the Times says, the latest accounts received from Paris were far from favorable. The advance of the Pontifical troops into the legation was believed to be immediate. If they were successful, the entry of the Duke of Modena into his State at the head of his army, was considered probable. But if the Papal advance is repulsed, a rising in Naples would most likely follow.

A Milan letter expresses an apprehension that bad blood was thrown up between the French army of occupation and the Italians.

The return of the French Ambassador to Rome is accompanied by a rumor that the Emperor demands of his Holiness the establishment of the legitimate legations of a Viceroy, who should govern in the name of the Holy See.

CHINA.—Highly important news had been received. Admiral Hope arrived off the Peiho river the 17th of June, and found that the fortifications had been rebuilt, but no guns or men were visible. The entrance into the river was barred by booms and stakes. The Plenipotentiaries joined the squadron on the 20th, and no notice was being taken of their arrival. An attempt was made on the 25th to force a passage, when, on a sudden, batteries, supported by a mongrel force, of apparently 20,000 men, were unmasked and opened a destructive fire. After a severe action the squadron was obliged to withdraw with the loss of the gun-boats *Cormorant*, *Lee* and *Plover*, and 464 killed and wounded. The French had 14 killed and 10 wounded out of 60. The Plenipotentiaries had returned to Shanghai.

A further telegram mentions that seven officers were killed and seventeen wounded—Admiral Hope being among the latter. Other telegrams confirm these particulars, and one, via Trieste, adds the following:—It is stated that the American Ambassador has been admitted to Peking. The hope of the treaty being carried out, is given up, and a fresh war is considered imminent.

Clippings from Foreign Journals.

In the Middlesex sessions, England, a gentleman sued a lady because, in a tussle with her to get a kiss, she bit his nose off. The court ruled that a man had no right to run any such risk with his nasal organ, unless he was willing to stand what damages might come from such a trial of strength.

The contemplated decimal system of England is to remain in abeyance for the present, but a new coinage is to be issued. The metal to be employed is to be a bronze, consisting of ninety-five parts of copper, four parts of tin, and one part of zinc; and the weight of the new coin will hardly exceed one-third that of the old. Upon re-coining one-fourth of the copper now in circulation, a profit of \$94,000 will be realized.

The Paris correspondent of the London Times writes that Prince Napoleon is reported to be more than disappointed with the turn of matters in Italy; he proposes to leave Paris for some remote part of France, to lay aside even his armorial bearings, to quit the busy scenes of politics and pleasure, and lead the life of a hermit. Such, at all events, are the *on dit* of the Palais Royal.

The British Parliament is no place for a poor man. At the last election Dr. Mitchell was returned to the Commons from a place in Cornwall; he was charged with bribery, but although he declared himself wholly innocent, he relinquished his seat because he was too poor to defend it. The cost of defending before a Committee, would have been not less than a thousand pounds, and might have been five thousand.

There are in Egypt three hundred miles of railroad. When the running of the trains was commenced, mummies were used for fuel, and are said to make a very hot fire. The supply is almost inexhaustible, and they are used by the cord. What a destiny. Think of devoting one's existence to providing fuel for a locomotive.

The News Condenser.

- The Indians are getting troublesome in Kansas.
- Professor Agassiz and wife arrived in the Arabia.
- The present population of the city of Milwaukee is 51,499.
- A Registry Law takes effect in Michigan this fall, for the first time.
- Eik in great numbers now frequent the vicinity of Sioux City, Iowa.
- The French army left in Italy amounts to 45,000 men, with 95 guns.
- John C. Fremont is taking \$5,000 a week out of his mines at Mariposa.
- Some of the banks of the interior of Illinois are refusing to pay specie.
- The Isle of Man has been connected with England by a submarine telegraph.
- The corn on the lowlands in Iowa has been severely injured by the frost.
- In Dover, N. H., there are annually made by 13 firms, 900,000 pairs of shoes.
- Mr. Greeley is expected home by the Overland Mail Route within a few days.
- The Emperor Napoleon, at last accounts, was still in retirement in the Pyrenees.
- The venerable Daniel Dana, D. D., died at Newburyport, Mass., Aug. 20, aged 83.
- Miss Lydia Barnard of New Hampshire was 102 years old on Tuesday last week.
- The coal miners in Pennsylvania, to the number of three thousand, are on a strike.
- Commodore Stewart resumed command at the Philadelphia Navy Yard last week.
- Passengers are to be brought over by the Great Eastern at rates ranging from \$16 to \$25.
- The first general Editorial Convention held in Illinois convened at Freeport on the 9th inst.
- Mention is made of much injury to the potato crop in some parts of Connecticut by the rot.
- New Orleans papers say that the sugar crop will fall off from 50,000 to 75,000 hogsheads.
- The frost on the mountains in Western Hampden, Mass., on Thursday morning was very severe.
- The mountain summits in the vicinity of Pike's Peak were white with snow on the 15th of July.
- The new Freshman Class at Yale will be the largest ever admitted. It contains 170 members.
- The black tongue is committing dreadful ravages among the cattle in the neighborhood of Belleville, Ind.
- On the 4th inst., the American Board of Commissioners for Foreign Missions will meet in Philadelphia.
- Quebec is again the Capital of Canada. All the Departments of Government have now been removed there.
- Prof. Owen has accepted the office of State Geologist of Indiana, and will commence work on the 1st of October.
- A national horse fair is announced to be held in Boston, beginning on Tuesday, Oct. 4th, to continue two weeks.
- The City of Washington, which sailed for Liverpool on Saturday week, took out two recent purchases of Mr. Ten Broeck.
- The sheep killed and injured by dogs in Ohio during the last year, according to the late census, are valued at \$145,000.
- For accommodating the Empress of Russia and her suite in his hotel, for one night only, a landlord in Basle charged \$3,400.
- On the tax list of Providence, R. I., Alex. Duncan heads the list. His taxable property is \$2,091,700, and his tax \$19,741.
- The Kansas corn crop is so good that the article is worth only 15 cts. a bushel at Leavenworth. The wheat crop is excellent.
- The Webster Statue, in front of the State House at Boston, was inaugurated with appropriate ceremonies on Saturday week.
- During General Scott's absence, General Wool, as senior officer, will be acting Commander-in-Chief in the Atlantic States.
- The proprietors of the Great Eastern realized over \$20,000 from admission fees during the time the ship was open to visitors.
- The earnings of the inmates of the Auburn State Prison, for the month of August, exceeded the expenses of the institution \$359.
- Mrs. Wm. P. Dana, of Perry, Me., has preserved and put up during the past season fifty-seven hundred pounds of strawberries.
- The oldest person in Chelsea, Mass., says the Telegraph of that city, is a Mrs. Callahan, an Irish woman, whose age is 104 years.
- The new freshmen class of Amherst College numbers 67. The sophomore class has received several additions and numbers 70.
- An address to the free negroes of the United States inviting them to settle in the island, has been issued by the Haytian Government.
- In the town of Canfield, Mahoning county, O., two extensive coal-olde factories are now in operation, and three more are being built.
- A correspondent of the New York Tribune states that a subterranean fountain of rock oil has been discovered at Sistersville, Pa.
- Mrs. Seymour, wife of the late Henry Seymour, and mother of ex-Governor Seymour, died at her residence in Utica, Friday week.
- During July, the cologne at the San Francisco mint consisted of \$1,640,000 in double eagles, \$30,000 in eagles, and \$30,000 in half eagles.
- The Montreal Gazette says about thirty or forty marriages have been concluded at St. Catherine's, between white women and colored men.
- A most valuable discovery of diamonds has recently been made at the foot of the Ural Mountains, Russia. One specimen brought the owner \$20,000.
- In an old book of records of the town of Norwich, Conn., a fine of twenty shillings is recorded as imposed upon Benedict Arnold, for getting drunk.
- Ten Broeck writes from England to a friend in Memphis that his winnings in England this year topped \$440,000 to gain which, he risked but \$30,000.
- The first white male child of the Pike's Peak region was born on the 5th inst. The event made quite a sensation in Denver City and the adjacent country.
- The new suspension bridge now in the course of erection over the Ohio at Wheeling, will have a span of over 1,000 feet. The cost of the structure is \$37,000.
- San Francisco has lost its fall and \$100,000 paid therefor, because the deed of the land on which the building stood was not properly signed and recorded.

Fall and Winter Campaign—1890-91.

NOW IS THE TIME

TO SUBSCRIBE FOR AND CIRCULATE

MOORE'S RURAL NEW-YORKER.

The leading and largest circulated AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER, as a New Quarter commences with October. The Rural is widely known as the best and most popular Journal of the class—its contents being of the first order. (Useful, Entertaining and Pure), and its appearance unique and attractive. Though published less than ten years, it is the acknowledged

CHAMPION OF THE RURAL PRESS.

In Ability, Enterprise and Circulation! It not only treats ably and fully upon Agriculture, Horticulture, Rural Architecture, &c., but has many other distinct and carefully conducted Departments—under such headings as Domestic Economy, Educational, The Traveler, Ladies' Portfolio, Choice Miscellany, Sabbath Musings, Useful Oils, (Scientific), &c. The Story Teller, Young Ruralist, Youth's Corner, &c.; with a complete Summary of News, Market Reports, &c., &c.

The present (10th) volume is pronounced, by its Patrons and the Press, the most perfect model of a Rural and Family Journal ever published, and we invite a comparison with any others extant.

THE ELEVENTH VOLUME, FOR 1890.

Will repeat the present in all respects—in Quality of Matter, Paper, Printing, Illustrations, &c., &c. As the long evening and leisure of Winter are coming on, all friends of the Rural and its objects are invited to subscribe and form Clubs for the leading advocate and promoter of Real "Progress and Improvement"—a Journal which ever ignores trash and lumber, and faithfully seeks to advance the Best Interests of Individuals, Families, Communities and the Country.

Style, Terms, &c.—The Rural is published weekly, each number comprising Four Double Quarto Pages (forty columns)—printed and illustrated in superior style, with Title Page, Index, &c., at close of volume. Only \$2 a year—\$1 for six months—with great reduction and liberal inducements to clubs and agents. Local Club Agents wanted in every section where the Rural is not circulated.

For Specimens, Show Bills, &c., sent free to all applicants. We should be glad to furnish "the documents" to any and all persons desirous of examining or circulating the "Eminent" Rural and Family Weekly of America.

Address D. D. T. MOORE, Rochester, N. Y.

* Newspapers giving the above brief Prospectus, and directing attention to the same, will receive the 10th volume, (if desired,) without sending us in exchange.

ARRIVAL OF THE OVERLAND MAIL.

The Overland Mail reached Jefferson City on the 20th ult. Business at San Francisco showed more activity, but the demand was mainly of a speculative character, and principally in candles and provisions.

A report from Oregon states that Capt. Wallen's command, consisting of 140 men of the 4th infantry, had been massacred by the Snake Indians, at Warm Springs, east of the Cascade Mountains. The report was credited at Fort Dallas.

Dates from San Juan Island are to the 20th ult. Affairs there were unchanged. The American troops were still in possession of the island, and their number had been increased to 400 men.

From Mexico—Southern Pacific Railroad.—Monterey advises state that Gen. Seneca was there conferring with Vidaurri. Dose, with 750 men and four guns, holds Guadalupe, and had banished several liberals. Miramon was arriving at 300 men for Northern Mexico. Late advices from Marab, Texas, state that President Faulkes, of the Southern Pacific Railroad, had made a final settlement with a new company, and the creditors had obtained full possession of the Road, and that work was recommenced immediately.

R. Rogers, of North Adams, Mass., has a shoe that was worn eight-five years ago by a woman at her wedding at Northampton. The heel is made of wood, three inches long, running to a triangular point, one-half inch broad, and tipped with leather.

From the Pacific Side.

The steamship *Adelphi*, of the Tahiti line, arrived at New Orleans on the 21st ult. Honolulu dates are to July 20th. The American bark *Lancaster*, of Philadelphia, en route from San Francisco to Australia, valued at \$32,000, foundered off Liki, July 10th. No lives were lost. The vessel and cargo are a total loss, but fully insured.

The news from San Juan is very conflicting. Victoria papers say that five companies of infantry, four of artillery, and a battery of eight thirty-two pounders, of the U. S. steamer *Massachusetts*, were at the island. The House of Assembly on the 12th, adopted an Address to Governor Douglas, urgently requesting him to enforce upon the English government the necessity of demanding of the government of the United States an immediate withdrawal of its troops, but strenuously, and at all risks, to maintain the rights to the island, and also to all the other islands in the same Archipelago, now clandestinely and dishonorably invaded. A motion was also adopted, urging Gov. Douglas to form volunteer military companies. Another statement is to the effect that five thousand American troops were on the island. Erections had been thrown up, and the harbor of Victoria was commanded by the field pieces. The island was in a complete state of defense. Gen. Harney says he will call for volunteers from the territory, if he is attacked. Gen. Harney had written a letter to Gov. Douglas, to the effect that he had occupied the island to protect the Americans from insults of British authorities of Vancouver's Island and the Hudson Bay Co. officers.

The British Admiral refuses to obey the orders of Gov. Douglas to bring on a collision, and also refuses to bring the North Pacific fleet near the island. He says he will wait for orders from the home government, and disclaims all hostile intentions. The American and British officers were on friendly terms.

FROM DENVER CITY.—The Denver City Express of the 15th reached Leavenworth, bringing \$32,000 in gold dust, the largest amount yet received in a single shipment. Returns from eleven mining districts give a majority of 1,500 against a State Constitution. A vigilance committee had been organized in consequence of the depredations upon property by thieves.

LARGE IMMIGRATION EXPECTED.—The Liverpool Times says it has the best authority for stating that the prospects of emigration to the United States are "most promising, and that an active movement for some months is anticipated. The latest emigration statistics show that while there is a falling off in the Irish emigration, the number of English and Scotch emigrants is largely increased."

Markets, Commerce, &c.

RETAIL NEW-YORK OFFICE: Rochester, Sept. 27, 1889.

Flour—A temporary lull in trade and no change in prices. Grain—Almost all kinds of grain are moving upward in rates. Wheat is fully 2 cents better than last week—Corn 3 @ 5 cents and Oats 1 cent. By reference to our New York City and Albany reports it will be seen that Rye and Barley are in demand at the East, and the prices there obtainable are very much greater than in this vicinity. These are the only grains which have not advanced in our market, distillers and brewers either holding aloof altogether, or purchasing at the figures we give. They will not pay any higher than we have indicated, at present; what will be their course hereafter, time will show. This is their purchasing season, and the idea prevalent with those in the market seems to be a declining rather than an advancing tendency. Other changes are slight and will be observed by reference to quotations.

Rochester Wholesale Prices.

MOONLIGHT PICTURES.

O, moonlight, making pictures bright
Upon my parlor wall—
Thou bringest to me a childlike voice,
A gentle, timid call
Of one who, with her little face
Pressed against the window-pane,
Would call throughout the twilight-time,
"O, moonlight, come again
And make bright pictures on my wall!"
And when the drooping trees
Were parted by the moaning winds
That came up from the sea,
And quivering bars of silver light
Were moving o'er the wall—
The shadows of the boughs without,
And o'er the blossoms fall—
She'd try to grasp those shining rays,
And, in that soft, bright light,
She looks as now—unseen she walks
With angels robed in white.

I almost see her upturned face,
Her large and wondering eyes,
A watching now the daisy clouds
Go sailing up the skies.
I almost hear those childish words—
They soothe my heart's deep pain—
As clouds go drifting o'er the moon,
"O, pictures, come again!"

O, whispering winds and sobbing seas,
I listen—now she's dead;
Her little voice filled all my heart,
I heard not what ye said.
O, moonbeams, rest upon the grave
Where my blue-eyed baby sleeps;
But come not to the dreary walls
Wherein a mother weeps.

MABEL VINCENT'S WARNING.

BY KATE CAMERON.

"There! HARRY, that is what I call a model husband," said the young and beautiful Mrs. VINCENT, looking through the half drawn Venetian blinds of their pretty cottage parlors, at a stately mansion across the way, the owners of which were just seating themselves in their elegant carriage for their evening drive.

"There's Mr. LAWRENCE, who thinks all the world of his wife, I'm sure he does, for there's no end to the splendid silks he buys her; and then, whenever she chooses, she can have him to wait on her to rides, or to parties, or the opera, and she never goes anywhere without me!"

"And does my little wife think I love her less because I cannot, like that millionaire over the way, devote myself exclusively to her service?"

HARRY spoke kindly, and threw his arm carelessly about his wife.

At any other time, MABEL would have answered him with a kiss, and dropped the subject at once, but now the spirit of discontent was aroused, and she replied, pettishly, "No doubt you do love me HARRY, but one likes some proofs of affection occasionally."

"And am I not working for you all the while, darling?" was the response; "but," he added, a little sternly, "you shall have proofs—you shall have substantial proofs."

And before Mrs. VINCENT could speak, her husband had gone back to the store—gone without the "Good-night kiss," never before omitted since he brought his bride to their humble but tasteful home—gone, with a weight upon his buoyant spirits, and a heavy feeling in his heart to which he was all unused.

And MABEL? At first she strove to justify herself for her cruel words. "At any rate I only spoke the truth. HARRY never does go anywhere with me, he is always delving in that old store; and only to-night when I asked him for that blue silk, he told me he couldn't afford it. I used to think merchant's wives could always have their choice out of their husband's stock of goods, but here, I've only had a two shilling gingham, and a four shilling kerchief this summer, while Mrs. LAWRENCE has had at least a dozen beautiful and expensive dresses. Oh, dear! it is too bad!" and MABEL VINCENT leaned her head upon her hand and wept.

From this painful reverie she was aroused by a ring at the door, it was JOHN, her husband's clerk, who brought a package from the store for Mrs. VINCENT. It contained the coveted blue silk, with the rich trimmings she had so earnestly desired. Surprised and delighted, MABEL carefully examined the costly fabric, now throwing it over a chair, and walking away the better to mark its effect—then standing before the mirror, she held the folds around her form, and smiled to see how very becoming it would be to her clear complexion and golden hair.

She had not finished admiring it, when her husband entered and she ran to him eagerly, and would have expressed her gratitude by a loving embrace, had he not repulsed her with the cold words, "I presume you would prefer more substantial proofs of my love than silly kisses, which mean but little, in future you shall be gratified."

And from that hour there was a perceptible change in the lives of HARRY and MABEL. Scarce a day passed that some costly gift was not added to the toilette and wardrobe of Mrs. VINCENT—jewels, such as she had sighed to possess, glittered upon her fingers—rich silks were bought and made to wear, without affording her the pleasure she used to feel in her simple muslins and gingham.

Erasing they left their little cottage, embowered in flowers and trees, for a stately mansion "up town," they gave dinner parties, and soirees—they even owned a carriage, and dashed proudly by their old neighbors, the LAWRENCES.

But was MABEL happy? Did the longed for wealth and its numerous appliances yield her true

happiness? Ah, no! she wearied, even to satiety, of the heartless show and ceremony by which she was surrounded—she pined for the quiet comfort which had been hers in their cottage home, for then HARRY was all devotion to her; now he never spent an hour of pleasant converse with her—he had no time for that—he was "a man of the world," she "a fashionable lady"—he no longer called her "MABEL," or "Darling," it was "Mrs. VINCENT," for she was the same cold and haughty person to him, that she was to the world, and if she smiled, 'twas as she did all other things, a studied effort. There were no more ringing laughs heard, telling of a light and joyous heart. All was cold and glittering, as an iceberg in the sun.

Meanwhile, there was some speculation among the inhabitants of the goodly city, where dwelt our friends, as to the sudden change in the life of the VINCENTS. Some shook their heads wisely and declared it boded no good; they used to think HARRY VINCENT a prudent business man, and one well-to-do in the world, but he was getting to be a sad spend thrift, and could not long maintain such an extravagant style. Others hinted plainly about his ill-gotten gains, and neglected business; until at last, the dreadful conviction was forced upon MABEL's mind, that her husband, whom she had believed to be the very soul of honor, had sunk to the level of a common gambler! Nor was the kindred vice of intemperance long in making of him another victim. Night after night would he enter his dwelling, with blood-shot eyes, and flushed countenance, telling too plainly of the midnight revel. And poor MABEL would weep bitterly over the ruin of his noble manhood. Expostulation and entreaty were alike in vain. Her own hand had given the first impulse, and now she had no power to stay the course of events which were fast hurrying to destruction all that had been dearest to her.

But the crisis came. Debts of honor, which he had not the means to cancel, accumulated on Mr. VINCENT's hands. Night after night, day after day, he played and lost; the fates seemed against him. At length, driven to desperation, by the taunts of his successful opponent, to whom he was indebted for many thousands, he plunged the assassin's knife into his heart, as they were both leaving the saloon where VINCENT had staked and lost his all.

Rushing through the deserted streets with the frenzy of a madman, HARRY VINCENT entered his house, and hurrying to his wife's dressing-room, where she was laying aside the costly raiment she had just worn at a fashionable levee, he rudely seized her arm, and drawing the blood-stained dagger from his vest, he exclaimed vehemently, "Here, MABEL VINCENT, is the proof of my love for you! You asked for proofs, and I have given them. I have perjured my very soul for you. Step by step, have I gone down—from the respectable and honorable position I once enjoyed; I have become a gambler—a drunkard—and," he added in a low, hissing voice, "a murderer! MABEL, the officers of justice will soon track my footsteps; they will arrest me, and I shall offer no resistance. I will pay the penalty of my crime with the life which is a burden to me, and when all is over—when your husband has suffered an ignominious death—then, MABEL VINCENT, do not say I never gave you any proofs of my love! At your hands will God require my soul, for you have been my destroyer!"

With a loud cry, MABEL sunk fainting at his feet,—and just at that moment she heard a cheerful voice exclaiming, "What! darling, have you been sleeping? I didn't think 'twas so late!" and MABEL opened her eyes to gaze upon the frank and beaming countenance of her husband, and to realize with a grateful heart that she had been dreaming! They were still the humble, but happy and honorable inmates of the cottage; the princely mansion, and all its gilded misery, had faded into the shadowy tissues of a vision. She looked in vain for the blue silk, which had been the token of the first downward step, and with tears of mingled penitence and thanksgiving, she bounded to her husband's side, and throwing her arms around his neck, exclaimed, "Oh! HARRY, forgive me; I have been so miserable since you went away, and I spoke so unkindly to you,—can you forget it all, and love your wayward MABEL still?"

HARRY sealed the ready pardon with a fond kiss, then added in a serious tone—"Yes, MABEL, I do forgive you, though it grieved me to hear you complain to-night, and to know that all my labor for our mutual happiness and prosperity failed to satisfy you of my affection. But I see how it is—you did not really mean what you said; 'twas but a passing whim, not the sober conviction of my true-hearted wife. We will still be happy in our little home, and bye-and-bye you shall have all you wish."

"I have it now," was MABEL's earnest response. "Your love, dear HARRY, is worth more than gold and gems to me. I would not give it in exchange for the wealth of the wide world."

Thus vanished the clouds which had threatened to obscure the peaceful sky of their married life, and again the sunshine of Love and Confidence illumined their hearts, while the rainbow of Faith and Hope spanned their pathway.

Not very long afterwards, Mr. VINCENT, having completed a profitable business transaction, told his wife that now he thought he could afford that blue silk she had so much desired.

"No, HARRY, not for the world," she answered, with an involuntary shudder. "I could never bear to wear that dress!"

"Very well, I'll not compel you to, my dear," was the rejoinder; "but I thought you wished it above all things."

"Oh, so I did, once, but I was shown the folly of my vanity and ambition; and now I do not wish to dress above my station, or lavish your hard earned dollars upon a fashionable wardrobe."

HARRY's eyes thanked his thoughtful wife, though he said not a word, and as she had never related her dream to him, he was somewhat at a loss how to account for the sudden change in her tastes and feelings. Very gratifying it was to him, however, and the consciousness that his efforts were appreciated by her he best loved, spurred him to fresh exertion. Success attended

his career, and the gliding years found him rapidly advancing in the esteem of the wise and good, as well as rising in the scale of worldly prosperity. His gentle wife was to him, meanwhile, a blessing and an aid. Her love and her sympathy were never withheld, and after they had, in reality, exchanged the home of their early married life, for one more befitting their social rank, and were surrounded by all the luxuries that wealth could procure, MABEL VINCENT still retained the child-like simplicity and earnest truthfulness that had first won the love of her kind and noble husband. Rochester, N. Y., 1859.

SINFUL HOUSEKEEPING.

It was a busy day with me. How many peep did every week bring with it! Morning "chores" in abundance—little lunch baskets to prepare for school—little faces and hands to wash—refractory books, missing buttons, knotted strings, all to be arranged at the moment. Fretful baby to quiet and amuse—an early dinner to get—table provision to be made for company, upon the shortest notice—house to be set in order to receive them—and, worse than all, as a sharp goad in the side, under all this burden, lay that easily-beetting but carefully-concealed sin, the determination that everything should be done with just so much nicety and exactness as I deemed essential to "good house-keeping."

Surely never before was baby half so irritable as this day!—never half so unwilling to sit upon the carpet and please himself. I had some misgivings as I remembered the difficulty with which he had cut the former teeth, and the possibility of a return of the convulsions; yet how many items, in the order and arrangement of my house, must I neglect, if I gave my time to him? And the rest of the children, too—it seemed as if they would never get off to school. Books mislaid—slate lost—and excuse wanted for a deficient composition! I thought Job certainly had never tried a mother's perplexities, when he won the palm for patience. Yet, secretly, conscience was worrying me sorest of all—for if I would but omit the polishing of certain articles of table use, upon which I was bent, I knew I might soon find little Emma's book, and as for Charlie's slate, I remembered that some little school-mates were amusing themselves with it the day before, seated in the wood-shed, where no doubt it was left. But I was too much provoked by the successive vexations to be willing to redeem his carelessness so easily.

As the children left the house, Emma's sobs had not ceased. Anna was cross at the long delay. But Charlie turned his large, loving eyes upon his mother's vexed and care-worn countenance, and murmured such a cautious, sad "good-by, ma," that the words fairly stung me. An angel's reproof lay all over that fair young face, with its earnest gaze! With nervous haste, I buried myself in domestic concerns.

At last, although fatigued, heated and restless in spirit, all was completed. Each room had received the last touch; every desired arrangement had been brought about—even baby had dropped in a quiet sleep. Before the arrival of my guests, and for a short interval, I was conscious of one of those pauses in which the soul is ready to speak. Just then, walking slowly across the room to replace a broom, which had been in use, I observed a shred of string lying upon the carpet. Surprised that even this small remnant of untidiness should be left, where I thought all had been in complete order, I paused, and set about removing the intruder. I swept—but it remained. Stooping down to pick it up with my fingers, I found it—a sunbeam!—a tiny, sweet beam had stolen between the darkened blinds and actually nestled in the carpet, when bustle and hurry, and annoyances had banished every vestige of sunshine from the heart. A light from that peaceful sunbeam shone into my deepest soul, as if it were a lightning-flash that had poured in upon me.

In my ignorant nicety, I had been trying to sweep away a sunbeam from the carpet! Oh, how many bright beams had I, on that very day, swept and washed and cleaned out of my house! The faces of my little children peered up from the ray on the floor, and—how they did plead to a mother's heart. The soothing, forbearing tone with which my husband had met the fretful complaints of the morning—this, too, spoke out from the little sunbeam. I quivered under the sound of it. No angry reproaches could have pierced my heart with half so many sorrows! As all my folly and ingratitude stood unmasked before me, my anguish was inexpressible. Sinking into a chair, I buried my face in my hands, and while the scalding tears flowed, such prayers went up from my aching heart as, I trust, have never been forgotten or lost.

How trifling—how unimportant, now appeared the vain emulation which so constantly spurred me to anxious labors. Every household article might shine by the toils of neatness, but how was my soul, day by day, darkening with impatience, complaints and unthankfulness. How small a matter in the sight of God, and now in my own sight, was the envied reputation of a housekeeper in comparison with that gentle patience, that loving sympathy and aid, which my children required and deserved at my hands. I longed for their return from school, that I might begin to retrieve my injustice to them. Peace, sweet peace, how had I shut it out from my heart—shut it from my family—ah! how busy had I been sweeping it all away!

I love the remembrance of that gentle monitor, the sweet little sunbeam! I date a renewed existence from the day it strayed so unbidden into my parlor. I trust I have learned to devote my energies to a life that is satisfied and eternal, rather than aim to deserve ever so well the meed of human applause for its own sake. I now question the virtue of that degree of household order, neatness, or taste, which has become so absorbing as to render the little kindnesses and charities of our home life interruptions of our main plan, which has usurped the chief place in our estimate of domestic duties—or which, if our actions are to judge us, would seem to constitute the most necessary item of our personal happiness and comfort.—*Advocate and Guardian.*

Folks must put up w/ their own kin as they do w/ their own noses—it's their own flesh and blood.

Wit and Humor.

MISPRINTS will present themselves in other columns than those of newspapers. The author of a temperance novel who wrote, "drunkenness is folly," was horror-struck to read, "drunkenness is jolly."

A LADY said to her husband, in Jerrold's presence, "My dear, you certainly want some new trousers." "No, I think not," answered the affectionate husband—"Well," Jerrold interposed, "I think the lady who wears them ought to know."

"Boy!" called out Brown, to the waiter at Sam's. "Don't call me boy, sir; I'm no boy, sir," said the latter. "Then do as you'd be done by," put in Brown; "and don't call this mutton *lamb* any more!"

"Wipe," said a man, looking for a boot-jack, "I have places where I keep my things, and you ought to know it." "Yes," said she, "I ought to know where you keep your late hours—but I

"I am certain, wife, that I am right and that you are wrong; I'll bet my ears on it." "Indeed, husband, you shouldn't carry betting to *extreme lengths*!"

"The Law," said Judge Ashurst in a charge, "is open to all men, to the poor as well as the rich." "And so is the London Tavern," added Horne Tooke, who was present.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I am composed of 22 letters.
My 21, 20, 4, 8, 21 is a boy's name.
My 1, 2, 20, 4, 13 is a petty rascal.
My 13, 8, 9, 22 is to be sapient.
My 7, 5, 16 is an adverb.
My 18, 8, 21, 5, 18, 20, 8, 10, 12, 6 is an officer who watches the landing of goods at the custom house.
My 15, 8, 16, 5 is to swell.
My 8, 17 is a preposition.
My 10, 14, 18 is to draw by a rope.
My 11, 22, 2 is a domestic fowl.
My 11, 14, 18 is an adverb.
My 13, 20, 6 is the act of opposition.
My 19, 8, 1, 12 is a garden tool.
My whole is a proverb.
Hopedwell, N. Y., 1859.

PROBLEM.

THE boundaries of a certain rectangular farm, containing 168 acres, having been completely effaced, the owner requested a Surveyor to determine anew the magnitude and position of the bounding lines. Finding four trees, A, B, C, D, remaining, which were known to stand one on each side of the farm, he measured the distances A, B, C, D, A, C, and found them to be 160, 120, 127.68, 40, and 171.03 rods respectively. Can the boundaries be determined from these data without the aid of a compass? What are the dimensions of the farm?
A. B. EVANS.

Madison University, N. Y., 1859.

Answer in two weeks.

SQUARING THE CIRCLE.—Of course your readers are acquainted with the game of "squaring" a given word, which has of late been current in society. You will perhaps put upon record the "squaring of the circle," which I send you. It is as follows:

CIRCLE
I O A B U S
R A R E S T
O R A T E
L U A T R E
K S T E E M

The condition of this squaring is that every line, horizontal and vertical, shall be a known word. I may remark that the reason why the circle is especially difficult to square in this way is, that in it three consonants come together—S O L; and these, of course, in making the other words, must be followed by a vowel or a liquid.—*Selected.*

ANSWERS TO ENIGMAS, &c., IN No. 506.

Answer to Miscellaneous Enigma:—A model of prudence and perfection.
Answer to Poetical Enigma:—36 years.
Answer to Algebraic Problem:—907877 596 plus acres at \$1.00 per acre.

NOT A HUMBUG.—Wanted, one or more Young Men to travel, to whom will be paid \$30 to \$45 per month, and expenses. For particulars, address with stamp, M. H. ALLEN & CO., Plattsburgh, N. H. 604-131.

600,000 ACRES OF HANNIBAL AND ST. JOSEPH RAILROAD LANDS. For Sale on Long Credit and at Low Rates of Interest.

These lands, granted by Congress to aid in constructing the Road, lie to a great extent within Six Miles and all within Fifteen Miles of the Road, which is now completed through a country unsurpassed in the sublimity of its climate and fertility of its soil. Its latitude adapts it to a greater variety of products than land either north or south of it, rendering the profits of farming more certain and steady than in any other district of our country.

Its position is such as to command at Low Rates of Freight both Northern and Southern Markets.

To the Farmer desiring to better his condition, to parties wishing to invest money in the West, or any in search of a prosperous home, these Lands are recommended.

For full particulars apply to
JOSIAH HUNT,
Land Commissioner Hannibal and St. Joseph Railroad,

THE LIFE, SPEECHES AND MEMORIALS

OF

DANIEL WEBSTER,

CONTAINING HIS MOST CELEBRATED ORATIONS.

A Selection from the Eulogies delivered on the occasion of his death, and his Life and Times.

BY SAMUEL M. SMICKER, LL. D.

In one large volume of 650 pages, printed on fine paper and bound in beautiful style. It contains excellent illustrations of his birthplace and Mansion at Marshfield, and a full length, life size Steel Portrait. The Publisher offers it with confidence to the American public, and is convinced that it will meet with an important want in American literature.

No work was to be obtained heretofore, which presented, within a compact and convenient compass, the chief events of the life of Daniel Webster, his most remarkable intellectual efforts, and the most valuable and interesting collections of the great mind of the nation uttered in honor of his memory.

We present this volume in this volume, at a very moderate price, and in a very convenient form. Subscription price, in cloth, \$1.75. handsomely embossed leather, \$2.50.

Sample copies sent by mail, post paid, on receipt of subscription price.

Circular, giving contents of the work, and Catalogue of my Publications, will be sent free on application. Address

DUANE RUTISON, Publisher,
605-131 23 South Third Street, Philadelphia, Pa.

GREAT SALE OF REAL ESTATE,

WITH VALUABLE BUILDINGS.

At Olcott, Niagara Co., Oct. 18th, 1859.

You Execution of the Estate of JASON AINSWORTH, deceased, will sell at Public Auction, on the day above named the following property:

1st. The Brick Hotel known as the "Grove House," with all the buildings connected therewith, and about 100 acres of land. The buildings are large, newly built, and cost some five or six thousand dollars.

2d. The Steam Saw Mill, nearly new, built by the deceased at a cost of four or five thousand dollars, and furnished with power sufficient for sawing and other machinery, with land sufficient for the purposes of the mill.

3d. Ninety six acres of land with valuable timber, lying about one mile west of Olcott, known as the Hopkins Creek Farm.

4th. Seventy-five acres of timbered land, lying about four miles southwest of Olcott. This is a valuable wood lot, and will be sold all together or in parcels, as we and purchasers may agree.

5th. Two valuable villas lots in West Olcott, in the center of the village, opposite Messrs. Outwater's store. Also, several choice lots in East Olcott.

The property above enumerated must be sold, and other valuable property will probably be offered. The village of Olcott is situated at the mouth of the Niagara River, on the shore of Lake Ontario, and for beauty of scenery, fertility of soil, salubrity of climate, good roads, water, fruit, freedom from frosts, droughts, or flood, the country around it cannot be excelled by anywhere in the State. All persons desiring to purchase will come and see, as there will be a rare chance for a bargain. Sale to commence at 10 o'clock A. M.

TERMS OF SALE.—All sums under \$1,000, one month; over and balance in three equal annual installments, with interest; all sums over \$1,000, one year, and balance in three equal annual installments, with interest. Good bankable paper, due in three or four months, will be taken in lieu of cash, if desired.

Any information pertaining to the above can be had by applying to F. N. ALBRIGHT, at Yates, Orleans Co., or A. T. WETTERWAX, at Olcott.

F. N. ALBRIGHT, A. T. WETTERWAX, Executors.

FOR PALE TEN FARMS IN FAIRFAX CO.,

Virginia, 10 to 15 acres each, in Washington City, D. C., containing from 80 to 600 acres. Price, \$15 to \$35 per acre.

Healthily located and adapted to the growth of grain, vegetables, fruit, etc. In the midst of a northern settlement, and a better market than any other place for particular address.

CHARLES SUTTON, Fairfax Court House, Va.

MANNY'S COMBINED

REAPER AND MOWER,

WITH WOODS IMPROVEMENT.

For the Harvest of 1859.

The subscriber begs to inform the public that he continues to manufacture this popular machine, and pledges himself to produce an improved model, which will fully justify his former reputation, as the best combined machine yet introduced, and inferior to none, either as a Reaper or Mower.

It has had a steady and increasing popularity from the first, and is a complete success in the great international trial at Geneva in 1858. It carried off the highest honors at the great National Field Trial at Syracuse in 1857, and amidst all the trials and trials of last year, it was the best and better established points of excellence than ever before.

The general principles peculiar to this machine, and upon which it is constructed, have proved so successful that there has been no attempt to change them.

The main effort during the last year has been to improve its mechanical construction, to make it stronger and more durable, and sustain its reputation as the leading and most acceptable machine to the largest class of farmers in the country.

Warranted capable of cutting from 10 to 15 acres of grass or grain per day, in a working manner.

Price of Machine as heretofore, varies according to width of cut, and its adaptation in size and strength to different sections of the country, from \$125 to \$150, delivered here on the cars.

Manufacturer and Proprietor, HOOKS & FALLS, N. Y.

BENNETT GRAY, Brockport.

Agents for Monroe County, N. Y.

WOODS MOWER.

Patented February 23d, 1859.

During the six years I have been engaged in the manufacture of the Manny Combined Reaper and Mower, I have given much thought and attention to the construction of what I foresaw would be a great want of the Farmers—a lighter and cheaper machine expressly for mowing, than had yet been made.

And now, after the most thorough and repeated experiments and tests in every variety of field, and in all kinds and every condition of grass, I am prepared, with entire confidence, to offer to the Farmers and Dealers of the United States, the great desideratum in this department of Agriculture, a saving machine, which, in its capacity, is capable of good work to any hitherto introduced, of easy draft, light, cheap, and durable.

This machine I now offer as my latest invention, to meet a special want of Farmers, and to place within the reach of all a Mower that for practical working, cheapness and simplicity, will be without a rival.

The Two-Horse and One-Horse Mowers. The Two-Horse Mower weighs 425 lbs., and cuts a swath one foot wide (or more if specially ordered). The One-Horse Mower weighs 300 lbs. (less 25 lbs.), and cuts a swath three and a half feet wide.

For a more full description of the Mower, or circular made to my Pamphlets, which will be furnished on application.—With each machine will be furnished two extra guards, two extra wheels, one wrench and oil can.

Warranted capable of cutting ten acres of grass per day in a workmanlike manner.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it zealously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal.—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

JOTTINGS FOR THE SEASON.

When the labors appropriate to the present month are concluded, it may be said that the active portion of the farmer's year has passed away, and he can now enjoy a brief period of leisure. There is to be no "folding of hands," certainly; but, the hurry and bustle incident to all the months between seed-time and harvest will give place to comparative ease and quiet. These latter conditions of both mind and body, however, will very much depend upon the proper accomplishment of the tasks yet on hand, and though we may not add anything to the general stock of knowledge by our present writing, we purpose giving a few hints, just joggling the mentalities of our readers to the merits and necessity of completeness. The sluggard, and he who procrastinates, will be caught, not only napping, but badly frost-bitten, should the former indulge "in a little more sleep," and the latter put off for a "more convenient season" the duties of to-day. "Now is the constant syllable ticking upon the clock of Time," we are told, and he who marks these conditions, and fulfills the requirements of the moment, will always be found among the *Men of the age*.

The *Corn Crop*, judging from the quotations now obtainable, and the recent advance taken in rates, is to be one of our *paying* institutions, for several months, at least. The early part of the year was very unfavorable,—in fact, during the entire summer we have had but little "old-fashioned corn weather,"—and the development of the crop has been a succession of difficulties. Probabilities seem to favor the idea that considerable quantities will not be well matured, and the aggregate value considerably diminished thereby. Every advantage which can be taken, ought to be seized with promptitude by the cultivator, so that not only himself but the country at large may be benefited. "Topping" and "cutting up," are the two recognized modes of securing, and the favorites of each have pressed their claims upon the public ear through the columns of the *RURAL* in days past. The main arguments for the former course were, that it cures the better portion of the stalk before it is injured by frost—allows free access of sun and air to the crop, thus hastening its ripening—and requires less labor. Our fodder is very short, however, and if there were no other reason for adopting the practice of "cutting up," this, under the circumstances, would be deemed sufficient by a goodly number of cultivators. When corn is fairly glazed it is fit to cut up at the root, and this mode will materially assist in keeping up the condition of fodder-stack and cattle. If not hurried by fear of frost, we should allow corn to stand until the husks begin to loosen, to facilitate their removal in securing the crops. After cutting and binding, the best method is to place in stacks of from six to ten bundles. It can stand in this condition for a considerable period without injury. After husking place the bundles in larger stacks until the corn is entirely beyond the reach of damage. On a dry day draw and stack near the barn-yard, in small stacks—of not more than two loads each—and it is well to place a pole in the centre of each stack, with two others leaning against it, so as to furnish an air passage, should there be any tendency to heating. Stalks had better remain well staked in the field, until wanted for feeding out, than to be stored in large stacks or close mows, where they are certain to suffer from heating or mould, or both combined. It is useless to urge upon farmers the importance

of care in securing corn-fodder—if self-preservation will not compel the grower to give all the required preparation, we are not aware of any "higher law" that will furnish essential aid in enforcing the claims of those interested.

The potatoes are to be dug and housed the present month. After all the care and labor devoted to this crop during the months of development, it is to be hoped that in the last duties connected therewith, a laxity of watchfulness will not be permitted to creep in. If the "rot" does not make its appearance, and opportunity is offered for gathering under favorable circumstances, all things over which the farmer has control should be properly prepared. Every opening likely to admit frost must be closed. Jack is well known to be a "great insulator," and if the most minute avenue is left unguarded, the cellar will soon give ample proof of his visits.

Year after year the caution against standing water upon the wheat fields is issued by the Agricultural Press. "Hope deferred maketh the heart sick," but we earnestly desire to see the day when the thousands of miles of tile and other drains will render unnecessary any such word of counsel, in our own State, at least. A special attention to this matter will pay large dividends, and winter-killed wheat would become almost a myth if draining received a tithe of what the system merits.

Amid all the calls that are made upon your time and exertions, don't let us hear any emanating from the domain of the porkers. There is neither music nor poetry in such sounds, and, viewed in a more practical light, very little profit. Quiet is an essential to fatness, and who ever noted a single instance of passivity in a half-starved specimen of the genus under consideration? We have heard and read of "educated hogs"—and we have seen a few—but not one was so thoroughly imbued with a disciplinary spirit as to resist the clamorings of an empty stomach.

When all the peculiar demands of the season are attended to and completed,—when the "painted month," is numbered with the past,—when the "bright colors in which everything green loves to die," have disappeared,—when a new year is hidden along the boughs, and another summer is nestled amid the falling leaves and faded flowers, what a glorious field of observation is opened to the gaze of the ardent cultivator. Wait not for the "days of great things,"—the least of Nature's children are deserving notice from the most towering intellect, and worthy the intensest study. 'Tis the "vaulting ambition that o'erleaps itself," and he who waits for brilliant opportunities is the drone in the great hive of humanity. The following, which we extract from the *London Gardener's Chronicle*, is to the point:—"Mr. Nockolds, at the late meeting of the Farmers' Club, said that the power of observing and recording facts and phenomena was a most valuable portion of a farmer's education. He remembered that when he quitted school, and was placed to learn his business, his master would, as opportunities occurred, point out particular trees, explain their distinctive characteristics, the purposes to which the timber might be applied, and make other observations, relative to familiar objects, which he could not fail to treasure up in his mind; and he believed that he had acquired more information by these practical means than he could have done by any amount of mere theoretical teaching. He had two sisters, who exerted a sort of double Queen Victoria power over him. They were very clever, and were well versed in chronology, from the days of Adam down to the present time. In short, they knew everything. On one occasion, the conversation happened to turn upon Henry the Eighth's wives, he had forgotten what was their number, and could only recollect that he was brute enough to cut off the heads of one or two of them. 'Don't you know how many wives he had?' was the question. 'No, I don't,' he replied, 'but do you see that little bird?' 'Yes.' 'Do you know what it is?' The young ladies confessed they did not. 'That,' he rejoined in triumph, 'that is a hen chaffinch; and, I think, my dears, you had better make the acquaintance of the common things by which you are surrounded, than trouble yourselves about Henry the Eighth and his wives.'

CRUELTY TO ANIMALS.

MESSES. EDS.—In a late *RURAL* you quote from a prominent veterinary surgeon, among other things, that "all cutting of their tails" is "cruel and unnecessary" in the case of horned cattle. If this is so, the conceived opinions of very many farmers need to be reconsidered and revised. My practice uniformly is to start the blood from the tip of the tails of all my cattle every spring, and oftener during the summer with such as show rough hair, or other evidences of a want of thrift. This is done by a square dock, or by slitting, when otherwise the brush of the tail will be too

much reduced. Ordinarily, it is probably best to perform the operation early in the day, when the animal is in cool blood, and in seasons of the year when flies are not over-abundant. The cruelty of the thing is too trifling to mention. Still, if no good follows the practice, it were better to omit it. But upon this point, something more will be needed to satisfy my mind than the dogmatic declaration of any one writer, however distinguished. I have always supposed that it was a preventive of horn-ail; and as a remedy for the disease when it was already seated, it has seemed evident and marked. But according to Dr. Dadd, it was all an illusion!

I have seen cattle in neighbors' fields with a hard, round roll or twist of hair in the centre of the brush,—their tails having never been cut,—and have ached to apply the knife, so sure was I that it would afford to the system a needed relief, and give to the outer coat of the animals a gloss that it probably lacked. I once purchased a pair of oxen in the month of August.—At the first glance, I saw that they were not thriving very well, though they were in good pasture. The eye was a little heavy, and the hair was rough and dull, and lacked that gloss and appearance of life which it ought to have. I saw, or thought I did, the difficulty; and as soon as the cattle were delivered, the knife was used without stint, and the cattle turned out. A few hours after, word came that one of them was "bleeding to death," whereat the writer was not particularly alarmed. It proved to be the one that most needed the operation, and there were evidences that a good deal of blood had spilled. Nothing, however, was done to stop the flow. In a few days there was a second shedding of coat, the eye brightened, they grew and thrived exceedingly, and in a few weeks the lively, well-laid hair fairly glistened, and there was, and continued to be, all the evidences of perfect, vigorous, abounding health. Nothing else was done for them, no other sufficient cause could be assigned for the change, and it will need more than the dictum of the learned veterinarian to satisfy me that the cutting was not called for and advantageous. And this case, in its results, accords with my almost uniform experience. W. B. P. Frausburgh, N. Y., 1859.

CORN SYRUP.

EDS. *RURAL*.—The agricultural publications of 1858 were sweet and welcome visitors, containing a much larger proportion of saccharine substance than is ordinarily afforded in tea and coffee. The syrup-loving boys and girls flattered themselves there would be no more famine in the bread and molasses department; and the good dames of the north were jubilant with gratulations, expecting to see no more wry faces in response to the sweet hint that so often accompanies the morning cup of coffee, "My dear, we are nearly out of sugar."

Sorghum was the hobby, and its riders promised us an abundant supply through this novel agency. But, alas! in 1859 we have to take our papers without sweetening. Still they relish very well, being full of the "staff of life," with which we are so amply supplied the present season. But the boys want a little molasses with the bread, and the good wife scrapes the sugar-bowl, hoping to give a hint without a word, and avoid having the cream curdle in the coffee beneath the vinegar scowl of the embarrassed husband. Under this pressure of the times W. B. P. asks, "Sorghum, where is it?"

I do not propose to answer this inquiry, as I am not one of the persons to whom it is addressed. I can only say of my Sorghum, it has gone to the worms, the frost, and the drouth.

This failure revived in my mind the memory of the "Corn Molasses" excitement of 1848, which constituted the sweetening of all the country papers of that year, and then took its leave, without imparting an item of its deliciousness to the buck-wheat cakes. Hence, in the absence of Sorghum, I determined to test the value of corn as a substitute. I give you readers the result of my experiments, which have been much more satisfactory than I had anticipated.

My corn is about three-fourths the usual growth, having been much retarded by drouth. When my first experiment was made, one-half of the corn was ripe enough for the crib. I then obtained, of syrup, in the proportion of eighteen gallons per acre, and of corn eighty bushels of ears, including the soft or unripe portion. The leaves, husks and tops were carefully saved for fodder. I continued my experiments weekly, and found, as I supposed I should, the saccharine substance in the corn

PARCE'S IMPROVED HOISTING CRANE.

The above engraving represents an improved Hoisting Crane recently patented by Mr. J. B. PARCE, of this county. Messrs. D. B. DeLAND & Co., proprietors of the Fairport Chemical Works, have one of these cranes in use in their extensive establishment; it operates on any place inside of a circle of forty feet in diameter, by which two men can raise or lower and place in any position required any weight not exceeding 4,000 lbs., and by the addition of another man or two, (or with steam power,) five tons can be handled in like manner. It will pass a post or any obstruction within ten feet of the centre, and can be thrust through a doorway or window for the purpose of loading or unloading freight from a cart, &c. The gentlemen above alluded to assure us that it can perform more labor than eight men by any other means known to them; and they consider it invaluable for iron foundries, ship yards, docks, marble works, stone quarries, railroad freight houses, etc.

The Crane is thus noticed by the *Scientific American*:—"The device for bracing the arm against the twist, or torsion strain, will attract the attention of such of our readers as take an interest in mechanical contrivances. To the post, A, which turns on pivots, the main arm, E, is firmly fastened. By means of a hinged joint, the outer arm, F, is connected with the main arm, E; the pin of this hinge is oval in form, and is firmly fastened into the main arm, E, so that it cannot turn, with its largest axis perpendicular to the line of the arm. The jointed arm, F, turns about this pin; the holes in F, through which the pin passes, being round, and fitting the pin loosely. The object of this arrangement is to hold the end of the arm, F, up horizontally when it is turned at right angles to the main arm, E. The rope, G,

passes between friction rollers, m, the axes of which are vertical."

The specifications describe the bracing device as follows:—"The main arm, E, is strengthened by means of double diagonal braces, I, which are united by a stay, r, which passes freely through an aperture, S, in the arm, E, without touching any part of the same, and the several arms, t and t', are attached to the arm by means of bolts or rivets, u u' u'' and u''', as clearly represented in Fig. 1; and all the arms, t t', are secured in the centre to the stay, r, by means of nuts, v, as represented in Fig. 2."

"If the weight be brought into a position, as represented in dotted lines in Fig. 2, the strain exerted by the same on the main arm, E, has a tendency to twist the outer end of the same, so as to turn the bolt, u', out (Fig. 1); and the bolt, u, in; but any strain which has a tendency to twist the outer end of the main arm, E, in this direction is brought to bear on the bolts u''' and u'', by means of the arms, t and t', of the brace, I; and, as the stay, r, passes freely through the aperture, S, in the main arm, E, any little motion in the braces, t and t', has no effect on the central part of the arm." The object of this bracing is to allow the arm to be swung with less power than would be required if it was allowed to twist; and "that the strain exerted by the weight on the arm may be brought to bear on that part of the same where it joins the post." If the bent arm twists with a heavy weight at the end, in swinging the arm out straight, we are obliged to raise the weight, with a useless expenditure of power.

Messrs. DeLAND & PARCE, of Fairport, N. Y., are the proprietors of this apparently very valuable patent, and will cheerfully respond to any inquiries in relation thereto.

stalk continually decreased as the corn ripened. My last experiment was made after the corn was fully ripe, and the yield of syrup was in the proportion of eight gallons per acre. The mode of cleansing, evaporation, &c., was the same as that of the Sorghum, and those who have eaten of the corn syrup pronounce it superior to the former. The balance of my corn is now cut and in the stack, and upon this I shall experiment still further, in order to learn how long it may stand in this situation without spoiling it for syrup. The yield will, of course, be less than before. To grow corn exclusively for sugar, the sets should be removed when they appear. But it is a question whether it will not pay better to connect the grain and syrup product together.

These experiments prove that every rural district can supply itself with sugar from the corn-stalk, which is next to worthless for fodder, and is usually trodden under foot. The expense of converting it into syrup is but a trifle more than that of fitting it for feed, by cutting, &c. True, the yield per acre is not large, but sure.

The Editor of the *RURAL*, three or four years

since, recommended his readers, in substance, "never to employ others to do that which could as well be done by their own hands." To many this suggestion has been worth, annually, three times the cost of that excellent paper. Would not the adoption of the motto of some of our worthy fathers be equally happy in its effect, viz: "Never import or buy that which can as well be produced or manufactured at home." Let us test Sorghum and corn, side by side, for a series of years,—develop the merits of each, and manufacture our own sugar, from one, the other, or both. Monaca, Wis., 1859. O. P. G.

WHEAT OR WINTER BARLEY—WHICH?

EDS. *RURAL*.—On this question you gave, a few weeks since, the diverse opinions of two Presidents of Agricultural Societies, and without presuming to "decide when high officials disagree," permit me to suggest that perhaps both were right (a conclusion certainly most satisfactory to lovers of official dignity). Winter barley proves with us a very tender plant, extremely liable to winter-kill—much more so than wheat. But when once thro'

the winter it is midge proof, and yields most bountifully, often, on good land, from forty to fifty bushels per acre. On good, dry land, such as will produce twenty-five bushels of wheat per acre, you may expect forty or fifty of winter barley, while on land which will produce fifteen or twenty bushels of wheat, you need expect only eight or twelve of barley. Early sowing is also essential to enable the barley to get good root before winter, and so too is thorough drainage, as if there is the least excess of moisture the plant will surely "heave," yet on dry land no crop pays better. I think winter barley is merely spring barley, acclimated to endure our winters, as after mild winters wheat on spring barley stubble will contain heads of barley scattered through the sheaves. On extremely good soil spring barley would answer to sow in the fall, though I think winter barley would be rather more hardy. Probably winter barley will become more and more hardy with repeated sowings—the farther it is removed from the spring sorts.

In regard to the *morality* of the crop, about which doubts are imagined, I am not aware that winter barley contains any more wickedness, pound for pound, than the spring sorts, besides being, on our best land, much more productive, and bringing five to ten cents more per bushel.

Henrietta, N. Y., 1859.

W. J. F.

ON BREEDING HORSES IN WESTERN N. Y.

EDS. RURAL NEW-YORKER:—An esteemed correspondent and a regular subscriber deeply interested in the above subject, has kindly handed me his file of your talented and highly pleasing paper, and drawn my attention to an article in your impression of July 29d, wherein Mr. PARSONS, anxious to improve the breed of horses in Onondaga Co., recommends larger and heavier horses to be used, whilst in your editorial remarks in the same number, you remind the writer that small horses notwithstanding bring high prices and are much in demand. And your correspondent, in the impression of August 13th, under the signature of "Rural Reader," on the same subject, and apparently anxious for further information, asks: "What kind of stallions crossed with the mares of Western N. Y., will produce the fastest trotters, best roadsters, most stylish and valuable carriage horses, and most useful stage, cart, and farm horses?"

Difficult as this question may be to solve, involving as it does in its sweeping grasp, the whole of the mares at present existing in Western New York, large, small, and medium sized, and notwithstanding all the varied opinions on the subject, I will obey the call of your correspondent, and try to assist you in solving this knotty but most interesting question.

Mr. P. recommends large horses, weighing 1,600 lbs., while you remind us that small horses are valuable; you are both apparently right, but as a general rule you are both wrong. Mr. P.'s large horse would produce too many leggy 17 banders, neither useful nor ornamental, and your small horse indiscriminately used would fill the country with weeds. I may say with your correspondent, "I have no axe to grind." Both these horses would no doubt produce some good ones, but they would produce far too many bad, and leave you with a very poor stock from which to breed in future. I understand the object to be attained by your correspondent's remark, it is this—What kind of horse would you recommend us to use to all our mares—great, small, and medium size, bad, good, and indifferent—in order to produce the greatest amount of valuable, useful horses, for all purposes, saddle, harness, and draught, with the least loss by wastage, (that is, overgrown useless animals, and undersized weeds, equally worthless,) leaving us at the same time with a goodly quantity of mares not deteriorated, from which we can continue our breeding operations with success?

In order that I may be properly understood by your large circle of readers, to whom I am a stranger, and may use terms (although correct) not in common use by them, permit me to explain that, by a Draught horse I mean a pure bred Clydesdale, a Suffolk, or a Northumbrian; they are all of them good. By Harness, I mean a pure Cleveland bay carriage horse; and for Saddle a thoroughbred, and I do not mean in this paper to speak of any other. Let me here state, however, for reasons hereafter to be named, that on no account whatever would I use a stud horse of a mixed breed, even if he was the fastest trotter in creation. The horse for your purpose must be pure, although neither he, or his blood, ever trotted fast in their lives.—Imported Messenger, Trustee, Dasher, &c., &c., were not trotters, but they produced the best of trotters, and so shall the horse I recommend if he can be obtained and have a fair trial. I speak from years of practical experience, spent in producing horses that could walk, trot, and gallop, as long and as fast as any horses in this fast country.

We must infer that a large proportion of your mares are not pure; hence the necessity of the above observation, that on the male side I insist upon purity, so that you can fall back and replace it, and follow it up for any period, even to all time. Where the mares are pure, the result will speak for itself; but where the mixture of breeds exist on the male side, no calculation can be made—the produce may perchance be right, or it may take after some great, gt. gt. grand, no knowing how far back. Therefore, to begin we must have one side pure blood, either saddle, harness, or draught; the mares we presume are not all so, and therefore to obtain, or attempt to obtain, the object asked by our friend (Rural Reader) we must have purity on one side, and the male is preferable.

In order to show the necessity of pure blood in the sire, and not only pure blood but perfection in shape, I will use the authority of an esteemed friend and able writer, ROBERT ORTON, M. D., on the Physiology of Breeding. The learned doctor observes: "There is no uncertainty in nature's operations, the male *always* confers the external structure of the offspring, while the female gives the internal." In other words, we reasonably calculate and expect that the offspring will bear the external conformation and locomotive powers of the sire, and the internal, (i. e.) vital organs or constitution of the dam. Now, if this observation is true it will materially assist us in our object; if

it is not, we will of course let it slide. By way of illustration, however, with your permission we will bring before your readers a few Physiological facts bearing upon this important subject, to enable them to judge of the necessity for using pure blood and superior form, such as I have strenuously recommended above, in the horse to be used for Western N. Y., and from which so much is expected.

In the first example a mare put to an ass will produce a mule, with its head, ears, tail, mane, legs and feet of the sire, or Jack, with the body and constitution of the dam or mare; and *vice versa*, put a pony to an ass, and the offspring will be a binny, with all the externals of the pony and the body and constitution of the ass. The former, sired by the Jack, will bray; and the latter, sired by the pony, will neigh. Mr. THOMAS, of Haverford West, in writing on this subject, says—"In using a long eared boar and a short eared sow (two purely distinct breeds) the progeny will have the long ears of the sire, or boar, improved by the fattening qualities of the sow, and the produce from a short eared boar and a long eared sow, will shorten the ears and body of their produce, with a corresponding loss of adaptation to fatten."

The cross with a pure draught horse, and a saddle or blood mare, will produce a fine, strong horse with the form of the sire, and the game of the mare, but at an awful sacrifice of pace and lasting qualities. The blood horse upon the draught mare is a decided improvement; it is, in fact, implanting blood upon strength; the form and locomotive powers are improved, at an apparent loss of size and strength, but this is not so much in reality as it is in idea, the bones of the blood horse being more dense, and stronger for their size than draught, and the muscles and tendons are also stronger in the same proportion. Experiments similarly conducted with sheep prove the same result. For instance, the Leicester ram with a Cheviot ewe will produce more size, and a squarer form, with longer wool—while the Cheviot ram with the Leicester ewe, will deteriorate the Leicester, and only slightly improve the Cheviot, proving indisputably that blood and form must be used on the male side, to guide us to a successful result.

This law is not confined to animals alone; nature dictates the same principles, and obeys the same law as rigidly in the feathered tribes. Mr. GARNETT, of Clithero, bred from a Muscovy drake and a common duck, the produce having the large form and wild habits of the male, with improved flesh of the common duck, while those hybrids produced from the common drake and Muscovy duck made little or no alteration in their form.

There is another rule in the Physiology of breeding, so very remarkable, and at the same time so well authenticated, that it cannot fail to prove interesting. The female system imbibes other influences (than those already named) from the male, which modify the future progeny of other males; in almost all kinds of animals the effect has been noted, and I now select a few which most suit our purpose for illustration. Mr. MCGILLAVORAY observes that, "in several foals in the Royal stud at Hampton Court, by Acton, there were unequivocal marks of the horse Colonel, to whom the dams of these foals had been put and bred from the previous season. Again, a colt belonging to the Earl of Sheffield, by Laurel, so resembled the horse Camel that it was not only thought, but boldly asserted at Newmarket that he must have been sired by Camel. It was ascertained, however, that the only relation the colt bore to Camel, was, that his dam had been to Camel the year before." "Prof. Low affords us another instance, after remarking that there is sometimes a difficulty in getting thoroughbred mares to breed to blood, and in order to induce them, a courser horse is used.—The Professor adds, the effect never fails to be seen in the progeny, the courser characters of the first male reappearing, however highly bred the subsequent stallion may be."

HALLER and BECKEN both say that when a mare has had a mule to an ass, and then a foal to a horse, the foal exhibits traces of the ass, a statement also confirmed by Prof. Low. Many reasons are assigned for this phenomenon, but, to enter into them, and explain how they come to pass, would lead me already too long paper beyond the limits of your columns. We will therefore try to solve Rural Reader's question, viz: what horse, under all the circumstances will answer his question, as given in the beginning of this article?

Now, Sir, if these gentlemen are correct in their Physiological remarks, as to the male conferring the external form and locomotive powers to the offspring, and the female the constitution in the first instance, and in the second that the male also has the power of influencing the female in respect to her subsequent progeny begotten by another horse,—I say if they are correct (and until we can prove they are not so,) we cannot be wrong in choosing the male with the greatest possible care, both as to blood and shape.

All well made horses from a good, sound stock, with proper treatment will have their natural paces in perfection, (the walk, trot, and gallop,) in which they will go as fast as any reasonable man wishes; and they (I mean any of them,) can readily be taught to go faster, and do a mile in fewer seconds than is absolutely necessary for any useful purpose; and will also easily learn any ugly, awkward style, fast or slow, the owner chooses, and it may be called trotting—"a rose by any other name would smell as sweet"—but to accomplish these things well (as a general rule) both blood and shape are necessary. There are plenty of horses, with very fine names, that go fast, but they have neither a natural pace or an elegant style; they are fit for a butcher's cart, and their intense value in the eye of a judge is nil.

Our object is to produce valuable, stylish, fast, and useful horses from all your mares, and the draught horse will not do this. "We cannot make a silk purse from a sow's ear"—from draught we cannot produce a saddle horse nor a first class harness; elasticity of limb, speed and elegance, would be sacrificed on the shrine of size and strength. With a short-legged Cleveland carriage horse you will come much nearer perfection; you will keep up your size and strength with more speed and elegance, and leave you with the best blood mares in the world for trotting, or any other

purpose but racing; from this stock you never can compete with thorough blood.

To fill all the requirements of Rural Reader, I fear there is only one horse, but there is one horse, and from him you can (according to the quality of the mare you use) produce every kind of horse enumerated in your correspondent's sweeping question. This horse I would have thoroughbred, so that from him you can produce racers, trotters, saddle, harness, draught, and horses for every intermediate purpose; but to do this it is necessary that he should be chosen with judgment—and that is not, can he do 2.30?—but it is, can he walk well, and sound, trot in due form, and gallop correctly? His limbs must be as strong as a wagon horse, short, flat, and free, not tied in anywhere; his feet good and sound, small head, wide nostrils, and sloping shoulders; his neck long, but not too long, nor his crest too high, (I don't like your peacock horses, they are only for show, they are flat catchers—more for ornament than use.) I would have his body thick, muscular and strong, and his back short, his blood as pure as flowed in the veins of Eclipsa, his height under 16 hands, his color a bright blood bay, with jet black legs, and not only without a blemish, but if possible without a fault.

I do not wish to be invidious, or speak ill of any particular horse; neither do I wish to praise another beyond his true merit. I cannot, however, resist remarking that I yesterday saw in a public exhibition a horse 25 years old, with all, or nearly all, the qualities I have enumerated, and upon inquiry I found that it was the celebrated race horse *Mango*, imported to this country from England, and now the property of Messrs. BATHGATE, of Westchester Co., N. Y. This horse won the St. Leger at Doncaster in 1847; his raising qualities and performances are of first class order, and if he was 5 years old, instead of 25, I would say of all the horses I have seen in this country he is the nearest the animal I have described, and the most likely to answer all the requirements of our friend Rural Reader.

The only excuse I can make for the length I have unfortunately run this article is the interest I feel in the subject, a desire to be useful to your readers in particular, a benefit to the human family in general, and also to give you, Sir, an opportunity of becoming acquainted with

Yours, most respectfully,
September 24, 1859. OLD WINN.

Rural Spirit of the Press.

Bones and Wheat.

ACCORDING to Sir Robert Kane, the distinguished chemist, says the *Scientific American*, one pound of bones contains the phosphoric acid of twenty-eight pounds of wheat. A crop of wheat of forty bushels per acre, and sixty pounds per bushel, weighs 2,400 pounds, and this requires about eighty-six pounds of bones to supply it with that essential material. The usual supply of bone dust (three to four cwt. per acre,) supply each of the crops for four years with a sufficiency of phosphoric acid, which is given out as the bones decompose. It may, therefore, be conceived what would be the effect of a double dressing of bones, renewed each year from time to time, by adding doses, all giving out the phosphoric acid by the slow process of decomposition.

Manuring Winter Wheat.

PROF. CAMPBELL says:—"Some farmers put off the application of their stable and yard manure to wheat until winter or spring. When this is done, they are usually but poorly compensated for their labor. Winter wheat has two periods of growth; the first in autumn, and the second during the following spring or summer. The vigor of the crop in its second period, generally depends very much upon the healthful development of those parts of the roots which are natural to the first or autumn period. If, then, manure is incorporated with the soil at the time of sowing, the impulse given to the wheat plants in autumn is almost certain to continue until the crop is matured—unless some physical cause comes in to prevent, such as drouth or the depredation of insects. But when manure is spread upon fall wheat in winter or spring, it comes too late. The basis of a good crop is not there. As well might you expect to make a great crop from a stunted calf, as to make a good crop in such a case as this."

Keeping Sweet Potatoes.

A WRITER in the *Oskaloosa Herald* gives his method of preserving the sweet potato through the winter. His way is as follows:—"I use dry sand to put them up in—it don't matter how the sand is dried, in a kiln, in a log heap, or in the sun, so it is dry, that is all that is required. I prefer drying in a log heap, as it costs at least four times less, and is just as good. And a family that has a little room with a stove in it, may keep a box or two of eight or ten bushels, without much inconvenience. The boxes must be raised six or eight inches from the floor, and they must not be nearer than four inches to the wall. Fill the box with potatoes, and then put in sand, cover the potatoes with sand. There is a good deal said about kiln-dried sand, but is all fudge. I have also known them kept well in buckwheat chuff. In order to keep potatoes with success, there must be a thermometer kept in the room. The mercury must not sink below 40°; if it does, the potatoes will chill and rot; it also must not rise above 60°, or they will grow. I have never lost any of my potatoes only by letting the room get too cold. A thermometer only costs a dollar, and every man ought to have one."

"Artesian Wells a Curse."

So says the *California Farmer*, and without agreeing with the opinion, we give an extract from its article on the subject:

"We have made critical examination of the result of this flooding the land, this profuse irrigation, and not a solitary instance have we found where we do not see a blight in some degree, and it is rapidly increasing. We venture the assertion that within two years many fine and flourishing garden spots will have become so diseased as to literally die out. The system, as now practised, is contrary to all principles of science, and we hope most earnestly that the cultivators of that

great valley will communicate freely and fully with us upon this subject, giving us all important facts relating to artesian wells and their influence. We know this fact. The fruit raised by the irrigation system is neither so high colored or so rich and juicy; and the trees that produce the fruit look succulent in their branches; they did not ripen their wood well, and thus become subject to be destroyed by cold and frost. Trees and plants raised under this system, make long, naked 'tap roots,' and consequently bear fruit upon the extremities of the limbs.

"We ask cultivators to examine our statements, and they will find them so. We do not believe there is a gardener, nurseryman or orchardist that will not soon deplore the error he has committed in thus being led into this unnatural system. God said 'fountains shall spring up in the desert,' across which in his own time he will 'make a highway for our God,' and then across the desert will be long beeds for the coming thousands to our land, the artesian well, and there they will be a 'blessing for man and beast'; and here, too, they would be a blessing, were it not for man's avarice. Artesian wells, if here and there only, would be well enough; but the system of irrigation should only be in accordance with nature's plans; the earth must not be deluged; gentle showering over the foliage at the evening hour to cleanse and refresh, is always good, and that is about all that is needed. But there is a great evil that will soon be felt at Santa Clara; in fact is now felt. The earth is parched up, and bitter and grievous complaints come from all quarters, for it is found that the evil is increasing. And yet, 'men have eyes, but they see not.' All the surface water of the entire country is drawn off by means of artesian wells; drawn down to their channels, and then sent up again in one stream instead of ten thousand through all the pores of the surface earth, and then carried off into the bay."

Agricultural Miscellany.

THE STATE FAIR, at Albany this week, will probably prove one of the best ever held by the Society. The weather promises to be fine, and the Albany papers say everything is ready on the Fair Grounds—that nearly a thousand entries were made last week: the buildings are all fitted up; many of the heavy articles have arrived, (including horses and cattle in droves;) the moving power for the machinery is being arranged, and every one to whom official duties have been assigned are at their posts. We hope the Fair will excel those held in this city—the most successful ever made by the Society—and if so, Rochester and Western New York will "try again" the first opportunity.

AG. FAIRS NEXT WEEK.—The only Northern State Fair to be held the coming week is that of Connecticut—at New Haven, Oct. 11-14. Though proverbially the "land of steady habits," Conn. is becoming progressive, agriculturally, and will make a creditable demonstration of the skill and industry of her producers. The Tennessee State Fair takes place at Nashville, Oct. 10-15. The only County Fairs in this State, so far as we learn, are—Seneca, at Waterloo, Oct. 12-14, and Yates, Penn Yan, Oct. 12, 13. New York Union Fairs—Brookport Union, at Brookport, and Palmyra Union, at Palmyra, Oct. 11, 12—both spirited Societies, which always have good exhibitions and are largely attended. Fairs are to be held at Hemlock Lake, Oct. 13, 14, and at Wyoming the 14th, which will, we believe, close the exhibitions in this State for 1859.

CORN, &c., DAMAGED BY FROST.—The frost which occurred the middle of last month proved far more injurious in some portions of this State than was reported at the time. Judging from what we saw and heard in this vicinity, we supposed and stated that the damage was not material,—but subsequent observation in reports from many counties east of this, and through Central New York, convince us that much damage was caused, especially to corn and buckwheat. Very little corn had been cut up at the time of the frost, and perhaps not over half the crop was glazed or out of danger; hence, there must be much soft corn, while the stalks are badly injured for fodder. We fear there will not be half an average crop of sound corn in many counties. Buckwheat is also badly injured in some localities.

OPORTO GRAPE WINE.—We are indebted to Mr. A. DEVERAUX, of Clyde, N. Y., for a sample of wine made from the Oporto grape. Mr. D. sent us a sample last winter, which we noticed favorably,—asking information relative to the culture of the grape, &c. In giving his reply, our associate of the Horticultural department made some remarks relative to wine from Oporto grape, pronouncing it altogether too sweet, &c. It is proper to state here—and the correction ought to have been made earlier—that the remarks were intended to apply to a sample of wine sent us from Seneca county, (and said to be made from the Oporto grape,) and not to that received from Mr. D. Our associate got things a little mixed, though usually accurate, and hence this voluntary amendment.

TO KEEP CIDER SWEET.—In answer to an inquiry, "How to keep Cider fresh and sweet," in a late RURAL, Mr. N. PAYNE, of Auburn, says:—"I will give you a simple process, which has proved satisfactory to me. Take Cider, pure and sweet from the press. Boil it sufficiently to clarify as you would syrup to make maple sugar, with eggs or milk. Skim thoroughly; when cold put it into sweet cans; bung tight. After a few months tap and you will find it 'fresh and sweet.' If you wish some of it for festive occasions, fill some bottles when you rack off—put one raisin or dried grape in each—tie the corks, and lay the bottles on their sides in the cellar until wanted."

THE OLD "SPIRIT OF THE TIMES."—In response to a request, it is but just to state that our long-time exchange, the "Old Spirit of the Times," is in no wise involved in the controversy recently brought before the public through "Porter's Spirit" and "Wilkes' Spirit of the Times"—a mistake not altogether unavailing, the names of the papers mentioned being nearly the same. We are assured that "The 'Old Spirit,'" as it is familiarly termed by its friends and subscribers, still flourishes as the leading journal of the Turf and the Field, and that its subscription list was never larger than at present, or its conductors more prosperous.

TRAIN HORSES TO WALK.—We have heretofore spoken of fast walking as more desirable in horses for general utility on the farm than fast trotting, and suggested that Agricultural Societies offer premiums accordingly. An exchange truthfully remarks that "a plow-horse should, above all things, be a good walker. The walking gait is not cultivated enough in training horses. Only consider what a team that could walk four miles an hour, for ten hours per day, could do towards hurrying through spring or fall work."

RECENT AGRICULTURAL EXHIBITIONS.

THE PA. STATE FAIR—near Philadelphia, last week, on the same grounds where the U. S. Fair was held a few years ago—was a decided success. According to the reports which have reached us the entries were numerous, and the exhibition fine, with a large attendance. The most prominent and attractive feature of the Fair was a trial of steam and hand fire engines—not very agricultural—some forty fire companies (including sixteen owning steam engines,) entering the arena of competition. The weather was propitious during the week. The premiums amounted to \$3,000.

THE GREAT ST. LOUIS FAIR.—The Fair of the St. Louis Agricultural and Mechanical Society, held last week, proved a splendid affair, though the weather was unfavorable a portion of the time. The display of Stock—especially of improved Horses and Cattle—was large and superior, and the prizes are said to have been fairly distributed among the various States represented. Among the \$1,000 premiums (of which several were offered,) we observe that one was awarded to CHAR. B. MACK, of Lockport, N. Y., for the best draught-horse—showing that Western New York was ahead in at least one class. In consequence of the inclemency of the weather on Thursday and Friday the program of the Fair was greatly retarded, and the awarding of the sweepstakes prizes postponed until this week.

THE INDIANA STATE FAIR.—at New Albany, Sept. 28-29—is reported to have been an improvement upon its predecessors, in many respects, and especially in grounds and arrangements. The Indiana Farmer says:—"The exhibition grounds are the most extensive and best arranged we have ever seen anywhere. The plot embraces some seventy-two acres, and is the property of the Floyd County Agricultural Association, which embraces in its territorial jurisdiction several of the adjoining counties. The grounds and the improvements on them cost about \$20,000. Of this amount the State Board has contributed \$8,000, and the remainder has been made up by the Association owning the property and by individual stock subscription."

MONROE COUNTY FAIR.—Our County Fair, last week, was worthy of the Society and locality. The exhibition was large and excellent in most departments—the display of Fruit, especially, being the largest and best we ever saw at a County Show. The weather was most favorable on the principal days—Thursday and Friday—and the attendance large, with corresponding receipts (some \$2,000.) The Indian Bull play, on Thursday, attracted an immense audience—the novelty proving more magnetic, apparently, than the very creditable exhibition of Stock, Implements, Fruit, Domestic Manufactures, &c. The address by Hon. J. O. PUTNAM, of Buffalo, was appropriate, instructive and eloquent—delivered in the best style, and well received by a large and appreciative audience. We presume the list of premium awards, etc., will be given in our local county papers.

ERIE CO. FAIR.—We learn that this Fair, last week, was the most successful ever held by the Society. The attendance was large, the exhibition fine, and the receipts greatly exceeded those of the previous year. The Buffalo Republic specially commends the display of implements, carriage, etc., made by CHAS. BOGGS, of Lancaster, and a new straw, stalk and root cutter manufactured by J. M. CRAIGHEAD, of North Evans. It adds that the annual address, delivered by Hon. A. B. DICKINSON, was decidedly agricultural, and both interesting and instructive to the many practical farmers of the audience.

THE WYOMING CO. FAIR.—at Warsaw, last week—was held to have been very satisfactory. The address was delivered by HORACE GREELEY to a large concourse of people. In proposing a vote of thanks, our friend Mr. H. T. BROOKS gave the orator proper credit for punctuality in meeting his engagement—remarking that Mr. G. had left New York almost immediately after his arrival from California, without even kissing his wife, a duty which he hoped would be performed the first convenient opportunity! The Major's joke is better than the philosopher's example as a husband.

THE ORLEANS CO. FAIR.—at Albion last week, (adjourned from previous week on account of bad weather)—was unusually successful. The exhibition of stock, particularly, is said to have been the best ever made in the county. The attendance was large, and the receipts sufficient to pay all expenses,—although the Fair was held only one day, in consequence of the fatal bridge accident at the rope-walking in the village, a performance, we are glad to say, having no connection whatever with the Fair.

THE CANADA WEST PROVINCIAL FAIR.—at Kingston, last week—is reported, by telegraph, to have been largely successful, in both show and attendance. We have no particulars.

WHEAT CROP AFTER FROST.—Dr. C. MILLER, of this city, presented us with a handful of wheat as cut, and also a sample threshed and cleaned, that was grown in a field that had been considered entirely destroyed by the hard frost of the 5th of June last. It is from the farm of JOHN BLEIM, of Gates, near this city. Mr. B. had five acres of winter wheat so injured by the frost on the 5th of June, that on the 10th he commenced cutting it and curing for fodder. After cutting one acre the press of work prevented any further progress until the 20th, when the other four acres were treated in the same way. The wheat on the first acre cut out up new leaves, formed heads, and was harvested on the 10th of August, just two months after the first mowing, and yielded 10 bushels of wheat, a specimen of which we now have before us. The four acres cut on the 20th yielded nothing. This fact it would be well to remember, should we be again visited with a late spring frost.

WINTER BARLEY.—In the Branch Co. (Mich.) Republican, Mr. JAS. CLINEBEE, a prominent farmer, states that Winter barley has been grown in that vicinity for the last three years, and done well in every instance where it had a chance—the general yield being from 20 to 24 bushels per acre. Mr. C. further says:—"Judging from what we have seen of the grain, it is capable of yielding 30 bushels per acre. During the past season it has been raised by the side of spring barley and has produced four bushels to one of the spring variety. Mr. AXON CLIVER, of this place (Quincy), has raised during the past season 60 bushels per acre on old stubble once plowed, or 180 bushels on three acres, and on land that has been cropped for eight years in succession. We think it has decided advantages over spring barley, viz:—1st. It may be sown after farmers get through with their hurry in sowing winter wheat. 2d. It may be harvested before wheat is ripe. 3d. It has no black, or false heads. 4th. It yields two to one, at least. 5th. The insect will not hurt it in the fall, and it is so early that the weevil will not hurt it. We are in hopes this barley will prove a substitute for the wheat crop, if we should be obliged to give up the cultivation of that should be obliged to give up the insect and weevil, which grain in consequence of the insects and weevil, which at present threaten its destruction in Michigan. This variety of barley should be sown sometime between the 15th of September and the 1st of November, requiring about two bushels of seed per acre. It will ripen ten days earlier than wheat, and leaves the ground in good condition for that grain."

M. A. R. Y.

Like a well ahead the Future,
Rise the shadows of the Past;
And I forward look to meet thee
Even as I saw thee last.

Saw thee, young, and fair, and holy,
With that look upon thy brow,
Ever saying, "I'm of Heaven,
Though I linger with thee now."

Ever saying to my spirit,
What of all things most I feared,—
That the chords, so interwoven,
Of my heart to thine endeared,

Twining were, not round an earth-plant
With their pure and perfect bands,
But that with each thought I gave thee,
Grew my fate in Angel hands.

Now I know 'twas not a fancy—
Now I know 'twas truth revealed,
That should whisper comfort to me,
When in death those lips were sealed.

And though all the world around me
Gloomier seems since thou wert gone,
Yet, my soul, through all the darkness,
Wait I for the coming morn.

All the olden time upriseth—
But it moves me not to grief,—
Nearer still I come towards thee—
Where, but there, have I relief?

Thou art wishing for my presence—
Firmly draw the golden bands;
O, how blest that I could find
All my fate to Angel hands.

Like a well ahead the Future,
Rise the shadows of the Past;
Hail, thou vision, crowned with glory!
Thou art mine, I thine, at last.

MY MOTHER.

WHAT pleasing yet hallowed associations cluster around the name of Mother! What long pent-up fountains burst forth as memory takes us by the hand and leads us far back through the maze of life, to the time when, with blessed with the love, guidance and admonitions of that pure spirit whom Heaven destined us to call Mother. A mother's love, how pure, how devoted. The sunshine of prosperity and the dark storms of adversity, alike fail to quench the flame which Memory has most beautifully described.

A Mother's Love! how sweet the name!
What is a Mother's Love?
The noblest, purest, tenderest flame
That kindles from above,
Within a heart of earthly mould,
As much of heaven as heart can hold,
Nor through eternity grows cold;
This is a Mother's Love.

Kind reader, has thou been bereft of such a treasure? Hast thou been called to take the last lingering look upon her who was dearest to thee of earth, and whose latest breath, perchance, was spent in prayer for her child? As her cold and lifeless remains were consigned to the "narrow house," to be forever hid from thy longing gaze, did not the consciousness that thou wert indeed motherless well nigh overwhelm thee? (No mother,—what a thought.) If so, well knowest thou how to sympathize with a kindred spirit.—Well might angels with unrolled pinions hover round a heart thus rudely shattered.

Methinks, while gazing upward to Heaven's blue vault, that were the starry veil thrown aside, I should see the same familiar face, (save it were illuminated by the glory which proceedeth from the Throne,) while the eye, beaming with its wonted love and tenderness, seemed silently to speak of that heaven which is now her home; and that if faithful in striving to escape the pollutions of earth, I too might share in the glories revealed in His kingdom, and enjoy her society without interruption through the vast cycles of Eternity.

Some have said that Time will lessen the affection for departed friends—that it will almost or wholly efface their remembrance from the heart. Such experience has ever been a stranger to us, and we trust the sacred precincts of our hearts may never witness an intrusion of that nature. Though many years have passed into oblivion's dewy vale since a sainted mother and other "loved ones" were with us in the flesh, yet how distinctly do we remember each look—each tone. 'Tis all in vivid array before the mind's eye, and we almost fancy that we again feel the soft clasp of the hand and the good-night kiss as in the days of "long ago." We wake from the dream only to find it an illusion, yet we are consoled by the recollection that these heart-gems are sacredly treasured in Memory's casket. Do we not feel their loss as keenly now as then? Ah, yes! Though we have appeared to the world, while mingling in its society, to have forgotten the past and its mournful associations, yet had they been gifted with the powers of divination, they would have seen it was "but a name,"—that mirth would gratefully have given place to tears. They saw not the sorrow lurking within the secret borders of the soul. We have sadly proved the impossibility of contact with the world repairing the breach which the icy fingers of Death, playing among the heart-strings of those we loved, have caused, and as years are added unto us, more sensible are we of the irreparable loss which we sustained. There is indeed

"No union here of hearts
That birth not here an end."

Our friends, where are they? They are not with us now. No, they have safely passed over the River. But we would not murmur; our Father thought it best. He saw that buds so delicately formed if left to the cold, blighting influences of earth, would wither and die, so he kindly transplanted them to a better clime, and they now bloom in angelic loveliness and beauty.

Le Roy, N. Y., 1889.

A CONTENTED MIND.

"Seen hard times, JOHN, how on earth do you manage to get along with your large family?"
"I doesn't manage at all, ma'am. I just leaves that to Him, and does the best I can."
Wonder what Mr. B. would say to that? Mr. B. does not believe in trusting his affairs to Providence—thinks he can manage them better himself. Don't meet with many such men now-a-days, I suppose?

"Do you have steady employment, JOHN?"
JOHN looked so indignant for a moment, that, had I been a Romanist, I should have devoutly "crossed" myself.
"Is it I, ma'am? Bless your soul! and isn't this seven weeks I am after going on without any stroke of work!"
"Very bad, indeed. How do you find enough to fill those six little mouths?"
They weren't such very little mouths either.
"Oh, we gets along some way or another, ma'am. When we has anything to eat, we eats it; when we don't, we goes without. Sorra a bit have I put into my mouth this day."

Mr. B. "faces sumptuously every day;" to be sure he asks a blessing upon his food before eating it—because it's the fashion—but he growls between every mouthful. Grumbling is very bad for digestion, Mr. B.—if you don't believe it, ask some M. D. The meal concluded, Mr. B. "returns thanks"—because it is the fashion, also—but he does it in a manner that says very plainly, "Thank you for nothing! Didn't I get all this myself?"
"I am afraid you will all starve to death yet JOHN."

Very consoling, wasn't it?
"No fear of it, ma'am. Doesn't the Big Book say a 'contented mind is a continual feast?' No fear of us starving as long as *that's* true."

There was such a look of content in his poverty, and of faith in the "Big Book" upon JOHN's homely face, (it seemed beautiful then,) that I involuntarily thought of ELIJAH's being fed by ravens, and wondered if JOHN's bodily wants were not supplied in some such way. At any rate, I felt sure that God's angels visited that poor hovel, and I tell you truly, I had sooner be JOHN—with his poverty, six children, and "a" that—together with his contented mind—than Mr. B. with his millions, his little, dried-up soul, and his cold, hard heart. JOHN is the richer of the two.

Rochester, N. Y., 1889.

WINNIE WILLIAM.

THE TYRANNY OF FEMALE "HELP."

"We are a conquered people," said Washington Irving, in reference to our slavery to domesticity; and bitter groans from the vanquished reach our ears continually. A writer in the Perth Amboy Journal recommends that lady housekeepers make a strike; or, if that cannot be done, (as it certainly cannot,) that the young ladies of a family be less dependent upon servant labor. "I believe physical labor," says the writer, "to be as necessary to the development of human intellect as stirring and cultivating the soil is to perfect the plant." In Germany, where, certainly, intellect and literary acquirements are pre-eminent, the ladies, even among the noble, spend the early part of each day in their kitchens, which are fitted up with the most scrupulous order and elegance, so that they can allow a friend to see them so occupied. In France, every lady understands the mysteries of the *cuisine*, and with a small furnace filled with charcoal, a frying-pan, and a skillet, will perform miracles of cooking.

In England, the servants are kept for years; a good servant considers her interest identified with that of the family with whom she resides, and seldom changes; this promotes an attachment between them, which is frequently preserved for generations, and the families of the same domestics will, for successive generations, live with the same families.

How is it with the United States? The young ladies are most generally brought up with no culture. Their habits are indolent, as regards bodily exertion, and they think making any exertion degrading. This being the case, they are thrown completely in the power of a class who are at once promoted to the office of regulators and arbiters at home.—Selected.

LADIES' SHOES.—The old fashion for decorating ladies' slippers either by needlework, by figured patterns on leather, or other material, or by the insertion of colored silk or satin, may be materially improved upon by a method which permits of the pieces of colored satin to be changed as often as the wearer desires, without in any way injuring the slipper. A little pocket may be made in the upper part of the slipper, under the perforations of the pattern, into which place the piece of colored satin is to be worn. When the wearer wishes to change the color, nothing is easier than to withdraw one piece and insert another. Tasteful bows and ribbons with buckles may be also attached to the shoes by a simple contrivance, and as easily removed. The novelty is a London one, and has for its name the "Chameleon shoe."

A BEAUTIFUL THOUGHT.—B. F. Taylor, of the Chicago Journal, paints the following beautiful picture of the homes of the immortal which lie "over the river."—"There is a dignity about that going away alone, we call dying, wrapping the mantle of immortality about us; that putting aside with a pale hand the azure curtains that are drawn about this cradle of a world; that venturing away from home for the first time in our lives, for we are not dead—there is nothing dead to speak of—and seeing foreign countries not laid down on any map we know about. There must be lovely lands somewhere starward, for none ever return that go thither, and we very much doubt if any would if they could."

GRIERS are like the beings that endure them—the little ones the most clamorous and noisy; those of older growth and greater magnitude, are generally tranquil—sometimes silent. Our minds are like ill-hung vehicles; when they have little to carry they raise a prodigious clatter; when heavily laden they neither creak nor rumble.

STRIVE WAIT AND PRAY.

BY ADELAIDE ANNE PROCTOR.

STRIVE: yet I do not promise
The prize you dream of to-day
Will not fade when you think to grasp it,
And melt in your hand away;
But another and holier treasure,
You would now perchance disdain,
Will come when your toil is over,
And pay you for all your pain.

WAIT: yet I do not tell you
The hour you long for now
Will not come with its radiance vanished,
And a shadow upon its brow;
Yet far through the misty future,
With a crown of starry light,
An hour of joy you know not,
Is winning her silent flight.

PRAY: though the gift you ask for
May never comfort your fears,
May never repay your pleading,
Yet pray, and with hopeful tears.
An answer, not that you long for,
But Divine, will come one day:
Your eyes are too dim to see it,
Yet strive, and wait, and pray.

A COUNTRY COTTAGE.

The stream ripples bright by my cottage;
The sunshine is bright on the stream;
And the wee, pobby stones, in the sunshine,
Like diamonds, sparkle and gleam.
There are hazel trees kissing the water,
And plumes of the fair meadow sweet;
And down by the hazel sits Jeanie,
And dabbles her little white feet.

The robin peeps in at my door-way;
The linnet looks down from the tree;
And here, pillowed in his cradle,
Wee Sandy sits smiling at me.
My milk-pail stands bright in the corner,
My thimble is all bright on the shelf;
And the white apron-cloth on the table,
Is clean, for I washed it myself.

Choice Miscellany.

Written for Moore's Rural New-Yorker.
THE ART OF CONVERSATION.

THE art of maintaining natural and easy conversation, demands a celerity of thought not required in any other attempt to communicate ideas. The conversationalist must be able to turn his mind quickly in any direction, in order to adapt his remarks to the varying topics of the moment. The writer and orator are independent in the choice and management of their respective themes. They can deliberate, and they can follow out any line of thought which they may see fit to pursue. But the conversationalist can foresee nothing. He can not infer, even for a moment, the course of the conversation, for the subject is at the control of another mind jointly with his own, and the association of ideas differs so widely, that the same remark will often awaken very diverse trains of thought in different minds. Every turn in the talk is, therefore, a leap in the dark, and it is the part of the skillful colloquist always to strike on his feet, ready for another spring.

It is true, conversation thus maintained must be a mere mass of almost unconnected ideas, presenting little of the cohesion and logical order of thought which we expect in the elaborately prepared essay or oration. It is true, also, that these ideas, though often brilliant and showy, will not be of the most profound or philosophic character, for long and studied premeditation is wholly at war with the very nature of conversation, which consists rather in saying what we are *thinking* than what we are *remembering*. Nor is this so much to be regretted. What is lost in profundity is more than regained in increased vivacity and interest. There is a freshness about the new ideas, just warm from the teeming brain, (sometimes almost letting us see the workings of the mind,) which gives a charm to natural conversation that far surpasses even the most profound remarks, elaborately prepared beforehand in the study, and coldly recited in the chit-chat of our every-day talk. It is the immediate contact of mind with mind, eliciting the bright sparkles of fancy, and the brilliant wit, (which seems to belong rather to the *company* than to any particular individual,) that gives to conversation its peculiar charm; and nothing is more at war with this than the long, premeditated speeches with which some persons are ever interlarding their conversation. And what is worse, such persons have, almost always, some particular hobby, which they are ever thrusting before you, in season and out of season, (most generally the latter.) We can well afford to dispense with such dull, formal wisdom in familiar conversation.—When we want instruction or profound philosophy, we can go to the library or the lecture-room; but deliver us from the man who "talks like a book" or from a book—and from the man who delivers an elaborate lecture every time he gets a chance, to an audience of one! Conversation is, in fact, and ought to be, rather a *social* than an intellectual exercise, and even when it develops and presents new ideas, it is not the proper healthful food of the mind, but, rather, the desert of the intellectual feast.

It may be said that by allowing these premeditated speeches in conversation, it would gain as much in weight and solidity of instruction, as it would lose in sprightliness. Aye! it would gain just as your sparkling wines would gain by being dosed with Muscovado sugar. They would be sweeter, thicker, stronger and heavier, but the bright sparkle in the cup would be gone forever. The other extreme,—unfortunately so common in conversation,—of directing it almost wholly to the trivial and unimportant, is an equal misapprehension of its true nature. Conversation should never consist wholly, or even chiefly, of chit-chat, and what is known as "small talk." For while it can not develop the profoundest truths, or grapple

with the deepest philosophy, there is no one subject, however mighty, which it cannot lightly skim over, culling the lightest and most easily perceived truths, as a healthful stimulus and recreation for the mind. W. J. FOWLER.

MUSIC OF YESTERDAY.

"Tune chord, the harp's full chord, is hushed,
The voice hath died away,
Whence music, like sweet waters, gushed
But yesterday."

It was swept by skillful fingers and gave forth some of earth's sweetest sounds,—now rising in wild grandeur and sublimity, now falling in low, soft cadences,—as though some stray zephyr had gently breathed over its musical surface, and, enchanted at the melody its footsteps called forth, still lingered at the play; or, as if telling earth's children some sweet, bewildering dream of the far-off land and its spirit inhabitants, who, clothed in pure white, sang continually the praises of their Golden City.

"Dark, evil wings took flight before the strain,
And showers of holy quiet, with its fall
Sank on the soul."

To-day, I list if, perchance, I may catch some low whisper, some faint breath; but alas! those chords are broken, mute, speechless. Aye! thou art the Music of Yesterday—thou art buried in the past.

Yesterday the spirit's harp may have caught some song of gladness, the chords of memory may have been swept by some joy, and at the touch flowed on free, free as air, but buoyed up higher and still higher, found no rest, no foundation for their gladness harmonies, and sank sadly, wearily, heavily to earth. Ah! it is a sight which might even make the dwellers of yon Golden City weep—if for them to weep were possible—to see the chords of the spirit's harp severed, broken, forever hushed.

Oh! Music of Yesterday, bright, joyous and glad were the songs, the melodies thou didst weave for us; naught but happiness swept our spirit-strings; and when eager hands, prompted by eager hearts, were waiting, watching, ready to grasp thee, thou didst fade away into mist. The strings of our spirit's harp were loosed, yea, snapped, and buried was all our joy in the Music of Yesterday. No, not all our joy, for in the Paradise above golden harps are swept, whose chords vibrate and re-vibrate as the ceaseless ages of eternity roll onward. ADDIE E. WALKER.
Hillsdale, Michigan, 1889.

THE STUDY OF NATURE.

FROM a recent educational lecture by Hon. Geo. B. EVERTSON, we make the following extracts:

Teachers are too much limited in their thoughts to dry and abstract subjects. They need to spend more time in the study of Nature, examining the causes that give strength and vigor to the oak, as well as vigor and spirit to man. Too little is done to make men more manly; and teachers, especially, are in danger of losing their manliness, for want of exercise in the open air. Many examples can be referred to of the training of the ancients in manly exercise.

The forest and gardens are the schools where the first lessons in beauty are to be learned; they may be given in the school room, or the parlor, or by the way. Each mass of trees has its own elements of beauty, as distinct in its character as that of different individuals. Color, form and motion conspire to add beauty to the forests, as all these in infinite variety are combined, as trees are grouped in larger or smaller numbers. Some would have us study the elements of beauty in paintings. But why not study the originals?

Doubtless the human form and "human face divine" are more beautiful, and of a higher order of beauty than anything to be seen in the forest or the landscape. Childhood, in everything that belongs to it—how beautiful in its perfect trust, its guileless simplicity, its gentleness, its hopefulness, its quickness to enjoy the external about it in all the shapes and forms of life!

The time has come when instruction should be given to children to prepare them for the work they are going to engage in the world, in a knowledge of those principles of science upon which the arts of farming, gardening and managing trees depend. The better educated teachers should make a beginning and set the example. Nothing so fully combines all the advantages of the exercise which teachers need in the open air, as the study of some branch of botany. In concluding, the lecturer urged upon teachers the motives they have to form the higher spiritual natures of children. They should see that there is nothing in their own character which they would not willingly have reproduced in its flower and in its fruit.

THE GREAT MYSTERY.

THE following beautiful passage is taken from Timothy Titcomb's "Preachings upon Popular Proverbs," which the Springfield Republican is now giving to the world:

"The body is to die; so much is certain. What lies beyond? No one who passes the charmed boundary comes to tell. The imagination visits the realm of shadows—sent out from some window of the soul over life's restless waters—but wings its way wearily back with no olive leaf in its beak as a token of emerging life beyond the closely bending horizon. The great sun comes and goes in heaven, yet breathes no secret of the eternal wilderness. The crescent moon cleaves her nightly passage across the upper deep, but tosses overboard no message and displays no signals. The sentinel stars challenge each other as they walk their nightly rounds, but we catch no syllable of their counterpoint which gives passage to the heavenly camp. Shut in! Shut in! Between this and the other life there is a great gulf fixed, across which neither eye nor foot can travel. The gentle friend whose eyes we closed in their last sleep long years ago, died with rapture in her wonder-stricken eyes, a smile of ineffable joy upon her lips, and hands folded over a triumphant heart; but her lips were past speech, and intimated nothing of the vision that enthralled her."

Written for Moore's Rural New-Yorker.
A HYMN FOR FAITH.

Woe is my heart at times disturbed
With doubtings as to what is best,
When there are promises enough
To set my troubled soul at rest.

And is it right to doubt so much,
And longer be so ill at ease,
When I might, rather, feel secure
With such assurances as these.

Dear Lord! in whom I put my trust,
Increase the faith I have in Thee;
And if it is Thy will, avert
The dangers I cannot foresee.

Wilson, N. Y., 1889.

K.

For Moore's Rural New-Yorker.

GREAT MULTITUDES FOLLOWED HIM.

AND why did the multitude thus follow Jesus? Why did the expectant throng crowd the quiet shores of Galilee, the streets of Jerusalem, and even the "desert places?" There was ONE among them whose words fell with weight upon their hearts. With sweetness, yet dignity, He spake words they could not forget. They turned away from the jeerings and mockings of the Pharisees to hear the words of truth from Him who spake as never man spake. We are told in the Bible account that they were "gathered together an innumerable multitude of people, inasmuch that they trode one upon another." What compassion must have moved the heart of the SAVIOR when His eye rested on the weary, eager throng. Soonest did his eye seek out the suffering ones, the downcast and sorrowful, the maimed, halt and blind. He knew just what words to speak, whether to rebuke or encourage; for He knew their inmost thoughts. He marked the desponding and care-worn, and forgot not to say "Come unto me all ye that labor and are heavy-laden, and I will give you rest."

How wearied must Jesus have been with his toils. For three years He traveled and taught in the cities and villages of Galilee, Samaria and Judea, and yet "had not where to lay His head." Doubtless He must have rested, if He would, in the abodes of elegance and ease, but He chose to mingle with the lowly and the humble. He mingled freely with them, and gently did He bear with their ignorance and rudeness. Should not this be a lesson to His followers? Are we justified in seeking exclusively the society of the refined and agreeable? Or, if we allow ourselves to come in contact with the lowly, shall we deem it a condescension, or count our sacrifices great in so doing? Whatever we are, however refined or accomplished, or whatever advancement we may have made in the way of life, we are infinitely behind the SAVIOR. Yet He laid aside His glory that we might not perish. He was set at naught by the world. Set at naught! Who realizes what this is? It is to be "passed by" by the rich and great, to meet the mocking glance, to hear the contemptuous remark of the "rulers." All this Jesus endured that He might save the world. O, that such love might ever awaken an undying interest in our hearts. But we hear so often the Story of the Cross, and our hearts are rendered so hard by the claims of self, it has little effect upon us. When we do realize something of what Jesus endured from men, and for men, we hardly think it a wonder that the Disciples once asked Him if they should command fire from heaven to destroy His enemies. It is well to give heed to the meek reply CHRIST made, when such feelings arise.—"Ye know not what manner of spirit ye are of." M. O.
Butler, Milwaukee Co., Wis., 1889.

CONFESSIONS OF INFIDELITY.

"I SEEM," says Hume, "affrighted and confounded with the solitude in which I am placed by my philosophy. When I look abroad, on every side I see dispute, contradiction, distraction.—When I turn my eye inward, I find nothing but doubt and ignorance. Where am I? or what am I? To what condition shall I return? I am confounded with questions. I begin to fancy myself in a most deplorable condition, environed with darkness on every side." Voltaire says: "The world abounds with wonders, and also with victims. In man is more wretchedness than in all other animals put together." How did he judge of it? By his own heart. He adds: "Man loves life, yet he knows he must die; spends his existence in diffusing the miseries he has suffered—cutting the throats of his fellow-creatures for pay—cheating and being cheated. The bulk of mankind," he continues, "are nothing more than a crowd of wretches, equally criminal, equally unfortunate. I wish I had never been born." Hear what St. Paul says: "I have fought a good fight, I have finished my course, I have kept the faith. Henceforth there is laid up for me a crown of righteousness, which the Lord, the righteous Judge, will give me at that day."—Lutheran Observer.

VALUE OF THE SCRIPTURES.—As the beauty of the world is set off by a graceful variety, so is it in the Scriptures. There are sublime truths that the most aspiring reason of man cannot overtop; and there are more plain and easy truths, on which the weakest capacity may converse with delight and satisfaction. No man is offended with his garden for having a shady thicket in it; no more should we be offended with the word of God, that among so many fair and open walks we have and there meet with a thicket that the eye of human reason cannot look through.—Bishop Hopkins.

THE ball in the emblem says, "The harder you beat me down, the higher I shall bound toward heaven;" so afflictions do but elevate and raise a saint's affections to heaven and heavenly things.

Spice from New Books.

Nature's Own Eye Water.

When I began the study of medicine, my eyes were so exceedingly weak, and had been for about ten years, or indeed always after the attack of measles, that I was in the habit of shading them, much of the time, with green or blue glasses. My friends, many of them, strongly objected to any attempt to pursue the study of medicine on this very account. And the attempt was, I confess, rather hazardous. What seemed most discouraging in the premises, was the consideration that I had gone, to no manner of purpose, the whole round of eye waters, elixir vitriol, itself, not excepted. Was there room, then, for a single gleam of hope? Yet I was resolutely, perhaps obstinately, determined on making an effort. I could but fail.

Soon after I made a beginning, the thought struck me, "Why not make the experiment of frequently bathing the eyes in cold water?" At that moment they were hot and somewhat painful; and suiting the action to the thought, I held my face for some seconds in very cold water. The sensation was indescribably agreeable; and I believe that for once in my life, at the least, I felt a degree of gratitude to God, my Creator, for cold water. The practice was closely and habitually followed. Whenever my eyes became hot and painful, I put my face for a short time in water, even if it were twenty times a day. The more I bathed them, the greater the pleasure, nor was it many days before they were evidently less inflamed and less troublesome. Why, then, should I not persevere?

I carried the practice somewhat further still. I found from experiment, that I could open my eyes in the water. At first, it is true, the operation was a little painful, and I raised, slightly, its temperature. Gradually, however, I became so much accustomed to it that the sensation was not only less painful, but even somewhat agreeable. In a few weeks I could bear to open my eyes in the water, and keep them open as long as I was able to hold my breath, even at a very low temperature. Perseverance in this practice not only enabled me to proceed with my studies, contrary to the expectation of my friends, and in spite, too, of my own apprehensions, but gave me in addition the unspeakable pleasure of finding my eyes gaining every year in point of strength, as well as clearness of sight. My glasses were laid aside, and I have never used any for that specific purpose since that time. Of course I do not mean by this to say that my eyes remain as convex as they were at twenty-five or thirty years of age, for that would not be true. They have most certainly flattened a little since I came to be fifty years of age, for I am compelled to wear glasses when I would read or write. I mean, simply, that they have never suffered any more from inflammation or debility, since I formed the habit of bathing them, even up to the present hour.

The more I observe on this subject, the more I am persuaded, apart from my own experience, that pure water, at the lowest temperature which can be used without giving pain, is the best known eye medicine in the world, not merely for one, two, or ten in a hundred persons, but for all. I recommend it, therefore, at every opportunity, not only to my patients but to others. It may doubtless be abused, like every other good gift; but in wise and careful hands it will often accomplish almost everything but downright miracles. We may begin with water a little tepid, and lower the temperature as gradually as we please, till we come to use it ice cold.—"Forty Years in the Wilderness of Hills and Polders," by Dr. WILLIAM A. ALCOCK.

Chinese Customs.

This Chinese parents select the wives for their sons, and decide whom their daughters shall marry. Their badge of mourning is white, and their funeral cards are written with blue ink. They mourn for the dead by proxy, and select a burying-place for the departed by the aid of one who makes that his profession.

We read horizontally; they, perpendicularly. We read from left to right; they, from right to left. We uncover the head as a mark of respect; they put on their caps. We black-ball our boots; they white-wash theirs. We compress the waist; they, the feet. We give the place of honor on the right; they, on the left. We speak of north-west; they, of west-north. We say the needle of the compass points north; they, to the south. We shake the hand of a friend in salutation; they shake their own. We locate the understanding in the brain; they, in the belly. Our officials designate their office or rank by a star on the breast or epaulet on their shoulders; they, by a button on the apex of their caps. We page our books at the top; they, on the margin. We print on both sides of the leaf; they, upon one. We place our foot-plates at the bottom; they, at the top of the page. We mark the title of a book on the back of the binding; they, on the margin of the leaf. In our libraries, we set our volumes up; they lay theirs down. We keep our wives in the parlor; they keep theirs in the kitchen. We put our daughters to school; they put theirs to service. We propel our canal boats by horses and steam; they pull theirs by men. We take our produce to market by railroad; they take theirs on men's shoulders. We saw lumber and grain float by steam and water-power; they do it by human muscle. We turn a thousand spindles and fly a hundred shuttles without a single hand to propel; they employ a hand for each. We print by a power-press and metal type; they, on wooden blocks with a hand-brush. We are a headless republic; they, a hoary-headed empire. We worship God; they offer incense to the devil. We hope for heaven; they are without happiness.—"The China Mission," by WILLIAM DEAN, D. D.

Beau.

Beau is a word of a somewhat various signification, according to the state of society in which it is used. Among rustic country people, it is a general term to denote a lover, or spark, or one who is attentive to a particular lady, or to the ladies generally. In the more fashionable circles

of city life, it is used to denote a medley character made up of about equal parts of the coxcomb, the fop, and the gallant. He is always either a woman's fool, or the successful cause of her ruin. Either she will use him for her convenience, or as a sort of upper servant, or he will succeed in his base designs upon her virtue. His profession is that of a love-maker, and he has one kind of speech, one set of verses, and one string of professions, which he rehearses to every woman he meets. He studies the weak point of a woman's character, which he generally finds to be that of vanity, and therefore he directs all his skill and power thro' that channel. Not often is he a man of brains enough to do more than this. With a woman of good sense he is harmless; but with the giddy, vain, and unintellectual portion of the sex, he is a most dangerous character. The experienced and adroit beau generally is conservative, if not professedly religious in his opinions—that is, when his intended victim happens to be of a religious family.—"Dictionary of Love."

Belle.

A BELLE is a beautiful and gay lady. A woman who is considered the handsomest and most accomplished lady of her town, is called the belle of that place. And this is a distinction which her natural and acquired charms may obtain for her, without any assumption whatever on her part. But when it is said of a woman that she is a great belle, we understand that she aspires for the distinction herself, and that her life is devoted mainly to the frivolities of fashion and flirting. This is a most despicable character for a woman, and corresponds to the word *beau* in the other gender. She seeks for opportunities to make conquests of the hearts of men, and is never happy except when she sees that her charms are being appreciated and admired. Such a woman is either petted, or despised, or laughed at by all men, except the beau, who is her natural brother.—*Ibid.*

VISIT TO THE MOSQUE OF OMAR.

BY MRS. SARAH DARCY JOHNSON.

I WAS as much surprised as delighted one day on receiving a polite invitation, from some of my Turkish friends, to assume their disguising mantle, and accompany them to the Mosque of Omar. I could hardly believe it possible that I was about to enjoy the privilege of walking on the hallowed ground of the Temple enclosure, of standing beneath its mournful cypresses, and setting foot on the site of the Holy of Holies itself; nor did I succeed in convincing myself that I was not dreaming, until fully equipped in their curious and most unmanageable costume. The transformation was complete. Ten minutes before, in my simple American dress, and now rigged out so perfectly a la Turk, that my own mother would not have recognized me! My friends were greatly amused and delighted. The slippers gave me the most trouble; and I was heartily laughed at whenever I attempted to walk. The peculiar shuffling gait of Oriental women must be learned, as an additional safeguard against detection; and great was the mirth I excited at every attempt to hobble across the room, which the enormous size of the slippers made it almost impossible to do. How should I get along in the street? was a query that gave rise to many fears and misgivings. The slippers I feared would certainly drop off, and the veil I felt sure would smother me; for, besides being very thick, it was closely wrapped round my face.

My costume consisted of full silk trousers, a trailing robe whose ends were securely tucked within my girdle, an embroidered vest, large yellow morocco boots, and over them slippers of the same material, turned up at the toes like a skate. A red fez cap was placed on my head, and around it a gauze turban edged with a fringe work of balls of gold. Over my whole person a white sheet was thrown, which required quite as much attention as the slippers; and although every precaution was taken, and innumerable pins brought into requisition for its security, it was not until I had gone through a severe process of drilling that I learnt rightly to manage my ghostly outer garb. My veil, though thick, was fortunately of such a texture that I could dimly see those around me, though my own features could not be distinguished. Next, I was warned that a word would betray me, and therefore I must preserve perfect silence, leaving the talking to them. To give the greater force to this injunction, they placed their forefingers on their mouths, and remained mute for some moments themselves, thus impressing it by example as well as precept.

On descending the steps, new difficulties awaited

SCENES IN AND ABOUT JERUSALEM.

VIEW OF HARAM ES-SHERIF FROM CHURCH OF ST. ANNE.—DOME OF OMAR.

me in the way of keeping on my slippers, which increased the merriment of my companions tenfold, affording proof that these poor creatures do know how to laugh—a fact hard to be credited when we think of their lifetime of slavish imprisonment! At a short distance there was a group of Effendis, and as I passed them I had many misgivings about my unwieldy wrappings; but a close observance of the directions I received before sallying forth, enabled me to retain them, and the lordly Turk was for once outwitted by the despised "Infidel." My prospects were brightening, and I felt encouraged. At the gate we encountered the jettty Nubians who guard the Haram, and I shuddered as I glanced at their fierce countenances and terror-inspiring clubs. But I congratulated myself that they, too, were quite unconscious of the concealment of an "infidel dog" beneath the folds of one of those white sheets, else I had met with perhaps worse treatment than that awarded the English doctor a short time before. On venturing barely within the precincts of the enclosure, to visit a patient who occupied a house near one of the gates, he was knocked down from his horse by a score of these ferocious fellows, dreadfully beaten, and for a length of time was confined to his room from the wounds inflicted by their nail-pierced clubs—indeed it was nearly the occasion of his death.

Having passed them I breathed freely—that is, so much as my provoking veil would allow me—and was again complacently congratulating myself, when my inward boastings were suddenly put to flight, by the consciousness that I had lost a slipper; and, in stooping to replace it, my veil dropped, disclosing my face to several acquaintances standing just in front of us! They would no doubt have recognized me, had they not immediately turned their backs—a custom always observed by the men on meeting females, for fear of committing the grievous sin of seeing a woman's face. The non-observance of this act is thought exceedingly rude; and, fortunately for me, it was on this occasion strictly adhered to.

Ascending a wide flight of stone steps, we passed an elegant Saracenic portal, and gained the marble-paved platform from the centre of which rises the towering Mosque of Omar. The sun was shining brightly on the variously colored porcelain with which it is covered in intricate patterns, and reflected all around the rainbow hues of the fifty-six windows with which it is pierced; and the cypress trees waved gracefully over the pretty little praying-places scattered here and there on the green grass. Indeed it seemed to me fairly land, and I was reminded at every step of the marvellous stories of the "Arabian Nights' Entertainments." The dome of the Mosque is said to be the most symmetrical in the world, and the whole is thought to be unsurpassed in grace and beauty.

The platform being considered very holy, we doffed our slippers and gave them in charge to an attendant slave; a very ancient practice, for we learn from the Old Testament that the Jewish priests always removed their shoes on entering the Temple, and never officiated except in their bare feet; and this practice was, on one occasion, a direct command from Jehovah; for we are told that Moses was divinely warned to put off his shoes on the miraculous appearance of the burning bush. Such is the importance still attached to this custom by eastern nations, that they are struck with holy horror and greatly incensed when the unscrupulous traveler attempts to pollute their churches and mosques with shod feet; and on entering places like this esteemed especially holy, a compliance with the rule is absolutely required. At this moment, hearing footsteps of persons behind us, we turned in another direction to avoid them, and strolled leisurely to the Mosque of Akas, passing an exquisite pulpit and fountain of variegated marble. By the pulpit is an elaborate urn, and overhanging it a cluster of cypress, olive and acacia trees, forming a most enchanting little spot. I lingered here, intent on gathering flowers as mementoes of the place, until warned by a sudden jerk at my sheet, of the approach of a Derwish.

In El-Aksa, seeing no one near, I ventured to raise my veil, in order to enjoy the luxury of fresh air; but it was no sooner raised than prilled down again by my companion, accompanied by the same significant pressure of her forefinger on her lips. On looking up to discover the cause of so unwelcome an intrusion upon the comfort of my respiratory organs, whom should I see but the same old Derwish, bearing an antique-shaped jug and bunch of keys, indicative of his office, as keeper of the holy places. This curious building is hardly describable. The exterior presents very much the appearance of a barn, with a dome at one end, and a row of pillars and arches at the other; while the interior is a jumbled composition of arabesque and gilding, windows of stained glass and wicker-work, and semicircular arches. At the upper end is an elaborately carved bronze pulpit, and portions of the floor are tessellated in mosaic.

I noticed that the worshiping-place of the men

was covered with carpeting, while that of the women was spread with tattered matting! On leaving El-Aksa, we directed our steps to "Sedna Esa," the reputed cradle of our Savior, but it was unfortunately closed. Such a number of women were around the Golden Gate during the whole time we were in the enclosure, that we did not dare to approach it, which I very much regretted. But a spot of still deeper interest was yet to be visited—the world-renowned Mosque of Omar; and we now directed our steps to one of its four entrances—an ornamental portal, its roof supported with slender Corinthian pillars. A "dim religious light" pervaded the building, and such a deep gloom the lofty dome, that it was scarcely possible to distinguish its rich gilding and arabesque. Just enough light penetrated the windows to produce an indescribably soft, and at the same time grand, effect.

It being an unusual thing for females (who in Mohammedan estimation, are no better than brutes,) to pollute with their presence so holy a place, we were closely questioned by the keeper, who luxuriated in a lazy attitude on the floor. The reply he received seemed perfectly to satisfy him, though unknown to me, being uttered in too low a tone to reach any but his own ear. He supplied us with a few tapers, and we descended by a flight of stone steps into the Cave of the Sakhrab, which it is supposed occupies the site of the Holy of Holies. Half way down the stairs is a colossal tongue, sculptured in alto relievo on the rock, which the "Faithful" devoutly kiss; and in the floor of the cave is a marble slab, which, on being struck, yields a hollow sound, indicative of a large void below. The traditions connected with these and other relics, such as the print of the Prophet's foot, I need not repeat, so very puerile are they. Over the Sakhrab hangs a time-worn red and green satin canopy, the gift of the Sultan.

It was not deemed safe to linger here more than a quarter of an hour, as the mosque was rapidly filling with the devout and faithful; yet it was with no little regret that I allowed myself so short a time on the hallowed ground, which I felt sure was once covered by the glorious Temple. Impressed with this belief, I imagined that every precious stone, imbedded within these walls, might once have composed part of the sacred structure.

Near the doorway through which we made our exit is a beautiful hiliputian building—a miniature of the mosque—marking the spot said to have been occupied by Solomon, when overseeing the erection of the Temple. Frolicking upon its marble floor were scores of laughing children. Scattered around are many light and fantastic temples, but none so beautiful as that appropriated by these children as their playhouse. What a contrast between this fairy scene and the dark, filthy archways through which we now groped our way on returning home!

On reaching my own door, what was my surprise on being saluted and welcomed in Arabic—so completely metamorphosed was I by my Turkish dress! I was greatly amused, and determined to enjoy the joke, and retain my incognito as long as possible. Accordingly, I remained perfectly silent, and kept every feature in strict abeyance. Coffee was handed, which I sipped with gravity quite as apropos as the Oriental posture I had taken on the divan; and in this position I sat many minutes before I was recognized by the occupants of my own home, whose astonishment was very great on hearing the English language from such an unexpected source!—*Hadjis in Syria.*

BROADCLOTH AN ENEMY TO HEALTH.

PROF. HAMILTON, in an address on hygiene to the graduates of the Buffalo Medical College, denounced broadcloth as an enemy to exercise, and therefore to health. He says:

"American gentlemen have adopted as a national custom, broadcloth—a thin, tight-fitting black suit of broadcloth. To foreigners we seem always to be in mourning—we travel in black, we write in black, and we work in black. The priest, the lawyer, the literary man, the doctor, the mechanic, chooses always the same unvarying monotonous black broadcloth; a style and material which never ought to have been adopted out of the drawing-room or the pulpit; because it is at the North no suitable protection against the cold, nor is it indeed any more suitable at the South. It is too thin to be warm in the winter and too black to be cool in the summer; but especially do we object to it because the wearer is always soiling it by exposure. Young gentlemen will not play ball, or pitch quoits, or wrestle or tumble, or any other similar thing, lest their broadcloth should be soiled. They will not go out into the storm because the broadcloth will lose its lustre if rain falls upon it; they will not run, because they have not confidence in the strength of the broadcloth; they dare not mount a horse, or leap a fence, because broadcloth as everybody knows, is so faithless. So those young men, those old men, merchants, mechanics, and all, learn to walk, talk and think soberly and carefully; they seldom venture even to laugh to the full extent of their sides."

YOUNG RURALIST.

KEEPING FOWLS IN KANSAS.

MESSES. EDITORS:—I noticed an extract from your columns in reference to the best mode of treating hens in winter, to ensure plenty of eggs, and will state my experience in that matter for the consideration of your numerous and intelligent readers, and especially the young, who always love to take care of chickens, and generally show no dislike to eggs, if you deem it of sufficient interest to award it a place in your columns. I need go no further back than the time I arrived in Kansas, in the fall of 1857, and I need not give my observations of a very large number of hens. Soon after I settled here, I found this market would not supply us constantly with eggs; besides, they ranged from 50 to 60 cents per dozen. I therefore called upon a friend who had about two dozen hens, but got no eggs, and purchased two of the lot, telling him at the time that I would have eggs in three weeks; but he was certain I would not, as it was then cold weather, in December. I took them home, (they were common hens,) and gave them a roost in the cow-stable, which was warm, and began feeding them fresh meat, both beef and pork. At first they ran away from the meat, seeming to be utter strangers to that kind of food, but after two or three days they eat it freely. In just two weeks from the day I bought them, one began to lay, and the other laid the next day, and both from that time on till spring laid about every day, without any intermission. We kept count of the number each one laid, until they over-run one hundred each.

In the spring I purchased a rooster, and in June both hens came off with chickens, out of which we saved one dozen pullets. In the fall the old hens were caught by something, leaving us only pullets. By the time they were nearly grown I commenced feeding them fresh meat, as often as three times a week, cut up small enough for them to swallow. When they were about six months old they commenced laying. I got the first egg on New Year's Day, and from that time on, we not only had plenty for ourselves, but now and then spared to a friend a few when none could be had in market. Most of them laid every day throughout the coldest weather, after they commenced. Some say I have a better kind of hens than others; but for the benefit of these, let me add, that I kept watch of the hens from which I took the two above described, and I found my friend got no eggs all winter, and yet his were kept in a warm place in his woodshed, and fed in the same manner that mine were, except the meat. I informed him that I fed mine fresh meat, which was the cause of their laying, but he was so skeptical, and it looked so foolish, he would not try it, and had no eggs. I feed my hens all they will eat of corn. In the winter I make a hot mash of corn meal, and give them that while it is warm. In Ohio, where I could get it, I fed wheat, which had a good effect. Of course they need lime, water, a good range in summer, and a warm place in winter.

I take great pleasure in feeding my chickens, which are great pets with me, and I also take great pleasure in eating fresh eggs, which cannot be had in this market many times during the year at even a half a dollar a dozen. So I take the independent course of supplying myself until our new country market shall be better stocked.

It was my intention when I commenced this to give you a brief statement of the fruit prospects in this region, but I find I must reserve that for a future time. I will add, however, that the soil and climate here are magnificent for fruit, but it is sadly neglected, as speculation usurps the talents of a large majority of the settlers in a new country. There have been some large shipments into this territory during the spring, some of which have come from the Rochester nurseries. But we are very destitute, even in the Wyandott Purchase, when we consider this was settled sixteen years ago by the Wyandotts, many of whom are white, educated men, and cultivate the soil. At this point a nursery would soon be very profitable, as this is the natural point for the settlers south of the Kansas river to come to the Missouri river with produce. Another advantage would be in the shelter derived from the forest trees, which would protect the fruit trees from the prairie winters. This forest extends west ten miles and south eight miles, and north up the banks of the Missouri river.

Wyandott, K. T., 1859.

DANIEL B. HADLEY.

"INALIENABLE RIGHTS."

A wag has made the following summary of what he calls the "inalienable rights of Americans," and which are not enumerated in the Declaration of Independence:

To know any trade or business without apprenticeship or experience.

To marry without regard to fortune, state of health, position, or opinion of parents or friends.

To have wife and children dependent on contingencies of business, and in case of sudden death, to leave them wholly unprovided for.

To put off upon hireling strangers the literary, moral and religious education of children.

To teach children no good trade, hoping they will have, when grown up, wit enough to live on the industry of other people.

To enjoy the general sympathy, when made bankrupt by reckless speculations.

To cheat the Government if possible.

To hold office without being competent to discharge its duties.

To build houses with nine and six inch walls, and go to the funerals of tenants, firemen and others killed by their fall, weeping over the mysterious dispensation of Providence.

To build up cities and towns without parks, public squares, broad streets or ventilated blocks, and call pestilence a visitation of God.

TO RURAL AGENTS, SUBSCRIBERS, &c.

THE RURAL NEW-YORKER enters upon a New Quarter this week, and we embrace the occasion to notify its Agents, Subscribers and other friends that single and club subscriptions—either for a year, or three months, on trial—are now in order and respectfully solicited. To those who know and appreciate the paper, we need only say that the quarter upon which we now enter, and the ensuing volume, will be worthy the enviable reputation the RURAL has attained—and all others are invited to give it a careful examination. It has thousands of ardent and influential friends, each of whom will, we trust, make some effort (during the ensuing few weeks and months) to augment its circulation and usefulness in their respective localities—and now is the best time to commence the campaign. As liberal Premiums and Gratuities will be given for Clubs, &c., as last year.

Oct. 1, 1859.

ROCHESTER, N. Y., OCTOBER 8, 1859.

DOMESTIC NEWS.

Matters at Washington.

The dispatches received by the Government narrate with minuteness the recent events in China. Flag officer Tatnall says that the British officer in charge of the gun boats, having visited him, said nothing about aid, but his silent appeal was powerful indeed, during the few moments he was on board the Powhatan. He looked anxiously at his Admiral and his boats. After he left, continues Capt. Tatnall, I held a conversation with our Commissioner, Mr. Ward, and he agreed with me perfectly, that under the circumstances of our position with the English, and the aid the Admiral had tendered me the day before, I could do no less than tow the boats to his relief. I made the offer, which was thankfully received and promptly accepted. Capt. T. towed the boats through the British line to within a short distance of the Admiral, whose flag was flying, when, casting off, he returned to the rear of the line, and anchored for the night. He took up this position as it might enable him to visit the wounded, and should any boat be sunk, to rescue the crew, in other words, to afford all the aid consistent with the neutrality. Having been informed by a British officer that the Admiral was dangerously wounded, Capt. T. went in a barge to visit him. When within a few feet of the Commodore, a round shot struck the coxswain, Mr. Hart, of Brooklyn, and slightly wounded flag Lieut. Trenchard. They reached the Commodore before the boat entirely sunk. Capt. T. says the Chinese Commissioners had previously notified Mr. Ward of their agreements, and requested him to accompany the British and French Ministers to the Peiho. President Buchanan entirely approves of the action of the Commodore in rendering the assistance he did to the British Admiral.

Colonel Rankin, Register of the Land Office in Olympia, Washington Territory, has arrived from the Island of San Juan. He reports that if the intentions of Gov. Douglas had been carried out, there would have been a collision between the British and American forces, as the Satellite and Plumber had been ordered by him to fire; but Admiral Bayne opportunely arrived and superseded him in the command of the English ships-of-war, five in number.

The original misunderstanding was with the Hudson Bay Co., the interests of which were represented by Douglas. The Island of San Juan had been in the occupancy of the Americans for at least eighteen months. Nobody seems to question their rights, and it has been for a long period considered and treated as belonging to Washington Territory. It was not until Gen. Harney applied to and was informed by Boundary Commissioner Campbell, that our title to the Island was clear and certain, that he dispatched troops thither at the earnest request of the residents who claimed protection from British aggression, and especially from the predatory incursions of the Northern Indians, who had even taken and held possession of a light house for three days, and against whom private expeditions had repeatedly been sent to chastise them. Col. Rankin says the people of Washington and the Pacific States are unanimous for our retention of the Island, and such is their enthusiasm, that if the United States troops should be directed to vacate, private parties in formidable numbers would immediately occupy that important position, and not surrender it without a severe struggle.

Arizona dates of the 15th are received. The presentation of the articles purchased for the Pimos and Maricopa Indians, under the act of Congress of February last, was made by Lieut. Mowry on the 10th inst. Between 4,000 and 5,000 Indians were present. About 2,000 farming implements and several thousand pounds of barley and other grains for seed, axes, &c., besides several thousand yards of cloths, calicoes, shirts, tobacco, and bread, were distributed.

The reason of this large distribution was explained in a speech by Lieut. Mowry, and in reply the Chiefs expressed great satisfaction of the kindness of their Great Father, the President, and promised to continue in the good conduct which had brought them so great a reward.

They cultivate this year 15,000 acres, and have supplied the Overland Mail Company with large quantities of grain. It is reported that next year their crops will be largely increased, through the facilities given them by the Government.

PERSONAL.—At the recent Commencement of the Vermont University, the degree of D. D. was con-

ferred upon Rev. S. S. CUTTING, Professor of Belle Lettres, &c., in the University of Rochester—an honor worthily bestowed.

ISAAC BUTTS, Esq., the able and popular editor of the Rochester Union and Advertiser, who has, with his family, spent several months in Europe, returned in the Persia, and was warmly greeted by many friends on his arrival in this city. Messrs. S. HAMILTON, of this city, and L. H. TUCKER, of Albany, also returned in the Persia.

RODNEY L. ADAMS, Esq., formerly of the Wayne Co. Republican, succeeds ANSON G. CHESTER as editor of the Syracuse Journal. Mr. A. is a talented writer and otherwise qualified for the position assumed. We are glad to observe, by the way, that the Journal has recently been enlarged and greatly improved in appearance.

News Paragraphs.

THE KANSAS (Ill.) Gazette says that on Friday week, a freight car on the Illinois Central railroad took fire about eight miles north of that city, and came in all ablaze. It was taken to the water tank, and subjected to a bath, which soon extinguished the flames. A considerable portion of the car was burned through, and a portion of the freight consumed. The car contained two kegs of gunpowder marked "codfish." The box containing the kegs was charred through, and on being taken out fell to pieces.

A LITTLE tool has been invented for threading a needle. It is made with two blades, which holds the needle with its eye opposite a little funnel-shaped opening, into which it is perfectly easy for a person of weak sight to pass the thread, and the thread inevitably passes through the eye.

CAPT. SIMPSON, of the Topographical Engineers, has discovered a route between Carson Valley and the valley of Great Salt Lake shorter than the route which he had been sent out to explore. The route is quite straight, and is equally good, if not a superior road, in almost every respect, to both the immigration line and the old line just explored by himself. The facts of the Surveying Expedition have been reported to Gen. Johnson, and it is probable that hereafter the bulk of the travel between California and Salt Lake will go by the last discovered route.

An engineer was walking on the levee at St. Louis one day last week, when a nimble thief snatched his watch, and ran off at a speed that bid fair to defy pursuit. It so happened, however, that the party robbed had with him a large Newfoundland dog, and instead of running himself, he spoke a few words to his four-footed companion. Off started the noble animal, and before the thief had gone many blocks he was dragged to the earth and secured by his singular captor. The fellow tho't fit to submit to the warrant displayed—two full rows of formidable teeth—and made no resistance to the majesty of the law.

THE total number of houses in Boston in 1728 was about 8,000, of which 1,000 were of brick and the rest of wood, and the population, after a settlement of nearly a hundred years, amounted to only 12,000. Now the number of buildings is probably upwards of 16,000, while the population is in the neighborhood of 175,000.

THE Dayton (Ohio) Empire says that Mr. H. H. Worman, of that city, on Thursday week, received a letter from his father, who resides in Damme, Germany, and who has reached the great age of one hundred and fourteen years. The centenarian writes a neat, legible, steady hand, and is able to wait upon himself and perform light labor.

ELISHA SCOTFIELD, a Revolutionary soldier, died in Jefferson Co., N. Y., a few days since, aged 95 years. He was a native of Bedford, Westchester county, where he resided until 1781, and for the five previous years was amid many of the most exciting scenes of the Revolution.

Owing to the difficulty and expense of transporting English Troops, it is supposed that the British Government will employ its Sepoys and other East India soldiers in the contemplated attack on China. If so, the war between two half-civilized races will be marked by scenes of peculiar barbarity.

ASSAYS at the Philadelphia Mint show the real value of the Pike's Peak dust to be only \$15.80 per ounce. Holders of the article have been confident that it was worth \$17 or \$18 per ounce.

THE property upon which is the Natural Bridge of Virginia, has recently changed hands for the sum of \$12,000. Next to the Falls of Niagara, it is the greatest natural curiosity in the United States.

AS was the case with our Mexican war, the late war in Italy has demonstrated the uselessness of all extra display in army uniform, and a commission is now sitting in Paris which has for its object the alteration of the present uniform of the French army, with a view to making it as simple and durable as practicable.

SUNDAY morning week, the first Baptist Church of Chicago, was in debt \$14,000. In forty-five minutes after the fact was stated, the congregation wiped out \$12,500, and were prepared to cancel the remaining \$1,500; but the pastor begged them not to do so, as several friends were unavoidably absent who would not be pleased if nothing was left for them to do!

A COIN was deposited in the corner stone of a church at Jackson, Mich., last week, that had been taken from the corner stone of a temple in Rome, built during the reign of the First Caesar.

THE corn crop in Illinois is greatly injured by the frost north of the Illinois river, there being hardly a corn field north of LaSalle which is not wholly or to a great extent ruined. In Minnesota no damage as yet has been done, and it is hoped the crops there may escape.

BY an arrival from Port-au-Prince, we have advices from Hayti to the 6th inst. The daughter of President GEYFFARD was killed by a gun-shot while occupying her father's chair, on the evening of the 2d inst. The shot was fired from the gardens adjacent to the palace. Great excitement existed in consequence of the act. Business at Port-au-Prince was dull.

THE amount of iron thus far used on the dome at the new Capitol at Washington, is 2,500,000 pounds; to complete the first section will require 500,000 pounds additional, making a total of 3,000,000 pounds.

400 pounds. The total weight of iron for the whole dome will be about 15,000,000 pounds. This great weight will only be about fifty pounds to the square inch, in the thickness of the walls.

THE MISSING AERONAUTS SAFE.—On the 22d ult., Messrs. LA MOUNTAIN and JOHN A. HADDOCK—the latter gentleman being editor of the Reformer—made a balloon ascension at Watertown, Jefferson county, and were not heard from until the 3d inst., when the following dispatch, dated Ottawa, C. W., was received:

"Lost all. Landed 300 miles north of Watertown, in the Canada wilderness. We were four days without food. We were brought out by Indian guides in canoes, &c. Please inform my wife. (Signed) JOHN LA MOUNTAIN."

The intense alarm consequent upon their long-continued absence, has given place to feelings of thankfulness for their safety.

FRIGHTFUL CALAMITY.—The canal bridge at Albion, Orleans Co., N. Y., broke down on the afternoon of the 28th ult. A large crowd had gathered upon the structure to witness a rope-walking feat, when it gave way and precipitated the mass into the water. Fifteen persons were killed, and a large number more or less injured. The following is a list of the dead:—Adelbert Wilcox, West Kendall; Mr. Stillson, South Barre; Jane L. Avery, Lydia or Sophia Harris, Thomas Cady, Albion; Sarah Thomas, Augusta Martin, Mr. Henry, Ransom Murdoch, Carlton; Mrs. Ann Vile, Barre; One man, middle aged, name unknown; Thomas Handy, Yates; Sophia Pratt, Toledo, O.; Perry Cole, Benton Corners; Mr. Cornell, South Barre.

PHYSICAL PHENOMENA.—The foreign papers state that the aurora borealis which was seen at Paris and in England on the 28th ult., was also visible in other parts of Europe, and especially at Rome—a curious circumstance, from its being so far south. We have also mention of spots on the sun being observed from various points; and a writer on meteorology in the London Times says that "the connection between solar spots, magnetism and aurora appears clearly established."—With regard to disturbances beneath the earth's surface, we find that the earthquake of Norcia occurred on the 22d. A strange occurrence is also notified from Belluno, at the foot of the Venetian Alps. In the district of Agordo, a volcanic eruption has broken out, and been in full operation since the 20th August.

EXPORTATION OF FLOUR.—A statement has been going the rounds, taken from the New York Journal of Commerce, that a lot of 500 barrels of flour, to be sent to Liverpool, was the first shipment of breadstuffs from New York for many weeks. This is a gross error. The Custom House returns for the week ending the 15th of September, 1859, report 2,847 barrels cleared from New York to Liverpool. For the week ending the 8th of September, 1,823 barrels flour were shipped from New York to Liverpool, 501 barrels to London, and 3,201 barrels to Glasgow. For the week ending September 1st, 1,750 barrels were shipped to Glasgow, and 1,975 barrels to London. For the week ending August 25th, 950 barrels were sent to Liverpool. For the week ending August 4th, 2,066 barrels were exported to Liverpool.

FOREIGN NEWS.

GREAT BRITAIN.—It is officially announced that the Great Eastern from Portsmouth, for Weymouth, Oct. 8th, will finally sail from Holyhead for Portland, Me., on the 20th of October. During this delay of three weeks, Mr. Scott Russell contracts to repair the damage occasioned by the explosion. This contract does not include any repairs which the boiler may be found to require, and although they apparently sustained no damage, it is said to have shown that the internal stays of the boiler most directly experienced the force of the shock, and had either been displaced or greatly weakened, so that the boiler cannot be safely used in its present situation.

The Daily News states that the Government has decided on dispatching several additional steam frigates and corvettes, together with a sufficient number of sailing frigates, to augment the squadron in China. It is also expected that a force of one thousand additional marines will be dispatched to China.

Isambard K. Brunel, designer of the Great Eastern, had died of paralysis.

The Manchester Guardian and London Post both speak severely of General Harney's conduct at San Juan Island, and threaten terrible things, unless the Government of the United States disavows his action.

The British Government has contracted for the laying of a submarine telegraph cable from Falmouth to Gibraltar.

It is stated in London that France had returned an evasive reply to a question from England, touching the concentration of troops in the neighborhood of Gibraltar.

The Governments of France and England were to take immediate measures for inflicting chastisement on the Chinese for the treacherous outrage at Peiho.

FRANCE.—There was no improvement in French commercial affairs.

The crops had fallen off greatly from last year's figures.

After several days suspension the Zurich Conference had resumed its sitting.

The French laws in relation to the press are not to be modified.

The Times' Paris correspondent says it was stated that twelve thousand French troops had been ordered to be held in readiness to depart for China. General Wimpfen was talked of for the command.

The Moniteur publishes an address to the Emperor, signed by about ten thousand Bergamasks. The address expresses a hope that the conditions of peace which His Majesty is about to dictate will be calculated to alleviate the sufferings which appear to threaten the future of Venetia. The address is violent respecting the return of the Archdukes.

ITALY.—The latest news from Italy leaves little doubt of the determination of the Italians to rely on themselves. Garibaldi was preparing for a general concentration of troops on any given point. Gen. Fanti, Commander-in-Chief of the troops of the Italian League, had fixed his headquarters at Bologna. The soldiers disbanded by Victor Emanuel were flocking around him.

The King of Sardinia had received the deputations of the National Assemblies of Parma and Modena in regard to annexation. The King expressed acquiescence in their views, and promised to support them before the great powers. He also expressed the hope that Europe, having recognized the right of other nations to form constitutions, will not deny it to Italy.

AUSTRIA.—Austria was to increase her military force in Italy, and it was ascertained that France has still nearly 100,000 men there.

CHINA.—The China mail had reached London bringing full details of the conflict near Peking. The Times prints a full list of the killed and wounded. The proportion of officers among them is very large. Rear Admiral Hope was wounded very severely.

Mercantile letters from China generally concur in the view that the revival of hostilities would not cause any material interruption to trade. The natives at Shanghai were much annoyed at what had taken place, and consequently no ill-feeling was anticipated there, but still it was believed that England would have to send out very large naval and military forces, and perhaps blockade these points in order to bring the Emperor to submission.

COMMERCIAL.—Broadstuffs.—The Liverpool market had an advancing tendency. Richardson, Spence & Co. report four firm, at full previous rates. Wheat firm and 10/24 higher since Tuesday. Corn firm and advanced 6d per quarter. Provisions.—Market steady. Pork firm. Lard dull at 55.

Clippings from Foreign Journals.

A HAMBURG paper contains a notice of the arrival there of two Yankee crafts, "all the way from the interior of North America and direct from Milwaukee, in Wisconsin, on the Michigan sea. She is loaded," says the paper, "with Canadian timber, and the most noticeable thing about her is her masts, each made of one stick, and having each one large sail, unlike our vessels, entirely without yards. She requires only half the number of men to work her that our vessels of the same size require."

GENERAL SATTLER, Intendant of the Russian Army in the Crimea, has just published an account of the provisioning of the army during the war. It appears from this that at its commencement Russia had in the field 250,000 men and 100,000 horses, and that the number of troops for whom the Intendence had to furnish provisions in 1855, was 845,000 men, with 187,800 horses; and in 1856, 796,973 men with 183,570 horses. The duty was performed under very great difficulties, the price of cattle and all provender and necessities having increased five-fold and even ten-fold, particularly from the middle of 1855 until January, 1856.

It is calculated that the working cost of the Great Eastern, while under steam, will be £800 per diem. Assuming that she runs to Portland in seven days, the cost will, therefore, be £5,600; the miscellaneous charges, £6,000. The Cunard steamers are asserted to cost £1 per mile, and the Great Eastern will average £2 per mile. The Great Eastern will not be liable to dock dues or pilotage at either Holyhead or Portland. Had she started from Liverpool the dock dues would have been about £1,500.

MR. BARNES, the celebrated engineer who conceived the idea of constructing the steamship Great Eastern, has suddenly died, just as he had been apprised of the success of the great ship. He was prostrated by a fatal stroke of paralysis.

THE Presse d'Orient announces that Mehemet Ali Pacha, the last son of Mehemet Ali, of Egypt, who has arrived at Constantinople from Marseilles, after having visited the principal cities of Europe, proposes to open his saloons to European society, which is considered a remarkable innovation on the part of a high Ottoman functionary.

In one of his hustings speeches, Mr. Bright, M. P., spoke of Louis Napoleon as "a crowned criminal." An English paper advises the Emperor to sue him for libel.

THE Submarine Telegraph Company, of London, now possess ten conducting wires between England and France, besides six stretching to Belgium, and five to different parts of the north of Europe. It is also proposed to lay a cable between the Channel Islands and the French coast. The cables belonging to this Company have been lately examined and found to be in excellent order, notwithstanding they have been laid for seven or eight years.

THE present English system of franking, in use since January 10th, 1840, provides that each public department shall absolutely pay the postage upon every letter and document it sends out. Even the Queen's privilege of franking was, by her own consent, abolished in 1840, but her own letters, when sent through the post-office, pass free by virtue of bearing the Queen's head stamp.

PROGRESS OF CIVILIZATION.—English papers record a case of horrible cruelty, where a soldier of the British army was flogged for desertion. The record is revolting in the extreme. "Davis, a young recruit, protested his innocence of the crime of desertion, bellowed and screamed for mercy, and supplicated Col. Talbot and the medical officers, and others who were present, to have compassion on him or he should die. His back was covered with large, red, inflamed boils, which bled profusely at every stroke, and reddened the ground under his feet, upon which the cat was ordered to be withheld for a few moments, when, finding that his punishment was not at an end, he gave vent to exclamations for mercy, and partly succeeded in delivering himself by force from the straps which bound him to the halyards. The punishment was again ordered to be continued, when at every succeeding stroke his cries and exclamations were most lamentable, inasmuch that the officers and men swooned away at the sickening spectacle, and had to be carried into the open air."

The News Condenser.

- Kosuth and his family are at Thun, in Switzerland.
- Ottawa, Ill., was visited on Wednesday by a snow storm.
- The total receipts at the National Fair in Chicago were \$33,000.
- City railroads were inaugurated in Cincinnati on Wednesday week.
- In Maine, New Hampshire and Massachusetts, hay is selling at \$18 to \$19 per ton.
- It is stated that Spain intends to extend a more liberal form of government to Cuba.
- The Irish Protestant delegation proached to crowded houses in New York on Sunday.
- It is said that our government has made a peremptory demand on Chili for redress.
- In sinking a coal shaft near Centralia, Ill., recently, a vein of strong salt water was struck.
- Madame Jumel, the widow of Aaron Burr, is now at Saratoga Springs. She is 80 years old.
- There are now going up in the city of Brooklyn nearly 900 buildings of various descriptions.
- More than five inches of rain fell at Bloomfield, Pa., during a recent storm of two days duration.
- Freeman Rawdon, of the well-known engraving firm of Rawdon, Wright, Hatch & Edson, died on the 22d ult.
- The blackberry crop of Indiana is estimated to have yielded nearly one-half a million of dollars this season.
- Mr. Alfred Tenoyson, England's Post Laureate, contemplates a tour to the United States the coming season.
- The plate of the first engraving of the Declaration of Independence has recently been discovered and restored.
- The Gonzalez Inquirer says that 250,000 sheep have been brought into Texas, from Mexico, since the first of January.
- The St. Paul Times says the crops of every sort in Minnesota this year are extraordinary in quantity and sound in quality.
- Our naval force in the Pacific consists of 8 vessels of war, of 11,223 tonnage, carrying 150 guns, and a force of 2,850 men.
- A citizen of one of the pleasant towns in Middlesex Co., Mass., bequeathed the sum of \$200 to the poorest of the village.
- The St. Paul Pioneer says that more buildings are in progress in that city than in any city on the river North of St. Louis.
- Several hundred thousand Chinese tea plants are in vigorous growth at the forcing houses of the Patent Office in Washington.
- A New York paper gives the names of 15 large vessels, beginning with the Great Eastern, whose united length is one mile.
- It was a negro soldier who, at Bunker Hill, shot the man who gave the first order against us in the war which that year began.
- A woman in Bangor has an infant nine weeks old that weighs two pounds and a half. The child weighed just one pound at birth.
- A "gobbler" in Massachusetts has developed maternal instincts so far as to set upon and hatch a brood of young turkeys.
- The Waterville (N. Y.) Times reports that during the last week about 60,000 pounds of new hops have changed hands at 10¢llc.
- A tremendously large bed of oysters, said to be three or four miles square, was discovered a few days since off Huntington, L. I.
- David Melville, of Newport, R. I., was the first person to use gas in this country. He lighted his house and factory with it in 1812.
- The case of jewelry exhibited at the recent Chicago Fair, was found on removal to have been robbed of \$3,000 worth of diamonds.
- Charles Spencer, of Canastota, has in process of construction two powerful microscopes for Prof. Agassiz, costing about \$1,000 apiece.
- Mr. P. T. Barnum has dammed a creek in East Bridgeport, Conn., and formed a lake 40 acres in area, for which the citizens praise him.
- Metallic window blinds are coming into use in New York. The frame is made of malleable iron, and the slats of corrugated sheet iron.
- We have seen it stated that the aggregate of cold is greater the present year than during any one for 70 years past, except that of 1845.
- Robert Wickliffe, the recently deceased millionaire of Kentucky, commenced life as a laborer at 50 cents a day, and never was ashamed of it.
- Mr. Andrew Porter, of South Danvers, Mass., has a squab in his garden which girls six feet seven inches, being as much as a good sized ox.
- A lady in Middletown, Conn., has recovered \$25 and costs from a chap who dressed himself up as a ghost and nearly frightened her to death.
- Mr. Champlain, of Yates Co., is "cultivating" a pair of buffalo calves which he recently brought with him Kansas. They are doing finely.
- At Port Huron, Mich., there recently arrived a quantity of dry goods, by direct shipment from England and Scotland, brought over in 24 days.
- The sum paid for gas in England is estimated at \$25,000,000 per year, yet but very few private houses burn it. The people are afraid of it.
- A fearful tornado swept over a portion of Sumpter district, S. C., on the 16th ult., laying waste several plantations and doing great damage.
- The Buffalo Republic predicts the speedy construction of a Lake Erie steamboat larger than the Great Eastern, to make thirty miles an hour!
- Vigilance Committees have been formed in several parishes of Louisiana, but the Governor has issued a proclamation ordering them to disband.
- A circus in Chicago was recently sold by the sheriff. The tent was bought by the Young Men's Christian Association, who will fit it for religious services.
- Sparrows have been sent from England to Australia in the hope that they will increase sufficiently to keep down the worms that annoy the farmers.
- A man named Hloock gave an exhibition of walking on the water at Toronto, O. W., Saturday week. He walked two or three hundred rods with success.
- The treasury receipts of Cuba for the first half of the present year were upwards of ten millions of dollars, an increase of half a million over last year.
- A statement was made at a Convention of the Congregational churches of New Hampshire that not one pastor in the whole connection used tobacco.
- Steam navigation has been commenced on the Tigris by an English company. They have a new steamer, and carry a large number of passengers.

HOMOEOPATHIC REMEDIES,
No. 562 Broadway,

HAVE THESE ADVANTAGES.

THEY ARE HARMLESS! No injury can arise from their use.

THEY ARE SIMPLE! You always know what to take, and how to take it.

THEY ARE CONVENIENT! You can always sign the

Medicated proper Sugar Pill at a moment's notice without hesitation or delay.

THEY ARE EFFICIENT! Thousands are using them in curing disease, with the most astonishing success.

LIST OF SPECIFIC REMEDIES.

No. 1. **PURGE PILLS**—For Fever, Constipation and Indigestion of the Stomach.

No. 2. **WORM PILLS**—For Worm-Fever, Worm-Colic, and Wetting the Bed.

No. 3. **BABY'S PILLS**—For Colic, Crying, Teething and Wakefulness, and Nervousness of Adults.

No. 4. **DIARRHŒA PILLS**—For Diarrhœa, Cholera-Infantum and Summer Complaint.

No. 5. **DYSENTERY PILLS**—For Colic, Griping, Dysentery, or Bloody Flux.

No. 6. **CHOLERA PILLS**—For Cholera, Cholera Morbus, and Vomiting.

LABOR.

BY FRANCES M. OSGOOD.

Pause not to dream of the future before us;
Pause not to weep the wild care that o'er us;
Hark how Creation's deep musical chorus,
Unintermitting, goes up into Heaven!
Never the ocean wave falters in flowing;
Never the little seed stops in its growing;
More and more richly the rose heart keeps glowing,
Till from its nourishing stem it is ripe.

"Labor is worship?" the robin is singing;
"Labor is worship?" the wild bee is ringing;
Listen! that eloquent whistler upspringing,
Speaks to thy soul from Nature's great heart;
From the dark cloud flows the life-giving shower;
From the rough sod comes the soft-breathing flower;
From the small insect, the rich coral power;
Only man, in the plain, ever shrinks from his part.

Labor is life! 'Tis the still water faith;
Indolence over despair, bewailth;
Keep the watch wound, for the dark rust assailth;
Flowers droop and die in the stillness of noon.
Labor is glory!—the flying cloud lightens;
Only the waving wing changes and brightens;
Idle hearts only the dark future brightens!
Play the sweet keys, wouldst thou keep them in tune.

Labor is rest—from the sorrows that greet us;
Rest from all petty vexations that meet us;
Rest from sin promptings that ever entreat us;
Rest from the world-sorrows that lure us to ill.
Work—and pure slumbers shall walk on thy pillow;
Work—thou shalt ride over care's coming billow;
Lies not down wearied, health we'll weeping willow;
Work with a stout heart and resolute will!

Droop not though shame, sin and anguish are round thee;
Bravely fling off the cold chain that hath bound thee;
Look on yon pure heaven smiling beyond thee;
Rest not content in thy darkness—a cloud.
Work for some good—be it ever so slowly,
Cheerish some flower—be it ever so lowly.
Labor!—all labor is noble and holy;
Let thy great deeds be thy prayer to thy God.

Written for Moore's Rural New-Yorker.

THE ORPHAN GOVERNESS.

BY ANNA BURR.

Chapter I.

"Well, MYRA, your new Governess will arrive this afternoon."

"Oh, mama, I didn't know that you had procured one yet. Who is she?" and the young girl drew nearer the fashionably attired lady.

"Her name is Grace Niles. I received a letter from your aunt Mary last week, and she wrote to ascertain if I desired a teacher for you and CHARLIE. It appears that this young lady has applied to her for a situation. Your aunt recommends her as a superior person. They were formerly acquainted, when Miss Niles moved in fashionable circles. I wrote back immediately to know when I might expect her, for the proposition pleased me. Here is the reply," continued Mrs. ARNHEIM, folding the epistle in her hand, "and I find that your Governess will arrive in the stage this afternoon."

"Well, I hope that I shall like her," and MYRA ARNHEIM sighed, while a pensive sadness stole over her thin, pale features. She was a fair, fragile girl of fourteen summers, and there were indications of ill-health about her, for the slight figure was not very straight, and her head drooped forward wearily. There was an expression of anxiety on the mother's countenance as she said,—"What makes you look so sad? Are you quite well to-day?"

"My head aches some, but perhaps it will feel better when Miss Niles comes. May we have tea in the summer-house this afternoon?—it is so cool and pleasant out there, and CHARLIE wants us to see his little ship launched."

"Oh, yes, dear, if you wish it."

The lady pushed back the golden curls from her daughter's brow, and if a correct physiognomist had studied Mrs. ARNHEIM's countenance then, he would have said that she was an indulgent mother, not very strong-minded, but like the generosity of women who are bred in the hot-house style of fashionable life, with no correct views of the solemn responsibilities of a wife and mother, but possessing a kind heart, and what she deemed a tender solicitude for the best interests of her children. CHARLIE, her youngest pet, was a bold, impulsive boy of twelve years, who was generally accustomed to have his own wishes consulted upon every occasion; but he was very generous-hearted notwithstanding, and loved his sister with an almost idolatrous affection. This devotion had resulted from education, for MYRA was a frail child, and he was taught to respect her sensitive nature, and never trouble her with rudeness. The influences which had nurtured her growth, had always been such as to develop selfishness; but the years of her life rolled on, and discovered new beauties of character, which even her worldly mother regarded with surprise. Mrs. ARNHEIM was a rich woman, and when her deceased husband left her large possessions, the widow was not quite inconsolable, for she still had the appliances of wealth, and access to the elite of society. She usually spent her summers at Willow-dell, her country resort, which was situated in a romantic portion of Connecticut, about thirty miles from New York.

The promise of having supper served in the arbor seemed to animate MYRA, and thanking her mother, she left the room saying—"I'll go to find CHARLIE, for he must be ready to welcome our Governess."

"Yes, I wanted you to tell him first, for he may rebel, and perhaps you can influence him. He is such a spirited boy." There was a mother's pride in her tone. MYRA soon found her brother, upon the bank of a little pond below the garden, where he was busily engaged with his boat.

"When will you be ready to launch, CHARLIE?"

said a soft voice, while a hand was laid upon his bowed shoulders.

"You here?" he exclaimed, turning up his handsome, boyish face. "Oh, before a great while! This playmate mustn't stand up straight all I can do."

"Don't say playmate—it isn't a pretty word," for MYRA possessed a natural refinement, both in manner and language.

"I am so vexed with this thing, sister!"—CHARLIE's face seemed quite flushed with exertion, for it was a warm day in the latter part of June. Stately elm trees lined the banks, and cast their shadows nearly across the pond, but a dry, withering breeze occasionally lifted the leaves with its hot fingers, and crept through the short grass, leaving no trace of coolness in its track.

"Let me help you, brother! I can hold that up while you are fixing it," and MYRA knelt down upon the mossy turf by his side.

"Well, I guess you may. There, hold it so." CHARLIE proceeded to fasten the mast without further difficulty.

"What have you named your ship?"

"The Pirate King of the Seas."

"Oh, CHARLIE, don't call it a pirate ship."

"Yes I shall, and I wish that you would make a flag and put the name on it."

"How can I?"

"Oh, sew the letters on somehow—I won't launch to-day, for I must have the flag first."

"Then some one else will be here to see your boat launched."

"Who?" and the boy looked up.

"Our new Governess. Mama says that she is coming to-day."

CHARLIE jumped up, and threw down his knife with a low whistle of surprise.

"I wonder if mama thinks that I'll be ruled over by a prim weazen-faced Governess? I won't, anyhow, that's a fact!" and CHARLIE's tone was very decided, while he placed his hands in his pockets, and drew up his frame proudly.

"Don't say so, brother. I am sure that she is not prim, nor weazen-faced, either, for aunt MARY writes that she is a superior person."

"Well, I don't care a fig if she is. I hate superior folks."

"Will you treat her politely, brother?" MYRA pressed her little thin hand to her brow, for a sudden spasm of pain contracted it.

"Does your head ache?" CHARLIE was by her side in a moment.

"Some; but will you promise?" The pleading voice and pale face touched the right chord, and the warm-hearted boy conquered his obstinacy with a strong effort.

"Yes, I will try to for your sake—but I won't promise not to tip over my inkstand, at least once a day."

"We are going to have tea in the arbor, and I shall gather a bouquet to present to Miss NILES."

"Well, I'll give her one of these great double-breasted sunflowers, as our gardener calls them," and CHARLIE laughed mischievously, while he returned to his work. There was a weary, pained expression upon MYRA's pale face, and when her brother observed it, his conscience smote him again.

"I'm going to shut my mouth now, so the ugly things won't come out any more; it does seem as if I am full of them sometimes."

"I knew that you did not mean it CHARLIE," and MYRA went languidly up the path to the house. A delightful garden framed it in on this side, and the choice collection of roses were in full bloom.

Mrs. ARNHEIM met her daughter upon the piazza. "Your Governess has just arrived. I have sent her up to her room, for she looks fatigued. She is quite pretty, and very lady-like, too."

"Who are you talking about?" inquired CHARLIE, coming through the shrubbery, fanning himself with his hat, for his broad, fair brow, around which the dark hair clustered in curly rings, was moist with perspiration.

"Miss Niles has come," quickly replied MYRA.

"Oh, you have been upon the grass with those white linen pants,—do go and change them, you careless boy," exclaimed Mrs. ARNHEIM.

"Oh, pshaw! who cares for a Governess," and these words floated up through the open window of GRACE NILES' room. She heard them distinctly, and a shadow swept over her countenance. The weary look grew heavier, and, somehow, you would have thought that it was a heart weariness. She appeared to be scarcely twenty years of age, but there was a patient, resigned expression about her mouth, which indicated that her soul had felt the withering blasts of sorrow, and battled with stern necessity. GRACE NILES was an orphan. Three years before she was introduced to the reader her father became a bankrupt, and survived his losses but a few months, for dependency seized his mind, and a rapid decline of health brought him to a premature grave. GRACE was the only child of her widowed mother, but the sudden descent from wealth to poverty did not incapacitate her for duty; traits of character were developed which no other discipline could have discovered, and GRACE supported her parent, whose health was feeble, by her own untiring efforts. Mrs. NILES was now dead, and as the superior education of GRACE qualified her for teaching, she conquered the dread of seeking the unenviable situation of a Governess, and applied to her former friend, Mrs. ARNHEIM. The sadness which had shrouded her eyes in misty gloom throughout the day now descended, and wrapped a pall about her heart, and as the voices came floating to her from the piazza, she burst into tears and wept for some time uncontrollably. But at length the bowed figure raised from its kneeling position by the carved oaken bedstead, and the weary voice said—"This will never do, GRACE NILES. You must rest. God will give you strength," and she pushed back the silken hangings.

An hour later, Mrs. ARNHEIM rapped softly at the door, but received no reply. "I will go in, perhaps she is asleep," thought the lady, and she did find GRACE resting sweetly. There were traces of tears upon her cheeks, but a settled peace, which none but Jesus can give, was apparent in her countenance. "Poor thing! she feels bad to come among strangers! I will let her rest—we can wait a while." These words were prompted by Mrs. ARNHEIM's kind heart, and she

softly withdrew from the room. Another half hour glided by, and this time, MYRA rapped at Miss NILES' door.

"Mama sent me to see if you were awake. My name is MYRA," and there was a modest blush upon the young girl's face as she extended her hand to GRACE, whose eyes filled with glad tears, for she was not anticipating such a welcome from either of her pupils. MYRA was naturally very sympathetic, and when she saw the mourning garments, a sudden impulse caused her to throw her arms around the stranger's neck and exclaim—"I know that I shall love you!"

"I hope so, darling," said GRACE, tenderly kissing her, and as they went down to the parlor together, she thought "Oh, I cannot help being happy with such a lovely scholar, and how thankful I ought to feel that God has raised me up a friend so soon."

They sat down to supper in the arbor, and GRACE enjoyed the meal exceedingly, for Mrs. ARNHEIM was in her usual chatty mood. She had a lively social temperament, and was still in the prime of life, with a fresh countenance, and a habitually good-natured expression. She also possessed an easy flow of language, which rendered her an agreeable conversationalist, and when animated, her racy style was peculiarly charming. The delicious strawberries, which were served with fresh cream from the dairy, was also a rare treat to the city girl, who had not breathed country air in a long time, or enjoyed any of its luxuries. A variable crimson came and went upon her cheeks, and CHARLIE's heart was won while he peeped slyly over his bowl of milk. His welcome had not been very cordial, but still polite, for he had promised MYRA this, and CHARLIE always remembered his promises. When their meal was concluded, Mrs. ARNHEIM left the new Governess to get acquainted with her pupils, while she went to ride. GRACE had a peculiar faculty of winning the confidence of the young, and her pleasant, cheerful ways, soon drew CHARLIE from his restraint. He was naturally very strong in his likes and dislikes, and possessed an unusual penetration for one of his years.—MYRA seemed satisfied to sit by and listen to their conversation, so GRACE thought it best to improve this opportunity in observing the peculiarities of the wayward boy. When the mother returned she found the trio upon the piazza, engaged in a familiar chat. The twilight shadows were creeping up the lawn, and myriads of insects were humming in the air.

"Come in, Miss NILES, and play for the children, we are very fond of music," and Miss ARNHEIM opened the piano. GRACE had a sweet voice, with not very powerful compass, but well suited for instrumental accompaniment, and CHARLIE turned the music while she sang several old songs. It was a long time since she had touched a piano, but she was thoroughly versed in the principles of music, and her natural love for it soon recalled much which she had discontinued of practice had nearly erased from her mind. Mrs. A. was well pleased with her performance, and after the children were gone she remarked—"Now, Miss NILES, I feel perfect confidence in your judgment, and I shall therefore let you pursue your own course with the children. MYRA is a weakly child, and cannot bear much, but I want to have her become accomplished in music, and her other studies must be superintended with care. Our family physician advises considerable exercise in the open air, and you can take her to walk or ride very often, for I shall leave her almost wholly to your charge." And the mother did, for she soon discovered that GRACE was worthy of her confidence.

The month of July came, and one day Mrs. ARNHEIM received a letter from a city friend, containing a pressing invitation for her to join a party, which were just ready to start for Nahant. The temptation was irresistible, and knowing that MYRA could not leave her studies, she resolved to have both of the children remain at home with GRACE, whom she began to esteem very highly. Her arrangements were soon made, and CHARLIE and MYRA saw their mother depart without regret, for they were warmly attached to their faithful governess. Perhaps, if Mrs. ARNHEIM had not been so much engaged with the gay company which thronged her elegant mansion, she might have noticed the gradual decline of MYRA's health. GRACE had spoken to her about it, but she replied, carelessly, "She has always been so from infancy; you must not let her study too hard," so GRACE said no more, but she watched the gentle girl with increasing anxiety, for sometimes there was a hectic spot upon her cheek, and she breathed quick and hard. One day, about a week after Mrs. ARNHEIM's departure, the young governess said to her charge, "You are not well to-day, my dear."

"I am tired, that is all."

"But you look sick. I'm afraid that you are growing weaker."

"I think not," but MYRA leaned heavily upon the arm of GRACE.

"We will sit down here, if you are tired," drawing her into the arbor.

"What a beautiful world this is! I wonder if it isn't a reflection of Heaven."

MYRA had a dreamy way sometimes, and GRACE always encouraged her to talk, for there was a peculiar beauty in her language.

"Since you have told me about the city of the Great King, and marked those places in my Bible, I do not care to read anything else."

"I am very glad that you like it so well, darling, for it is the best book in the world."

"My father used to love it, and I almost always found him reading it while he was sick; mama never liked it as well—she thinks it is dull and prosy—I heard her tell a lady so one day. But I never read anything half so beautiful, and I am glad you have come to live here, so I can hear you talk about it. O, I used to wish that some one would," MYRA paused, and seemed lost in thought, but suddenly arousing—"I wish that CHARLIE loved his Bible more, and I think that he does since you have read and prayed with us, for I have found it in his hands several times; but he would always throw it down, as if he was ashamed, when I came near—he is such a queer boy!" At

this moment, the subject of her remarks appeared at the end of the walk, accompanied by a gentleman, a stranger to GRACE, and MYRA gazed at him intently while he approached. CHARLIE seemed full of ecstasy, and soon called out, "Oh, sister! don't you know cousin HENRY?"

"I thought that it was you," and a joyous light beamed from her eyes, as she sprang to the neck of the young man, who clasped her to his heart.

"My dear little MYRA! How you have grown!" Then he held her from him a moment. "You are looking very thin—are you well?"

"Oh, yes! but this is my governess—Miss NILES, cousin HERBERT LESLIE."

GRACE arose, and bowing, excused herself, for she knew that the children would like to be alone with their visitor. "And this is the cousin whom I have heard so much about. He has returned quite unexpectedly," she thought, while gliding swiftly up the piazza steps. [To be continued]

PIANO FORTES,
from 6 to 7 1/2 octaves in elegant rosewood cases, all of which are manufactured under his own supervision, and are for sale on reasonable terms.
By devoting his personal attention to the touch and tone of his instruments, which have hitherto been considered unvaried, he will endeavor to maintain their previous reputation, and respectfully solicits an examination from the profession, amateurs, and the public. 507-71000

600,000 ACRES OF HAMBAL AND ST. JOSEPH RAILROAD LANDS. For Sale on Long Credit and at Low Rates of Interest. These Lands, granted by Congress to aid in constructing the Great Northern Railroad, are situated within six miles and in fifteen miles of the Road, which is now completed through a country fertile and rich in its soil, and adapted to a greater variety of products than land either north or south of it, rendering the profits of farming more certain and steady than in any other district of our country. It is located in such a command at Low Rates of Freight both Northern and Southern Markets. To the Farmer desiring to better his condition, to parties wishing to invest in the West, or any in search of a profitable home, these lands are commended. For full particulars apply to JOSHUA HUNT, Land Commissioner Hambal and St. Joseph Railroad, 605-194 Hambal, Mo.

NOT A HUMBUG.—Wanted, one or more Young Men in each State to travel, to whom will be paid \$50 to \$75 per month, and expenses. For particulars, address with stamp, M. D. ALLEN & CO., Flatlow, N. H. 504-126

ROBINSON'S MATHEMATICS.

By H. N. Robinson, LL. D.
The only full course, except one published in this country, and the most complete, most practical, and the most scientific series of Mathematical Text-books for Common Schools, Academies, and Colleges, ever issued. The special attention of Teachers is invited to

THE PROGRESSIVE ARITHMETICS.
Just published, and believed to be the most complete, comprehensive, and progressive series ever published in this country. The arrangement and classification of the subject-matter is strictly scientific, and in accordance with the natural order of thought and action. The numerous, clear, and analyses are conspicuous for their brevity and lucidity, as well as for their accuracy and logical fullness. The typography and mechanical finish is unsurpassed. The Examples are numerous, and superior in their practical utility, and their adaptation to the real business of active life. It is the aim of the author to present a subject of Arithmetic, in the most accessible, and as a result, rather than a mere text-book, a practical, and as a result, a truly valuable and useful work, and price, at fifty cents per volume, and a complete set, at one dollar.

ROBINSON'S NEW ELEMENTARY ALGEBRA
is now ready, and one of the best of all the text-books of the kind published. It contains 312 pages; its typography is of the highest quality, and it contains a variety of interesting and valuable Examples. It is a complete and self-contained work, and is adapted to the study of Algebra in the first year of a course. It is the aim of the author to present a subject of Algebra, in the most accessible, and as a result, a truly valuable and useful work, and price, at fifty cents per volume, and a complete set, at one dollar.

ROBINSON'S UNIVERSITY ALGEBRA
is now ready, and one of the best of all the text-books of the kind published. It contains 312 pages; its typography is of the highest quality, and it contains a variety of interesting and valuable Examples. It is a complete and self-contained work, and is adapted to the study of Algebra in the first year of a course. It is the aim of the author to present a subject of Algebra, in the most accessible, and as a result, a truly valuable and useful work, and price, at fifty cents per volume, and a complete set, at one dollar.

SANDER'S PROGRESSIVE READERS.
THE CHEAPEST AND BEST BOOKS IN MARKET, containing the greatest average amount of matter, at the lowest price, below in some instances from 25 to 50 percent. Below that of competing books of the same grade. The circulation of these Readers has increased 33 percent, during the past year, and is now at a high point. ONE MILLION OF COPIES A YEAR! To this series has just been added

SANDER'S ANALYSIS OF ENGLISH WORDS,
a book that should be used in the advanced classes of all our schools. Price, 50 cents.

WELLS' NATURAL PHILOSOPHY, AND WELLS' CHEMISTRY,
are works of great merit, and have been received with very general and enthusiastic favor by Teachers. Price, 15 cents. Single copies of each book, 10 cents. A complete set, 25 cents. Belonging to the AMERICAN EDUCATIONAL SERIES, will be sent pre-paid to Teachers, at half price, for examination with reference to introduction. *Specialty, favorable terms offered for first introduction to this machine.*

A New Descriptive Catalogue, containing 100 pages, with full descriptions, terms, notices and commendations of teachers, etc., of all their publications, will be sent to any address, upon application to the Publishers,
WELLS & PHINNEY, Publishers,
48 and 50 Walker Street, New York.
D. W. FISH, Rochester, N. Y., General Agent for Introduction.

GUANO!—The superiority of Phosphate over Ammoniacal fertilizers, in restoring fertility to worn-out lands, is now well understood. The subscribers call the attention of Farmers to the **WELLS' GUANO**, which for richness in PHOSPHATES and ORGANIC MATTER, and its solubility, is unsurpassed.
For sale at \$30 per ton of 2,000 lbs., and liberal discount will be made by the cargo.

Circulars, with directions for use, may be had on application at our office.
FOSTER & STEPHENSON,
25 Beaver Street, New York.
424-1300 Agents for The Atlantic and Pacific Guano Co.

MANNY'S COMBINED REAPER AND MOWER,
WITH WOOD'S IMPROVEMENT.

For the Harvest of 1859.
The subscriber begs to inform the public that he has been manufacturing this popular machine, and pledges himself to produce an implement that will fully sustain its former reputation, as the best combined machine ever introduced, and inferior to none, either as a Reaper or Mower.
It has had a steady and increasing popularity from the first, achieving a complete success in the first important trial at New York in 1858. It carried off the highest honors at the National Field Trial at Syracuse in 1857; and amidst all the competition and trials of 1858, came out with more and better established points of excellence than ever before.
The general principles peculiar to this machine, and upon which it is constructed, have proved so successful that there has been no attempt to change them.
The main effort during the last year has been to improve the mechanical construction, to make it stronger and more durable, and sustain its reputation as the leading and most acceptable machine to the largest class of farmers in the country.

Warranted capable of cutting from 10 to 15 acres of grain or grass per day, in a workmanlike manner.
Price of Machine as heretofore, varies according to width of cut, and its adaptation in size and strength to different sections of the country, from \$125 to \$150, delivered here on the cars.

WOOD'S MOWER.

Patented February 22d, 1859.
During the six years I have been engaged in the manufacture of the Manny Combined Reaper and Mower, I have given much thought and attention to the construction of what I consider would be a great want of the Farmer—a lighter and cheaper machine expressly for mowing, than had yet been made.
And now, after the most thorough and repeated experiments and tests in every variety of field, and in all kinds and in every condition of grass, I am prepared, with entire confidence, to offer to the farmers and dealers of the United States the great desideratum in this department. An Agricultural labor-saving machine—a Mower, superior in its capacity for good work to any hitherto introduced, of easy draft, light, cheap, and durable.

This machine I now offer as my latest invention, to meet a special want of farmers, and to place within the reach of all a Mower that for practical working, cheapness and simplicity, will be without a rival.
I build Two-Horse and One-Horse Mowers. The Two-Horse Mower weighs 425 lbs., and cuts a swath four feet wide (or more if specially ordered). The One-Horse Mower weighs 300 lbs., less, 300 lbs., and cuts a swath three and a half feet wide.

For a more full description of the Mower, or reference made to my Pamphlets, which will be furnished upon application. With each machine will be furnished two extra guards, two extra sections, one wrench and oil can.

Warranted capable of cutting ten acres of grass per day in a workmanlike manner.
Price of Two Horse Mower..... \$90
One-Horse Mower..... 70
Delivered here on the cars.

With each machine, and with greater success than at any previous time, the manufacture and sale of "Manny's Patent Combined Reaper and Mower with Wood's Improvement."

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.
CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

The Rural New-Yorker is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and antique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the Rural an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it so assiduously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal,—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

For Terms and other particulars, see last page.

MENTAL IMPROVEMENT.—TIMELY HINTS.

The season of almost unceasing physical toil on the part of soil culturists is again drawing to a close, and that of recreation and mental improvement rapidly approaching. The long evenings and leisure of Winter are coming on apace—and for nearly six months the great mass of American Ruralists will have a comparative vacation from the arduous labors of their occupation. As we have, at appropriate periods, offered suggestions relative to the labors of seeding, cultivating and harvesting soil crops, we may now be permitted to present a few thoughts touching the mental improvement of those who have become physically strong by the manly and noble exercise required to secure success in the culture and management of Garden, Orchard and Field. "Improve the Soil and the Mind" is a wise maxim, and one worthy of far more consideration and action than it receives from the upper (or, rather, lower,) ten hundred thousand of American Agriculturalists. In regard to mental improvement, as in other matters, it may truly be said, and sung, of them that

"They know the right, and they approve it too,
Condemn the wrong, and still the wrong pursue."

The Rural Population of this country has more leisure than any other laboring class—especially during the (in the North) long season of Nature's hibernation—and its members ought to possess as much intelligence and mental cultivation as those of other occupations. Indeed, our idea of a true farmer—the farmer for the present age—is that he should be as truly a member of the "learned professions" as any lawyer, physician or divine; and the time is not distant when the intelligent cultivator of the soil will be entitled to such rank and dignity. Ere that time, however, the farmer's son must have and embrace the opportunity to study his profession and the Natural Sciences in the Common School, the Academy and the Agricultural College. Meantime, let us suggest what may be accomplished by Ruralists distant from, or in conjunction with, these institutions of learning—what may be done during the coming season of comparative leisure.

In the first place, the farmer, and every member of his family who has arrived at proper age, should devote more time than is now given to reading, study and thought upon useful subjects—moral, practical and scientific—subjects a knowledge of which enables the possessor to think, labor and act aright. We hold that the farmer should be a reading, thinking, educated man, and thoroughly informed, not only in regard to his own occupation, but as to what is transpiring throughout the world. And all this he can be by devoting a little time to reading and study. Every farmer should possess books and journals devoted to Agriculture and kindred subjects, and read, study and criticize them with earnestness. As winter approaches the wise farmer will annually make additions of such books and periodicals as are best calculated to correctly advise and instruct himself and the various members of his family, and see that the investment is properly appreciated, so that it will ere long return good dividends. And he will be as careful to provide proper mental food for his wife, sons and daughters, as for himself—thus manifesting wisdom of head, kindness of heart, and the foresight of a

true educator. His centre table and library shelves will be covered with books and journals which discuss practical, scientific, historical, moral and timely topics—while those of a light, superficial or trashy character are either entirely ignored or extremely rare. Regarding the principles, training and mental discipline and improvement of his children of paramount importance—of greater consequence than the amount of money or number of acres they may possess on arriving at majority, or inherit at the time of his decease—he adopts such home measures that both the heads and hearts of his sons and daughters may be properly directed and educated. Is not his example suggestive to thousands of parents who read the Rural New-Yorker, and worthy of emulation at the present season?

But, aside from the sources of individual and family improvement at home, there are other important means which can and should be rendered available in augmenting the knowledge and mental culture of the farmer. In many sections of Rural America—and especially in thickly populated districts—we are rejoiced to know that Farmers' Clubs, and similar associations designed for the mutual instruction of their members and "to improve the soil and the mind" (more properly the mind and the soil,) are in successful operation. These are proving of great benefit to members and community—becoming popular, and annually increasing in numbers and usefulness. Every town or neighborhood embracing a dozen farmers may and ought to have some such organization, holding frequent meetings,—especially during winter, for lectures, discussions, the reading of essays, etc.—say weekly or fortnightly. This would not only enable young men, and even the middle aged, to require much valuable information, but prove an excellent school to train members in speaking, composition, &c.,—matters sadly neglected by the great mass of our population. For example, the writing of an essay on any specified subject—practical, scientific or historical—necessarily involves thought and investigation, so that the essayist not only acquires valuable information but also disciplines his mind in properly imparting it to others. The discussions would prove of decided benefit to participants, the practice of speaking enabling them to acquire confidence and fluency in expressing their views publicly. Why is it that each one of a company of six to twenty or more farmers, when seated, can talk readily and sensibly on any subject with which they are familiar—yet, when organized in a meeting, and it becomes necessary to rise and address the chairman or president, not one of them can speak calmly or to the point on the same subject? The reason is too obvious to be stated—the habit of talking informally, and the lack of practice in speaking otherwise, being the correct solution.

—There are other matters connected with this subject worthy of notice, but we have suggested enough, it is hoped, to induce thought and action in the right direction.

RINGBONE, CAUSES, TREATMENT, &c.

EDS. RURAL NEW-YORKER:—I own what would be a very valuable young horse, but for a ringbone between the hoof and lower joint. Can you, or some of your numerous correspondents, find an *effective remedy*? For such I would be willing to make handsome compensation.—S. H. KERNELE, Cornwall, Vt.

Some very strange ideas are entertained concerning the nature of ringbone, and when we give utterance to our own convictions, by stating that a clearly established case is *incurable*, we are aware that such expression is in contact with the opinions held by very many sound, practical, thinking men. Past volumes of the Rural have contained scores of "cures," so-called, and though we may appear to join issue with those who have furnished these recipes, we are in readiness to receive more light upon the subject, and shall be happy to chronicle experiences, no matter how widely they diverge from our own views. This is the true mode to elicit such information as will prove of value not only to horsemen but to the entire community.

Ringbone is a bony tumor—*exostosis*—its situation is on or in the vicinity of the pastern bones, and the end is generally anchylosis of the pastern joint. To a proper consideration of this disease a knowledge of the construction of the pasterns is essential, and we give an illustration from "Youatt on the Horse."

The upper pastern receives the lower pulley-like head of the shank bone, and forms a hinge-joint admitting only of bending and extension, but not of side motion; it likewise forms a joint with the sesamoid-bones. Its lower head has two rounded protuberances, which are received into corresponding depressions in the lower pasterns. On either side, above the pastern-joint, are roughened projections for the attachment of very strong ligaments, both in capsular ligaments, and many cross ligaments, which render the joints between the two pasterns sufficiently secure.

[A. The sesamoid bone. B. Upper pastern. C. Lower pastern. D. Navicular bone. E. Coffin bone.]

The lower pastern is a short and thick bone, with its larger head downward. Its upper head has two depressions to receive the protuberances on the lower head of the upper bone, bearing some resemblance to a pulley, but not so decidedly as the lower head of the shank-bone. Its lower head resembles that of the other pastern, and has also two prominences, somewhat resembling a pulley, by which it forms a joint with the coffin-bone, and a depression in front, corresponding with a projection in the coffin-bone. There are also two slight depressions behind, receiving eminences of the navicular bone.

In the case mentioned by our correspondent, the ringbone lies "between the hoof and lower joint."

The bony deposit, we should infer, is on the lower pastern, and is recognized by a slight enlargement, or bony tumor just above the coronet. The annexed illustration, (see a) gives the appearance when first distinguishable upon the side of the pastern, above the joint, and where there is a prominence of bone.

The causes, according to the best writers, are three, "hereditary, structural, and incidental."—This is the view held by that oft-quoted writer upon the horse—FENCIVAL—and it is sustained by the observations of practical veterinarians. SOLLEY remarks:—"Ringbone is sometimes hereditary; though it is usually occasioned by a strain taken in curvetting, bounding turns, violent galloping or racing." The latter author ascribes the "exciting causes" to any acts or efforts of speed or strength productive of concussion to the pastern bones. He also thinks that blows may produce it, although "the bones of the pasterns are unlikely parts to be struck."

There are two modes of treatment, and, as we give both, our readers are left to make their own choice. Dr. DADD, one of our most skillful veterinarians, and in whom we have much faith,—states that the old method of treating exostosis by fire and blister is fast giving way to a more rational procedure. It has been discovered that there is not, really, any cure for this malady; if we can relieve the horse from lameness, that is all that can be expected. We treat the disease, when first discovered, just as we would a recent splent or spavin, by cooling, evaporating lotions, cold water bandages, &c.; rest, too, so much disregarded by physicians, is of some importance." In chronic cases Dr. D. applies acetate of cantharides daily, until the parts appear hot and tender, then substitutes cold water bandages, repeating the process if necessary.

Mr. SPOONER, one of the most distinguished of England's veterinary practitioners, says "the best treatment for ringbones of either kind is, after the inflammation has been in a great measure removed by cooling applications, to fire the part, or otherwise, well rub in the iodide of mercury ointment, washing off the effects on the following day, and thus repeating it again and again. We have by such means succeeded in removing the lameness, diminishing the enlargement, and restoring the animal, in many instances, to a state of usefulness."

EUROPEAN AGRICULTURE.

WINTER BARLEY FOR FEEDING SHEEP.—A correspondent of the London *Agricultural Gazette*, writes to that journal:—"Last spring a farmer in Hants fed his sheep on this dry plant, after it was in ear; his flock have not recovered from the effects of it yet. In August it first scoured them, and he has lost some 23 ewes and several lambs; they dwindle away, and the shepherd says when they die, they have not a drop of blood in their veins."

PASTURAGE IN A PROLIFIC SEASON.—A writer in the *Mark Lane Express*, in an article on this subject, speaks of the difficulties of "too much grass," and suggests a variety of courses to pursue with it. "It is always desirable," he says, "to have plenty; but profusion is certainly an evil in grazing. The stock leave the coarser herbage for the finer spots; consequently these get overcast and bare; the coarser grows still coarser, and in the end becomes nearly worthless." One course would be to shut up a part for mowing, which would be the same in result, but less risk and expense than

WEST HIGHLAND FAT OX.

In perusing "Rural Letters from Europe," by SANFORD HOWARD, Esq., recently published in the New Yorker, our readers have doubtless noticed the frequent mention made of West Highland Cattle. This breed has its admirers, and we give, in connection with a brief description of its habits and peculiarities, the above illustration of an ox in condition for the butcher.

The West Highland Cattle are a primitive breed, and are principally found in a range of islands (the Hebrides,) skirting the Western coast of Scotland from the promontory of Cantire to the Northern extremity of the country. From the earliest accounts we have of Scotch cattle, this breed has remained unchanged, or improved only by selection. This group of islands extends nearly two hundred miles from North to South, and while the striking features of the Highland cattle are evident in all, there is considerable difference in size, earliness of maturity, and consequent value, the change being readily traced to the effects of climate and superior pasturage. Those upon the island of Islay, the most Southern of the group, are awarded the palm in the specialties mentioned.—The increase of size, however, is not considered an advantage in the Northern islands, or even on the mainland, as it is gained by a loss of hardihood, rendering them unable to withstand the inclemency of the weather, or to subsist upon the scanty forage that the Highlands supply. "Breeders are so much aware of this," remarks YOGATT, "that they endeavor to preserve the purity and value of their stock, by selecting, not from the districts where the size has increased, but, by almost general consent, from the Isle of Skye, where the cattle are small, but are suited to the soil and to the climate; and can be most easily and securely raised at the least expense; and, when removed to better provender, will thrive with a rapidity almost incredible."

After viewing them at the Glasgow Cattle Show, Mr. HOWARD writes:—"They are very handsome in form, occupy the bleakest districts, and thousands of them are reared without shelter and with no other food, except a little milk from their dams in early childhood, than what they grub from the

turning in more stock. Or the rough spots of grass might be mown for hay, or mown in small quantities daily, and left to dry on the field, to be eaten at pleasure by the stock. Another suggestion is to let a portion stand for winter and early spring pasturage. The grazing will possess considerable value as an auxiliary supply to root-fed cattle and sheep.

FLOWERING OF POTATOES.—Dr. MANBY, an eminent English agriculturist, and the author of a prize essay on the cultivation of early potatoes, says in that essay, which has recently been published, that "a flower to an early potato is considered a sign of deterioration, the first symptom of growing out, it being contended that all the strength of the plant should be thrown into perfecting the tuber, and not into the opposite extreme." He would therefore eradicate them as soon as they appear, and save seed from plants which have shown no indication of flowering. Experiments have shown that potato plants beginning to show a tendency to flower, perfect their tubers less early and perfectly than before that tendency was developed.

IN-AND-IN BREEDING.—About ten years ago the Londonderry Standard published a series of letters upon "The Form of the Horse," written by JAMES C. L. CARSON, M. D., and the substance of these have now made their appearance in book form. The English press is giving some extracts to their readers, and are thus enabled to obtain

rugged pastures. Nature has given them a coat of hair which protects their bodies against the winter's storm. Some of them at this show had a considerable portion of their last year's hair, three or four inches long, hanging in patches on them. They are bred almost exclusively for beef, but some of the Highland cows present by no means a mean appearance for dairy purposes, and their milk is of the richest kind and affords butter of the best quality."

The Highland bull should be black, or pale red, the head small, the ears thin, the muzzle fine, and rather turned up. He should be broad in the face, the eyes prominent, and the countenance calm and placid. The horns should taper finely to a point; and, neither drooping too much, nor rising too high, should be of a waxy color, and widely set on at the root. The neck should be fine, particularly where it joins the head, and rising with a gentle curve from the shoulder. The breast wide, and projecting well before the legs. The shoulders broad at the top, and the chine so full as to leave but little hollow behind them. The girth behind the shoulder deep; the back straight, wide, and flat; the ribs broad, the space between them and the hips small; the belly not sinking low in the middle; yet, on the whole, not forming a round and barrel-like carcass. The thigh tapering to the hock-joint; the tail set on a level with the back. The legs short and straight. The whole carcass covered with a thick, long coat of hair, and plenty of hair also about the face and horns, and that hair not curly.

The value of the West Highland cattle consists in their being hardy, and easily fed; in that they will live, and sometimes thrive, on the coarsest pastures; that they will frequently gain from a fourth to a third of their original weight in six months' good feeding; that the proportion of offal is not greater than in the most improved larger breeds; that they will lay their flesh and fat equally on the best parts; and that, when fat, the beef is close and fine in the grain, highly flavored, and so well mixed or marbled, that it commands a superior price in every market. Mr. HOWARD thinks the breed adapted to some portions of our country.

the following passage upon in-and-in breeding:—"There is not the slightest foundation for the strong prejudice which exists in the public mind against in-and-in breeding. Many of the best horses, as well as the best short-horned cattle, we have ever had, were very much and closely in-bred. To a certain extent this was unavoidable, when the studs and herds were first formed; but it makes little difference whether it was the result of necessity, or of choice. It has fully established the immense advantage of breeding in-and-in, when the stock is of the right sort; indeed, I can see no other possible way of retaining the perfections of any particular strain than that of returning frequently to the same blood. We must be careful, however, to observe that the individuals we select to breed from are as near perfection as possible, both in themselves and their ancestors. We will thus secure the transmission of their good qualities. On the other hand, if there is any special defect, it will be sure to pass down, when it is thrown in-and-in, and will hardly ever be got rid of. I think it is owing, in a great measure, to want of attention to this rule, that there is so much prejudice against close breeding. It will succeed only when the good qualities bear an immense preponderance over the bad ones."

Experienced breeders very properly place great reliance on blood. In short, this just amounts to the fact, that good and bad qualities are all hereditary. Like begets like. No person ever saw a Clydesdale foal got by a blood-horse out of a blood mare, or a short-horned calf by a long-horned bull

out of a long-boned cow. Such a thing is never expected. If, then, these general characteristics are invariably transmitted, have we not some reason at least to conclude, that all things are hereditary. In fact, the offspring will inherit, either in whole or in part, the most trifling peculiarities of their ancestors, sometimes taking more after the one parent, and sometimes more after the other, or being a mixture of both, as the case may be. Whatever the peculiarities are—whether soundness, disease, form, temper, softness, strength, durability, speed, wind, or any other thing—they pass down from generation to generation. We should, by all means, keep to the good blood; but, at the same time, we must be careful to select the best specimens of that blood, if we wish to attain to high success."

THE NEW YORK STATE FAIR, HELD AT ALBANY, OCT. 4-7.

THE NEW YORK STATE AGRICULTURAL SOCIETY has long been the leading institution of its class in Rural America, but never so fully demonstrated its superiority, or achieved such marked success, as during the holding and in the results of its Nineteenth Annual Exhibition. After a combined display, attendance and receipts unequalled by any other State Association, "Excelsior" may well be adopted as the motto of the Society—and surely every native Rural New-Yorker, wherever located, (whether still in the "Empire," the resident of a sister Commonwealth, distant Territory, or sojourning in foreign lands,) will rejoice in this triumph, and justly feel greater pride in New York on account of the achievements of her most prominent institution for the promotion of the Rural and other Producing Interests of the Country. But, rather than glorify the State, Society and People, by the use of strong adjectives, we prefer to state such facts as will speak abundantly in their behalf, and sustain the enviable reputation hitherto acquired.

As already intimated, the State Fair was a remarkable success, in all respects—in the extent, and quality of the exhibition, the number in attendance, and amount of receipts. Much of this is attributable to the very fine weather of the week, an item of the first importance, and in which the Society were never more favored than this year. The general arrangements for the Show were also very complete, and had evidently been made known to those most interested. These things, however, important as they are, would never have produced so fine an exhibition and large attendance, had not the Society been in good repute and the Ruralists of the State imbued with the true spirit of emulation and improvement. With such a rare combination as fair weather, fine arrangements, good reputation of the Society, and the right feeling among a progressive people, the exhibition could not be otherwise than creditable and successful—and we are not, therefore, surprised that, taken all in all, the New York State Fair for 1859 excelled its predecessors. For the manner in which the arrangements were made and carried out, and the successful result, much credit is due to Col. B. P. Johnson, the long-experienced and capable Secretary, and the unequalled General Superintendent, Maj. M. R. PARSONS—for these gentlemen and their assistants were really the most active, working and efficient men of the Fair, whatever the positions or assumptions of the numerous honorables and amateur farmers present. The Judges and Exhibitors also aided largely in perfecting and properly carrying out the arrangements. Among these were many of the most enterprising and influential Farmers, Horticulturists, Mechanics and Manufacturers of the State—nearly every section being represented by model men, and presenting superior animals and articles as well. Indeed, at this Fair,—great as it was in the essential and creditable elements of the skill, industry, and ingenuity of our people—like most others we have attended, the representatives of the people were, to us, most interesting, and we are half inclined to give the names and characteristics (mental and physical,) of scores of men whom we met, rather than speak of the products of their skill and industry. But that is not our province, and we proceed to other delineations.

The Exhibition was large and of good quality in most departments. In connection with assistants we took very full notes of the display in various departments, but are unable to give more than a synopsis of the memoranda in our possession. [We also have notes of the evening discussions, which will be given hereafter.] The entries were far greater than last year, aggregating 3,555, and being classified as follows:

Cattle.....	562
Horses.....	507
Sheep, Swine and Poultry.....	604
Plowing Implements and Machinery.....	500
Grain, Vegetables, Dairy, Sugar and Honey.....	300
Domestic Manufactures.....	364
Miscellaneous Department.....	604
Flowers, Plants, Deigns and Fruits.....	24
Special Committee.....	10

The show of Improved Stock was very large, each class being represented by superior animals. In quality we think the display in the various classes of Cattle, Horses, Sheep, Swine, Poultry, &c., by far the best we ever saw. Referring to our notes we will make brief mention of the main features, commencing with

THE CATTLE.

Short-horns.—This popular breed made an admirable display—the show being large and fine. Excellent animals were shown from the herds of Samuel Thorne and Wm. Kelly of Dutchess, Wood and Eastman, and J. F. Converse of Jefferson, Hurst, Slingerland & Bullock of Albany, J. R. Page and Henry Fellows of Cayuga, A. B. Conger of Rockland, Lewis G. Morris and S. Leland of Westchester, J. W. Chaddock of Seneca, J. H. Tucker of Erie, J. B. Garrett of Onondaga, D. T. Vail of Rensselaer, J. Snell of Canada West, A. H. Beach of Conn., and several others—including many animals worthy of special notice, (such as Mr. Thorne's bull "Grand Turk," Hurst & Co.'s "Noptone," J. R. Page's "Hiawatha," &c.) W. R. Duncan of Kentucky, exhibited some twenty animals—mostly beautiful roans, but not equal in form and size to the representatives of

several New York herds, and inferior to what Kentucky should send to an Empire State Show. Mr. Thorne made a grand show of imported and home bred animals.

Devons.—The show in this class was unusually large and creditable, evincing that the beautiful, uniform Devons are increasing in favor. The principal exhibitors were Messrs. Wainwright of Dutchess, E. G. Faile of Westchester, E. Otley of Ontario, Truman Baker of Madison, Geo. Vail and P. S. Forbes of Rensselaer, O. Howland of Cayuga, A. B. Conger of Rockland, Webb & Rogers and E. G. Cook of Jefferson, J. Hilton of Albany, J. Freemyer of Schoharie. The display was superb, of course, as several of the best herds in the State were represented.

Ayrshires.—A much better show than usual, in both numbers and quality. The herds of Messrs. S. D. Hungerford and Brodie & Converse of Jefferson, Sam'l Curtis, H. D. Hawkins and E. P. Prentice of Albany, John C. Hitchcock of Dutchess, J. S. Thompson of Saratoga, and perhaps others, were represented. The Ayrshires are attracting attention as dairy stock.

Herefords.—E. Corning, Jr., of Albany, made a fine display—exhibiting 18 animals. Fine animals were also shown by A. Bowen of Orleans, M. C. Remington of Cayuga, Geo. Clark of Otsego, and E. P. Gardner of Schoharie.

Alderneys.—This breed was represented by animals from the herds of Wm. S. Johnson of Dutchess, Jno. T. Norton of Conn., A. B. Conger of Rockland, and Chas. A. Burt.

Grade Cattle and Working Oxen were not wanting, and the show was creditable in both numbers and quality. The much-abused and neglected "natives" evinced that their owners were not know nothings in breeding and care, whatever their political proclivities. Good animals were shown by Mather & Moore, W. H. Slingerland, A. Fitch, C. E. Pease, G. W. Harcourt, and J. H. Booth of Albany County; J. H. Converse and Wood & Eastman of Jefferson, H. & F. Bowen and Coon & Tompkins of Orleans, E. Otley of Ontario, Henry Cook of Dutchess, Luther Comstock of Oneida, Peter Slocum of Wyoming, and others.

Fat Cattle.—We think the show of Fat Cattle the best we have seen at any State Fair—not of monsters, but of animals that will make "beef as is beef." Of stall fed, Thos. Doty and G. H. & A. D. Gazley of Dutchess, Thos. Kimber of Onondaga, and E. Sheldon of Cayuga, presented extra fine animals. Among the grass fed, the two pair of Short-horn three year old steers exhibited by Craig and James (sons of J. S.) Wadsworth of Livingston, were decidedly extra—worthy the Genesee Valley. George H. Charles of Albany, and C. J. Willis and W. R. Duncan of Ky., also showed fine fat animals.

HORSES.

The display of Horses was so large and elegant that we were unable to observe closely half of even the animals most noted for blood, beauty and endurance, and hence shall not attempt (this week, at least,) to particularize. The show was by far the largest in numbers and best in quality we ever witnessed, including many superior animals from Western and Central New York. The exhibitions in the ring attracted great attention—the display of style and speed being the "cynosure of all eyes" that could obtain a sight. All present who had a streak of horse-adoration in their composition—i. e., almost everybody—appeared delighted, from Gov. MORGAN (who, by-the-way, purchased two or three fine horses from this county,) and Gen. Wool down to the smallest and humblest judges of the "noblest of all animals."

SHEEP.

Of Sheep there was a good show, though the Coarse and Middle Wool or Mutton Breeds were more numerous represented. Fine *Leicesters*, *Cotswolds*, &c., were shown by Robt. Brodie, Wood & Eastman and Robt. Hungerford of Jefferson, Julian Wione and P. Van Wie of Albany, John McDonald of Herkimer, G. H. & A. D. Gazley and V. H. Hallock of Dutchess, H. Bowen, Jr., of Orleans, G. C. Hitchcock of Conn., J. Bettridge of Monroe, O. Howland of Cayuga, R. Gipson of Oneida, Nelson Gower and Thos. Kimber of Onondaga, D. D. Campbell of Schenectady, and others.

Of *South-Downs* there was a good show—principally by Sam'l Thorne of Dutchess, C. Parsons of Monroe, (20 head,) A. B. Conger of Rockland, E. Corning, Jr., and J. H. Booth of Albany, J. C. Taylor of New Jersey, O. Howland of Cayuga, and E. G. Cook of Jefferson. *Shropshire Downs* by J. Lorillard of Westchester, and J. C. Taylor.

The display of Fine Wools was not large. Good *Spanish Merinos* were shown by Jesse Hinds of Vermont, Geo. Brown of Ontario, J. Stickney of Steuben, N. M. Dart of Delaware, E. G. Cook of Jefferson, and J. M. Percy, Potter Baker, W. P. Brown and W. H. Armstrong of Rensselaer. *Silvians* of extra quality—imported and home bred—were exhibited by Wm. Chamberlain of Dutchess; same bred by Geo. Brown of Ontario. Mr. Chamberlain also had some French and Silenian. *Saxons* were shown by Geo. Dakin of Dutchess, C. W. Hull of Columbia, and T. V. Maxson.

SWINE.

The show of Swine was not large, but comprised some fine and weighty specimens of the genus *Sus*, with few or none of the long-nosed, wind-splitting and thistle-digging varieties. Fine animals of the Essex breed were shown by Messrs. Thorne, Conger, E. Griffin and A. M. Underhill—of Suffolk by Conger, E. G. Cook, E. Corning, Jr., and J. H. Booth—and of Yorkshires, Berkshires, &c., by S. D. Hungerford, Wm. Richardson, and others.

POULTRY.

Although the "chicken fever" has subsided, and all are ready to laugh at the foolish things said and done during that epidemic, yet the Poultry exhibition continues to be quite an important part of our State Show, and always commands crowded houses. The first thing that attracted our attention on entering this department was the fine exhibition made by J. H. Clapham and E. A. Wendell, of Albany, of all names and colors. The *Black Spanish* seems to be gaining in favor, and every year we notice an increased number on exhibition. They are a beautiful and valuable bird,

though apt to suffer in our cold winters; but for this we would prefer them over all others. *Game Fowls*, too, are increasing, but we hope this is no evidence that the American people are beginning to tolerate the cruel sport of cock-fighting. *Brahmas*, *Africans*, and other Geese were shown in excellent condition; but really the most beautiful thing we saw in the poultry line was a cage of Black Cayuga Ducks, shown by John R. Page, of Sennett, Cayuga county. Perhaps they pleased us the more because we had never before seen them—or, only a very young pair, some years since. The *Turkeys* were well represented, as were also the *Rabbits* and *Fancy Pigeons*.

AGRICULTURAL IMPLEMENTS.

It would require more space than we can afford to this department, even to give a list of articles on exhibition. Never have we seen so large a display at a State, or even National Fair. The Horse Powers and Threshing Machines were the most prominent, and seemed to attract general attention. Westinghouse, Emory, Pease, Wheeler and others exhibited their respective machines in operation. Three *Potato Diggers* were in competition for the premiums, and the first was awarded to one from New Jersey; the machine of Mr. Niven, which was figured and described in the *RURAL* a few weeks since, received the second premium. These run a point or plate of iron under the bill, and the soil and potatoes are carried up an "apron" made of iron rods, on the endless chain principle, the soil falling through and the potatoes passing to the back of the machine where they are deposited on the ground. We do not know that the Committee saw these machines in operation, and if not, their award is of little consequence. A *Steam Engine* designed to propel a steam plow, traveled about the grounds and subsequently attempted to plow, but did not succeed to the satisfaction of the spectators. A novel implement which attracted attention, was a roller made of cast iron wheels, about an inch broad, and set on a rod about two inches apart, but each one acting independently of the other. Two others thus constructed were attached by means of an iron hinged reach, like "bob sleighs." This machine is designed for breaking clods and dragging, or rather rolling in grass, wheat and other seeds, and is said to be quite effective. Reapers, mowers, plows, harrows, cultivators, drills, &c., were shown by the acre, but our limited space will not allow us to particularize. We may notice many of the novelties and improvements in future numbers.

DAIRY HALL.

The show of Dairy Products was much better than that made at Syracuse last season, when we counted only eight or nine specimens of butter and a dozen or so of cheese. At Albany we counted over fifty-five large cheeses, and about forty specimens of butter, and the quality of many of the samples was excellent. Still, the exhibition of dairy products was not creditable to the great State of New York, nor did it do justice to our dairy interests. A gentleman from New Brunswick remarked to us that, judging from the exhibition, he thought dairying must be unprofitable in this State. Most of the cheeses shown were from Jefferson, Lewis and Herkimer, though there were a few from Oneida, Onondaga and other counties.

GRAIN AND SEEDS.

There was quite a respectable exhibition of Wheat, Rye, Barley, Oats, Flax Seed, Timothy Seed, Corn, &c. The White Winter Wheat of E. S. Hayward, of this city, was a very fine sample, and reminded us of the palmy days of Genesee wheat. The Red Winter wheat of O. Howland of Cayuga, was another excellent sample, and there were others almost as good.

DOMESTIC AND MANUFACTURERS' HALLS.

The Domestic Hall was a very attractive feature of the Fair, and was constantly thronged with visitors, being a favorite resort of the ladies. Had time permitted us to take notes of the embroidery, the crochet work, the quilts, the stockings, the hoods, scarfs, shawls, and a thousand other things which we saw and admired, the crowd would have prevented, as we were compelled to occupy a very small space and to move on with the mass.

In the building devoted to Manufactures there was a fine display of carriages, sleighs, and other work creditable to the Albany manufacturers; but the display was not large, as many articles of manufacture, such as leather, pianos, clothing, India rubber goods, &c., were exhibited in Domestic Hall and in another building, and the most tasteful one on the grounds—indeed the only one making any pretensions to architectural style. This was erected by the

ALBANY MECHANICS' INSTITUTE.

an Association recently organized, which will in future make its own annual exhibitions. This building contained several steam engines in operation, furnishing power where it was needed, for the performance of various mechanical operations. Here the printers were at work at the press, the lithographer "striking off" views of the fair ground, cooking and parlor stoves of various styles were in full blast, a telegraph office established, and sending friendly messages from the visitors to anxious friends at home in all parts of the country, and a hundred other mechanical operations performed, which we have no space even to mention.

THE ADDRESS.

was delivered about noon on Friday, the last day of the Fair, by Hon. JOHN A. DIX. The day was unpleasant, the wind blowing strong and cold, which made speaking difficult, and listening very unpleasant. The number of hearers was, therefore, less than usual. After the address the Secretary announced the Premiums, and the General Superintendent declared the Fair at an end.

A report of the Horticultural Department of the Fair is given on next page—by reference to which it will be observed that our associate was not favorably impressed with all the arrangements. The receipts of the Fair were some \$18,000; we will give the figures next week. Our report is made from notes taken before the premiums were awarded, and finding it difficult to obtain post-office addresses of exhibitors, we have only attempted to give the counties in which they reside. The Premium Awards will probably comprise full particulars in this respect.

Rural Spirit of the Press.

To Remove Films.

A CORRESPONDENT of the *Southern Homestead* writes:—"Having seen a number of remedies for taking film from horse's or cattle's eyes, I'll give the method that I have practiced for years without failing in a single instance. Take a piece of fresh butter the size of a common walnut, and put it in the opposite ear—that is, if left eye, put in right ear. If the butter is hard, hold the ear with your hand for a short time, until it melts and runs into their head; in most cases one application is all that is necessary. If you have not got the butter, hog's lard will answer."

Fall Plowing.

In an article on this subject, by the editor of the *Country Gentleman*, we find the following hints upon the manner of performing the work:—1. Do it thoroughly and in a workman-like manner. 2. If the soil is at all liable to standing water in winter, it should be plowed in narrow lands, and the water-furrows carefully cleared and free outlets provided, so that all surface moisture may at once drain away. Unless this is attended to, it is of little use to plow low lands in the fall. If covered with water until spring, the frost has no mellowing effect, and very little decomposition takes place—the soil is only hardened by its exposure. 3. In fall plowing, the furrows should be deep and narrow, so as to expose as much surface as possible to the action of the frost, and it matters little how rough the work may be, provided the whole surface be inverted by the plow.

Leaves as a Manure.

The following, which we clip from the *Working Farmer*, is not only timely, but well worth examination and trial:—In many parts of our country wood, lands have deposits of leaves, until the amount contained on the surface is entirely greater than is required for any benefit they can furnish to the growing forests. In such cases the leaves may be removed to the manure shed with great profit; having parted before their fall, or soon after, with all their aqueous portion they become a progressed representative of large amounts of inorganic matter, and when properly composted and decayed, form a manure of great value. Woods, earth, to be found in many localities in large deposits, is very valuable as manure, but first requiring treatment with the lime and salt mixture, we have often described, to neutralize tannic acid and to disintegrate the fibre so as to render the manure fine for distribution. We have often seen wood-ashes of three times the value per cord of the best barn-yard manure. Dried leaves may be used as an absorbent for urine in stables in the place of straw, and they may be gathered up through the woods. The best way of collecting leaves, particularly where the ground is not level, is to brush them down hill with a birch broom; as soon as the windrow is formed, the pushing or rolling over of this windrow will cause it to pick up all the leaves in its wake, and at the foot of the hill it may be loaded into carts. In the making of hot-bed earth, and borders for grape vines, &c., gardeners prize wood-ashes very highly. Black mould from the woods is extremely rich in all the inorganic materials; all of which are ready for re-assimilation in plants.

The Use of Quails.

WM. NORRIS, an intelligent, observing farmer boy, who makes his home in the Southern part of Illinois, has recently been studying the habits of the quail, or, incorrectly, "partridge," and gives the following testimony, which will interest agricultural readers:

He observed a small flock commencing at one side of the field, taking about five rows, following them regularly through the field, scratching and picking about every hill till they came to the other side of the field, then taking another five rows on their return, and thus continuing till he thought they were certainly pulling up the corn. He shot one, and then proceeded to examine the corn ground. On all the ground that they had been over he found but one stalk of corn disturbed; that was scratched nearly out of the ground, but the kernel was still attached to the stalk. In the crop of the quail he found one cut-worm, twenty-one striped vine bugs, over one hundred chintz bugs that still retained their individuality, a mass apparently consisting of hundreds of chintz bugs, but not one kernel of corn. The quails have been decreasing in number in that vicinity for about five years past, and the chintz bug increasing. It is believed that these facts stand in the relation of cause and effect to each other.

In connection with the above we give the following extract from the *New York Tribune*:—"One of the prettiest of our American birds is the quail, and although not very musical, its notes are clear, thrilling, and pleasant. With anything like decent treatment, quails become semi-domesticated, though never entirely so, and add not only in beauty, but in real value to the farm; for they are not grain eaters, but immense insect destroyers; and a farmer should no more permit a quail to be destroyed about his premises than he should his domestic poultry—in fact, not as much, for it may be necessary to kill off the surplus, to eat or sell, to save the expense of winter feeding. But that is not the case with quails; and even should they increase to such extent as to require a little grain to sustain them through the deep snows, they will pay back all the cost of keeping in the spring. A flock of quails in your garden or vine-patch would be the most effectual remedy for striped bugs that could be applied, and then, the remedy costs nothing."

How to Hunt the Woodchucks.—Perhaps some of the boys will thank Mr. GEO. SLADE, of Mendon, for this novel and said to be successful mode of heading woodchucks:—"Take a turtle about the size of your hand; bore a hole in the edge of his shell and tie a string in the same. Then put on his back, near his tail, a small amount of sulphur with a little turpentine; ignite the same, and head the animal down the hole. Impelled by the excitement in his rear, he diligently seeks the bottom. The woodchuck, terrified by the smell of the sulphur and the flaming appearance of his visitor, evacuates the premises, and is met at the hole by the club of the hunter. The turtle is then pulled out for another hunt. It is said the experiment never fails."

Agricultural Miscellany.

HAMMOND FAIR—Jefferson and St. Lawrence.—On our return from the State Fair we left the Central road at Rome, and passed through portions of Jefferson and St. Lawrence counties—Adams, Watertown, Antwerp, Roselle, &c.—to fulfil an engagement to speak at a local Fair near Chippewa Bay, in Hammond. Too Fair was held on the 6th and 7th, but (arriving late the second day,) we saw little of the exhibition, which was largely attended, several towns being represented. We were glad to make the personal acquaintance of such men as DAVID MORRIS, Esq., President of the Society, Col. LAMPUER, Messrs. ALLEN, WILSON, FORBES, GORDON, and many other officers and members who appeared to be of the right stamp to forward Rural Improvement. Hammond proved a far more fertile and beautiful town than we anticipated—especially after passing the rough granite ledges of Roselle—being finely situated on the St. Lawrence river. It has a strong, fertile soil—mostly clay loam—evidently cultivated by intelligent, industrious and thrifty farmers. We have rarely seen better farm buildings, fences, &c., or more indications of good culture and profitable husbandry, even in the most favored localities, than in Hammond and some parts of Roselle. Rough and forbidding as much of the latter town appears, it contains many farmers who have become wealthy among rocks that would frighten a farmer of Monroe county. Dairying is the main branch here, the rough lands, unfit for the plow, affording rich pasturage. In Hammond the cereals are grown advantageously—spring wheat quite extensively—but we saw little fruit. These towns were originally settled and are mainly occupied by intelligent and thriving Scotch farmers, who have become independent by their industry, economy and good management. In passing through several towns of Jefferson and St. Lawrence we saw many fine herds of cattle, principally dairy stock, and found a richer country than we had expected. We were pleased with both people and country, and regret that lack of space precludes proper mention of many things observed. Watertown is a beautiful, busy, thriving village—almost a city—with many fine public edifices and business blocks. The Watertown & Rome Railroad—extending from the Central at Rome to Cape Vincent, and ably superintended by CARLOS DUTTON, Esq.—is largely benefiting the people and country of Northern New York.

SHANANTEE FARMERS' CLUB FAIR.—The Secretary, W. M. BRADSHAM, Esq., gives us a very interesting account of the Fair of the Shanantee Farmers' Club—one of the most spirited and progressive associations in the Union—which was held the 23rd ult. Mr. B. says no better evidence need be given that Free Fairs are an improvement on the common plan than was witnessed that day. The morning dawned cheerless after a steaming night of rain, and many thought it best to postpone; but about 10 A. M. the people and articles began to pour in, and for three hours the clerks were kept busy, more than 600 entries being made in that time. Among the working oxen, there appeared 18 yoke to one wagon, tastefully got up, being finely decorated with farm produce, implements, &c. The show of cattle and horses was fine; also of sheep (35 pens,) swine and poultry—while the entries of grain, farm implements, vegetables, fruit, dairy, domestic manufactures, &c., were large and the exhibition creditable. It is estimated that 7,000 persons were present. J. V. H. CLARK, Esq., of Manlius, gave a practical and forcible address on the Duties of Agriculturists.

—Well done, Shanantee Farmers' Club! Your example in this and other matters is worthy of emulation and imitation in a thousand localities within the circle of our parish of readers, and we'll keep talking about the benefits of Farmers' Clubs every opportunity.

SHERBURNE FAIR—Progress by Improvement Illustrated.—Onenango county people get up good Fairs. At the recent Fair in Sherburne there was a procession illustrating the progress of improvement, in which appeared pioneers with their axes; an emigrant car drawn by oxen and filled with children as caroles in their mirth as if they were not supposed to be making their way among the bears and wolves and other appendages of frontier life; old and improved plows, harrows, &c.; dairy animals; an old lady, seated in crocheting attitude, and steadily plying the dasher of an old-fashioned churn, was followed by a dog-power churn in operation, in the wake of which came other dairy tools and a manufactory of cheese boxes; a butcher industriously cutting up juicy steaks; masons with hammer and trowel; carpenters at their benches, and a car with eight or ten cash and blind makers at work; blacksmiths blowing and striking, and shoeing horses; painters, moulders, printers, tanners, shoemakers, tailors, harness-makers, wagon-makers, tinners; potters mixing their clay and moulding vessels for use and ornaments; milliners, cabinet and chair-makers, seamstresses, batters, silversmiths, dentists, and the Sherburne and Smyrna fire companies.

MEN WHO ARE MEN.—A Chicago paper says:—"In one of the carriages at the opening of the National Fair, were four members of the U. S. Ag. Society, who have never used alcoholic liquors or tobacco; three of them have never known sickness in any manner, and one only once being slightly so. Two of them are over seventy years of age, and two over fifty. Three of them are at present Vice-Presidents of the United States Agricultural Society, and one a member of the Executive Committee. The names of these distinguished gentlemen, who are an example to the rising generation, and who should take knowledge of them, are Vice-Presidents J. Brooks, of Massachusetts, John Jones, of Delaware, and F. G. Cary, of Ohio; the member of the Executive Committee is J. W. Ware, of Virginia."

COMPARATIVE VALUE OF HAY AND OTHER FODDER.—The following table gives the comparative value of different kinds of food for farm stock, made from what are said to have been carefully conducted English experiments:

180 lb of hay are equal to	
275 lb green Indian Corn stalks,	48 lb wheat, 59 lb oats,
44 lb rye straw,	45 lb peas or beans,
164 lb pea straw,	64 lb buckwheat,
180 lb oat straw,	87 lb Indian corn,
101 lb raw potatoes,	68 lb arums,
275 lb boiled potatoes,	105 lb wheat bran,
390 lb mangold wurtzel,	109 lb rye bran,
64 lb turnips,	167 lb wheat, pea and oat chaff
64 lb rye,	170 lb rye and barley chaff.

According to the above, wheat is worth but little more than twice as much per pound as hay, and Indian corn not half as much; and oats are worth more than corn. We are confident that this will not hold good in this country.—*N. Y. Tribune.*

A WRIGHTY TWO-YEAR-OLD.—Mr. O. WILLIAMS, of Sunderland, Mass., says he last spring sold a two year old Durham bull for butchering, the live weight of which was over 2,000 pounds.

DEVERED.—The extended report of the State Fair, given elsewhere, compels us to defer several articles intended for this number of the *RURAL*.

THE NEW YORK STATE FAIR.

HORTICULTURAL DEPARTMENT.

The New York State Agricultural Society, as most of our readers know, held its Annual Fair at Albany, on the 4th, 5th, 6th and 7th insts. The weather was all that could be desired, and the grounds were visited by immense numbers of people, yielding a large revenue to the Society, and we hope a corresponding amount of pleasure and profit to the people. A pretty full report of the other departments will be given in other pages of this paper, and we purpose here only to give some notes of the *Fruits, Flowers and Vegetables*.

FLORAL HALL—ARRANGEMENT AND MANAGEMENT.

The arrangement of **FLORAL HALL**, in which was shown the *Fruits and Flowers*, was the most inconvenient and ill-adapted to the purpose that we have ever seen. In the centre of the building a platform or staging was erected with four ranges of shelves on all sides, the first about the height and width of the ordinary table, the next a foot or so higher, and so on, as shown in the little drawing which we have made from recollection, and which we presume is not correct in its proportions. The dots represent a railing, about three feet from the lower shelf, to keep the crowd from disarranging or handling the fruit.

Section of Floral Hall at Albany.

By this arrangement a pretty good view is had by the people of the lower shelves, but of those above they can see nothing but a mass of fruit—not a label can be read, or one variety distinguished from another. Indeed, on the upper shelves, twelve or fifteen feet distant, it is difficult with the light afforded, to tell apples from pears, and the Committee have to climb around among the fruit, to the great danger of the plates and their own necks. This has been the system adopted for several years past, and if the object of the Superintendent is to give all possible annoyance to the Committees, and to prevent the people from gaining any knowledge of the fruits exhibited, he certainly deserves great credit for his ingenuity—for a nice adaptation of means to ends. The only thing that rendered this plan of exhibition bearable was the fact that exhibitors generally stood within the railing, and were quite accommodating in giving information—ever ready to climb the shelves and hand plates of the different varieties that spectators might wish to examine. But, at the late show, the Superintendent excluded exhibitors from the space within the railing, so that there was no one of whom an inquiry could be made. We saw one gentleman from Erie county with a paper in his hand containing a list of pears which he had been recommended to plant, and he came to the State Fair almost for the sole purpose of examining the fruit of these varieties, but the tables were in charge of a few policemen, and he could not obtain a particle of information, and no one could tell him whether the fruit was on exhibition or not. Two other gentlemen of Herkimer were anxious to see certain varieties of apples, and applied to us to assist them, but we could render them no aid. The people present being thus effectually debarred from gaining information, there was only one chance left, and that was through the reporters for the press, who were anxious to take notes, to spread before the readers of their journals. This, however, was prevented, by the Superintendent, who excluded them from within the railing, the only place where they could obtain the desired information. Twice we were requested to leave, and our notes are consequently very meagre. The State Society should appoint a new Superintendent or learn the old one that the object of the exhibition is to afford the people the best possible facilities for gaining knowledge.

BETTER PLAN FOR A FLORAL HALL.

While we are on this subject we will give a very simple and convenient plan for the arrangement of a **FLORAL HALL**, for the exhibition of *Fruits, Flowers, and Pot Plants*.

Section of Floral Hall, as Proposed.

Figures 1 and 2 may consist of either one table wide enough for four plates, or two tables or shelves, figure 1 being raised some six inches above figure 2, and wide enough for two or three plates; figure 2 made for three or four plates. The lower shelf in the centre oval, (figure 3,) is designed for cut flowers. Shelf 4, raised six to eight inches above 3, is for bouquets and small pot plants. Shelf 5, raised a foot or more above 4, is designed for large and fine specimens of pot plants, the largest in the centre, giving the crowning grace to the whole. Figure 6, floral ornaments, or large pot plants. Figure 7, entrance door, figure 8, door for egress. a, dotted lines, the railing to keep spectators from crowding near the fruit, handling and disarranging it. In the space inside of this railing the exhibitors should stand, ready to answer all inquiries and hand the specimens to such visitors as may wish to examine them critically. If the railing is made of rustic work, poles and branches from the woods, instead

of boards and scantling, the effect will be much better. The general effect of many a good horticultural show is destroyed by rough carpenter work. Rustic work should be substituted as much

Ground Plan of Proposed Floral Hall.

as possible. b, passage way, and as the people enter through one door and pass out at the other, crowding and confusion are in a great measure prevented. The passage way, shown in the plan, is only six feet between the railing. In most cases this would be too narrow.

This plan, with such variations as circumstances may render necessary, will be found a very convenient arrangement, in which every article requiring close examination will lie quite convenient for the purpose.

FRUIT.

The exhibition of fruit was large, and the specimens exceedingly perfect. Most of the apples and pears were from the Western part of the State. **ELLWANGER & BARRY**, as usual, took the first premium for the largest and best collection of pears and apples, and **SMITH & HANCHETT**, of Syracuse, the second premium on both. These collections were very fine. **L. MENAND**, of Watervliet, showed some good pears, as did also **W. FENNIS**, of Throg's Neck, and **J. M. MATTHEWSON**, of Jacksonville. **JOHN W. BAILEY**, of Plattsburg, **E. S. MAYNARD**, of this city, **S. BOWEN**, of Oak Corners, **P. S. FORD**, of Bath, and others, made excellent exhibitions of apples.

There was a good show of both foreign and native grapes. **DAVID McLEOD**, of Albany, exhibited most superb foreign varieties, and **J. G. WHITE**, of Albany, **A. B. MOORE**, of Westford, and **M. HOWARD MERRITT**, of Hart's Village, well grown and well ripened specimens of native grapes, mostly Isabella and Catawba. Seldom have we seen such magnificent Isabellas, as were here exhibited, and one plate, by Mr. MERRITT, we think we never saw equalled. They were almost as large as the Black Hamburgs on exhibition.

FLOWERS.

The show of flowers was not large, there being but two or three collections of Dahlias, the best being shown by **JOHN WILSON**, of Albany, and **SMITH & HANCHETT**, of Syracuse. **SMITH & HANCHETT** and **L. MENAND**, made a fair show of roses. There were a few *Phloxes*, but nothing worthy of especial notice. *Verbenas*, few and fair. *Asters*, numerous and poor. **Mrs. VAN NAME**, and **Mrs. NEWCOMB**, of Pittstown, made their regular annual show of flowers, and took about all the premiums offered in the amateurs' list. For years,—almost as long as we can remember,—these ladies have made a good exhibition of flowers, and pocketed the premiums, almost without competition. We should hardly realize we had been to a State Fair did we not meet their smiling faces; but we wish other ladies would enter this list, and not allow them to carry off the premiums quite so easy.

VEGETABLES.

The show of vegetables was large. Plenty of the coarse Mexican pumpkin were exhibited, and attracted attention from their large size, as they always do. A few Hubbards were on the tables, but most of them showing signs of mixture. In a few years, unless we are more careful, scarcely a pure squash of this fine variety will be found. **CHAUNCEY E. GOODRICH**, whose large collection of seedling potatoes, has for many years formed the principal attraction of *Vegetable Hall*, was not present, (being, as he wrote, detained by sickness,) but Judge CHEEVER exhibited 21 varieties of Mr. G's later seedlings. The *Prince Albert* were in abundance, and very large, many specimens being from ten to twelve inches in length. No *Flukes* were shown; *Macizans* were in two collections, and fine, but the *Peach Blows* were the favorite sort, and altogether the most abundant. The first premium was given to this variety, and the second to the *Black Diamond*, a seedling by Mr. GOODRICH. A poor, worthless sort, was labeled *Early June*, the same as is generally sold here under that name, but is not to be compared to the true *Early June*.

Onions were plenty and fine; the *Cabbage* was large, and some *Savoy* excellent, but most of the common sorts showed mixture. No one should show what claims to be a green cabbage all streaked with purple, or blushing with red, at its doubtful origin.

Farm Root Crops were scarce. A few good *Buta Bagas* were shown by **A. V. THORNTON**, of Watervliet, and large *White Turnips* by **A. M. UNDERHILL**. We also noticed half a dozen *Man-golds*, but a two-bushel basket would have held all the roots. A good exhibition of roots we seldom

see at any of the Fairs in the States, but we have never visited a Canada Fair where we did not see a large and fine display. Our farmers have a good deal to learn in root culture from their Canadian neighbors.

FRUIT RECEIVED.

We are again indebted to various friends for collections of fruit, for examination, names &c.

—To **E. THAYER**, of Watkins, Schuyler County, in this State, for a small box of *White Grapes*.—Mr. T. says they were "from a seedling of my cultivation," planted four years ago this fall, and which produced some forty clusters last season, but owing to the excessive cold last winter, the vine produced but a very few scattering grapes this summer. Those I send you are the two best bunches, and are one-third of all that the vine produced this season. There was no full developed clusters, as was the case last year. From the fact of their being an entire new variety, as tho't by many in this place, the name of *Thayer's Martha* was given them. Now I wish you, as far as the specimen sent will permit, to say from their color, transparency, size, (though they fall short in that,) shape, and particularly the flavor, what, or by what name they may be called if not a new variety; and give your opinions through the *RURAL*, or otherwise, whether they are entitled to the name given them or not. The grapes are ripe and fit for eating about the 12th of Sept., or before. Clusters regular, and a trifle smaller than the Isabella, but like them in size and shape, and a little irregularity in some clusters. I think at a more mature age of the vine it would produce about the same clusters in shape, size, &c., as the Isabella. The vine is very thrifty and hardy, and foliage thick."

The clusters of grapes received are very small, the berries about the size and shape of small Isabellas, green, tinged with amber. They plainly show their native origin. The quality is good. We should judge this to be a very promising variety, but another season will afford a better opportunity for a more satisfactory opinion.

—To **S. BOVINGTON**, of Pittsford, N. Y., for well ripened *Catawba* Grapes, and a black, seedling grape of large size, but too strongly native in its character to become popular.

—To **D. BALL**, of Perry Center, N. Y., for apples, under the name of *St. Lawrence County*, which proved to be the *Alexander*.

—To **A. S. CLACKNER**, of Pittsford, for beautiful specimens of the *Pomegranate Melon*.

—To **H. C. HEATH**, gardener to **L. A. WARD**, for fine specimens of the *Mammoth Tomato*.

PRICES OF FRUIT IN NEW YORK CITY.

The Day Book gives the following report of the Fruit Market:

Apples.—Receipts per steamboats are now very light, and prices have again advanced. Shippers have commenced forwarding by the canal, and some boat loads have already arrived, but prices continue firm. We quote:

Western Apples, mixed lots, per bbl	\$1 35-40 00
Common Apples	1 00-1 25
Orange Pippins	1 50-2 00
Red Sweets	1 25-1 50
Twenty or Pippins	2 00-2 25
Fall Pippins	1 75-2 00
Detroit Reds	2 00-2 50

Pears.—Are becoming scarce, and we advance our quotations. We have several consignments in to-day, for which we hope to render a good account. Virgalieu ripen up very badly this year, becoming spotted and mildewed, so that dealers are afraid to buy them until they are fully ripened. A few Bartlett's have come in from Maine, sold at \$25-30 per bbl. Seckels are mostly poor, and sell at irregular prices. We quote:

Seckels, good	\$10 00-15 00
Virgalieu, perfect	10 00-15 00
Napoleons	10 00-15 00
Louise Bonne de Jersey	10 00-15 00
Duchess d'Angoulême, per bbl	10 00-20 00

Quinces.—Have made their appearance, and a few have been sold at \$1-2 per hundred, according to size and quality, and at \$8-10 per bbl.

Grapes.—We quote:—*Catawba*, 11-15 cents per lb.; *Isabella*, choice, 10-12c; per lb.; do. common, 8c.

TO SAVE TREES FROM MICE.

Messrs. Eds.—As we often hear complaints about the depredations of mice upon fruit trees, and the enquiry how to prevent their depredations, I thought I would give my remedy, to wit: Some six years since, about the first month, when the snow was some twelve to eighteen inches deep, I found the mice had commenced gnawing several young trees in my orchard, and on one side of my small nursery, along side of the fence; some fifty rows 1½ rods from the fence, were more than half destroyed. What to do I did not know, but finally concluded to try ashes—by so doing save them. I took dry ashes and strewn around those trees in the orchard, and along on the nursery trees on top of the snow, and not a mark of a mouse track did I see after. I have used ashes about my trees ever since, by applying them about the roots and bodies of my trees, from January to April, and have not had one tree injured since. I consider this a perfect preventive, and at the same time a great benefit to the trees.

E. SALISBURY.

TRIOMPHE DE GAND AND ALICE MAUDE STRAWBERRIES.—Can you, through the *RURAL*, inform me and many other readers, whether the strawberries *Triomphe de Gand* and the *Alice Maude* are one and the same thing, or are they different? The *Alice Maude* is cultivated here by a few to a limited extent, and is well spoken of by those who have tried them. I very much liked your description of the *Triomphe de Gand* and thought of sending for a few vines. Last week I was told I was already in possession of the same; that it was the same as *Alice Maude*.—**J. E. IRISH**, White Corners, Erie Co., N. Y.

They are not the same, and quite distinct, but both European sorts. The *Triomphe de Gand* is the most promising and popular of any foreign variety, and we have confidence that it will be profitable, both for the amateur and market grower.

THE HORTICULTURIST—PEAR QUESTION.

THE EDITOR AMONG THE DWARF PEARS.

Our readers will remember the recent controversy in our columns, as well as in other Journals, on the possibility of raising pears with profit.—The Editor of the *Horticulturist* took rather decided ground against dwarf pears; but we have no doubt became satisfied at last that a little more information on the subject would be a decided advantage. So, a few weeks since he visited Rochester, and sent to his Journal the following letter.—This, we suppose, is only the first step in the right direction. We might make several corrections, but prefer to give the main part of the article just as we find it.

ROCHESTER, New York.

DEAR HORTICULTURIST:—The lovers of your pages during the years that are past and gone, may not object to reading a few hasty lines from this, your old residence, and now most certainly containing some of the best examples of horticultural progress. Consider me then shaking off the dust of Broadway on Board the New World, that Great Eastern of the rivers, and dining next day in Albany, knocked about first on one side and then on the other elbow by ladies waiting on table in extra large crinolines; evidences that women are asserting their rights in these progressive quarters.—Thence follow to the garden nurseries of the wealthy city of Rochester, and into the grounds of Ellwanger & Barry, the latter the able conductor of your historical pages for so considerable a portion of your lengthened history.

A fanciful writer says: "Of some plants the seeds, so far as we can perceive, are living animalcules, with voluntary motion, till they pitch their tent upon a spot that they think will suit them; they then germinate, and change from animals to alga." Now surely the pear seeds would seem to have voluntary motion, and to have pitched upon Rochester for their home, but for the fact that apples and plums have done the same; and to suppose that all the fruits could have assembled themselves, is going a little too far. We must believe, therefore, when we see acres of trees, nearly all loaded with fruit, that there has been some human ingenuity invoked to call them together. Such is the case; superior culture in a suitable soil and a proper climate has arrayed the trees in a garb such as I never saw before. The pears assume here to my vision the same unaccountable increase of health, beauty, size, and productiveness, with fruit so large as not to be recognized or called by name, as surprised Mr. Barry at the exhibition at Burlington, Iowa, when he fairly admitted even he was at fault. Now in Rochester, the Duchess and the Bartlett assume an aspect and a color—I may as well call it the *pear bloom*, which is to me from a little farther south,—the greatest of surprises; and this bloom, or a similar tinge, pervades other fruits. The grape and the green gage plum have it in a very marked manner. Then the sizes and the health! Why, an orange-tree in the tropics is more beautiful than the loaded pear-trees of Ellwanger & Barry, and others of Rochester.—A soil of the quality that the pear would select for itself, and a climate to suit it also, have made the product all that has been said of it. And yet, without the greatest attention in other orchards of the same vicinity, while the few pears that adorn the trees are larger than farther south, there is also evidence that the utmost culture is required. The accounts we have had are realized in several, but not in all cases; the mode of treatment is precisely what has been often promulgated. To insure success there is no other crop, not even a spear of grass allowed to grow in the vicinity of either pear or plum-tree. Aeration of the root, mulching with stable manure in the fall, good trimming, and fine fruit is the result.

The plums are a perfect sight; the curculio is shaken off into sheets regularly every morning by a person appointed for the purpose; it requires but little time to do this, and the result is magnificent. The Green Gage, Pond's Seedling, Bowman's Magnum Bonum, Peter's Yellow Gage, Damascus Red, and the Prun plums, here hanging like ropes of onions, are examples of what care and attention will do.

Of the pear, the largest number budded is the Bartlett. The best bearers, where all seemed to be loaded, were probably the Duchess d'Angoulême, Bartlett, Flemish Beauty, Vicar, Bourre Clairgeau, and Hardy, Belle Lucrative and Virgalieu; and we noted as very fine, Beurre de Waterloo, Goubalt, Calabasse monstrueuse, Cramoie, in beauty number one, though in quality second; Pratt, Livingston, Virgalieu, the Downing, named by Leroy; Wharton, new; Bullam, St. Gualin, Conseller Ramwez, very large; Beurre Nantais, Baron de Mello, Beurre Superfin, very good; Tyson, Beurre d'Amaluis, large and good; Sheldon; and the Church, known and esteemed for twenty years as one of the best.

The apples here are quite as successful as the pears; the trees are breaking down with the weight, and the dwarfs are especially beautiful.—We noted as standards, Early Joe, Strawberry, and Jersey Sweeting, as highly ornamental; as fruitful, the Keswick Codling, Mother, Broadwell, Red Astrachan, Baldwin, Gravenstein, Genesee Chief, Rousselet de Stuttgart, and Reine de Reinette.—The dwarf apple-trees were also borne down with fruit, and of extreme beauty, the best for ornamental purposes being, perhaps, the Doucain, but all were handsome and nearly all fruitful.

GRAPE, PEARS AND QUINCES.—As you seem willing to be troubled, I would like to ask a few questions, too. 1st. I have two or three hundred grape cuttings bedded which I wish to transplant next spring—will it be best to cut them back, and let them remain where they are, or take them up and heel them in? 2d. I want to set them on the east side of a north and south fence, where the snow drifts considerably in winter—will the drifts injure them, and should they be taken down from the trellis or left up? 3d. I have a few quinces bedded in the ground—ought the earth to be heaped up to them so as to partially or wholly cover them? Or would tan-bark, sawdust, or something else, be better if they need any protection? 4th. The apple described by Mr. WANNAM, of Alabama, is, I should think, much like, if not the same as, the Clam Apple, or Clum Pippin, raised in the adjoining town of Shelby. The original tree—a seedling, as near as I can find out—stands on a farm formerly owned by a Mr. CLUM, now

by **Jas. ECKHART**. The apple is fit for cooking the middle of August, ripe last of September or first of October, will keep with good common care till February. Tree very thrifty and an excellent bearer. I will try and send a few specimens by the bearer of this so that the quality of the apple you can judge for yourself.—**A. S. BACON**, Ridgecay, N. Y., 1859.

1st. Nothing would be gained by taking up the vines and heeling them in. 2d. Many cultivators think it is good economy to lay all grape vines down in the winter, simply covering them with a little earth. The vines start more vigorously, and no evil can result from a hard winter. Drifts of snow would not injure the vines, but be a sufficient protection if constantly covered, but we often have very severe weather without much snow. 3d. It is better to cover the quince stock with earth, if possible. 4th. This is the same apple we think, although we did not have an opportunity to examine the specimens sent us, for we placed them on exhibition at the Fruit Grower's Meeting, and they disappeared before even the Fruit Committee saw them.

PEARS ON MOUNTAIN ASH, &c.—I want to know through the *RURAL* whether Pears will do well grafted on the Mountain Ash? How should they be grafted, in the root or body of the tree? Also, will they do well set on a dry side hill which faces to the south? Will it pay to raise Cherries for a market crop?—**J. D. Selo**, N. Y., 1859.

SEVERAL varieties of pears will succeed on the Mountain Ash, and this stock is said to be well adapted to light, sandy soils. Our nurserymen have only just learned what varieties will succeed on the quince, and we cannot say what varieties will grow best on Mountain Ash. Work on the stock as near the roots as convenient. Cherries may be grown with profit near cities that afford a good market.

COOKING MEAT, PIE-PLANT PIE, &c.

EDS. *RURAL*:—I am glad to see that some of the female contributors to the *Domestic Corner* of your excellent paper think there is something to be learned in regard to the cooking of meats, as well as making cake. It is a fact that a large majority of our housekeepers are sadly deficient in this branch of the culinary department; but in this day, when so much information can be obtained through the press, we cannot have much excuse for not knowing the best method of cooking a beefsteak or a sheep's head and pluck for our husband's dinner—when he is kind enough to provide us with the material. In a late number I noticed a recipe for cooking beefsteak, which would have been very good had the salt been left out while cooking, for it injures it materially to salt while broiling or frying. A very little may be sprinkled over it when taken from the fire, or a piece of butter will often season it enough for most people.

A word in regard to pie-plant pie. In preparing the stalks, I do not think it economy, or even necessary, to peel the skin off, for I think no person can tell the difference, when cooked, between that which has been peeled and that which has not. After it is cut in small pieces, it can easily be washed to remove the dust, and then, with plenty of sugar and good crust, makes a nice pie. And now, permit me to endorse the sentiments a late correspondent utters about the canine race. The women are the greatest sufferers from these mischievous brutes, for where one saves them a step in driving a chicken from the door, they have to take ten to see that their pantries or cellar doors are shut against their noses. I have no dislike for a nice dog, but for my life I cannot see the benefit of keeping one, unless it be to keep up the price of mutton, or rob the chickens and pigs of what justly belongs to them.

North Shenango, Penn., 1859. M. A. KINGSLEY.

INQUIRIES, PLAIN COOKIES.—Having seen in a late number of the *RURAL NEW-YORKER*, some recipes for *dysing*, I would like to learn through its columns, how to color woollen goods drab, or stone color, that will not fade. Also, whether any of your readers can give directions for preparing citron to use in cake and pies; and whether our common citron melon is suitable for that purpose.

I send a recipe for Plain Cookies, which is very good, thinking some of your housekeeping readers might like to try it. Four eggs; 2 cups sugar; ¼ cup of butter; 1 teaspoonful of saleratus in milk enough to dissolve it; just enough flour to roll out thin. Flavor with nutmeg or caraway seed.—**A READER**, Auburn, N. Y., 1859.

INFORMATION WANTED.—As some of the *RURAL* lets may be M. Ds., or just about as good, can any one give a remedy for weak eyes?—also, to remove a film from the eye? What is the best hair invigorator or restorative, or what will keep the hair from falling off? What is the best kind of varnish to use on oil paintings, and how should it be put on to preserve the picture from cracking? As good artists are hard to be found in the country, we poor "farmers' girls" have to get some knowledge the best way we can, or be satisfied with half-way affairs. We find by experience, that much of the boarding-school wisdom is all a "sham," even in the boasted "ornamental department."—**G. PRATTLEBURGH**, N. Y., 1859.

TOMATO WINE.—As an answer to an inquiry in the *RURAL NEW-YORKER* for making *Tomato Wine*, I send the following recipe, which I have always found good. To one quart of juice add 3 quarts of water, and 3 pounds of sugar, (not brown,) let it ferment four days then bung up, and let stand two weeks before using. Make from green tomatoes.—**MARY F. W. P.**, West Chester, Pa., 1859.

SAL-SODA will bleach very white—one spoonful is enough for a kettle of clothes.

THE DEAR LITTLE GIRL IS DEAD.

A little song is still!
A little warble that one summer made
So sweet a melody in our garden bowers
It brightened all the blooming of the flowers.
Alas, the garden bowers are clothed in shade,
The little song is still.

Two little feet have fled!
Two little, busy feet are heard no more
To fall as lightly as the summer rain
Upon the grass plot—no'er to come again,
And trip in joy across our cottage floor.
The little feet have fled.

Look upward in the night!
When you are bowed with grief and wild alarm,
See from the shining window of your star,
To beckon you to her bright home afar,
Your loved one reaches forth her beaming arms.
Look upward in the night!

Hearken when all is still!
Can you not hear the song an angel sings?
"Of such heaven's kingdom is," your God has said,
Pale mourners, from the dust lift up your heads,
And hear the music borne on zephyr's wings—
Hearken when all is still!

Henceforth let murmurs cease!
"Bless the little children," said the Lord,
"To come to me, of such heaven's kingdom is,"
Let sorrow cease, let faith take hold on this,
His promise—for eternal is His word.
Henceforth let murmurs cease!

Written for Moore's Rural New-Yorker.

A CHAT WITH YOUNG HOUSE-KEEPERS.

I AM not going to come at my object through any circumlocution of preface or introduction, but stepping, in imagination, (a swifter way than by steam,) into the sitting-rooms or kitchens of you LUCYS, and JENNIES, and ANNES, who have of late taken upon yourselves the vows of "love, honor and obedience," I settle myself, as though I were an aunt that you had known all your lives,—for a comfortable and cosy chat.

I am neither a prying "old maid," nor a meddling matron, however,—that I must give you to understand at once, or lose entirely the hearing sense of my auditors,—for the days of my youth lie not so far in the past that I have forgotten how peculiar and incurable is the spite which beginners in the art of "managing" have against these neighborhood nuisances. I know nothing of city ways or life, so I speak only to you who are *ruralists*,—who, having taken upon yourselves new responsibilities, are earnest to do for the best, and make the most of your *beginning*.

First of all,—attacking the enemy at the most formidable point,—please don't say to yourselves "I guess I know enough to keep house" without going to other folks for assistance." Perhaps you do,—it may be that you have grown up under the eye of a mother whom you were willing to learn of,—yet, again, it may not be, and perhaps something of the experience of one who has kept "eyes and ears open" as to the ways of doing, and the ways of leaving undone, may be of benefit in either case. I take it for granted that you have carried into your new sphere something of the romance of girlhood, for only the *real* cares, perplexities and sorrows of life can entirely uproot this, and I trust that they have not yet fallen to your portion. But with the romance of your new situation, with its happiness and bright fancies, have you room in your hearts also for thoughts of the duties it imposes; for reflections that should you take the wrong path at the beginning, a few years will bring you into a maze of perplexities and pains where you hoped to find your Eden,—a maze from which you will find that only the clue of *Love* can lead you, and that only through stern endeavor?

You must think of this, not only after but before you are bound by ties that nothing but death can sever, for it is no light thing to take into your keeping the happiness and well-being of a heart—perhaps the destiny of a soul.

You must have *ambition*,—not the article that bears the name, when it should be labeled *avarice*,—but ambition to do right, to be useful, to do all that woman can do for the happiness of others,—to be a thorough, practical keeper of the house which is your home.

You must have *pride*,—not the pride that carries a high head in contrast with modesty, but pride in doing *well* whatever you find to do,—pride that will not let others do for you what you can and ought to do yourself.

You must have *calculation*,—not the counting of dollars and cents *alone*, though this is necessary knowledge; but a quick and true perception of the best *uses* of the one, five, or ten talents which you hold, and a head clear enough to adapt your needs to your means.

You must have *order*. If the "bump" is not on your cranium, perhaps you may think that you are not accountable for leaving your bread-loaf in one pan, the slices cut from it in another, and both a temptation to flies,—for hanging or dropping your dish-cloth where half an hour of hunting will not find it, or for having half your chairs in the middle of the room, the table at right-angles with the wall in one corner, and the curtains with one end of the roll nearly at the top, and the other at the bottom of your window, but—if you want to be a good house-keeper and have a happy home, my advice is that you *raise* such bump by bringing your head in contact with the next hard substance that you meet; for, though I pretend to no knowledge of Phrenology, I have an idea that *fratting* lies next to order, and when the latter is not fully developed, the former has rather too much development,—running into the vacant ground adjoining.

You must have *patience*. It is one of the "divine attributes" in any situation, but as a wife and a house-keeper, you must have it, or there

will be loose ends in your household, temper-flashes between its inmates, and discord generally. "You must have"—I might go on saying to the last lines of a quire of paper, but I have not time to think of all your needs for you. If you have the will to be as nearly perfect in your sphere of life as you may be, you will not fail to think for yourselves, and that is all I am writing for,—to set you thinking. Yet I may enlarge a little on what I have said.

There are few among young house-keepers who have not the first requisite,—ambition,—yet there are many who have not the right kind. It is not *how much* you can do alone, but *how much* you can do *well*. I don't like to see young people lazily moderate in motion, but to my mind there is such a thing as "going on the jump" too much. It is destructive to shoe-leather at the least, and in the end you seldom accomplish more; for it is an old, a tried, and a proved saying, that "haste makes waste." Guard against a habit of saying, in reference to your work, or habits of doing it, "it would have been better, but I couldn't *spend time*." Time is used to the very best advantage in doing work thoroughly and well.

As to calculation, you all ought to know what it means, for *economy* can't live without it. There are a thousand little ways in which you can plan for convenience and comfort as well as saving, if you try. To prove it, never consign an article to the garret, or food to the pig-trough, until you have thought in vain of a way to make it useful.

But you must think for yourselves, I say again. The secret of all success lies in this, yet how few think it applicable or necessary in *just keeping house*! Try it,—sit down to the task; for it will be one if you are not used to it, and if you do not find it the best oil ever applied to domestic machinery, you may doubt the word of Oak Grove Farm, N. Y., 1869. AUNT MARY.

THE LITTLE HAND.

THE little hand! bless it, how confidently it is placed with our own. It trusts in its helplessness and weakness for guidance. Every nerve rests tranquilly, as its tiny fingers are encircled by a firm and loving grasp. Watch the footsteps of the little one as he ranges the lawn, and with his little hand he gathers the purple violets, and with childish glee he strews them around. His dark eyes look up roguishly as he runs laughingly on saying, "Catch me if you can."

How lovingly the little hand entwines its tiny fingers among your curls, or clasping them at your knee, lisps out an infant's prayer that speaks peace to the troubled heart as if an angel's voice had whispered it from heaven. Beautiful childhood! would it could be always shielded from harshness, from corroding care, and corrupt influence. Look at little hands stretched out for help from a harsh father, or an intemperate mother. There are five little ones, the eldest not more than seven, with large dark eyes and curling hair. She stands in front of a band of little ones, singing and keeping time with her little hands, for there are none to molest or make her afraid. She has been taken away from the dark fate that awaited her childhood's home, and the beautiful boy that she points out as her brother, that unnatural mother had placed a rope around his neck to strangle him, but was discovered and arrested in her dark design, in time to save his life. There he is, not four years old, with a doll in hand, and he looks up, his face radiant with smiles, as he replies to our simple question of "are you fond of dolls?" He has large dark eyes, and a noble head; we could predict a splendid career for him in the future, if rightly guided.

Little hands are all around us, seeking for guidance, relying upon the protecting influence of those older than themselves. Would that we kept ourselves pure, so that we could perform our duty faithfully and well. That nature must be hardened indeed that can see a tear drop fall from the eyes of childhood, or the little hand stretched out in vain.

Who cannot recall to mind little hands they have caressed and tenderly cared for, that have now passed on to the spirit land? Our darlings were laid to rest in their narrow house, their little hands filled with white rose buds, the last of summer's offering. Though now all unseen to our mortal gaze, their angel hands are still invisible ministers of love, drawing us to them in their beautiful home. Cherish, then, the little hand, and guard and guide it while you may, for it is an angel in your household. You know not how soon their wings will unfold and soar upward and onward into the world of love and light, leaving you in your anguish to mourn and lament over their brief stay. Blessed memories of the little hands that have clung to you in their simple, child-like faith and trust. Oh! may those memories never be laden with harshness or unkindness, "for of such is the Kingdom of Heaven."—*Mother's Mag.*

FRIENDSHIP.—We know that earthly affection is deepened and intensified by increased familiarity with its object. The friendship of yesterday is not the sacred, hallowed thing, which years of growing intercourse have matured. If we may with reverence apply this test to the highest type of holy affection, (that love which dwelt in the bosom of the Father from all eternity towards his Son,) what must have been that interchange of love which the measureless lapse of eternity had fostered—a love, moreover, not fiftal, transient, vacillating, subject to altered tones and estranged looks—but pure, constant, untainted, without one shadow of turning! And yet, listen to the words of Jesus, "As the Father hath loved me, so have I loved you!" It would have been infinitely more than we had reason to expect, if He had said, "As my Father hath loved ANGELO, so have I loved you." But the love borne to no finite being is an appropriate symbol.

Time wears slippers of list, and his tread is noiseless. The days come softly dawning, one after another; they creep in at the windows; their fresh morning air is grateful to the lips that part for it; their music is sweet to the ears that listen to it; until, before we know it, a whole life of days has possession of the citadel, and time has taken us for its own.

GIVING.

Is o'er thy sunny pathway
A shadow dark is thrown;
Or in a heart of purity
Some evil seeds are sown—
Know, then, the voice of duty
By thee has oft been spurned,
Or, from the poor, the lowly,
Thy footsteps have been turned.

Kind words thou hast not given—
The mourner's heart to cheer;
Or from the sufferer eyecids deigned
To wipe away a tear;
No voice amid earth's weary ones
Doth rise, thy name to bless;
No wonder earth seems dark and lone,
Or life a wilderness.

O, wouldst thou find some gentle balm
To soothe these shadowy hours,
Go forth amid the lowliest ones
And scatter joyous flowers;
Give gentle words—give freely
From thy heart's secret store—
Nor think the blessing lavished
Will come to thee no more;

For, oh! if on the waters
Thy bread is freely cast,
Ne'er deem it lost, for plentifully
It will return at last;
If fortune's smile thy path illumine,
And life seems glad and free,
Give freely, oh, give thankfully,
As God hath given thee.

South Danby, N. Y., 1859. MARY A. B.

Choice Miscellany.

A MAGAZINE OF THE LAST CENTURY.

LOOKING over a collection of old volumes, the other day, I found a magazine printed in London, in 1777,—a volume which, I doubt not, my great-grand-mother read, many long years ago, with as great pleasure as in these modern days her unworthy descendants peruse the pages of the *Atlantic*, or columns of the weekly newspaper. Each No. contains about fifty pages of reading matter, and romance, fashions, family government, medicine, philosophy, French tales, poetry and music, afford a sufficient if not a select quantity of reading material. The volume is embellished by a variety of wonderful copper-plate engravings. The first of these represents a lady of rank seated before her mirror, while her maid, who stands behind her, is performing the difficult task of hair-dressing.—A large number of hair pins, with ornamental heads, form a sort of crown in connection with a large puff above her brow. Her robe is trimmed with an immense quantity of ruffles and flounces, which would make one groan, even to think of making. Her father, her lover, and a page, are all present, watching, with evident interest, the structure which is being reared. The page plays the guitar, the lover assists the maid by passing the hair pins, and the father, seated near, with his hand raised and a smile of pleased surprise on his countenance, admires her beauty.

In another No. is a charming representation of a lady's head-dress, "*A la Zodiaque*." Near each ear are five curls of various dimensions, the remainder of the hair being combed over an immense cushion at the back of the head. This cushion is several times larger than the head, and in the form of a hemisphere. Around this is a band upon which the signs of the Zodiac are embroidered in gold and silver, jewels representing stars ornament its extensive surface, and over the left ear is a half moon. Do we wonder that a century ago hair-dressing was considered one of the fine arts!

LYSIDAS and ELPRIDA illustrate a pastoral tale. Sheep and cows, the most distant of which, in violation of all perspective, are as large as those nearer the foreground, walk with great complacency down perpendicular hills, and unexpectedly find themselves in very small valleys and behind very singular trees. Four pages of "poetical essays" are inserted in each No., in most of which some rustic swain, bewailing his lot, threatens to retire from public life and take up his abode in some lonely cave.

In the "Foreign News" the speedy surrender of the rebel army is prophesied, and the victories of the English troops and the humanity of General Howe, spoken of in the highest terms of praise.—The most amusing thing, however, is an account of "the trial of Mr. HONNE for a libel." The first charge is that an advertisement has been inserted in the *Public Advertiser*, "purporting to be an account of the Constitutional Society having met on the 7th of June, and agreed that the sum of £100 should be raised, to be applied to the relief of the widows, orphans, and aged parents of our beloved American fellow subjects, who, faithful to the character of Englishmen, preferring death to slavery, were for that reason only inhumanly murdered by the King's troops near Lexington, or Concord." This was signed by JOHN HONNE, and for this offense, after a long, and what now seems a very amusing trial, he was sentenced to pay a fine of £200, to be imprisoned twelve months, and at the expiration of that time to give security for his good behavior for three years.

A magazine of the last century! There fits before my mental vision scenes of those good old English days—lords and ladies, and more common folk clad in garments to the fashion of which the nineteenth century is a stranger—groups of eager listeners gathered around the "keeping-room" fire to hear news of the war—fathers with listening ears, and mothers with anxious countenances—the one eager to hear of a son's bravery—the other anxious lest the news should be of defeat and death. And then there rises a far off view of a distant land—a land thought by many a sturdy Englishman to be fit only for the dwelling place of

Indians and wild beasts—a country beyond the boundaries of civilization, present or prospective. But now,—who need comment on the changes which eighty years hath wrought?

MRS. J. W. WILLARD.

Zumbrota, Minn., 1859.

PROSE POETRY.

THE poet-editor of the *Chicago Journal*, B. F. TAYLOR, Esq., gives the following beautiful description of the Northern Lights, that were so brilliantly displayed recently:

THE NORTHERN LIGHTS.—If we could always get change for that noble word-coin, "Aurora," and think of *aurora hora*—the golden hour—we should like "Aurora Borealis" better;—the northern golden hour, the northern morning. And a golden hour it was on Sunday evening last, when thousands of eyes brightened in the colored lights that shone through God's painted window in the north. Its only parallel within our remembrance was eight years ago, when we penned a little description that is as fanciful as was the display. How it seemed to us was wrapped up in a rhyme for convenient transportation; and here is the whole of it.

To claim the Arctic came the Sun
With banners bright of burning zone,
Unfurled, they streamed from airy spars,
And froze beneath the light of stars.

But the prose part of the description capered after this wise: Last night, the moon, in a new coat of silver, rode high in the west, while in the north and north-east, pure, pearly white, overlaid the blue—then deepened to an orange—then turned to a crimson; until it looked like a pillar of fire in the wilderness, or a daguerreotype of sunset.—Anon it changed; the crimson was pink; the blue, a blush; and the pearl a delicate green.

What they were doing up aloft, is more than we know. Whether rehearsing sunset or sunrise; shifting scenes for the never-to-be-performed drama of "To-morrow;" or spreading out rainbows on the upper decks to dry, is a mystery.

Now and then, white, silvery looking spars were lifted from the northern horizon, and converged in the zenith; and it occurred to us, that, may be, they were repairing this great blue tent we live under, and that we saw the blue spars and the red linings of the curtains that were thrown up, to keep them out of the way of the aerial craftsmen. And then again, as it crimsoned, and pearly, and clouded so exquisitely, we fancied it might be Heaven's grand pattern for sea shells to tint by, discovered at last.

And once more, such a beam, nay, cloud of red light, streamed out into the night, and over the stars, that we would be sure it must come from Heaven's painted window, and that somebody—perhaps somebody that we once knew and loved—was passing to and fro, giving us, without the walls, a glimpse or two of the glory within. And who knew that it might not be the evening of some forgotten and long past yesterday, thus "revisiting the glimpses of the moon,"—one that you and we loved, and have sighed for, more than we could care to tell, and would give a dozen to-morrows to see again.

As we looked, it changed, and the heaven, from far below the "dipper" to the zenith, was a *flutter*. Through the silver lace-work shone the stars, and the blue and the galaxy itself. What could it be, but the dim scars of the loved and lost, thus waved in token of remembrance to the earth beneath? And why not? How beautiful and how calm lay that earth beneath the great Argus sky! The eyes of hundreds were turned towards heaven, that, during the broad and glaring days forget there is a heaven, and a treasure in it. They remembered it then, and remembered it in turn.—Ah! if our fancies were only half true! But while we gazed and mused, the vision vanished; the window was curtained, the rehearsal over, the sea shells taught their lesson, the tent "as good as new," the last scene shifted, and the old yesterday faded out.

BEWARE OF PARTING.

BULWER, the master novelist, writes a reflection which will appeal to the sensibilities of every man and woman:

"There is one warning lesson in life which few of us have not received, and no book that I can call to memory has noted down with an adequate explanation. It is this, 'Beware of parting!' The true sadness is not in the pain of the parting, it is in the When and How you are to meet again with the face about to vanish from your view! From the passionate farewell to the woman who has your heart in her keeping, to the cordial goodbye exchanged with pleasant companions at a watering-place, a country-house, or the close of a festive day's blithe, or a careless excursion—a cord, stronger or weaker, is snapped asunder in every parting, and Time's busy fingers are not practiced in re-splicing broken ties. Meet again you may; will it be again in the same way? With the same sympathies? With the same sentiments? Will the souls, hurrying on in divers paths, unite once more, as if the interval had been a dream? Rarely, rarely! Have you not, after even a year, even a month's absence, returned to the same place, found the same groups re-assembled, and yet sighed to yourself, 'But where is the charm that once breathed from the spot, and once smiled from the faces?' A poet said, 'Eternity itself cannot restore the loss struck from the minute.' Are you happy in the spot in which you tarry with the persons whose voices are now melodious to your ear? Beware of parting! or, if part you must, say not in insolent defiance to Time and Destiny—'What matters! we shall soon meet again.' Alas, and alas! when we think of the lips which murmured 'Soon meet again,' and remember how in heart, soul, and thought, we stood forever divided the one from the other, when once more, face to face, we each only exclaimed, 'Met again!'"

ONE contented with what he has done in this world, stands but a very small chance of becoming famous for all he may do hereafter. He has laid down, and the grass will soon be growing over him.

SABBATH MUSINGS.
"GOD'S FIRST TEMPLES."

BY ELLEN C. LAKE.

"The groves were God's first temples. Ah, why should we, in the world's riper years, neglect God's ancient sanctuaries?"

No sound of solemn organ-tones
Breaks through the quiet air,
No chiming of cathedral bells
The winds of summer bear;
No gorgeous arches echo back
The hymnology of our praise,
No marble pillars make the strength
Of temples here upraised.

Only the whispers of the wind
Under the maple bough,
Blent with the joy-hymns of the birds
In the rippling music's flow;
Only the clear and holy calm,
The silent air of rest,
Wake to a life both true and warm,
The faith within our breasts.

Of old the prophets stood and spake
Where'er the spirit bade—
We of these years go up to pray
Only in churchly shade.
But struck apart from other souls
By wounds of pain or sin,
The changeless temple of our God
Calls us to enter in.

Under their arches, broad and deep,
One Eye alone can see,
One Priest doth shrive and comfort us
Whate'er our pain may be;
For all the mysteries of the creed
Are compassed by a word,
The Love that ransomed us, for love
All prayers of earth hath heard
Charlotte Centre, N. Y., 1859.

SELF-KNOWLEDGE.

"KNOW THYSELF" is one of the most comprehensive precepts in the whole moral system. It was considered of such vast importance by the ancients that it constituted one of the three precepts consecrated in golden letters at the temple of Delphos, and was supposed to have been given originally by Apollo himself. As that idolatrous, superstitious people conjectured that this sublime precept originated with their God, and was transmitted to them from heaven, should not we in this enlightened age, ferret out its origin, and strive to comprehend and appreciate its value? What they conjectured we are sure of. This oracle is uttered and unfolded to us in many ways in the revelation of God's word. One great design of the scriptures is to teach man to know himself,—to know his fallen and depraved condition by nature, and his inclination to remove still further from the standard of virtue.

Self-knowledge is commendable, because it is the root of all wholesome information. Man should know what he is, that he may know what he is to be, and have some faint idea of what he can be. It teaches man his mental capacities, his deficiencies, his most prominent traits of character, and his besetting sins. It points out too fully developed passions, which need subduing, and it brings to light those weak points which need guarding and fortifying. It is the keystone in the fabric which man is rearing for himself. It is the trusty pilot who can guide with unerring hand our barque across the troubled sea of life; and steer our course from those siren isles which so often wreck the thoughtless voyager. This knowledge is preferable because it is attainable by all persons. To become versed in it does not require that depth of thought and force of penetration which is demanded by the sciences; those of common capacity can call home their rambling thoughts, turn them in upon themselves, and watch the motions and intents of the heart. To do this effectually, we have got to raise that veil which the deceit of the heart has thrown around us, and discharge the fawning sycophant and delusive flatterer who has so long stood sentinel at the door, forbidding the admittance of ambassadors of truth and inspection. When this is done, we can then probe the heart in all its labyrinth and reveal the dormant germ and hidden sin. We shall then have access to the fountain head, where we can search out the bane which has alloyed its source, and poisoned the whole stream. We shall find the bitter waters of self-seeking, sweeter than the waters of the Ganges to its Hindoo worshippers. Though the master-mind of the royal sage, feast on the mysteries of wisdom, yet shall ignorance of self bow down the spirit of a Solomon to idols. J. S.

Prospect Hill, N. Y., 1859.

Don't take your Bible and say, "I don't want to read it, but I suppose I must," nor your hymn book, and say, "I don't want to sing, but I guess I had better;"—don't say, "I don't want to pray, but I will, and keep praying till I do feel like it." I am in the habit of likening the Savior in my thoughts to some great and noble friend—don't you suppose, if you went to the door of such a friend and said to him, "I did not want to see you a bit to-day, but I was afraid you would feel hurt" if I did not come, and would treat me accordingly," that he would say, "If you don't want to see me, I am sure I don't want to see you;" and do you suppose that God is less delicate in friendship than an earthly friend?—*Becher.*

GOD'S BOUNTY.—The flowers do not implore the sun to meet them. He looks down with genial warmth, and draws them forth from the dark ground to rejoice in his light. And why should we implore God to grant us the spiritual mercies we desire, as if He were cold and unwilling, when over us He hangs, like the sun over the earth, rich in all bounty, and longing to bestow it?

THE ART OF TEACHING.

Much has been said and written upon this subject, yet how few of our educators seem to understand anything of the real and proper method of imparting instruction. Generally speaking, some youth, just emancipated from the confinement of the district school, where he has, perhaps, "been through the Arithmetic," and obtained a slight smattering of English Grammar, Geography, &c., imagines himself fully prepared to teach "young ideas how to shoot," and thus equipped he starts forth in quest of employment. This obtained, he commences the usual routine of bearing recitations, solving problems, and the thousand-and-one duties which present themselves with each revolving day. The children measure his capability to teach by the readiness with which he answers their arithmetical puzzles, and the parents judge of his proficiency and success by the rapid strides with which their offspring march through their text books,—the number of times they have been through their readers,—and the favorable account the children bring home of their wonderful proficiency in their various branches of study.

Here, it appears to me, is one cause of the many imperfect teachers. The standard by which the public judge is an improper one. Rapidity is taken for thoroughness; a knowledge of words instead of a knowledge of things; and until this standard is changed—until the public mind becomes aware of the fact that no one is properly educated in any branch of science, until he is thoroughly acquainted with the principles upon which that science is founded, the crop of poor instructors will be large. For instance, in studying Arithmetic, it is better to go through *once*, with a thorough analysis of its principles and rules,—even if only a few examples under each head are solved—than a score of times, in the semi-mechanical method which is so much in vogue at the present day. Yet this change must be made by the teacher himself. He must labor to impress the truth of these facts upon the minds of his pupils, and through them to reach and influence the minds of the parents. Could this be done thoroughly and systematically, a vast improvement would be made in our educational system, and a step of great importance taken toward the acme of literary excellence.

This subject, when viewed in its proper light, goes far toward showing the vast responsibility which rests upon the school-teacher. Upon him not only rests the duty of instructing the young, but of diverting the public mind from its false position and pointing it to that which is true,—tearing off the veil which ignorance and prejudice has placed upon their eyes, and holding truth up to their view in all its fair proportions. And as he comes in contact with error in its thousand forms, and prejudices and biases as peculiar and various as the individuals who possess them, he must be a man of great originality and invention,—one whose head is well stored with useful knowledge, whose reading has been varied and extensive, and whose eye is ever open to the true interests of society, both old and young. This is a subject worthy of the deep and earnest attention of every one interested in our National and individual prosperity, and one which presents itself not only to the teacher but to every one in any way connected with our Educational System.

PHYSIOLOGY IN SCHOOLS.

How greatly this important branch is neglected in our common schools. Even teachers themselves are ignorant of this study. I think the assertion can be sustained, that one-half of the District School Teachers of this State do not understand Physiology. They do not know the number of bones in the human system, nor the number of pulsations of the heart, unless they have learned by observation.

Now, it is my belief that every teacher should be able to pass an examination in Physiology, as much as Grammar. Although it is not taught by means of text books, it can be taken up as a lecture during the time of general exercise. This is accomplished very easily in the country where you have everything at hand. You can easily procure the different parts of an animal, and dissect and explain the functions of different parts in a plain and convincing manner. You cannot imagine what an interest this will create, and the anxiety with which the scholars will await the return of the general exercise, for they know something good is coming.

It will not only excite the children, but it will put some new ideas in the heads of the parents, giving them a good impression of the teacher. When we see the benefit that is derived from a few minutes' labor, and observe how much difference such lectures have caused, then will we witness and feel the teacher's true reward. Follow Teachers, try this, and if my views are right, you will succeed.

Prospect, Oneida Co., N. Y., 1859. E. L. H.

VERY YOUNG CHILDREN AT SCHOOL.

The statistics show that a large number of children are sent to school at too early an age. We sometimes hear parents object to the rule adopted by Committees, excluding all under four, and, in some towns, five years of age. It is a question whether the limit should not be higher than lower. In some cases it is frankly acknowledged that "they are sent to school to get them out of the way," and, as this educational fever is intermittent and hebdomadal, uniformly most prevalent on Mondays, the motive may be no better where there

is less frankness in its avowal. The confinement of children at so early an age must be prejudicial to the proper development of their physical powers. Action is as necessary to the health of a little child, as the atmosphere is to life. To keep a child still and unoccupied, is doing violence to its physical nature. In its very sports and plays, a child may be learning what are, for its age, the most important and practical lessons.

It is true, a precocious development may be secured, by a premature stimulus of the mind, carried on in advance, and to the neglect of physical and moral training. Dr. Johnson's suggestive question, "What becomes of all the clever children?" fitly indicates the value of such precocity. A few years ago, infant schools suddenly became very numerous, and little lispers astonished wondering spectators by their ready answers, from "Infant Philosophy," "Physiology made easy," etc. Some thought a new era in education was about to dawn upon the world, and predicted that those precocious prattlers were the harbingers of "the good time coming." Time, however, has not verified their predictions. But the eager attempts still made in certain directions, to convert our schools into nurseries, show that some vestiges of this exploded theory still remain. The number of children under five, attending Public Schools in Massachusetts, the last year, was 12,370. It is gratifying to observe that there was a decrease for the year of 1,238.—*Massachusetts Teacher.*

SCHOOL LIBRARIES.—The benefits of a well-selected school library in every school-room in the State surpass computation. The good books in them would be useful for reference not only during the sessions of school, but would keep many from idleness and vice, from sorrow and despair, when no other but these silent and impressive monitors and teachers were present. They would admonish and teach our youth and bless our homes the whole year. They would banish from among us the hurtful literature so cheaply and abundantly furnished, with tempting pictures, at every corner. If our youth are taught to read they will read something. If parents do not see that reading, in cheap form, is thrown in their way, bad men will. These good books would form a correct taste for reading, which could not afterwards well be perverted, leading to habits of inquiry which must result in better citizenship, wealth and a happier state of society. The quickening, conservative and elevating influence of such a library in every town can require no argument.—*Hon. Jonathan Tenney.*

WEYER'S CAVE.—No. I.

This celebrated Cave is situated in the Valley of Virginia, seventeen miles north of Staunton, and near the western base of the Blue Ridge. It was discovered in the year 1804, by BERNARD WEYER, a fox-hunter, who, while searching for a lost trap, thus stumbled upon immortality.

The entire length of the Cave, in a direct line, is about sixteen hundred feet, but this distance is nearly doubled by the numerous branchings and windings of its passages. In height it varies from four to ninety feet. The floor is dry and hard, but the walls are constantly wet with the lime-water which trickles from above. These drippings in time form the beautiful incrustations and strangely life-like statues which people almost every room of this subterranean palace.

At the time of its discovery the entrance was so small as to make the Cave somewhat difficult of access, but the present owner has removed the rocks by blasting, so that a man may enter standing nearly erect. Passing for some distance through a narrow and irregular passage, the ceiling suddenly lifts, the walls expand, and the "Guard Room" is before us. Around the walls are ranged rows of pale images, resembling, by the dim light of the candles, groups of statuary, and appropriately called the "Guards." In the center of the arched roof is an opening bordered with brilliant stalactites, which reveals to us a lofty dome, surrounded with columns and hung with gorgeous drapery.

From this room a passage sixty feet in length, and terminating with a descent of thirteen feet, brings us into "Solomon's Temple." Here we find an elevated seat, glittering with snowy stalactites and hung with elaborately wrought drapery, which is called the "Throne." In a corner of the same room a beautiful stalactite depends from the roof, exactly resembling a chandelier, while just

behind and beneath it the formations resemble a pulpit and desks. Strangely out of keeping with the rest of the room is a mass of rock called "Niagara Falls." So perfect is the resemblance to a cataract that we can almost fancy a time when some magic wand touched the plunging waters and foaming spray and changed them into stone. Just above the cataract a stalagmite, somewhat similar in form to a man in the act of leaping, is called "SAM PATCH."

Next in order in the guide-book, though not in order as we visited the rooms, is the "Shell Room." This, formerly called the "Radish Room," is remarkable for the beautiful formations which adorn its roof. Thousands of small stalactites, various in color and form, depend from the ceiling, and as the guide lifted his light among them, the pendant crystals, with drops of lime-water sparkling among them, assumed a brilliancy which recalled to the mind the wonders of ALAN-NE'S palace.

Passing through the "Porter's Lodge," a long, narrow room of no special attraction, we enter the "Pantheon," and leaving the direct route, gain access to the "Lawyer's Office," a room fitted up with strange imitations of boxes, benches, rolls of parchment and other legal paraphernalia. In the floor is a reservoir of delicious water, cool, and clear as crystal, from which visitors are accustomed to refresh themselves. Still keeping out of the main way we visit "Weyen's Hall," where a couple of stone figures are pointed out, which the imagination, with considerable effort, transforms into the fortunate hunter and his dog. The third and most interesting of these side rooms is called the "Armory." It contains many magnificent stalactites, numbers of which bear a strange resemblance to the various implements of war. One of these, the "Shield of Ajax," is surrounded with armorial accompaniments, and in a hall dedicated to MARS, seems well placed and appropriately named.

BERTHA MORTIMER.

A LIST OF WONDERS.

Among the thousands of marvelous inventions which American genius has produced within the last few years, are the following, compiled from the Patent Office Report:

The report explains the principles of the celebrated Hobbs Lock. Its "unpickability" depends upon a secondary or false set of tumblers, which touches the real ones. Moreover, the lock is powder-proof, and may be loaded through the key hole and fired off till the burglar is tired of his fruitless work, or fears that the explosions will bring to view his experiments more witnesses than he desires.

A harpoon is described which makes the whale kill himself. The more he pulls the line, the deeper goes the harpoon.

An ice-making machine has been patented, which is worked by a steam engine. In an experimental trial, it froze several bottles of sherry and produced blocks of ice the size of a cubic foot, when the thermometer was up to eighty degrees. It is calculated that for every ton of coal put into the furnace, it will make a ton of ice.

From Dr. Dale's examiner's report, we gather some idea of the value of patents. A man who had made a slight improvement in straw-cutters, took a model of his machine through the Western States, and after a tour of eight months, returned with forty thousand dollars. Another man had a machine to thresh and clean grain, which in fifteen months, he sold for sixty thousand dollars. These are ordinary cases—while such inventions as the telegraph, the planing machine and India rubber patents, are worth millions each.

Examiner Lane's report describes new electrical inventions. Among these is an electrical whaling apparatus by which the whale is literally "shocked to death." Another is an electro-magnetic alarm, which rings bells and displays signals in case of fire and burglars. Another is an electric clock, which wakes you up, tells you what time it is, and lights a lamp for you at any hour you please.

There is a "sound gatherer," a sort of huge ear-trumpet, to be placed in front of a locomotive, bringing to the engineer's ears all the noise ahead, perfectly distinct, notwithstanding the noise of the train.

There is an invention that picks up pins from a confused heap, turns them around with their heads up, and then sticks them in papers in regular rows.

Another goes through the whole process of cigar making, taking in leaves and turning out finished cigars.

One machine cuts cheese; another one scours the knives and forks; and another rocks the cradle; and seven or eight take in washing and ironing.

There is a parlor chair patented that cannot be tipped back on two legs—and a railway chair that can be tipped back in any position without any legs at all.

Another patent is for a machine that counts passengers in an omnibus and takes their fare. When a very fat gentleman gets in, it counts two and charges double.

There are a variety of guns patented that load themselves; a fishing line that adjusts its own bait, and a rat trap which throws away the rat, and then baits itself, and stands in the corner for another.

There is a machine, also, by which a man prints instead of writes his thoughts. It is played like a piano forte. And speaking of pianos, it is estimated that nine thousand are made every year in the United States, giving constant employment to one thousand nine hundred persons, and costing over two millions of dollars.

ARTESIAN WELLS.

The Columbus (Ohio) Gazette gives the following account of the boring of an artesian well in the State Capital grounds of that city:

At the depth of 123 feet below the surface, the auger first struck a hard limestone rock, and at 149 feet limestone water appeared; at 180 feet, sulphur; and at 675 feet salt water veins were struck. At 884 feet slate or shale rock was reached, thro' which the auger penetrated to the depth of 1,974 feet. At the depth of 1,445 feet, iron tubing was inserted for 225 feet in length, which prevents the brittle, soft, shelly rock from filling up the cavity.

On Monday morning last, the borings indicated the presence of sand rock, giving the most flattering prospects of a near approach to water. On Wednesday last the auger reached a depth of 1,990 feet, sinking from four to five feet every twenty-four hours. The workmen are more encouraged at this time than they have ever been heretofore, and we shall not be at all surprised to hear of the entire success of the experiment.

The strata perforated by the auger may be set down as follows:—Loam, sand and gravel, 125 feet; and sand rocks 14 feet. The bore of the well to the depth of 1,700 feet is 4½ inches in diameter; below that 3½ inches. The cost of the work thus far is about \$9,000.

There is an Artesian well at Louisville, Ky., of three inch bore, and 2,086 feet deep. The water rises by its own pressure, when confined in tubes, 170 feet above the surface, and it is said discharges 260 gallons per minute. The St. Louis Artesian well at Belcher's sugar refinery, is 2,199 feet deep, and the water rises 75 feet above the surface of the ground. Some of the salt wells near the Ohio, Muskingum and Hocking rivers, are from 1,500 to 2,000 feet deep.

ALGEBRAICAL PROBLEM.

A FARMER has four flocks of sheep. In the second are four more than nine times the square root of one-fourth the number in the first. The third contains double the number in the first and second, and the fourth ten more than one-eighth the number in the third. The whole number in the four flocks is 848; how many are there in each flock?

ANSWERS TO KNIGMAS, &c., IN No. 508.

Answer to Miscellaneous Enigma:—Knavery is the worst trade.
Answer to Problem:—They can. Length 108, and width 160 rods.

THE ODOES WE ENJOY.—CAMPHOR.

THAT solid, concrete substance called Camphor, is known to all Young Ruralists, for we doubt if there is any one thing more generally found in the houses throughout the country, not even excepting our National Narcotic—tobacco. Some one has said, "concerning the simplest and most familiar objects men are too apt to be the least informed," and as this may be the case with Camphor, we take an illustration of its source, together with a description of varieties and mode of manufacture, from JOHNSTON'S *Chemistry of Common Life*, hoping our young readers will be gratified therewith. Scale, one inch to twenty feet. Scale for flower and leaf, one inch to four inches.

CAMPBOR TREE AND LEAF.

"There are several known varieties of camphor. The two most familiar in commerce, are the camphor of Japan, called also Dutch camphor, because it is usually brought to Europe by the Dutch, and the China or Formosa camphor. Every part of the camphor tree (*Laurus camphora*) is impregnated with the perfume. It is extracted by chopping the branches and boiling them in water; the camphor rises to the surface, and becomes solid, when the water is afterwards allowed to cool.

The odor of the camphors is powerful, very characteristic, and to many persons very agreeable. It is used for scenting soaps, tooth-powders, and numerous other preparations for the toilet.

What is called Borneo camphor is obtained from a different tree (*Dryobalanops*), but by the action of nitric acid is converted into common camphor. An artificial camphor also is prepared from oil of turpentine; but it does not possess the composition or fragrance of the laurel camphor, and cannot be used as a substitute for it."

NOBLE SENTIMENTS.

This is an agreeable world, after all. If we would only bring ourselves to look at the subjects that surround us in their true light, we should see beauty where we behold deformity, and look and listen to harmony where we heard nothing but discord. To be sure, there is a great deal of vexation and anxiety to meet—we cannot sail on a summer sea forever, yet, if we preserve a calm eye and a steady hand, we can so trim our sails and manage our helm, as to avoid the quicksands and weather storms that threaten shipwreck. We are members of one great family; we are traveling the same road and shall arrive at the same goal. We breathe the same air, are subject to the same duty, and shall lie down upon the bosom of our common mother. It is unbecoming, then, that brother should hate brother; it is not proper that friend should deceive friend; it is not right that neighbor should deceive neighbor.

We pity that man who can harbor enmity against his fellows; he loses half the enjoyment of life; he embitters his own existence. Let us tear from your eyes the colored medium that invests with the green hue of jealousy and suspicion; turn a deaf ear to scandal; breathe a spirit of charity from your hearts; let the rich gushings of human kindness swell up as a fountain, so that "the golden age" will become no fiction, and the islands of the blessed bloom in more than Hyperian beauty.

THERE are many who say more than the truth on some occasions, and balance the account with their consciences by saying less than the truth on others.

TO RURAL AGENTS, SUBSCRIBERS, &c.

THE RURAL NEW-YORKER enters upon a New Quarter this week, and we embrace the occasion to notify its Agents, Subscribers and other friends that single and club subscriptions—either for a year, or three months, on trial—are now in order and respectfully solicited. To those who know and appreciate the paper, we need only say that the quarter upon which we now enter, and the ensuing volume, will be worthy the enviable reputation the RURAL has attained—and all others are invited to give it a careful examination. It has thousands of ardent and influential friends, each of whom will, we trust, make some effort (during the ensuing few weeks and months), to augment its circulation and usefulness in their respective localities.—and Now is the Best Time to Commence the Campaign. As liberal Premiums and Gratuities will be given for Clubs, &c., as last year.

MOORE'S RURAL NEW-YORKER

NEWS DEPARTMENT.

ROCHESTER, N. Y., OCTOBER 15, 1859.

DOMESTIC NEWS.

Matters at Washington.

WHILE it is authentically stated that Minister Ward did set out for Peking, there is now, after having exchanged ratifications, no official advice received at the State Department. It may be mentioned that Captain Tatum, in a letter dated July, says that the invitation of the Governor of the Province to Mr. Ward designated the 8th of that month for a conference with him.

But little official information has been received in official quarters, relative to the filibuster movements. As to the reported departure of a party of filibusters, the only authentic account in the possession of the Government, is, that they left in a tug boat about 10 miles below New Orleans, but which could not convey them to the place of their destination. They doubtless expected to be taken on board a larger and more suitable steamer. In the meantime, the federal officers were, according to their instructions, to use every legitimate means to intercept the filibusters.

Lord Lyons, the British Plenipotentiary, has had a protracted interview with Secretary Cass in regard to the departure of the Nicaraguan Expedition. He announced it as the determination of his Government to protect Nicaragua by force against invasion. This course is recognized by the Government of the United States, and therefore a telegraphic dispatch was at once sent to the commander of the British squadron, directing him to land such a force as may be required for the expulsion of the filibusters, should they succeed in effecting a landing.

T. B. Beaumont, formerly of Jamaica Plain, N. Y., now a resident of Hong Kong, China, in a letter dated July 28d, says, a rumor here, probably a Chinese story, is, that the Emperor has sent a communication to the Governor of Shanghai, saying that the firing from the forts of the Peiho river upon the British and French Embassy, was not by his orders, but by those of Mandarins, whose heads he has ordered to be struck off for the act. It is expected that the American Minister, Mr. Ward, has proceeded to Peking.

Perilous Aeronautic Voyage.

In the last issue of the RURAL NEW-YORKER we made brief mention of the balloon ascension of Messrs. LA MOUNTAIN and JOHN A. HADDOCK, at Watertown, Jeff. Co.; the fact that they were nine days absent without a word as to their whereabouts, and the receipt of a telegraphic dispatch stating they had "landed 800 miles north of Watertown in the Canada wilderness." Since that date Mr. Haddock has returned to the editorial chair and furnishes his readers with a graphic account of the trip. We make extracts as follows:

Every arrangement had been made for a successful inflation, and at 27 minutes before 6 P. M., the glad words "all aboard" were heard from Mr. La Mountain, and myself and that distinguished aeronaut stepped into the car. Many were the friendly hands we shook—many a fervent "God bless you," and "happy voyage," were uttered and many handkerchiefs waved their mite adieu.

As we rose into the light fleecy clouds, they looked, between us and the earth, like patches of snow we see lying upon the landscape in Spring-time; but when we rose a little higher the clouds completely shut out the earth, and the cold white masses below us had precisely the same look that a mountainous snow-covered country does, as you look down upon it from a higher mountain. In six minutes we were far above all the clouds, and the sun and we were face to face. In eight minutes after leaving the earth, the thermometer showed a fall of 24 degrees. It stood at 84 when we left. The balloon rotated a good deal, showing that she was ascending with great rapidity. At 5.48 the thermometer stood at 42, and falling very fast. At 5.50 we were at least two miles high—thermometer 34. At 5.52 we put on our gloves and shawls—thermometer 32. The wet sand bags now became stiff with cold—they were frozen. Ascending very rapidly. At 5.54 thermometer 28, and falling. Here we caught our last sight of the earth by daylight. At 6 o'clock we thought we were descending a little, and Mr. La Mountain directed me to throw out about 20 pounds of ballast. This shot us up again—thermometer 26, and falling very slowly. At 6.05 thermometer 23—my feet were very cold. At 6.10 thermometer 18. We drifted along until the sun left us, and in a short time thereafter the balloon began to descend. At 6.30 thermometer 22—rising. Threw over about

15 pounds of ballast. We must have been, before we began to descend from this height, 3½ miles high. At 6.32 thermometer 23—rising. We were now about stationary, and thought we were sailing north of east. We could, we thought, distinguish water below us, but unable to recognize it. At 6.38 we threw over a bag of sand—making 80 lbs. of ballast discharged—leaving about 120 lbs. on hand. We distinctly heard a dog bark. Thermometer 28—rising rapidly. At 6.45 thermometer 33. At 6.50 it was dark, and I could make no more memoranda. I put up my note book, pencil and watch, and settled down into the basket, as much at home as though at my post in the Reformer office. From this point until the next morning I can only give my experiences from memory.

We heard, soon after dark, a locomotive whistle, and occasionally could hear wagons rumbling along the ground or over a bridge, while the dogs kept up an almost ceaseless siren. We sailed along, contented and chatty, until about half past seven, when we distinctly saw lights and heard the roaring of a mighty waterfall. We descended into a valley near a very high mountain, but as the place appeared rather forbidding, we concluded to go up again. Over with 80 lbs. of ballast, and skyward we sailed. In about 20 minutes we again descended, but this time no friendly light or "deep mouthed watch dog's heavy bay" greeted us. We were over a dense wilderness, and settled down over a small lake. We had our life preservers ready for use, but got up again by throwing over all our ballast except about 18 pounds. Mr. La M. now said it was folly and madness to stay up any longer, that we were over a great wilderness, and the sooner we descended the better. We concluded to settle down by the side of a tree, tie up, and wait until morning. In a moment we were near the earth, and as we fell I grasped the extreme top of a high spruce, which stopped our descent, and we were soon fastened to it by the large drag rope. The touch of that spruce sent a thrill of discomfort to my heart, for I knew that its kind did not grow in any well settled, nor any warm country.

Mr. LaMountain said, after he looked around, and made as much of an examination of the scenery as we could do for the darkness and rain, (for it had rained the past hour) that the "Atlantic was played out—we were far into the woods, and if we got out alive we ought to be thankful." We rolled ourselves up in our blankets, and patiently waited until morning. The rain dripped down upon us in rivulets from the great balloon, and it was not long before we were wet as men could be. After a night passed in great discomfort we were glad to see the first faint rays of daylight. Cold, wet and rainy, the morning broke, the typical precursor, we were to learn, of many other mornings to be spent in those uninhabited wilds. The rain did not cease, and we concluded to throw over all we had in the balloon except a coat apiece, the life preservers, the anchor and compass.

The Atlantic, relieved of her wet load, rose majestically with us, and we were able to behold the country below. It was an unbroken wilderness of lakes and spruce—and we felt, then, that we had gone too far, through a miscalculation of the velocity of the balloon. As the current was driving us still to the north, we dare not stay up, as we were drifting further and still further to that "frozen tide" from which we knew there could be no escape. Mr. LaMountain seized the valve-cord and discharged gas, and we descended in safety by the side of a tall spruce. We made the Atlantic fast by her anchor, and for a moment talked over what we should do. We had not a mouthful to eat. No protection at night from the damp ground, were distant we knew not how far from any habitation, were hungry to start with, no earthly hope of raising a fire, and no distinct idea as to where we were. We concluded to trust to the compass, and took a course which would bring us out of any wilderness we might be in.—We settled in our own minds that we were either in John Brown's tract or in the great Canada wilderness—to the south, we thought, of the Ottawa, and knew that a course south by east would take us out, if we had strength enough to travel the distance.

To the south-east, then, we started. After traveling about a mile and a half we came to the bank of a small creek, flowing down from the westward. At this point we were agreeably surprised to find that some human being had been there before us—for we found several small trees cut down, the coals from an old fire, and a half barrel which had contained pork. I eagerly examined the stamp. It read,

"Mess Pork,
P. M.
Montreal."

This settled the question that we were in Canada—for I very well knew that no Montreal inspection of pork ever found its way into the interior of New York State. We traveled all day Friday up the unknown creek—crossing it about noon on a floating log—and striking on its southern bank, a "blazed" track, which led us up to a deserted timber road, lying on the opposite side from a large lumbering shanty.

For four days our adventurers were rafting down rivers or journeying across the country, with nothing to eat but a frog apiece and four fresh water clams. While poling the raft they had constructed upon one of the lakes, seemingly so numerous in that vicinity, they heard the report of a gun, quickly followed by a second report. Mr. Haddock remarks:—"No sound was ever so sweet to me as that. We hallooed as loud as we could a good many times, but could get no response. We kept our poles going, and had gone about half a mile when I called La Mountain's attention to what I thought was a smoke curling up among the trees on the side of the hill. My own eyesight had begun to fail me to an extent that I could not depend upon it when a long, steady gaze was necessary. He said it was smoke, and that he thought just below it, on the bank, was a bark canoe. In a few moments the blue smoke rolled gently yet unmistakably above the tree tops, and we felt that we were saved."

Paddling the raft to shore, Mr. H. hurried up the bank, and came upon the shanties of a lumbering station. "I hallooed," he writes—"a noise was heard inside, and a noble looking Indian came to the door. 'Vous parlez Français?' was my eager

inquiry, as I grasped his outstretched hand. 'Yes, sir—and English, too.' He drew me into the cabin, and there was the head of the party, a noble-hearted Scotchman named Angus Cameron. I immediately told my story—that we came in with a balloon, were lost, and had been four days without food—asking where we were. Imagine my surprise when he said we were one hundred and fifty miles due north of Ottawa—in the dense, uninhabited forest, whose only limit was the Arctic circle. I dispatched the young Indian for La Mountain, who came in after a moment, the absolute picture of wretchedness. All that the cabin contained was freely tendered us, and we began to eat. Language is inadequate to express our sensations while doing so. The clouds had all lifted from our sombre future, and the silver lining shone all the brighter for the deep darkness through which we had just passed."

Personal and Political.

A DISPATCH, dated Augusta, Ga., Oct. 6, says:—Jones, Democrat, is elected to Congress in the 8th district, by a majority ranging from 250 to 350. In the 7th district, Hill, opposition, is elected by 250 majority. Gov. Brown's majority is fully 15,000. The Democrats are successful in all but the third and seventh Congressional Districts.

The returns of the Mississippi election show Democratic gains.

It is a remarkable fact that the Alabama Legislature is unanimously Democratic.

LIEUT. MOWRY's election as Delegate from Arizona was unanimous; out of 3,000, it is not known that even one was against him.

OFFICIAL returns of the Maine election are received from all but a few small towns, and the result is as follows:—Republican, 56,848; Democrat, 44,343. Republican majority, so far, 12,000. Senate.—Republicans, 30; Democrat, 1. Representatives.—Republicans, 119; Democrats, 32.

The citizens of Ohio, at the next election, vote upon an amendment of the Constitution, establishing annual instead of biennial sessions of the Legislature.

MAJOR DAVID B. GREER, an early pioneer in Arkansas, and Secretary of State for 19 years, died on the 29th ult., aged 57.

THE Governor of Florida has issued a proclamation, directing the Judges of Probate in the counties to take a vote on the question whether West Florida shall or shall not be annexed to Alabama.

FOREIGN NEWS.

GREAT BRITAIN.—The American occupation of the island of San Juan attracts considerable attention in the journals. The Times editorially states the facts of the case and says, fortunately the affair is in good hands, and we trust there can be no reason to doubt that the governments of the two countries will proceed to a decision in a spirit of moderation and equity. The article concludes as follows:—"It is not a question of convenience, but of justice. The decision should depend on the interpreted terms of the treaty, and it was evidently not doubted by either government, a short time ago, that this interpretation could be discovered. If, however, it should prove that the existing convention cannot be so applied as to satisfy the contracting parties, there can surely be no reason why two States, which have now adjusted their respective limits across an entire continent from the Atlantic to the Pacific, should not complete the work in the narrow waters of Vancouver's Island.—Americans may assure themselves that in such negotiations they will meet with no conditions but those of fairness and amity on the part of this country. It would be hard, indeed, if children of the same stock, who can feel the sympathies of blood and lineage as they were felt and expressed in the waters of Peiho, should find much difficulty in adjusting a petty boundary question on the coast of the Pacific."

The London Post also again refers to the subject, and says if the importance of San Juan is to be considered, there can be no doubt that its possession by England is absolutely necessary to the security of British Columbia. It thinks the government at Washington can have nothing to gain by the adoption of the violent and unjustifiable proceedings of Harney.

The screw steamer Fox, Capt. McClintock, sent by Lady Franklin to the Arctic regions in search of the traces of Sir John Franklin's expedition, has returned to England, having been completely successful. At Point William, on the north-west coast of King William's Island, a record was found dated April 25th, 1848, signed by Capt. Crozier and Fitz-James. The record says the Erebus and Terror were abandoned three days previously in the ice five leagues to the N. W., and that the survivors, all amounting to 105, were proceeding to Great Fish river. Sir John Franklin had died June 11th, 1847, and the total deaths to date, had been nine officers and fifteen men. Many deeply interesting relics of the Expedition were found on the western shore of King William's Island, and others were obtained from the Esquimaux, who stated that after their abandonment, one ship was crushed in the ice and sunk, and the other forced on shore, where she remained. Mr. Fox was unable to penetrate beyond Bellot straits, and wintered in Brentford Bay. Minute and interesting details of the expedition are published. Several skeletons of Franklin's men, large quantities of clothing, &c., and a duplicate record, up to the abandonment of the ships, were discovered.

The crew of the Great Eastern had been arrested and tried at Weymouth, for mutinous conduct, in refusing to wash the decks when ordered. The two ringleaders were sentenced for three months imprisonment respectively, at hard labor, and the remainder for a fortnight. The evidence showed that the ship's crew were far from complete. The English journals strongly denounce the incomplete and hurried manner in which the ship was sent to sea. A vague rumor has been current that her first voyage will be postponed until November.—This, however, is authoritatively contradicted, and she is still advertised to leave Holyhead for Portland, on the 20th of October.

The London Morning Herald gives prominence

to the following paragraph:—We have reason to believe that a definite treaty of peace will soon be concluded at Zurich. It will, however, have the signature of only two powers—France and Austria. The preliminaries of Villa Franca will be strictly maintained as to the relations of Austria and Sardinia. A Berne telegram says a courier from Vienna had reached Zurich with instructions to draw up a treaty of peace, and documents for the cession of Lombardy and Sardinia. No allusion is made to the Duchies. It is hoped that a treaty will be signed in a few days.

At the Agricultural show at Lewes, a steam chaff cutter exploded, killing six persons.

Upwards of a thousand marines, strong detachments of the rifle light infantry regiments, &c., were to leave England for China, by the overland route. The first of the squadron, in service against China, had already sailed. The government intends to dispatch fifty gun boats, sloops, frigates and other vessels. An order for 2,000,000 cartridges, packed in 200 boxes, had been executed at Woolwich, in one day, including the stowing on ship-board. These go to China, overland, and a second order to a much greater extent was progressing for the sea voyage.

FRANCE.—The Times Paris correspondent says the report of the day was, that the question of the Duchies had been arranged, and that Tuscany is to be reigned over by the King of the Belgians's second son, and Parma and Modena by Maximilian. Another report says the Count de Flanders is to have the three Italian Duchies and the Arch Duke Maximilian, Venetia, with separate constitutions. These reports must be taken for what they are worth.

Another Paris rumor was to the effect that there was to be no Chinese expedition at the head of the Peiho. The Mandarin has proffered an atonement, coupled with the promises of all the satisfaction required, and that the Ambassadors will be received at Peking.

The Paris correspondent of the London Herald, regards the scheme for placing a Belgian Prince on the throne as a ridiculous canard.

The Times Paris correspondent again draws attention to the great activity in the French dock yards, and states that he has been assured that there are now building, or under orders to be built, twenty ships of the line—ten of the very largest size, but all strictly fighting ships, steel-plated and, provided with iron peaks or prow.

Numerous exiles had arrived at Marseilles.

The Paris correspondent of the London Spectator, who has, on several occasions, communicated early and authentic news, asserts that Napoleon accepts the plan of the King of Belgium, which is to give the fortress of Peschiera and Mantua, and the States of Parma and Modena to Sardinia, to re-instate the house of Lorraine in Tuscany, and restore the legations to the Pope. After the introduction of a variety of reforms, Venetia is to have governmental instructions and an army of its own, under the Arch Duke Ferdinand Maximilian, with the title of the Grand Duke of Venetia. This stimulation has the concurrence of Austria. A Congress is to be held at Brussels. It will be presided over by the King. This letter is dated on the evening of the 27th. The Paris Patrie has an article, which partially confirms the above statement.

According to the last accounts from Paris, the treaty between France and Cochinchina, was expected to be signed on the first of August.

The Paris correspondent of the Times says that Cherbourg is about to be armed completely on a war footing, and that rifle cannons are being provided for all its batteries.

ITALY.—The Sardinian Government has addressed a circular to the Great Powers denying the reported secession of Savoy to France, and declaring such rumors entirely void of foundation. The Sardinian Government is also said to have protested to the Great Powers against the secret aid afforded by Austria in recruiting soldiers for the Pope. Evidence is being published to prove that Parma, under the government of the Duchies, did not maintain a neutral attitude during the late war. The Pope remained in a very alarming state, and Cardinal Antonetti had declared him unfit to take part in public affairs.

SWITZERLAND.—The Lausanne Gazette says that the minister of the United States, Mr. Fay, has presented a memorial to the federal council, praying it to intervene with the cantons, which have persevered in their laws, restrictions or intolerant measures against the United States, in order to maintain a modification of the same.

TURKEY.—Amicable relations were established between Turkey and Persia.

Matters in Candia were assuming a serious aspect, and numerous troops had been sent there.

CIRCASSIA.—Schlamyl was betrayed and delivered a prisoner to the Russians for a bribe of 6,000,000 rubles. The Circassians continue to war against Russia.

COMMERCIAL.—Breadstuffs.—Messrs. Richardson, Spence & Co. report decline in breadstuffs. Flour dull and quotations maintained with difficulty; new American 2½¢@27½¢ per bushel; wheat was also dull, and had declined 1d@2d per cental; western red 74d@75¢; western white 90¢@94d. Corn dull and declined 6d per quarter; mixed 5d@5d@6d; yellow 5s; white 7s@7d. Messrs. Bigland, Athya & Co. quote a decline in corn of 6d@6s per quarter. Provision.—Messrs. B. & A. Co., James McHenry & Co., and others quote beef steady, with more activity for the India. Sales at 25¢@28¢. Pork quiet and quotations nominal. Bacon dull and holders pressing their stock of old on the market. The official report shows a decrease of 147,000 pigs. Lard steady at 66¢ for good refined. Tallow advanced 6d. Butchers quoted at 61a.

THE SAN JUAN BOUNDARY.—The National Intelligencer, which always speaks upon such topics with caution and accurate information, says, in reference to the boundary dispute:—"Although we do not, in general, like to see our military commanders on distant frontier posts assuming, without very urgent considerations, responsibilities which may jeopard the peace of the country, yet, unless all the maps we have had access to are grossly inaccurate, it would appear to us highly probable that the Island of San Juan, in the Strait of Haro, properly falls within the American boundary, and that Gen. Harney could not, consistently with strict duty, permit it to be taken undisputed possession of by the British troops or agents."

The News Condenser.

—Lake Superior iron ore is finding a market in Wisconsin.

—Spain is agitating the question of taking Gibraltar from England.

—There are 200,000,000 feet of lumber manufactured in Bangor, Me., yearly.

—Kossuth has returned to London. He had a halt of a few days in Paris.

—The bears are committing depredations in nearly every part of Wisconsin.

—The gas works at Galveston, Texas, were put in full operation last month.

—Platt Co., Ill., has 33,000 acres in corn, estimated to yield 50 bushels per acre.

—The Cleveland Medical Gazette has an account of a tumor weighing 129 pounds.

—Mr. Gregory, of the diggings at Pike's Peak, has returned to Georgia with \$23,000.

—A new volcano has sprung up in Oregon. Mount Hood is in a state of active eruption.

—The loss of the Austrians in the Italian war was, altogether, 1,184 officers and 47,500 men.

—The fever is slowly increasing at Houston and Galveston, where more deaths are reported.

—A new saline deposit has been discovered at Central City, Marion Co., Southern Illinois.

—There are at present in the world about one hundred and twenty-one thousand Mormons.

—Andreas Fitzy, one of the "Old Guard" of the Napoleon, died on Sunday last in Brooklyn.

—The Queen of Boni, of the South Pacific, has left her twelve husbands and taken a new one.

—There has been a tremendous gale on Lake Michigan, causing an unprecedented rise of water.

—It is stated that the Circassian Chief Schamyl has been taken prisoner and sent to St. Petersburg.

—In the Cincinnati jail there are now fourteen prisoners charged with murder in the first degree.

—Fifty horses were burned with a stable at Mad Springs, El Dorado county, California, August 23.

—The Boston Transcript says the swallows have gone South, and that they all left on the same day.

—The people of Turin are going to express their gratitude to Napoleon by erecting a monument in Paris.

—Some burglars in Albany have been living in a temporarily vacated house in the densest part of the city.

—The people of Paris have recently presented to the Empress Eugenie two vases of gold, weighing 150 ounces.

—The cholera has carried off one thousand six hundred persons in Hamburg this summer—nine hundred in July.

—The total value of American vessels and cargoes lost at sea during the month of September, is about \$950,000.

—The French Academy's prize for poetry has been awarded this year to Mlle. Ernestine Drouet, a school-teacher.

—Samuel Pike, of Brattleboro, Vt., gathered last week a second crop of strawberries grown in his garden this year.

—A good telegraph operator, working ten hours per day, brings a receipt of about \$75 to the treasury of the company.

—"What's in a name?" One of the candidates for county offices in La Salle Co., Ill., is Wait, and another Waitmore.

—The Governor-General of Canada has appointed Thursday, Nov. 3, as a day of general holiday and thanksgiving.

—The champion oarsmen of St. Johns, N. B., are about to go to England to meet the great oarsmen of the mother country.

—The papers of the entire West—as far as the Mississippi—are rejoicing over the recent rains. They were greatly needed.

—The New Bedford Standard reports a pumpkin vine in that city which is three hundred feet long, and bore 115 pumpkins.

—The Austin (Texas) State Gazette says that \$16,000 have been lost lately in the mails between Galveston and New Orleans.

—It is said that Capt. Comstock, formerly of the steamer Baltic, is to bring the Great Eastern from Portland to New York.

—A horned owl, supposed to be about one hundred years old, has just died at Arundale Castle, the seat of the Duke of Norfolk.

—Photographing on porcelain, it is stated, has been successfully accomplished in New York, regardless of irregularities of surface.

—Chicago is cursed with obscene handbills to such an extent that an abatement of the nuisance is urged in some of the papers.

—The first Arab newspaper ever published in the Turkish Empire, and out of Constantinople, has been commenced at Beyrout.

—The equinoctial storm at the South was unusually severe. Great damage is reported all along the coast from Virginia southward.

—There are now in Germany, Denmark and Switzerland, 63 Baptist churches and 7,120 members; 25 years ago there were only 7.

—A miner on Lake Superior was blown 60 feet by the premature explosion of a blast he was preparing. He was torn into fragments.

—"One-legged Jim," a renowned Sioux warrior, died recently at Redwood, Minn. He became a temperance man some years ago.

—The quantity of coal gas annually used in Philadelphia is estimated at 6,000,000 cubic feet, for which the public pay \$18,500 per annum.

—The clergy of Springfield, Ohio, have united in publishing a remonstrance against the holding of lotteries at church and charitable fairs.

—A large number of Pike's Peak miners are leaving the mountains for the valley, in consequence of the prevalence of rain and snow storms.

—The Missionary Herald for October says the French emigrant traffic on the African coast still continues, and its baneful influences are sensibly felt.

—Garibaldi has issued a proclamation threatening to shoot any of his men who venture to profess themselves Mazzinians, Republicans, or even Garibaldists.

—Borey, the horse-tamer, has a rival in a young lady of Westchester Co., who has recently been exercising her powers on vicious horses with great success.

—The N. Y. Post says that if General Tom Thumb finds a fitting wife, the public will enjoy the pomological exhibition of a new variety of "Dwarf Pear."

—The Toronto Leader says photograph ten dollar bills on the Gore Bank are in circulation. They can be distinguished from the genuine by their purple tinge.

News Paragraphs.

On board one of the English gun-boats, in the late attempt of the British to go to Peking in their own way, a single shot took a leg from each of six men who were standing in a line.

In Chester Co., Penn., an old cent has been exhausted. On one side it bears the inscription, "Nova Constellatio." In the centre is the "eye," and around the thirteen stars. On the other side are the words "Libertas—Justitia—1783." In the centre, "U. S." surrounded by a wreath.

Tus Springfield (O.) Republican has a poor opinion of tobacco raising. It says:—"If there is any dirtier work than raising tobacco, except chewing it, we should like to know it. A gum issues from green tobacco that covers everything that it comes in contact with. We met recently a troop of men fresh from the tobacco field, that, in any other portion of the world than this, would pass for Hottentots. They looked as if they always burrowed in the ground, and in hands and face, as well as dress, were the color of woodchucks."

Respect to the island of San Juan or Bellevue, which is now in dispute between the United States and Great Britain. Col. Lee of the Topographical Engineers, made a thorough exploration in the Straits of Haro, and reports that the island is worthless to either government for any purpose whatever. Col. Rankin's report is to the same effect. According to the observations of Col. Lee, San Juan is destitute of wood and water, and entirely unproductive. The value of its harbor is also said to have been much exaggerated.

From an official report, it appears that since 1847 the introduction of Asiatics to meet the wants of Cuban labor cover 42,501 subjects—there having perished in the transit 7,022, or 15 per cent. of those taken on board.

Tax Toronto Globe of Monday, says:—"Merchants and others should, at the present time, make a close examination of the one dollar bills on the Niagara District and Commercial Banks, Canada, as counterfeits on them are afloat. A large number of them were put into circulation on Saturday evening. They are well executed, and have a very close resemblance to the genuine bills."

Vermont refuses to allow a traveling circus to desecrate her territory. As the State is not very wide, the showmen, however, manage to accommodate her sight-seeing population by exhibiting up and down her eastern and western boundaries.

Ma. Leslie, the enterprising young man who swindled a platoon of girls by hiring them as teachers and leaving them suddenly in New York, at the same time attempting to steal their baggage, was sentenced in Philadelphia, on the 20th, to three years hard labor in the Penitentiary.

The Grand Jury of Chittenden county, Vt., has indicted the Managers of the State Agricultural Society, for giving premiums on horse trotting. The Burlington Times says, "human virtue" can go no further than this. The Pharisee of the Scriptures can "come down!" If the Chittenden County Grand Jury is a "blessing," it is emphatically a "blessing in disguise," this time.

An American "Great Eastern."—The sailing of the Great Eastern revives reminiscences of an American ship very nearly her size. She was launched about thirty years ago on the St. Lawrence, and was called the "Baron of Renfrew." She was 600 feet long, and was composed of long logs of timber clamped together in the roughest manner. She crossed the Atlantic safely, and

immediately on her arrival in England was broken up and sold. She was, in fact, an ingenious expedient to get rid of the timber duty, which was then excessive, and was a sort of magnified and finished ocean raft. The Government would not allow the experiment to be repeated, holding it to be a violation of the revenue laws.—*Ab. Jour.*

AMERICAN COLORS.—The Kennecott (Me.) Journal says that a few years since the wife of the American Minister to England, received from a friend in New England, a box of autumn leaves, selected for their beauty and variety of tints. The lady wore them as ornaments, and they attracted much attention, and were greatly admired by the English people. Since then these leaves have been in demand there, and every autumn packages are sent over in steamers, and flash their beauty in high circles in London.

FROM VENEZUELA.—We have later news from Venezuela. The French Charge d'Affaires had been sent out of the country on ten days' notice. His opposition to the existing government and participation in the bloody revolution are the causes alleged for driving him away. Gen. Rubin, with the government forces, had taken the town of Marguerita, but the rebel chief, Gen. Aquada, escaped to Barcelona. He had been retaken, and the government forces were everywhere victorious. The revolutionists, or rather the robbers, had committed the most outrageous excesses, murdering and plundering to a fearful extent. From present accounts, however, their triumph is at an end.

ARRIVAL OF THE OVERLAND MAIL.—The overland mail has reached Jefferson City with San Francisco dates of the 12th instant. Sufficient returns had been received to ensure the election of the entire Democratic ticket. All the candidates for Supreme Judges and State Printer, and the two Lecompton candidates for members of Congress, were also elected. There was also a very large Lecompton majority in both branches of the Legislature. The people's reform ticket in San Francisco was elected by a majority of from one to three thousand.

Business at San Francisco continued dull, with a slight country demand. Quotations were nominally unchanged, but for the goods sold buyers obtained better terms.

The silver mines of Arizona were doing well, although the people there were much annoyed by the depredations of the Apache Indians. Capt. Smith, Sept. of the 3d Division of the Overland Mail line arrived from El Paso, having in charge 200 lbs. of silver bullion assigned to the Philadelphia Mint. There was upwards of a ton of silver bullion at El Paso awaiting shipment to the States.

A private letter from Arizona, dated Sept. 17th, says the Apaches are getting bolder, and we have almost the usual number of murders and fights.—The vote at the recent election for delegates to Congress exceeds 2,000. Only about one-sixth participated in the New Mexican election.

PRODUCTION OF GOLD IN CALIFORNIA.—A correspondent of the N. Y. Courier & Enquirer says the quartz-crushing machines now in California cost upwards of \$2,300,000, and makes the following statements as to the present rate of gold production in that State:—"The richest quartz vein in the State is that of Allison's Ranch, which is believed here to be the richest gold mine in the world. The first sixty-three tons of quartz from this vein produced \$22,000. The vein or lode, called lead by the miners, was opened in October, 1856. The yield during the ensuing two years was estimated at about \$1,500,000. Eight thousand tons of rock have been crushed, which has yielded \$200 per ton. Street & Soule's claim, in Tuolumne county, is supposed to contain gold rock worth \$4,000,000. Colonel Fremont's Mariposa Rancho mines are yielding him, it is estimated, \$5,000 per week. The authorities, adopted by the Register, state the production to have been very uniform since 1854, at about \$70,000,000 per annum, and from various facts brought to my knowledge, I believe the estimate to be nearly correct. The total yield of the California mines from the discovery up to December, 1858, is stated to have been \$580,623,297.

AGRICULTURISTS, try Guano and Plaster on your fall sown crops. Bone Phosphate of Lime and Phosphoric Acid and Ammonia is what you want to quicken your fall wheat, and give it strength of root, putting it beyond the power of insects to injure. Guano will do this, with the advantage of a splendid crop without weeds.

509-21

Markets, Commerce, &c.

RURAL NEW-YORKER OFFICE, Rochester, Oct. 11, 1859.

Wheat and Wheat are without change. Corn has advanced 2 1/2 cents during the week, and is firm at 80 cents per bushel. Oats are quoted at 36 3/4 cents per bushel, and are wanted. Barley is as last quoted in this market. The Eastern market is as we predicted a week since. The receipts having been satisfactory, speculators have concluded to drop, and prices are no better in New York than here. MEATS are without change in rates, but we notice farmers in the market as the cold weather approaches. Several hundred sheep, and a very fair lot of beef were on sale Saturday last. The sheep were readily disposed of at 4 1/2 cts per lb. for, and 6 cents for hind quarters, although a prime article was hardly to be found. DAIRY.—"What has become of all the butter?" is the inquiry now-a-days. Very scarce is it, and the market is steadily moving upward. HAY.—We have to put another dollar to the rates of hay—\$10.00 @ \$20.00 is the range, tip-top is readily sold at the latter figure.

AGRICULTURAL HYMN.

BY REV. JOHN PIERPONT, D. D.

To God, the gracious Giver
Of sunshine, dew and rain,
Of hillside, vale and river,
And broad and fertile plain,—
Who giveth to our mountains
The glory of their trees,
And pourth out the fountains
That fill our inland seas,—

Who wrappeth Winter's bosom
In His soft, woolly snows,
And openeth every blossom
That Spring around us throws,—
To His, our tribute bringing,
Of thankful hearts, we come,
With joy and gladness singing
Our hymn of "Harvest Home."

Shall we, Thy sons and daughters,
Withhold our grateful praise,
While all Thy winds and waters
Are vocal in Thy praise?
No! while all earth rejoices
In Thy paternal care,
Will We lift up our voices,
O God, in praise and prayer.

God, who our patient labor
With plenty crown'st thus,
Help us our suffering neighbor
To bless as Thou dost us;
And while Thy gifts we gather
From field and fold and stall,
To serve the good All-Father
Who giveth all to all.

Story Teller

Written for Moore's Rural New-Yorker.

THE ORPHAN GOVERNESS.

BY ANNA BURR.

(Continued from page 333, last number.)

Chapter II.

"When did you reach New York?" inquired MYRA, after they were seated.

"The steamer from Liverpool arrived three days since, and I came up here quite as soon as Aunt MARY would let me, for I wanted to see you and CHARLIE—she said that your mother had gone. That Miss NILES is a very queenly-looking lady—I have heard something of her history."

"Oh, she is a lovely person! I never was so happy in my life before as I have been since she came here."

The gentleman smiled at MYRA's earnestness. "I would go through fire and water for her sake," said CHARLIE looking up from the kite he was fixing.

"Ah, I see that she has two pretty good friends; but when do you expect aunt home?"

"Sometime in August. I hope that you will not go back to the city immediately because mama is absent. I want you to stay very much."

"Well, I'll visit here a few days, MYRA—we must have some nice rides together before I leave."

"Oh, yes, cousin," exclaimed CHARLIE, animatedly, "and I want you to hunt and fish with me, too."

"I'm just in the mood for ruralizing, CHARLIE. A year's travel through foreign cities, and wandering among ancient ruins, has well nigh jaded me with sight-seeing, and I will throw off my fatigue in this charming retreat," and HERBERT LESLIE did enter into the enjoyment of country life with a youthful zest. He had known MYRA and her brother from their infancy, and there had always been a strong attachment between the cousins. A large fortune was left at his disposal, when he had attained his majority, two years after his father's decease. But the early education of pious parents had shielded him from the evils which are the attendants of wealth. His time was mostly occupied with benevolent schemes and projects, or in overseeing his immense landed estates, until, at the earnest request of Mrs. LESLIE, he left his business, and traveled with her in Europe for the benefit of his health. There was a manly independence and freedom from social distinctions in HERBERT's very air, which indicated the true gentleman, and GRACE felt, instinctively, that he would scorn to do a mean act. As they were necessarily thrown much together, she had an opportunity to observe him closely in his intercourse with the children. She soon experienced no restraint in his presence, for his respectful deference was peculiarly agreeable to one who had formerly moved in refined and elegant circles.

MYRA continued to grow thinner and paler every day. She had a slight hacking cough, and HERBERT began to watch her anxiously. GRACE was walking alone in the garden one day, and she was somewhat surprised at his sudden appearance in the path before her, for she had left him in the library with MYRA.

"Miss NILES, may I talk with you awhile?" GRACE signified her assent, and followed him to the arbor with undefinable sensations, for his manner was strange.

"I am beginning to feel troubled about MYRA—she has grown worse since I arrived—don't you think so?"

"Yes, sir, and I have written to Mrs. ATHERTON about it to-day."

"Thank you, I am greatly relieved—I was going to request this of you. MYRA is a lovely girl. I shall prolong my visit for her sake. It seems hard that she must leave the world while yet so young," and HERBERT sighed.

"Please do not speak of it—I cannot bear it yet. She is the dearest friend that I have on earth."

"Forgive me if I have pained you, Miss NILES"—for GRACE's voice had sunk into a whisper, and she burst into tears. A sudden impulse prompted him to say "I will be your friend, if you consider me worthy of the honor." She raised her head, and a look of warm gratitude shone from the soft, hazel eyes.

"Thank you, Mr. LESLIE, but our paths in life diverge widely."

"Modest worth is elevated above these distinctions. Permit me"—and he respectfully lifted her hand to his lips. "This seals the compact; and now please remember that while I live you have 'a friend.'" His tone was earnest, and hearing it, GRACE knew that he meant what he said. After a time she talked more calmly of MYRA, and somehow their conversation widened and deepened upon subjects which discovered a strange congeniality of sentiment. GRACE forgot that she was a governess, and ere she was aware of it, HERBERT drew her into talking of herself. The sorrowful story of her life was related in her own touching, eloquent manner—telling it more with her changeable face and soft eyes, which grew dark with intensity, or sent forth sudden gleams, just as a streamlet will glide deep and still through forests, and then burst out into the sunshine upon the plain before it wends its way back again. When they returned to the house, GRACE went up to her room, while HERBERT joined his cousin in the library. New thoughts were surging through the orphan's mind, and she could see a hand writing beautiful, glowing words upon the walls of her heart. The language was strange, but still her soul interpreted the words, although they were seen through a misty veil—just as we sometimes behold a transparent cloud wrapping its pearly folds over the glorious, rising sun, not concealing it, but softening its dazzling brilliancy. She sat down to write, and she held the pen in her hand a long time before it was dipped in the gilt inkstand which CHARLIE had given her. I will take an extract from her letter which may interest the reader. It was addressed to an aunt who resided in Central New York.

"I was sorry to hear of your anxiety upon my account; please do not feel troubled about me, for I am very happy here. Your kind invitation for me to come and share your home was warmly appreciated; but I know of your limited income, and duty urged me to seek a situation. Mrs. ATHERTON is very kind, and I am devotedly attached to her children. She entertains a great deal of fashionable society, (for there are many country-seats of the wealthy in this vicinity), but I see little of it, for MYRA's delicate, nervous organization cannot bear much excitement. The world never seemed half as beautiful. There is a wondrous depth and expansion of blue sky out here in the country, and I have such delightful rambles in the deep woods. O, how I love them! and MYRA does, too. She is a dear girl. We are more like companions than teacher and pupil, for she is very mature for one of her years, and our souls often find sweet communion together. A cousin of hers is visiting here now. I like him very much. There is a graceful ease and social polish in his manners, and at times a strange depth in his dark eyes, when he becomes interested upon some favorite theme."

When HERBERT entered the library he found MYRA reclining upon the sofa, with a book in her hand. He came up behind her very softly, and she did not see him until he spoke—"What are you reading, little cousin?"

"My Bible," and MYRA's eyes looked uncommonly large and brilliant when they turned upon the young man. She would have said more, but her cough prevented. A pang shot through his heart, and dropping by the sofa he drew her head to his shoulder.

"Do you cough much now?"

"No, only mornings." The two cousins made a beautiful picture.

MYRA's curls swept HERBERT's cheek, and a sadness stole over his face as he bent his handsome head over her. The setting sun shone in at the large bay-window upon them, and trailed rosy bars of light across the dark wainscoting of the lofty room; for Mrs. ATHERTON's house was built in the style of old English manors. This library was adorned with the portraits of the family, in heavy gilt frames, and there were several rare paintings, of Italian scenery. There was also an elegantly carved mahogany bookcase, and the costly bindings of several hundred volumes shone through the glass doors.

"I have been reading this," and MYRA's soft voice took up the sweet words of CHRIST—"Let not your heart be troubled—ye believe in God, believe also in me. In my Father's house are many mansions; if it were not so, I would have told you. I go to prepare a place for you—and if I go and prepare a place for you, I will come again, and receive you to myself, that where I am there ye may be also." I do want to go," and there was the old dreamy look in MYRA's eyes, "Don't you think that angels hover around us sometimes, cousin HERBERT?"

"Yes, darling, the pure and good often feel their influence; but why do you ask?"

"Oh, it seems as if papa is near me sometimes."

"I presume that he does watch over you, MYRA," and he pressed a kiss upon her fair brow.

"Do you think so? It makes me very happy to believe that." A sudden animation lit up the pale face.

"Always believe it then, for nothing can harm us that brings holy and good thoughts to our minds."

The cousins had many such conversations together during HERBERT's visit, but sometimes MYRA would talk of her governess, and then her listener appeared much interested. He never seemed weary of hearing her praises from the artless lips. One day it happened that GRACE and HERBERT were left alone in the library. He took down a volume of SCOTT's poems from the bookcase, and read several passages from "The Lady of the Lake." His clear intonations, accompanied by occasional suggestions and explanations of his own, made the time pass very agreeably to his attentive listener. At length he closed the book, saying—"How do you like this poem, Miss NILES?"

"Oh, very much—it carries me into a sort of dream world, where all is strangely beautiful—at least some parts of it affect me thus."

They talked a long time, and when HERBERT said, with one of his rare smiles, "Our tastes are similar—we shall be very good friends," GRACE could not help marking the earnestness which made his eyes grow dark.

A letter from Mrs. LESLIE suddenly summoned her son to New York, and he departed, leaving MYRA sad, but somewhat comforted by his last words—"I will come back when aunt returns, and

then, perhaps, you will be able to enjoy some pleasure excursions." GRACE felt a strange heaviness when he bade her "good-bye," saying, "I trust that we part friends."

"Yes," and there was an ingenuous blush upon her cheeks. But now the welcome guest had left Willow Dell, and CHARLIE wandered through the house whistling to himself, as if endeavoring to overcome the sense of loneliness which pressed heavily upon his heart, too. Two days after HERBERT's departure, a carriage laden with trunks drove leisurely up the avenue, and CHARLIE came running in, exclaiming, "Mama has come, and there is a lady with her."

Chapter III.

Mrs. ATHERTON had not received the letter from GRACE, but she felt wearied, and concluded to return before the expected time. The young lady who accompanied her she introduced as "Miss GERTRUDE BELMONT," a rich Southern heiress, and the daughter of an old friend. She was a very handsome, stylish-looking girl, and wore the air of one who was accustomed to admiration, and idolized it with all the intensity of her nature. Mrs. ATHERTON had met her at Nahant, and persuaded her to spend a few weeks at Willow Dell, upon her homeward route to Virginia. Miss BELMONT's education had been such as to nourish selfishness and pride. She possessed a disposition so artful and designing, accompanied with fascinating manners, beauty, and wit, that crowds of admirers attended her triumphant appearance in society. She had become a confirmed coquette, and now it was necessary for her happiness to have at least twenty flirtations during a season. Mrs. ATHERTON was delighted upon hearing of HERBERT's return, and before she retired that night she wrote a letter:

"MY DEAR Nephew:—I want to lecture you soundly for going off before I had returned. You must come back immediately, and your mother and Aunt RAYMOND must accompany you. A Miss BELMONT is here from the South, and you can 'play the agreeable' to her, for she must not die of ennui; and now, I think of it, bring CARRIE and her affianced, Mr. SANDFORD."

So ran a part of this epistle.

The next day GRACE sought Mrs. ATHERTON, and informed her of MYRA's symptoms.

"Well, I don't think that we need be alarmed about her yet," was the thoughtless mother's reply. "Her health always begins to fail this time of the year. Dr. THORNTON knows how to strengthen her up—she must call to see her to-day. I have just sent for HERBERT to come out to Willow Dell, with some city relations, for you know I must entertain our visitor agreeably—so I shall leave MYRA in your charge. But there are some presents in my trunk." The lady soon produced an elegant dress-pattern. "This black silk is for you, and JANE must make it up this week. Your kind attention to my children is appreciated."

GRACE's eyes filled with grateful tears, and she warmly expressed her thanks. "You are perfectly welcome to it; and here are some jet bracelets to match." Mrs. ATHERTON could not have chosen more appropriate gifts, for GRACE's wardrobe was not very extensive, although her exquisite taste had made it appear more ample than it really was.

Dr. THORNTON came that afternoon, and his countenance was very serious. GRACE watched him closely, and her heart sank within her. The mother seemed alarmed, too, and anxiously awaited the result; but she took comfort from the assurance that MYRA was in no immediate danger. Return mail brought nothing from New York, but the following day the sudden advent of Mrs. ATHERTON's city friends, threw her into a state of pleasurable excitement. HERBERT immediately sought his cousin MYRA, and her joyous face told more than her words how happy she was to meet him again. GRACE seemed pleased, too, and an hour soon passed very swiftly over the trio. Then, there came a rap at the door, and Mrs. ATHERTON entered, followed by the ladies. There was her sister, Mrs. RAYMOND, with her daughter CARRIE, and HERBERT's mother. GRACE perceived at once that the latter was different from either of her sisters, for she was a dignified woman, without coldness or hauteur, and her manners were distinguished by that repose which characterizes a true lady. She had a very peaceful, sunny countenance, and looking at her for the first time, our heroine felt that she was all that HERBERT's mother should be. Mrs. RAYMOND was a gay, social lady, much like MYRA's mother, and CARRIE was what education had made her—a butterfly of fashion, lovely in person, and naturally of an amiable disposition; but she was a petted, spoiled girl, and dress, gay society, and worldly pleasure were her constant delight. GRACE thought that she saw a deep under-current of lively sensibilities and affectionate impulses beneath the frothy surface of her character, for she embraced MYRA very warmly, and then turned away her head to hide the tears which sprang to her eyes upon beholding her cousin's evident decline.

"I'm not going to let you remain here any longer," said Mrs. ATHERTON, peremptorily, when they had chatted awhile with the invalid. "Miss BELMONT and Mr. SANDFORD are alone in the parlor, and we must join them. Do you feel able to go down this afternoon, my daughter?"

"Oh yes, mama," and HERBERT offered his arm.

"We will fix a nice seat for you," said he.

"Come, Miss NILES, you are going, too?"

"Certainly, GRACE," said Mrs. ATHERTON, nodding pleasantly,—"and so she went."

When MYRA was comfortably seated in a large, easy chair, HERBERT's aunt drew him across the room, to be introduced to Miss BELMONT, for he had not seen her yet. The gentleman was accustomed to meeting with beautiful women, therefore he betrayed no peculiar signs of admiration when presented to GERTRUDE. Perhaps this was what piqued her vanity, for she certainly exerted herself to please this fastidious young man that afternoon. She was brilliant in conversation, and her sparkling wit shone to the best advantage, and effectually engrossed HERBERT's attention for some time; but she noticed that his eyes occasionally wandered to where GRACE sat with her charge. Mr. SANDFORD was having a game of backgammon with his betrothed, and at length a burst of musical laughter from CARRIE proclaimed her victory.

The gentleman put on a very sober face, and called out, "Miss BELMONT, will you please extricate me from my embarrassing position? Here this little lady has actually won the game from me three times in succession."

"I infer that you wish me to take her place, and let you win now," said GERTRUDE, smiling.

"That is precisely what I desire," he replied with comic gravity, for HARRY SANDFORD was fond of a joke, and his playful jests made him a great favorite with the ladies. His manners were also very pleasing, and this, joined with an income of six thousand a year, made him quite a "lion" in the fashionable circles.

"Do come, Miss BELMONT, for he is in a very precarious situation," and CARRIE sprang up from her chair. So HERBERT crossed the room with GERTRUDE, who accepted the challenge; and the two cousins watched the game with some interest, but then HERBERT left them to join MYRA. After tea, music was proposed, and as GRACE was requested to play, she sat down to the piano, and HERBERT turned the leaves while she sang a few songs. But she excused herself as soon as politeness would allow, for MYRA looked weary, and they left the room together.

"Miss NILES is very attentive to her charge," remarked the soft voice of Mrs. LESLIE, when the door had closed behind them.

"Oh, yes! I feel under lasting obligations to sister MARY, for sending me such a prize," was the mother's complacent reply. "She seems very well bred, too, and there is a graceful ease in her manners, which is truly charming."

"She came of an old family, and was not bred for a teacher," Mrs. RAYMOND remarked.

HERBERT felt gratified to hear his mother's meed of praise, and GERTRUDE saw it with a pang of jealousy.

"They all seem to be captivated by this upstart governess, and construe her impudence into good breeding," she thought, and again the heiress employed all her fascinations to win HERBERT's attention, for a little rivalry was a sufficient incentive to the artful coquette at any time. Before sunset that evening the gentleman went to see MYRA.

"How is our invalid now?" he inquired as CHARLIE opened the door.

"Oh, I am resting; come in, cousin," said a faint voice from the sofa. HERBERT obeyed, and GRACE arose from the low stool where she had been sitting. They stood together near MYRA's head, while CHARLIE leaned upon the other end of the sofa. A new idea seemed to flash through the boy's mind, for he suddenly clasped his hands, exclaiming, "Oh, sister! I don't HERBERT and GRACE (she had long before this requested the children to drop her formal appellation) look near enough alike to be brother and sister?"

"I have thought so a great many times," was the artless reply.

GRACE turned away her head quickly, but not before the gentleman had caught a glimpse of the sudden light breaking through the rosy glow upon her face. A deep conviction of what prompted it settled in his heart, and there was a new tenderness in his tones when he bade her good night, which made her strangely happy. The interest which her acquaintance had inspired, during his two weeks' visit at Willow Dell, had been deepening ever since, and now, when he thought over her superior qualities of mind and heart, HERBERT knew that he had found his "soul's elect." But he resolved not to make this known to her at present, until he had derived more evidence of a reciprocal attachment.

There is an old saying that "Delay is dangerous," and how many times has this proved true in our own lives! A strange fatality often causes procrastinations, which may appear very trifling, but are so connected and interwoven in the chain of circumstances, that time has proved them important links, and set them up as shining way-marks upon life's road.

One morning, while Mrs. ATHERTON's guests were lingering around the breakfast-table, engaged in pleasant desultory chat, she remarked, "Gentlemen, I know that the young ladies would enjoy a horseback ride this fine morning. That thunder shower last night has laid the dust, and the air is very fresh."

"I am always a willing cavalier," said Mr. SANDFORD, jumping up and bowing very gallantly to the ladies.

"So am I," added HERBERT, with less alacrity.

"Oh, I'm so glad! Now you can use that beautiful riding-suit which I saw in your room, Miss BELMONT; but what shall I do, aunt?" and CARRIE drew down her face, as if in a dilemma.

"Never fear! I can provide you with one. Now remember, girls, I shall have the horses around in a half hour, so you must be ready," for they were leaving the room together. GERTRUDE was not displeased with having an opportunity for displaying her elegant figure upon horseback, and she heard the arrangement with inward delight. She did make a splendid appearance, GRACE thought, for she watched the riding-party as they went down the avenue, until GERTRUDE's waving plumes were no longer visible. MYRA was leaning upon the arm of her governess, and she said, "That Southern lady is very beautiful, but I never could love her."

"Why, darling?"

"Oh, she has such a scornful expression about her lips sometimes, and then her eyes have a strange glitter, too."

GRACE had marked it. There had been a reserve between the two ever since their first introduction, for Miss BELMONT was naturally overbearing, and since HERBERT's arrival, her restraint toward GRACE almost approached to rudeness, at times. [Concluded next week.]

SLEEP.—The keenest pang of remorse, as painted by the great poet, is that it "murders sleep," and the choicest boon that man receives from his Maker is described in that pregnant line so beautifully paraphrased by England's noblest female poet—"He giveth his beloved sleep."

TRUE beauty is but virtue made visible in outward grace. Beauty and vice are disjointed by nature herself.

DEAFNESS CURED, HOWEVER CAUSED, by a new method. Address Dr. BARNARD, personally or by letter, at No. 974 Broadway, New York. 609-46

WINTER WORK—From three to five dollars per day can be made. Work easy and pleasant. Send stamp for particulars. G. O. CLARK, 509-17. Drawer 212, Rochester, N. Y.

AGENTS WANTED!—POPE GREGORY'S CROSS AND WEATHER MIRROR! A very valuable curiosity. Consulted every day by every body. Send stamp for particulars, which are free. 509-17. G. O. CLARK, Drawer 212, Rochester, N. Y.

MEXICO ACADEMY, MEXICO, OSWEGO, N. Y. The Winter Term of this long established Institution opens December 1st. Its thoroughness and popularity continue undiminished. For particulars address J. D. STEELE, A. B. Principal. 507-17

LARGE TURKEYS.—I shall have for sale after Nov. 1st a fine lot of YONGE TURKEYS, old stock weighing 14 lbs. to 23 lbs. One from 4 to 6 lbs. Another, 11 lbs. to 15 lbs. per pair. I also have a lot of 100 lbs. and 150 lbs. per pair. Also, an extra lot of 100 lbs. per pair. 509-17. JOHN R. PAGE.

NEW GROCERY ESTABLISHMENT, No. 20 Front Street, Rochester, N. Y.

JOHN J. JARVIS has opened a Grocery Store, where can be had a choice lot of Groceries—Tea, Coffee, Sugar, Molasses, Spices, Raisins, Prunes, Zante Currants, Nuts, Lard, Tobacco, Cigars, &c. JOHN J. JARVIS, 501-13

GUANO.—We would call the attention of Guano Dealers, Planters and Farmers to the article which we have on hand and for sale at THIRTY PER CENT. LESS THAN PERUVIAN GUANO, and which we claim to be superior to any Guano or fertilizer ever imported or manufactured in this country. This Guano is imported by WM. H. WEBB, of New York, from Jarvis & Baker's Island, in the "South Pacific Ocean," and is sold in pure and unadulterated form. It has been analyzed by many of our prominent Farmers, and analyzed by the most eminent and popular Agricultural Chemists and found to contain (as will be seen by our circular) a large percentage of Bone Phosphate of Lime and Phosphoric Acid, and other animal organic matter, yielding ammonia sufficient to produce immediate abundant crops, besides substantially enriching the soil. It can be freely used without danger of burning the seed or plant by coming in contact with it, as is the case with some other fertilizers; retaining a great degree of moisture, it causes the plant to grow in a healthy condition, and as experience has proved, free of insects. For orders in any quantity, (which will be promptly attended to), or pamphlets containing full particulars of analyses and tests of farmers, apply to JOHN B. BARBY, Agent, 505-13. No. 55 South St., corner of Wall St., N. Y.

WATER PIPE. THE CHEAPEST & MOST DURABLE IN USE.

We have been unable during the past three months to supply the demand for this Pipe, but have recently made arrangements for the manufacture on a more extended scale, and hope hereafter to be able to fill all orders promptly.

This Pipe is made of Pine Timber, in sections eight feet long. It is easily laid down, not liable to get out of order, and if properly laid, is the most durable of any kind of Pipe in use.

We can produce any amount of evidence of its durability, capacity, strength and superiority over any other. The price of the size commonly used for farm purposes, is 4 cents per foot at the factory.

Our Manufactory is at Tonawanda, Erie Co., but orders should be directed to us at Arcade, Rochester, N. Y. 505-13

TO HOUSEKEEPERS.—SOMETHING NEW. B. T. BABBITT'S.

BEST MEDICINAL SALERATUS. 68 It is manufactured from common salt, and is prepared entirely different from other Saleratus. 68 All the deleterious matter extracted in such a manner as to produce Bread, Biscuit, and all 68 kinds of Cakes, without containing a particle of 68 Saleratus when the Bread or Cake is baked; 68 thereby producing wholesome results. Every 68 particle of Saleratus is turned to gas, and passes 68 through the Bread or other article, leaving no 68 saleratus remaining but common salt. 68 Water and Flour. You will readily perceive by 68 the taste of this Saleratus that it is entirely differ- 68 ent from other Saleratus.

70 It is packed in one pound papers, each wrapper 70 branded, "B. T. Babbitt's Best Medicinal 70 Saleratus," also, in five pound boxes, and in 70 glass of effervescent water on the top. When 68 you purchase one paper you will preserve the 68 wrapper, and be particular to cut the next ex- 68 actly the first brand of Saleratus for use. 68 Full directions for making Bread with this 70 Saleratus and Sour Milk or Cream Tartar, will 68 accompany each package; also, for making Soda 70 Water and Salidita Powders. 68

70 MAKE YOUR OWN SOAP, 68 AND 70 WITH 68 B. T. Babbitt's Pure Concentrated Potash. 70

68 Warranted double the strength of ordinary Pot- 68 ash. Put up in cases of 1, 2, 3, 4, 5, 6, 8, 10, 15, 20, 25, 30, 40, 50, 60, 70, 80, 90, 100, 120, 150, 200, 250, 300, 400, 500, 600, 700, 800, 900, 1000, 1200, 1500, 2000, 2500, 3000, 4000, 5000, 6000, 7000, 8000, 9000, 10000, 12000, 15000, 20000, 25000, 30000, 40000, 50000, 60000, 70000, 80000, 90000, 100000, 120000, 150000, 200000, 250000, 300000, 400000, 500000, 600000, 700000, 800000, 900000, 1000000, 1200000, 1500000, 2000000, 2500000, 3000000, 4000000, 5000000, 6000000, 7000000, 8000000, 9000000, 10000000, 12000000, 15000000, 20000000, 25000000, 30000000, 40000000, 50000000, 60000000, 70000000, 80000000, 90000000, 100000000, 120000000, 150000000, 200000000, 250000000, 300000000, 400000000, 500000000, 600000000, 700000000, 800000000, 900000000, 1000000000, 1200000000, 1500000000, 2000000000, 2500000000, 3000000000, 4000000000, 5000000000, 6000000000, 7000000000, 8000000000, 9000000000, 10000000000, 12000000000, 15000000000, 20000000000, 25000000000, 30000000000, 40000000000, 50000000000, 60000000000, 70000000000, 80000000000, 90000000000, 100000000000, 120000000000, 150000000000, 200000000000, 250000000000, 300000000000, 400000000000, 500000000000, 600000000000, 700000000000, 800000000000, 900000000000, 1000000000000, 1200000000000, 1500000000000, 2000000000000, 2500000000000, 3000000000000, 4000000000000, 5000000000000, 6000000000000, 7000000000000, 8000000000000, 9000000000000, 10000000000000, 12000000000000, 15000000000000, 20000000000000, 25000000000000, 30000000000000, 40000000000000, 50000000000000, 60000000000000, 70000000000000, 80000000000000, 90000000000000, 100000000000000, 120000000000000, 150000000000000, 200000000000000, 250000000000000, 300000000000000, 400000000000000, 500000000000000, 600000000000000, 700000000000000, 800000000000000, 900000000000000, 1000000000000000, 1200000000000000, 1500000000000000, 2000000000000000, 2500000000000000, 3000000000000000, 4000000000000000, 5000000000000000, 6000000000000000, 70000000

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.
CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

The Rural New Yorker is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the Rural an eminently reliable guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it zealously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other journal,—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

For Terms and other particulars, see last page.

NEW YORK STATE FAIR.

EVENING DISCUSSIONS.

A very creditable desire was shown by the farmers in attendance at the State Fair to improve every moment; and notwithstanding all were weary with the labors of the day, the evening discussions were well attended. The large and beautiful Lecture Room of the State Agricultural Society, was literally crowded until nearly ten o'clock each evening. We did not reach Albany in time for the discussion of Tuesday, but took full notes of what was said on Wednesday and Thursday evenings. We have only room for our report of the meeting held on Wednesday evening, and in the next number will give that for Thursday, and perhaps a few suggestions as to the best way to render Agricultural Discussions interesting and profitable.

At the suggestion of Hon. T. C. Peters, of Darien, Col. ZADOCK PRATT was called to the Chair. Mr. Peters announced the subject proposed for discussion as *Manures, and the Best Modes of Applying them*, and remarked that this was a very important question, for many farmers had learned that they could not grow crops without manures, and others were fast learning this important lesson, whereupon,

Wm. PLUMB, of Onondaga, spoke of his system. He used from 20 to 25 loads to the acre. Apply it generally in the spring, and plow under as soon as practicable. Takes long, dripping manure from the barn-yard, spreads it on the land, plows under, and plants corn—next year barley, and next wheat. Then lays down to clover. The President inquired if Mr. P. could live by a system if he employed a man to do the work. To which he replied that he commenced with nothing, had paid for his farm, and had a little money left to expend in attending the State Fair.

Mr. WINEGAR, of Cayuga, thought manures should be plowed under, as a general rule, but had found a top dressing excellent for wheat.

Mr. MOSLEY, of Onondaga, had learned much about manures and their management from JOHN JOHNSON, of Geneva, and had, in the main, adopted his mode. Stabled his stock, and made the most of the manure. Drove it to the fields in the winter directly from the stable, and threw it on the snow. In this way did not have to draw as much water as though it had lain soaking until spring—drawing does not cut up the land, and the work is done at a leisure time. As soon as the ground was ready, plow it in lightly. In this way he had subdued heavy clay knolls, and made them as mellow as an ash heap.

Mr. PETERS said he differed with some gentlemen in regard to the application of manure. He would not plow in manure deep. Bury it ten inches or so and the roots of plants would have difficulty in finding it. The second time of plowing he would plow deep, so as to sandwich the manure between the two plowings. Nature applied her manure on the surface, and she had made a wise provision for an annual manuring. His experience was that manure placed on or near the surface, produced the most satisfactory results.

Lewis F. ALLEN, of Black Rock, said any general rule for the application of manure will prove a fallacy. One system will not do for all soils. Clay soil retains manure as it does water, and it remains

dormant unless it can come near the surface. His farm was mostly in grass, and he applied manure in September and October, on the surface. Its effect on the growing grass can be seen for half a mile. If manure is applied in the spring it is lifted up by the growing grass, clogs the machine, and its full benefit is not gained until the following year. A good way of manuring is to put sheep on the grass in the fall, and allow them to eat down to the roots. Had one meadow, giving fine crops, that had never been plowed since the creation, and of course it had received no other than surface manuring.

Mr. LYONS, of Lewis county, had cultivated what was called a hungry or leachy soil. Plowed manure in just as it came from the barn, and deep. That which did not decompose the first year was not lost, it was available after the next plowing. He did not believe in the leaching of manures. Manure water poured on a barrel of sand would leach through pure water. He did not, either, believe in late fall pasturing, as recommended by Mr. ALLEN.

Mr. WINEGAR, in reply to the remarks of Mr. PETERS, said that nature had placed manure on the surface, said that nature did no plowing. The greatest difficulty with him was to get the manure under. Had no fears of getting it too deep.

A. GOLDSMITH, of Orange county, said inorganic manures may be spread on the surface without loss, in fact they would be likely to gain ammonia from the atmosphere.

Mr. COLLINS, of Lewis county, had a piece of land which had been in grass over fifty years. It now produced over three tons to the acre. Of course it was never manured, except on the surface. The effect of surface manuring on this grass could be seen for five years.

Mr. MARKS, of Onondaga, was first taught that manure should be plowed in, but often saw no good effects from the manure he used. Now he composted in the yard, and drew to the fields in September or October, and applied on the surface. Some years ago he had resolved never to plow under manure again, but last spring deviated from this purpose, and well plowed under twenty cords per acre, and planted corn; the crop is not much better than where no manure was used. He would never bury manure again, as he invariably got the best results from surface manuring.

Mr. SYLVESTER, of Lyons, always plowed under manure. Was so particular to have it covered, that if he drew manure to his fields in the winter, he covered the piles with swamp muck. Obtained a field that was so poor it did not produce six bushels of corn to the acre the year before—manured it heavy with stable manure, plowed it under deep, and the first year got eighty bushels shelled corn to the acre. The soil is a clay loam, north of the village of Lyons.

Mr. GEDDES, of Onondaga, said such experiments as that stated by Mr. SYLVESTER were apt to lead to error. It was complicated. Mr. G. had plowed deep, broken up the subsoil, which perhaps had not been done before, and this, in addition to the manure, gave a good crop. He was indebted to Mr. MARKS, of his county, who taught him by example to put manure on the surface, but JOHN JOHNSON was the first man who had the boldness to recommend such a course in print. The object to be sought in manuring is to make the grass grow; this fills the earth with roots, which rot and greatly enrich the soil. Mr. G. found manure to pay better upon grass and wheat than upon any other crops. Apply manure upon wheat as a top dressing, in the fall or early in the winter, and it will remain green as a meadow through the winter; even upon knolls where the snow was blown off. Had called the attention of Mr. PETERS to this, and he expressed fears that it would not stand through, but his fears were groundless. In answer to the inquiry, whether drilling had not been the cause of the thrift of his wheat, Mr. G. said that all his wheat was drilled, and only a part top-dressed, and this part showed the vigor through winter, of which he spoke. Mr. G. inquired of farmers present, whether they had ever derived any benefit from the use of plaster before the clover came up. He wished them to give a little attention to this subject, as his experience was that plaster required the leaf to operate upon.

Mr. CHESTER, of Ulster, had found manure applied in all ways beneficial—the question, and a very important one, which was the best way to apply it. Mr. C. generally plowed six or seven inches deep, and then harrowed. Farm, a sandy loam; brought manure from the city. Always used composted manure; had tried coarse manure and found it far less profitable than that which was composted. A little compost in the hill would produce better results than a large dressing plowed or dragged in. Last year plowed in manure, and did not receive five per cent. of the benefit he would, had it been used in the hill. Never let land lie in grass for a series of years—could not be

satisfied with a small crop—broke it up, manured, and made it produce abundantly.

L. F. ALLEN said grazing land in Kentucky that was never plowed, was worth from \$100 to \$170 per acre, and would keep a bullock to the acre. The cattle was fed upon it, and that was all the manure the land got. From these lands came the fine Kentucky cattle to the New York market. Some time since Mr. A. spent a day at Mr. PATTERSON'S farm in Maryland. When he came in possession of it, it was poor, worn out land, not worth \$5 an acre. Mr. P. bought lime-stone land, made lime, and scattered it over his poor soil, until it looked as though it had been visited by a snow storm. No manure was applied but lime and plaster, and now this land produced 2½ tons of hay to the acre.

A. L. FISH of Herkimer, owned a farm 800 feet above the Mohawk, on the south side. When he came in possession of it, it was very poor—could not make grass grow. The hard problem with him was, how to commence to improve. He plowed, planted to corn, and manured in the hill with artificial manure. Fed the corn and stalks to cows, carefully saved all the manure, and drew it out in the winter. Manure should be thoroughly mixed with the soil. Manure itself will not grow plants, nor will poor soil, but when both are well mixed together, healthy plants and a good crop may be expected. He plowed deep and then sowed clover, which succeeded, and the difficulty was then overcome. Now the product of his farm was four times what it was twenty years ago. Then twenty-five head of cattle was all the farm would support; now he kept sixty, and all done with manure produced upon the farm, with the exception of a little guano, at first, to get a start.

Mr. BARTLETT of Dutchess, made a good deal of manure by stabling his cattle. Would recommend to farmers a course which he had pursued with advantage. Wherever he noticed a poor knoll, or a poor spot anywhere on his farm, as shown by the crop, he put stakes to mark it, and at the proper time applied manure liberally to these places, just as he would notice and nurse a weak lamb in the flock.

A. GOLDSMITH of Orange, said all farmers know that land can be kept in grass a long time, but the great majority, he thought, considered it a very unprofitable practice. Gentlemen said that after top dressing from year to year, fine grass was produced. Then he advised that it be plowed under, so as to enrich the soil. Was astonished to hear any one say that manure could be applied to wheat and grass more profitably than to any other crops. Corn would grow in a manure heap, and no crop was more benefited by manuring.

JAMES WILLIS of Queens, said his method of manuring corn was to draw out the manure in the fall and plow it under in the spring.

SOLON ROBINSON wished those present who were giving advice, to remember that the most difficult thing was to commence improving poor land. After a good commencement, progress was easy enough. He had some very poor land; couldn't afford to buy guano, or other manures, to enrich it; had no stock, and what could he do?

Mr. FISH recommended the planting of corn, and the use of ashes and nightsoil in the hill.

ZADOCK PRATT said in the Catskills they placed the tanbark, and the fallen leaves from the woods, in the barnyard. This soon made manure, and was placed upon corn land. This was the way the farmers of Catskill commenced to enrich their land.

Mr. PETERS thought he might aid Mr. ROBINSON in his effort to make the "desert blossom as the rose," by giving a brief statement of a case of improvement in Genesee county. There was a streak of poor land lying south of his residence, so very poor that it could not grow grass. A number of years since a German brought three acres of this land. He sunk an old barrel, and into it was emptied all the slops from the house. When it became strong it was placed over a small piece of land, and the barrel was refilled. In this way about a quarter of an acre was enriched and planted with cabbage plants, and these, as they grew, were refreshed and fed by the contents of the barrel. The result was a very great crop of cabbage. These were fed to a cow, all the stock the owner kept, and the manure applied to the soil. The next year more than half an acre was enriched. That three acre farm had grown into fifty acres as good land as there was in Genesee county.

A. B. CONGER, President of the State Agricultural Society, said he regretted that the discussion had not been a little more philosophical. There was some good in all that had been said, but there were principles well settled in agricultural philosophy which might account for the different experiences of the speakers. It had been settled in England that nitrogenous manures were the best for grasses, and phosphatic manures for leguminous plants. Fermenting manures had been talked

about. Fermentation was the process of decomposition; it was another word for dissipation. Unless something is done to arrest it, it would destroy the manure. On the best mode of applying, there was but one rule. The manure was for the benefit of the roots, and should be placed where it can be within their reach. Mr. C. said his object in rising was not to talk himself, but to introduce a farmer from Massachusetts, the Hon. JOSIAH QUINCY, Jr., who had had great success in soiling, and could impart valuable information on that subject.

Mr. QUINCY said he would make but a simple statement of his practice. Owned a farm that twenty years ago produced only twenty tons of hay; now it gave him every year three hundred. This improvement was effected by the introduction of the English system of *soiling*. The saving of fencing by this system would be immense. On one hundred acres he had not an interior fence. Farmers do not appreciate the value of cow manure. Most of his information was derived from Mr. DANA, a chemist, and author of the *Muck Manual*. He was chemist to the manufacturers of Lowell, and cow manure was the only thing known that would *set colors*, until Mr. DANA, by studying the composition of cow manure, discovered the principle in the manure so necessary to the manufacturers, and taught them how it could be obtained in a better and cheaper way. A cow will produce about 8½ cords of solid manure in a year, and the liquid manure is equal to about 3 cords of the solid. If dry muck was used in the stables, this quantity would be increased threefold, making it about 20 cords a year to each cow. Such manure, within five or eight miles of Boston, was worth from \$5 to \$8 per cord. From these figures, he had come to the conclusion that the manure of a cow was as valuable as her milk; but, for fear he was over-estimating its value, he submitted the question to Mr. DANA, who had given perhaps more time and study to this subject than any other man, and Mr. D. pronounced his estimate correct. On this authority, therefore, he would state that the manure of a cow was as valuable as her milk. The farmers of this country have not yet learned how much can be done on a little land. The laws of France divide the farms among the children, and it is estimated that there are in that country 250,000 farms less than five acres each. The farmers of this country should divide their farms with their sons, instead of sending them West, and grow a large amount of produce on a small breadth of land, and great good would result to both old and young.

CURING, SMOKING AND KEEPING HAMS.

A MOST VALUABLE AND SEASONABLE ARTICLE.

EDS. RURAL NEW-YORKER:—Having seen in your paper of Oct. 1st, an article by C. I. S., Mill Creek, Erie Co., Pa., requesting some one to send a recipe to keep hams and shoulders after they are smoked, permit me to give you my experience for the benefit of C. I. S., and your readers in general.

Formerly I tried keeping hams and shoulders in salt, and also in grain, but they would dissolve the salt or mould in the grain. I then tried keeping them in pounded charcoal with no better effect. I next tried dry ashes, but unless the hams were very dry when put up they would taste of the ashes. I then tried sewing them up in coarse cloth and white washing them several times over, as I had seen them in that condition in market; but they did not keep well—would either mould or the lime would crack and the flies get in.

For a number of years I have adopted a new method and never failed to keep them sweet and free from mould or flies. I prepare a sack for each ham. A yard square of good sheeting is sufficient for a good sized ham. After the hams are smoked, and before any flies have infected them, I put them up, one in a sack. I take sweet hay and cut it (in a cutting-box) about one inch long, and fill in the sack and around the ham, so that the ham cannot touch the bag. Tie a cord around the open end and hang them up in the smoke-house or some cool, dry place, and they can be kept any length of time; the bag and hay will keep away the flies and allow the moisture to escape so they will not mould.

Hams should always be well cured before they are smoked. I have seen several good recipes in the Rural, for curing hams. The following is my method, and I have often been asked how I could keep them through the summer and have them of so fine a flavor:

RECIPE FOR CURING HAMS.—To one gallon of water take one and a half pounds of good salt, one half pound of sugar, and half an ounce saltpetre—to be increased in this ratio to any quantity required to cover the hams. As soon as your pork is cold cut out the hams and pack them closely in your eask. Sprinkle each layer lightly with fine

salt—put on a weight and pour on the brine immediately, and before the juice of the ham has escaped. It will require from four to six weeks for the salt to strike through, according to the size of the hams. It will be necessary perhaps to add a little salt on top of the hams; sometimes, if they are very large, they absorb so much of the salt as to leave the brine so weak it may sour. It would be well to take them up after they have been in a week or two, and examine them, and if necessary add a little more salt. Great care should be taken not to salt too much, as by doing so you lose the flavor of the ham; and but just enough should be used to keep them. As the ham absorbs the salt from the brine it should be fed by adding a little salt on the top and the hams should be well struck through. When the hams are large I take out the flat bone and cut off the round socket bone with a chisel, leaving always the large bone. With care I never have failed to keep hams sweet.

HOW TO MAKE A SMOKE-HOUSE.—Having given you my method for Curing and Keeping Hams, let me add my plan for a Smoke-House. No farmer should be without a good smoke-house, and such a one as will be fire-proof and tolerably secure from thieves. Fifty hams can be smoked at one time in a smoke-house 7 by 8 feet square. Mine is 6 by 7, and is large enough for most farmers. I first dug all the ground out below where the frost would reach, and filled it up to the surface with small stones. On this I laid my brick floor, in lime mortar. The walls are brick, eight inches thick and seven feet high, with a door on one side two feet wide. The door should be made of wood and lined with sheet iron. For the top I put on joice 2 by 4, set up edgewise and 8½ inches from center to center, covered with brick, and put on a heavy coat of mortar. I built a small chimney on the top in the center, arching it over and covering it with a shingle roof in the usual way. An arch should be built on the outside, with a small iron door to shut it up, similar to a stove door, with a hole from the arch through the wall of the smoke-house and an iron grate over it. This arch is much more convenient and better to put the fire in than to build a fire inside the smoke-house, and the chimney causes a draft through into the smoke-house. Good corn cobs or hickory wood are the best materials to make a smoke for hams. The cost of such a smoke-house as I have described is about \$30. ALBX. BROOKS, Factoryville, Tioga Co., N. Y., Oct. 1859.

ABOUT WATER PIPE.

EDS. RURAL NEW-YORKER:—In your issue of July 17th, 1859, I saw a communication from H. J. F., of Palmyra, N. Y., describing a water pipe he had made, said pipe being constructed of cement and drain tile, which I concluded was the pipe. I had over sixty rods of wooden pipe—laid down in the summer of 1854,—which failed the past summer, and being, part of the way, from three to six feet deep in a coarse gravel, and also very difficult to find the leak, I concluded to put down a cement pipe that would not rot in five years. I used two inch drain tile; the mortar was composed of one bushel of lime to three of clean sand. I took two boards, about three feet long and four inches wide, nailed a piece across one end, leaving the sides four inches apart. For the other end I took a piece of stake iron, bent it to a half circle, and screwed it fast on the outside, near the end, making it of the same width, or a trifle wider. I then put my box in the ditch, plastered the bottom about a half inch deep with mortar, laid my tile as near the centre as possible, filled in the sides and over top, and then drew the box along, again going through the process, fitting the tile as closely together as possible. It hardened nicely, and being badly off for water I was induced to let the water in about three weeks from the time it was finished. The pipe not being dry enough, the water sweats through in some places, and there were some small holes where the cement was not closed together. The latter I could easily stop with tallow, and then give them a coat of plaster. Were I to do the same job again, I would make my box four and a half, or five inches wide, and let it stand five or six weeks before letting in the water.

In answer to the inquiry of H. T. B.,—"Should the dirt be put on to the mortar immediately, or should it harden first?"—I would say, on part of mine I covered it lightly immediately, part I left until the water was let in, and part, which was on low ground, was covered with water in less than six hours after it was laid, but I could see no difference. The one appeared to harden as fast as the others. To his second inquiry, I would say, if the bottom of your ditch is soft, remove all the soft muck and fill in with earth that is better, or lay a plank under your pipe. As to the depth of laying cement pipe, it should be so deep that the frost will not heave it up in places to crack it. I

would make another suggestion,—where you are obliged to rise and fall with a pipe, it should be done systematically, that air may not be confined at the high points without a chance to escape. My pipe has between five and six feet of pressure. I have now a beautiful stream of pure water,—no taste of decaying wood, but as sweet and cool as the discharge as at the spring.

S. C. P.

GRASS LAND ON LONG ISLAND.

Eds. RURAL NEW-YORKER:—I have read your article on "Grass Lands," in the last number of the RURAL, and am glad to see the manner in which you set forth the importance of the grass crop, as the "staple crop of the country"—a crop of the greatest value and importance, and one that probably receives as little or less attention than any other production of the earth. I simply propose to state a fact as to the grass-producing quality or power of Long Island "barren land," so called.

There is a field of about two acres near this place, North Islip, by the side of the Long Island Railroad, that was cleared up a few years ago out of the "barren and bushes," and laid down to grass—clear timothy. The land received a dressing of about fifty bushels of leached ashes per acre, with very little if any other fertilizer. I am unable to learn anything more than this concerning the clearing and laying down of this lot, as the man who cleared it is not here now; but the present owner and occupant, who has been in possession of it for the past three years, makes this statement, adding that the lot has been mowed for five years in succession, and has produced about two and a half tons of the finest and best quality of hay per acre, at the first mowing each year, having been sometimes mowed twice a year, besides being pastured every year, or fall, until winter. I do not mention this as a practice to be imitated, but to show the grass-producing quality of the land; for, during the five years past, it has not had a particle of any kind of manure or fertilizer applied to it in any way or form, except the droppings of the stock whilst on it for pasture in the fall. The yield of this piece of land has been at least two and a half tons per acre, for five years, besides the pasture.

North Islip, L. I., Oct. 5, 1899.

AGRICOLA.

DISEASE OF CATTLE—INQUIRY.

Eds. RURAL NEW-YORKER:—The stock of cattle, consisting of nine head, principally cows, belonging to Mr. BENJ. KENAGA, my neighbor, has been entirely swept off by a strange, and to us unknown disease, during the last six months. A statement of the facts and description of the disease is given, in the hope that some of your numerous correspondents may know something about the disease, and perhaps its remedy, and will render a public favor by giving their experience in the matter. Mr. K. describes the symptoms as follows:

First—Profuse watering from the eyes for one to two days. Second—Discharge of whitish matter from the eyes for one to two days. Third—Chills, with excessive shivering or trembling. Fourth—High fever until the animal dies, the matter running profusely from the nose. On dissection the matter is found in great quantity in the throat; and the gall is found to be enlarged to two or three times the natural size. No case of similar sickness has occurred in this neighborhood, although thickly settled. Any information on this subject, given through your paper, will be appreciated by numerous friends of the RURAL in this vicinity.

Williamsville, N. Y., 1899.

T. WINTER.

Rural Spirit of the Press.

Save the Straw.

Reports from many sections speak of an unusually light hay crop. In some counties in the western part of New York, and north-eastern Ohio, farmers are disposing of their stock at reduced prices. An intelligent friend just returned from a visit in that neighborhood, expresses the opinion that there is not enough hay there to winter half the stock. Fortunately there has been grown this year an unusually large breadth of grain, and straw and stalks will be plenty. If these are properly secured, and fed out judiciously, they will do much to make up for the scarcity of hay. Straw alone, merely piled up in the yard without protection from the weather, and left for the cattle to run too at pleasure, will not keep them in good condition. If it be housed or properly stacked, and fed out, mixed with a little addition of roots, bran, shorts, or oil cake, it will be eaten readily, and stock will thrive upon it. The experience of all who have used a straw-cutter, proves that it is a great economizer of food, and that the labor required to cut straw, stalks, and even hay, is amply repaid by the saving effected, and the greatest value given to the feed. By cutting and steaming, the very coarsest parts of stalks may be prepared for mixture with ground stuff, and become palatable, nutritious food. Let those who think of selling their cattle at a sacrifice, first see that all resources of this kind are counted upon; they may find the present necessity a real benefit in teaching them how to winter stock cheaply and well, almost without the use of hay. So says the American Agriculturist.

The Value of Different Manures. Tax lesson inculcated by the following paragraph, from the pen of Hon. F. HOLBROOK, in the N. E. Farmer, is one of great value to the thinking farmer. It gives confirmation to the remark of Mr. COKE, late Earl of Leicester:—"That the value of the farm-yard manure is in proportion to what it is made of. If cattle eat straw alone, the dung is straw alone; the cattle are straw, the farm is straw, and the farmer is straw—they are all straw together."

"Not long ago I had four cows come up to the stable in the fall, which I thought might yield a good supply of milk through the winter, if well fed. I also had four other animals, cows and heifers, which were not expected to give much milk till the following grass season. The first

four were tied in the stable side by side, and received each, in addition to hay and stalks, four quarts of small potatoes each morning, and two quarts of corn and oatmeal each evening, through the winter. As was expected, they gave a good mess of milk, and came out well in the spring. The manure of these four cows was thrown out a stable window, under the cattle shed, by itself. The other four animals were tied in the same stable, next to the first four, and received only hay and corn fodder. Their manure was thrown out by itself, at the next stable window, and under the same shed, so that the two heaps lay side by side. The heap made by the four cows that were daily mowed with potatoes and meal, kept hot and smoking all winter, and was wholly free from frost. The heap made by the other animals that had only hay and stalks, showed no signs of fermentation, and was somewhat frozen. Observing this difference from time to time, curiosity prompted me in the spring to apply these two heaps of manure separately, but in equal quantities, side by side, on a piece of corn ground. The superiority of the corn crop where the manure from the mowed cattle was applied, over that where the other heap was spread, was quite apparent and striking; and called my attention more particularly than it was ever before directed, to the importance of feeding out or beat our richest products, if we would have the best kind of manure for our lands, and large crops from them."

A Wool Train.

The last received issue of the Kansas City Journal of Commerce remarks:—Yesterday morning we were standing on the steps of the Union Hotel, when the wool train of twenty wagons belonging to C. G. Parker, entered the city. There were several guests of the hotel from New York and other eastern cities, watching it as it passed. This was a feature—a spectacle of western country commerce entirely new to them, and naturally elicited many inquiries of a business character, all of which we believe were satisfactorily answered. The train yesterday of Mr. Parker brought in 27,500 pounds of wool, belonging to John Dold & Bro., of Las Vegas, consigned to W. A. Chick & Co., of this city, and by them to be forwarded to Glasgow & Bro., of St. Louis. These wagons were thirty-one days from Las Vegas.

ANOTHER.—A Mexican train of twenty wagons, belonging to Mr. John J. Carr, came in yesterday morning, bringing 30,000 pounds of wool; 2,000 mountain goat skins and seven bales of buffalo robes. The wagons were exactly forty days coming in. There were three hundred and twenty-nine head of cattle belonging to the train.

Agricultural Miscellany.

PALMYRA ANNUAL AG. SOCIETY.—The Annual Fair of this Society—held Oct. 11, 12—resulted most auspiciously. The weather was fine, the attendance large, and the exhibition considered better than either of its predecessors—a rare combination of good fortune, calculated to produce unusual success, and prove satisfactory to members and community. We were present on the 12th, and (after making considerable noise in endeavoring to discharge the duty assigned us) had an opportunity of viewing the grounds and portions of the exhibition. We had heard of the fine grounds of the Society, and the progressive spirit of officers and members, but were most agreeably surprised. The Fair Grounds are beautifully situated and well arranged—the best, we think, considering expense and age, of any we have visited. Indeed, so well were we pleased with the arrangement that we have concluded to give, soon, a plan and description of the grounds and improvements. Of the various departments of the exhibition we can only speak in general terms. The show of Cattle was good—better than usual (we were assured) in both numbers and quality. Short-horns were shown by J. C. and L. HATHAWAY, and T. U. BRADY, of Farmington, G. D., and A. J. DOWNING, of Palmyra, ELIAB YOMANS, of Walworth, and perhaps others. There were also many fine grades and natives on exhibition. The display of Horses was also good, including fine animals in each class. The show of Sheep was very creditable, especially of fine wools. Mr. ELIJAH ENNIS, of Palmyra, made a fine show of Spanish Merinos (nearly 40 head)—also J. C. PETTIT of Palmyra, S. M. BURMAN, of Marion, NARUM WARREN of Macedon, and others whose names we did not ascertain. Leicester and South Down were shown by Wm. CHAPMAN, of Palmyra, and S. S. LAWRENCE of Manchester. Among the Implements, &c., of which there was quite a display, several railroad horse powers and threshers were exhibited in operation. BICKNELL & HUFFMAN, of Macedon, showed a model Grain Drill, worthy the commendation we have heretofore given their machines. ALANSON SHERMAN of Palmyra made a fine show of carriages, &c., and A. S. CHASE of the same place some excellent samples of draining tile. The large exhibition building comprised Fruits, Vegetables, Fancy and Domestic Manufactures, &c., in abundance, and of such quality as to attract great attention. The arrangement of the whole exhibition indoors was excellent, and each department would bear close examination. The fruit was very fine, especially apples and grapes, and we regret that we could not ascertain names of exhibitors. The display of Vegetables was also highly creditable. Among them we found a collection of rarities or wonders contributed by L. W. BRIGGS of Macedon—including the largest and finest head of Paris Cauliflower we ever saw. Mr. B. also had fine specimens of the Mammoth Pine-Apple and Snow-ball Squashes—the Mammoth Citron and Apple-Pie Melon—and last but not least (in the eyes of the curious) a bill of the celebrated *Dioscorea Batata*. A good display of Stoves, &c., was made by BOWMAN & WALKER and L. M. CHASE of Palmyra—and of Cabinet Ware by H. D. JENNER, of the Ladies did their part in decorating the hall with many superior specimens of handwork, both ornamental and useful. The President of the Society, LUTHER SARGENT, Esq., of Palmyra, contributed to various departments of the exhibition, as also did the Messrs. ROBERTS, J. NOTTINGHAM and J. G. TOWNSEND of the same place, SAMUEL DUNFEE and JAS. WHITE of Macedon, and many others. In fact, the Fair was every way worthy the reputation of the Society and its members, and we congratulate all concerned upon its marked success. We are indebted to the officers of the Society for courtesies, and especially to CHARLES B. ROBERTS, Esq., whose hospitality we enjoyed. Palmyra has long been known to us as a beautiful village, but we were not before aware that it contained such a model residence as that of our temporary host—a home and surroundings which prove Mr. R. to be a man of taste and progress in practice as well as precept. A gratuity which he has recently constructed is worthy of particular notice—but we must close for want of space.

AGRICULTURAL EXHIBITIONS have been held during the past two months, in the United States and Canada West, to the number of nearly or quite five hundred. While the number of Shows is much greater than ever before, the quality and attendance have excelled former demonstrations. Rural America is progressing.

THE RESCRIPTS AT N. Y. STATE FAIR, (Albany), for entries, admissions, etc., amounted to \$18,183.45—some \$3,000 greater than at any previous exhibition of the Society. We have not the figures at hand, but think the receipts at the Fair held in this city, in 1891, were far larger in proportion to price of single admission, (which was then 12½ cts., half the present rate), and hence that the attendance was greater. In 1891, also, a member's ticket admitted a whole family through the Fair—whereas now it only entitles the holder to four single admission tickets.

THE MICHIGAN STATE FAIR—at Detroit, Oct. 4, 7—was remarkably successful in most respects, indicating augmented zeal and commendable progress on the part of the Agricultural, Horticultural and Artisans of the Peninsular State. We shall endeavor to give some details on our next.

MICHIGAN STATE AG. SOCIETY.—Officers.—At the recent Annual Meeting of the Mich. State Ag. Society, the following officers were elected, with great unanimity, for the ensuing year:—President—H. G. WELLS, of Kalamazoo. Secretary—R. F. JOHNSON, of Detroit. Treasurer—BENJ. FOLLETT, of Ypsilanti. Executive Committee—E. N. WILCOX, of Wayne county; J. B. CHURCH, of Branch; HORACE WALTON, of Washington; E. N. THOMPSON, of Genesee; FRED. FOWLER, of Hillsdale; GEO. E. JOHNSON, of Kent; JAS. G. BIRNEY, of Bay; and CHAS. DICKER, of Calhoun.

THE CONNECTICUT STATE FAIR—at New Haven, last week—was reported to have been the greatest and most successful of all the State Fairs ever held in said Commonwealth. The weather was delightful throughout, the attendance unusually large, and the aggregate receipts exceeded \$10,000. Good for Connecticut!

CANADA WEST AG. SOCIETY.—After an animated contest between the friends of London and Hamilton, the Provincial Agricultural Society of Canada West, which met at Kingston recently, selected Hamilton as the place for holding the Annual Exhibition or Fair of the Province in 1890. The President of the Association for the ensuing year is JOHN WARD, of Cobourg. HUGH O. BARWICK, of Woodstock, was elected First Vice-President, and F. W. STONE, of Guelph, Second Vice-President.

THE BROOKPORT UNION FAIR—Oct. 11th and 12th—resulted very satisfactorily. The Republic states that there were about 800 entries, including 186 of horses, 61 cattle, 60 sheep, 57 fruit, 99 vegetables, 38 implements. The exhibition was large and fine, and the attendance on the second day estimated at 15,000. The receipts were nearly \$1,000. Altogether the Fair was very successful, and the result both gratifying and profitable, as "it is believed the income from all sources will nearly or quite place the Society out of debt." We regret that an engagement elsewhere precluded us from attending and taking notes of the exhibition.

THE ITHACA FAIR—at Trumansburg, Sept. 29, 30 and Oct. 1—is said to have been a great affair. The editor of the Ithaca Democrat, who was present "in the expectation of seeing nothing more than a one-horse county town arrangement," says he was never more agreeably surprised—indeed "astonished at the completeness of the arrangements, the large and elegant display, and the manifest enthusiasm of all concerned." The grounds of the Society, the large and commodious hall, and other improvements, are also commended. "In fact," adds the Democrat, "the arrangements are perfect in all respects, and reflect credit on those engaged in getting up the exhibition." The display of fruit was very fine, surpassing any other our contemporary had seen in the State.

A LARGE YIELD OF POTATOES is mentioned in a letter just received from D. B. WAITE, of Springwater, N. Y.:—"To-day I have dug the product of one potato (which I brought from Minnesota, last fall, in my pocket) after washing the tubers carefully they weighed one hundred and three pounds, and measured nearly two and a half bushels. The heaviest tuber weighed 3 lbs. 18 oz., and the four heaviest ones 13 lbs. 7 oz. The soil was rather cold clay and not matured. Hoed twice and both times when the vines were wet, which some potato-raisers condemn. When you hear of a larger yield, let us know it!"

SALE OF IMPROVED STOCK.—The attention of breeders and others is directed to the advertisement of Judge CARROLL, announcing that his blood cattle, horses and sheep will be sold at auction on the 26th inst. In noticing the sale the Livingston Republican says:—"The Judge has for many years been one of the most active of our citizens in the improvement of stock. Many years ago he introduced a breed of horses that have no superiors for the road or farm. When our farmers began a progressive movement for a better quality of Cattle, the Judge, by his pure and personal influence, entered heartily into the movement, and as a result, noted as our county has become for fine cattle, there are no herds superior to the Judge's. At the late County Fair, he was awarded the first premium for the best show of cattle owned by one person. And it is this class of stock he proposes to offer at auction. Farmers or others who desire full blood animals should by all means attend this sale, as it is seldom that so fine a lot is offered."

IS LAND IMPROVED BY WOOD CHIPPING?—In a private letter one of our Long Island subscribers makes some suggestive remarks on a subject little understood. He says:—"There is, to my mind, a very interesting question connected with the forest productions of Island lands, or the portions of the Island now uncultivated. It is this:—What effect does the repeated cutting, burning and removing of all the woody product, for a long series of years, or a long period of time, have upon the land?—for a period of 150 or 200 years. Several years ago, I suggested this to, or before, the Farmers' Club of the American Institute, but there never was much said on it; no one seemed to know much about it, or really to comprehend it. I submitted it chiefly to call out information on the subject. Most of those who said anything about it seemed to think land could not be injured or impoverished by growing wood on it, but I believe it can be, and by taking off at stated intervals, or periods, all the woody product, leaving nothing on the land to decay. Why will land not become exhausted by producing a succession of crops of wood as well as by crops of corn and wheat—only continue the process long enough? I intend that land, or a section of country, can be greatly impoverished, or rendered barren, by depriving it of its woody product, continually carrying off all that grows on it for a series of years."

CHICAGO SPRING WHEAT is said to be constantly improving in quality, either from better varieties being planted, or more pains taken in growing and preparing it for market. The proportion of Spring and Winter wheat has very largely increased, and it is expected that the difference in price between the two sorts this year will be less than ever before.

PRIZES AWARDED AT THE NEW YORK STATE FAIR.

Held at Albany, October, 1899.

HORTICULTURAL

MARKET PRICES OF FRUITS.

It is an encouraging sign of the times that people are beginning earnestly to inquire the best way to dispose of their fruit—it shows progress—success in fruit culture. As the best way of answering the many inquiries on this subject, we give the market prices in New York city, and at other places. One thing our fruit growers have to learn, and that is to send only the best specimens to a distant market, and to take especial pains to pack them, so that they will reach their destination in good condition. Fine fruit, well packed, always sells at a high price in the eastern markets, while inferior samples in bad condition, are often a drug, scarcely paying for transportation. It costs no more to send a barrel of apples to New York than to bring \$3, than one that sells with difficulty at half that price. While attending the last State Fair at Albany, two gentlemen living on the Hudson, inquired if we could send them a supply of winter apples. This we thought strange, as they lived less than a hundred miles from the city. They informed us, however, that it was difficult to obtain round fruit in New York. The packers in this city buy the fruit by the wagon load. It is then thrown into barrels, headed up and shipped. No care is exercised, and no judgment in selecting out the bruised specimens.

PRICES OF FRUIT IN NEW YORK CITY.—The following report of the New York market, from the Tribune, is valuable, as showing not only the present prices of fruit, but the dependence of that city upon Western New York and the Western States for a supply of fruit. The suspension of receipts by the Erie Canal, even for a few days, causes a scarcity, and the reporters are compelled to say "the market is quite bare of good apples."

APPLES.—The extensive break in the canal above Schenectady cuts off the receipts via that route, and the market is, in a way, quite bare of good apples. It is said that a week to ten days must elapse before boats can pass the break, and in the meantime apples must be comparatively scarce and high, offering good inducements for prompt shipments of choice fruit by the most expeditious routes. Should the weather be unseasonably warm, much of the fruit now delayed would reach market in poor order. In any event the present scarcity must be followed by a temporary glut, and corresponding low prices. Quotations are now difficult to make, the transactions of the day not being sufficient to establish any market rate; but we name the following figures:

Western, mixed lots \$2 00 @ 2 50
Common, 700 lbs 2 00 @ 1 25
Red streaks 2 00 @ 1 25
Twenty minute Pippins 2 00 @ 2 50
Fall Pippins 2 00 @ 2 50
Desert Reds 2 00 @ 2 50

Pears.—We quote:
Saratoga, good, 700 lbs \$15 00 @ 20 00
Virginia, perfect 15 00 @ 20 00
New York 10 00 @ 15 00
Louisiana, good, 700 lbs 10 00 @ 15 00
Duchess, good, 700 lbs 10 00 @ 15 00

QUINCES are very scarce and wanted. Apple Quinces, 700 lbs, \$3.00; Pear Quinces, 700 lbs, \$2.00.
GRAPES.—Catawba 12 1/2 @ 15; Isabella, choice, 10 1/2 @ 12; do common, 8 @ 10.

DIPTERIS.—Southern, 8 @ 10; do, 10 @ 12; do, 12 @ 15; do, 15 @ 20; do, 20 @ 25; do, 25 @ 30; do, 30 @ 35; do, 35 @ 40; do, 40 @ 45; do, 45 @ 50; do, 50 @ 55; do, 55 @ 60; do, 60 @ 65; do, 65 @ 70; do, 70 @ 75; do, 75 @ 80; do, 80 @ 85; do, 85 @ 90; do, 90 @ 95; do, 95 @ 100.

DIPTERIS.—Southern, 8 @ 10; do, 10 @ 12; do, 12 @ 15; do, 15 @ 20; do, 20 @ 25; do, 25 @ 30; do, 30 @ 35; do, 35 @ 40; do, 40 @ 45; do, 45 @ 50; do, 50 @ 55; do, 55 @ 60; do, 60 @ 65; do, 65 @ 70; do, 70 @ 75; do, 75 @ 80; do, 80 @ 85; do, 85 @ 90; do, 90 @ 95; do, 95 @ 100.

DIPTERIS.—Southern, 8 @ 10; do, 10 @ 12; do, 12 @ 15; do, 15 @ 20; do, 20 @ 25; do, 25 @ 30; do, 30 @ 35; do, 35 @ 40; do, 40 @ 45; do, 45 @ 50; do, 50 @ 55; do, 55 @ 60; do, 60 @ 65; do, 65 @ 70; do, 70 @ 75; do, 75 @ 80; do, 80 @ 85; do, 85 @ 90; do, 90 @ 95; do, 95 @ 100.

VEGETABLES AND THEIR PRICES IN SACRAMENTO.—A. G. WHEELER, Esq., of Sacramento, California, sends us the following statement, showing the order and date of arrival of the Spring, Summer and Winter Vegetables at that market. Also, the price when first taken to market, and subsequent ruling rates of each:

SPRING AND SUMMER VEGETABLES.

Spinach. In March, 12 to 6 cents per pound.
Asparagus. about April 1st, \$1 per bunch to 75 cents per dozen.

Rhubarb. about April 15th, 50 to 6 cents per pound.
New Potatoes. about April 15th, 20 to 7 @ 8 cents per pound.

Green Peas. about May 1st, 75 to 8 cents per pound.
Artichokes. about May 1st, \$1 to 50 cents per dozen.

Spring Onions. about May 15th, 12 to 6 cents per pound.

Green Beans. about May 20th, 75 to 5 cents per pound.
Cucumbers. from open beds, about June 1st, \$5 to 25 cents per dozen.

English Beans. about May 21st, small land, 7 @ 8 cents per pound.
Tomatoes. about June 1st, 50 to 8 cents per pound.

Green Corn. about June 1st, \$1 to 30 cents per dozen.
Lima Beans. about June 15th, 12 cents per pound.

Summer Squashes. July, 25 to 30 cents per pound.
Egg Plant. July, 50 to 6 cents per pound.

Muskmelons. about July 1st, \$1 to 12 cents each.
Watermelons. about July 1st, \$1 to 12 cents each.

SUMMER AND WINTER VEGETABLES.

Canflower. \$1 50 per dozen.
Califlower. \$1 00 per dozen.

Cucumbers. in hot-beds, \$3 per dozen.
Green Peas. (until January,) 12 cents per pound.

Beets. Carrots, Lettuce, Parsnips, Radishes, Salsify, Turnips, each 37 1/2 to 50 cents per dozen bunches.

WINTER VEGETABLES.

Cabbages. in sacks, 1 1/2 @ 3 1/2 cents per pound.
Onions. in sacks, 10 @ 12 cents per pound.

Potatoes. in sacks, 2 @ 4 cents per pound.
Sweet Potatoes. in sacks, 3 @ 5 cents per pound.

Beets. Carrots, Parsnips and Turnips, in sacks, 1 1/2 @ 3 cents per pound.

Cauliflower. in bunches, \$1 50 per dozen.
Califlower. in bunches, \$1 50 per dozen.

Cucumbers. \$3 per dozen.
Green Peas. 75 to 12 cents per pound.

Lettuce. in bunches, 87 to 50 cents per dozen.
Radishes. in bunches, 87 to 50 cents per dozen.

The last number of the California Farmer gives the market report of San Francisco for September 1st, and we copy enough to show the prices of the principal fruits in that city:

Apples and Pears from 12 to 25 cents per pound.
Bartlett Pears 35 cents per pound.
Lamb Blackberries 50 cents per pound.

Orab Apples 35 cents per pound.
Green Apples. for cooking, 12 1/2 cents per pound.
Peaches 12 1/2 to 35 cents per pound.

In Boston apples range from \$1 50 to \$2 50 per barrel. The Toronto Globe says "the supply of apples continues large, but consists purely of importations from lake ports. Prices range from \$1 75 to \$2 25 per barrel."

PRICES OF FRUIT IN COVENT GARDEN MARKET, LONDON.—As prices of fruit, not less than of other goods, convey a pretty accurate idea of the abundance or scarcity of the supply, we have prepared the following tabular statement, by which the prices obtained in Covent Garden market, in the first week in August, this season, may be compared with those of the same week in the years indicated, beginning with 1841:

	1841.	1843.	1850.	1853.	1859
Apples 7 doz.....	8s. 0d.	2s. 0d.	2s. 0d.	8s. 0d.	8s. 0d.
Half a doz.....	8 0	7 0	4 0	5 0	5 0
Pears 7 doz.....	4 0	6 0	3 0	4 0	5 0
Half a doz.....	4 0	10 0	8 0	7 0	12 0
Plums 7 pound.....	2 0	8 0	6 0	3 0	2 0
Half a doz.....	5 0	5 0	4 0	3 0	3 0
Cherries 7 lb.....	4 0	5 0	3 0	2 0	4 0
Br. Currants 7 lb.....	6 0	7 0	5 0	6 0	7 0
Red.....	5 0	5 0	5 0	5 0	6 0
White.....	1 0	5 0	5 0	5 0	6 0
Gooseberries 7 lb.....	5 0	5 0	3 0	4 0	5 0
Raspberries 7 lb.....	4 0	6 0	4 0	3 0	3 0
Apricots 7 doz.....	8 0	2 0	2 0	3 0	4 0

We may add that an ordinary sieve contains about five pecks, and a currant sieve two and a half pecks. A punnet is a round, flat basket that holds from twelve to eighteen good sized plums.—*Gardener's Chronicle.*

Know the above it will be seen that almost all fruits sell higher now than they did eighteen years ago. But we do not suppose any one will be foolish enough to argue from this, that fruit culture in England is a failure—or that the soil or climate of England is such as to render fruit culture unprofitable. This was the argument used by the enemies of dwarf pears—because pears were as dear as when the dwarf pear excitement commenced, therefore dwarf pear culture was a failure.

BOQUET STANDS.

Sows of our readers, no doubt, have experienced a good deal of difficulty in arranging bouquets to suit their taste. Even professional gardeners, many of them, make sad work in arranging flowers. Our attention has recently been called to an ingenious invention by DANIEL STRAD, of Huddersfield, England, called "Strad's Pyramidal Boquet Stand." It consists of a pyramidal cylinder of metal, pierced with holes at uniform distances, and within it is another cylinder, fitting so as nearly to touch the outer one, and with just enough space between to receive the stalks of the flowers which are inserted in the holes. At the top of the outer cylinder is a tubular orifice, stopped with a small tube reaching to the bottom of the cylinder. The small tube is lifted out, and a little water poured into the central bore or tube, and then the small tube is again inserted, and a little water poured into that also. The flowers are then inserted according to the fancy of the decorator, and as each flower has but an inch stem, they sit close to the outer cylinder, touching the inner one, and by the process of capillary attraction, get from it just enough moisture, without being actually wet, as serves to sustain their freshness of color and odor for a considerable length of time. With the addition of a glass shade over it, the lower edge of which is immersed in water, most flowers will keep near a month. Nothing can be more simple in use, though so thoroughly philosophical in construction, as this Boquet Stand.

Another, and more simple contrivance for the purpose, is described by a correspondent of the *London Cottage Gardener*. "I went to a China store and selected about six or eight China or Liverpool-ware cups, of such size as would just fit into or nest in each other,—commencing at the largest sized coffee-cup, or small bowl, and ending with the smallest of a child's tea set. I then placed under the bottom of each of them a circular piece of wood (such as come with ribbons, but anything else will answer the purpose,) to separate the cups, so as to leave a space for putting the flowers into.

It is not necessary that the cups should be one uniform shape, as none but the lowest cup will be seen when the flowers are arranged in it. The lower cup should be mounted on the wooden base, with a circular rim around the upper edge of it to hold the cup firmly; or it may be placed inside of an ornamental vase."

DETORTICATION OF TREES.

ALLOW me to call attention to the following:—"The system of stripping the bark off the trunks of trees for the purpose of destroying the insects which infest them, has now been generally applied to a large number in the Champs Elysees and elsewhere in Paris, and has led to the discovery of a curious fact, recently communicated to the Imperial Horticultural Society by M. Robert. It appears that trees may be deprived of the whole of their bark not only without experiencing any injury, but even with considerable advantage, the operation tending to increase their power of vegetation. Elms, for example, which before the operation did not increase more than one or two millimetres in diameter each year, have been found to increase four or five when stripped of their bark. Trees having a very thin bark, such as the birch and others, need not be stripped to obtain a similar result; it is sufficient for the purpose to make longitudinal incisions in the bark by means of a kind of three-bladed scarifier. It is now intended to subject all the young elms in a languishing state to this treatment throughout Paris, it having answered perfectly with those planted on fortifications. In a commercial point of view, the discovery is of some importance." The above, if correct, promises most valuable results.—*Cor. of Gardener's Chronicle.*

FRUITS RECEIVED.

We are indebted to J. H. STANLEY, of Le Roy, for a singular apple—one half a fine russet, with a reddish cheek, and the other half green. The line of demarcation is as plain as it could be painted, dividing the apple in two equal halves, and running through the centre of the calyx and the stem. We give a drawing showing this curious sport.

Mr. S. sent with the apple the following note:

EDS. RURAL NEW-YORKER:—I send you an apple, raised by my brother, which is a curiosity. The tree which bore it bears all green sweet apples like the green half of the one I send you. About forty or fifty feet from it stands a tree which bears an apple like the Russet half, and the only tree in the orchard which bears that kind of apple. The one bearing the green apple had about six bushels on it; this year all green but this one. The Russet tree had none on, though it probably blossomed. When the apple was first picked the division was plainly marked through the centre of the stem. If you consider it worthy of notice, please give us your views as to how the amalgamation was brought about, &c.—J. H. STANLEY, Le Roy, N. Y.

—To JOSEPH MACOMBER, Macedon, N. Y., for specimens of a green, sweet apple, much like R. I. Greening in appearance, and larger and more colonial than Green Sweeting. It appears like a long keeper, and in all respects we should judge it to be a valuable sweet apple. It was brought originally by Mr. M. from Vermont.

—To ELLWANGER & BARRY for a large basket of magnificent pears which we are examining and tasting daily, as they mature, with great satisfaction.

—To E. W. SYLVESTER, of Lyons, for specimens of a small seedling apple, known as the *Sylvestor*—small, round; calyx closed, in a shallow, wrinkled basin; stalk very short and slender, inserted in a deep, narrow cavity; skin smooth, yellowish cream color, sometimes with a beautiful blush on the sunny side; flesh white, tender, very juicy, with a pleasant flavor. Mr. S. says "the tree is a good bearer, the apples always fair, and full of vinous juice. Season, October and November."

NEW SUBSTITUTE FOR GRASS LAWNS.

SPERGULA FILIFERA.—To Mr. Mongredien belongs the merit of having first pointed out that *Spergula filifera* was capable of forming an excellent substitute for grass in the formation of lawns. A piece of ground planted here four years ago with this pretty little moss-like Alpine, is now, and has been for these three years past, closely covered with a carpet of the richest green—soft and elastic to the tread, and forming a turf equal to that of the finest grass, for which, at first sight, it might easily be mistaken. Over grass, it however possesses many advantages; in the first place it requires no mowing, and it is reported to withstand the effects of long-continued drouth better than any grass, remaining comparatively green when the latter has been burnt up. Another point in its favor is its evenness of surface, provided the ground laid down with it has been made so in the first instance—a matter of great importance—for as the plant itself never grows more than a quarter or half of an inch in height, any inequalities or other defects of formation are ever afterwards perceptible. After planting, the only care that it requires is sweeping and rolling. If left undisturbed it would be one mass of white flowers in July, but as most people prefer a lawn perfectly green to one covered with blossoms, the latter should be removed by frequent sweepings with a fine besom. A birch broom is too rough for it. In forming a lawn with this plant, Mr. Mongredien's gardener, Mr. Summers, recommends the seeds, which are very small, to be sown behind a north wall, and when up to be transplanted where required, placing the plants regularly over the surface, at say six inches apart. On strong clay it sometimes assumes a yellow hue, but this has been found to be easily converted into a beautiful green by watering with weak liquid manure. Unforeseen disadvantages may yet arise, however, in connection with the employment of this as a lawn plant; but at present, judging from the little experiment that has been made with it, it certainly promises to answer perfectly, and in an economical point of view, seeing that mowing may be dispensed with, it cannot fail to be highly appreciated. A trial of it on a more extensive scale is now being carried out, the result of which we hope to be enabled to report hereafter.—*Gardener's Chron.*

GRAPE CULTURE ABOUT SYRACUSE.

This subject having become of such general interest, it may not be amiss to give a few leading facts necessary to be known and heeded in order to give permanent success to Grape Cultivation. The soil, climate, and proper treatment of the vine, summer and winter, must combine to reward the careful and diligent with an abundance of grapes in full maturity. First, make the selection of the vines with regard to their being hardy and productive; have the soil mellow, rich and deep, with plenty of sun and circulation of air, with underdrainage, ordinarily, at least three feet deep. Sprinkle sulphur on the leaves once or twice in the summer, if they are inclined to mildew; take out the suckers and weak sprouts, so as not to have too much vine for the room. Take the cheap insurance of laying down the vines, (after they are trimmed about the 1st of December,) on the ground, and covering them slightly with earth or other substances. Give them soap suds and other

fertilizers during the growing season, mixed with common sense, and no good reason can be shown why each American sovereign's table should not be daily graced with this prince of luxuries during the winter. Acting upon the valuable suggestions recently made in the *RURAL NEW-YORKER*, to visit our neighbors' gardens, I will refer to the to the practical experience of some of our neighbors and citizens I have observed during a few spare hours snatched from my profession.

Recently, in a call on my venerable friend Hon. B. DAVIS NOXON, he called my attention to his grapes, recently gathered, and the perfect bunches nicely laid down for the winter, in boxes three or four layers deep, with cotton between. Also, to the fact that upon a frame made over a flat roof some two feet above it, he ran a portion of an Isabella vine, and upon a space of some eight feet square had gathered a bushel of most elegant grapes. They were the best he raised, as to ripeness and perfection.

I next called upon Mr. ALLEN COREY, of this city, whose vines are of seven years setting, mostly Isabella, the rows running north and south, eight feet apart. The soil is a sandy loam, with a gravelly subsoil, and his Isabella grapes, in size, excel any I have ever seen. He informed me his crop last year from half an acre was 8,300 pounds of grapes. He also called my attention to a seedling grape just in bearing, raised by him, a hybrid between a Connecticut grape and the Catawba. It was two weeks or more earlier than the Isabella. The grape certainly tasted well, is somewhat higher colored than the Catawba, and may prove a valuable acquisition.

My next visit was on Mr. GEORGE RAYMOND, of this city, whose soil is of a gravelly loam, and the quantity and quality of his grapes were indices of happiness and rational enjoyment. His Concord and Dianas were especially fine.

Syracuse, N. Y., 1859. S. N. HOLMES.

THE NEW GRAPES.

J. J. THOMAS, editor of the *Country Gentleman*, makes the following notes on some of the new grapes, received by the editor, from SAMUEL MILLER, of Pennsylvania. Some of these we were anxious to see this year, but have not succeeded in doing so.

Union Village.—Bunch 5 inches long, not shouldered, berries large, seven-eighths of an inch in diameter—dark brownish-black—much resembling the Isabella in flavor, hardly so good perhaps—nearly round. We should like to know the exact period of ripening.

Mary Ann.—Bunch small, berries half an inch in diameter, black, probably very early; flavor good, equal to Isabella, sweet, perceptibly foxy, but not disagreeable. S. Miller says, "hardy and immensely productive."

Cassidy.—Bunch of medium size, 4 or 5 inches long, slightly shouldered, moderately compact; berries half an inch to five-eighths in diameter, light green, sometimes a faint shade of salmon; sweet, scarcely foxy, with much pulp, rather deficient in flavor. Downing says "very good," and S. Miller, "sweet as honey, with a peculiar and delightful aroma." Tastes differ, and we cannot place it so high in the scale of excellence.

Lenoir.—Bunch scarcely shouldered, 4 inches long, rather compact; berries rather small, or three eighths to one-half an inch in diameter, with a rather brisk and quite high flavor—"good" or "very good."

Franklin.—A small, broad, shouldered bunch, compact and even—berries half an inch or more in diameter, round, black, apparently thoroughly ripened, and hence an early sort. Quality "good," perhaps "very good." There is a perceptibly brisk flavor, a very slight shade of the acerb quality of the frost grape.

Mr. DOWNING states in the *Horticulturist*, the results of his experience and observation with the new grapes, as follows:

Rebecca.—Any one who tastes it will be unwilling to do without it. Mildew a little, but not more than the Isabella. Requires but time to rank as the "American Chasselas."

York Madeira.—Hardy, productive. "Pretty good." A few days earlier than Isabella.

Hyde's Eliza, Candy's August and Baldwin's Early.—All probably same as York Madeira.

Delaware.—Longest tested. Not a delicate grower, as some represent. Fruit sugary, aromatic, refreshing. Never cloyes, and is of the highest quality.

Diana.—One of the most vigorous growers. Begins to color, and is very good to eat almost as early as the Delaware, but does not hasten to maturity as that kind does.

Herbmont.—Needs protection in winter, and will not ripen its fruit north of New York, as a rule. It gives abundant crops of delicious, spicy fruit, the berries of which are bags of wine.

Anna.—First fruited while A. J. Downing was living. Flavor reminds one of the Muscat of Alexandria. It grows much like the Catawba, and seems to resist mildew better than any except Delaware. Berries large, much like Catawba, peculiarly dotted and covered with bloom. Color greenish white, sometimes light amber. Less acid than the Catawba. Ripens as early as the Isabella.

PEAR BLIGHT.

EDS. RURAL NEW-YORKER:—Either through a failure on my part in making myself understood in my communication published in your issue of August 25th, or through some misunderstanding of said communication on the part of Mr. SPENCE, (see his article in the *Rural* of Oct. 8th,) we (Mr. SPENCE and myself,) failed to understand each other.

It appears that the disease alluded to by Mr. SPENCE, affects nothing but the roots, while the bark blight to which I referred in my article is confined to the body and base of the lower limbs, or, I should say, to the larger limbs.

Will Mr. SPENCE, and other gentlemen of the Fruit Growers' Society of Western New York, give us, poor benighted outsiders, a little "more light" on the subject?

Livonia, N. Y., Oct., 1859. G. C. BACHMAN.

GOOD, WHOLESOME BREAD—POTATO YEAST.

TAKE two teaspoonfuls good flour; scald the flour so that when it is thoroughly scalded it will be about the consistency of mush; beat well; when cool enough, add two-thirds teaspoon fresh yeast. When very light, knead with a little warm water,—it is much better to use part milk,—knead just flour enough to have it smooth, without sticking to the board, then make in loaves. When again light, bake in a good oven. The foregoing will make two loaves which should be baked in two quart pans. Let it rise very light before placing in the oven, or until it begins to crack on top. Bake half to three-fourths of an hour, keeping good watch that it does not scorch or brown, and you will have bread that your worse half will declare is the very best he ever eat. If not, we shall put him down as hard to please.

POTATO YEAST.—As I have never yet noticed in the *RURAL NEW-YORKER* a recipe for the kind of yeast that we use, I forthwith send it. Boil three good-sized potatoes; pare and wash very fine. While the potatoes are boiling, take a single handful of hops, tie them in a muslin bag, and place them in an earthen bowl that you can set over the teakettle. Pour about a quart of boiling water on them, let them stand from three to five minutes, or until the potatoes are done and mashed, add to the mashed potatoes one teaspoonful flour; two tablespoons sugar; one-fourth teaspoon salt; one teaspoon ginger—scald the whole with the hot water; mix well, and when cool enough, add two-thirds teaspoon brewer's yeast. Set in a warm place until very light. This yeast, if kept in a cool place, but where it will not freeze, will be good for several weeks during the winter. Chautauque Co., N. Y., 1859. NERRIE.

HOW TO PUT UP HAMS AND LARD.

MESSRS. EDITORS:—Noticing an inquiry in the *RURAL* "how to put up hams," I send you a recipe that I will warrant to keep them any reasonable length of time, perfectly sweet—as follows:

When the hams are sufficiently dried (say two and half months after killing,) wrap them well in newspapers—(the *RURAL* would give them a splendid flavor, as it contains so many nice things, though I would prefer to keep my old ones to read again; but a truce to the digression,)—and pack them in good, strong ashes. You can keep them sweet and nice as long as you please.

While I am in the way of it, I will send you a recipe for making lard "as white as snow." Now, don't be incredulous, but try, and then you will know 'tis so! Take about the proportion of one gallon lye and two tablespoonfuls of soda to thirty gallons water, and boil the fat in it the usual way, and my word for it, your lard will rival snow. Fosterville, Tenn., 1859. M. F. W.

COLORING RECIPE—CREAM PIE.

EDS. RURAL NEW-YORKER:—In reply to an inquiry in a late issue I send the following:—

To COLOR STRAW LEAD, OR MOORE COLOR.—Take beech-bark chips, cover with water and set over the fire until you think the strength is out, then strain the dye, place it over the fire again, adding a little copperas, (not too much, or it will make it too near a black.) The dye must be very strong of the beech-bark. Clean your straw with soap and water and a brush, then put it into the dye, stir and turn over often (to prevent spotting,) airing it occasionally until dark enough. Rub in clear water. When dry it may need brushing. I have always colored in brass, but something else may be as good.

CREAM PIES.—Lady readers of the *RURAL*, please try my way. Into one pint of cream stir 1 tablespoon of flour, nearly a half cup sugar, a little salt, and season with nutmeg or extract of lemon.—Make a good crust and your pie will be good. Henderson, N. Y., 1859. Mrs. M. E. RICK.

STARCHING FINE SHIRTS.—Noticing an inquiry in the *RURAL NEW-YORKER* for a good recipe for starching fine shirts, collars, &c., I send you one which I have never seen published. One ounce spermaceti and one ounce white wax—melt into a thin cake on a plate. A piece size of a quarter dollar, added to a quart of prepared starch, gives a beautiful lustre to the clothes, and prevents the iron sticking.—VIVIAN, Levant, N. Y., 1859.

SODA CRACKERS.—One and one-half cups of milk; 1 teaspoonful soda; 2 teaspoonfuls cream tartar; a piece of butter as large as a hen's egg; a little salt—put the soda in the milk, the cream tartar with the flour, mix hard, roll thin, and bake in a quick oven.—NELLIE STERLING, Kalamazoo, Mich.

ELDERBERRY WINE.—Will some of the *RURAL* readers please inform me how to make elderberry wine? I have eighteen gallons of the juice. Will it pay to manufacture?—D. N. GARDNER, Dundee, Yates Co., N. Y., 1859.

BUTTERMILK CAKE.—One teaspoon buttermilk; 1 tablespoon butter; 1 teaspoon soda; 1 teaspoon salt; 1 teaspoon dried currants; 1 teaspoon cream tartar; 8 cups flour. Bake slowly one hour.—LIBBIE, Oakland, N. Y.

COLORING KID GLOVES.—Will some of the *RURAL*'s numerous correspondents please to inform men how to color white kid gloves a light green or blue?—BALLY, Sidahill, 1859.

CHARLOTTE RUSS.—Will some of your readers inform us through the *RURAL NEW-YORKER* how to make Charlotte Russe, and oblige—Augusta, Knoxville, N. Y., 1859.

EXAMINE your pickles, sweetmeats

WATCHING.

BY KATE CAMERON.

I am watching by my window,
But, ah, 'tis all in vain—
The loved ones and the loving
They never come again.
They left us when the blossoms
Made bright the summer day,
The flowers will return in spring,
But they—ah, never, they!

I am watching by my window,
And musing on the Past,
The sunny visions of my heart
Too fair, too frail to last.
A thousand dreamy fancies
Woven in idle hours;
Ah, ne'er will bloom such flowers again
In Fancy's faded bowers.

I am watching by my window,
The busy, bustling street,
The ever changing faces,
The tread of passing feet;
And one thought comes to cheer me
That God is over all,
He knows each heart's pang,
He sees each tear-drop fall.

In love He watches o'er us,
Nor will it be in vain,
For He will bear us safe at last
Over Life's troubled main,
And in those blessed mansions
Upon the Spirit-Shore,
Earth's faded flowers again will bloom
To change and die no more!
Rochester, N. Y., 1859.

MOONLIGHT.

An enlightened mind can regard only with wonder and contempt, mingled with the most heart-felt pity, the poor, deluded heathen, who bows with reverence, and, perchance, with a yielding up of life, before an image his own hands have fashioned. But I confess to a feeling of admiration for the untutored enthusiast who gives vent to his inherent religious zeal by a sincere worship of the moon; and, without doubt, I should follow his not altogether ignominious example, had I never been taught of Him who made both "the heavens and the earth."

In childhood I possessed a love of moonlight that became the subject of many a pleasant jest by merry companions, who delighted to remind me of the man said to hold undisputed possession of that enchanted realm, and to gaze forever down upon the bustling, transient mortals who inhabit this mundane sphere. Although I entirely ignore the story of the poor unfortunate recluse, yet my passionate love of moonlight has grown with my growth and strengthened with my strength, until it has become a part of my very being. Even now, as I sit at my open window and write, the pale moonbeams are illuminating every object around, and shining full upon my face, and I am strangely, calmly happy—as I always am under their silent, soothing influence. At times, when some great sorrow has fallen with crushing power upon the heart, and the darkness of despair enveloped the soul with a midnight gloom—at such times, I have gone forth and stood alone under the broad canopy of heaven, and the moon, looking so pityingly down, would charm away the spirit-pain, and the old light-heartedness returning, it seemed I could almost defy the world to render me again unhappy. "Sickly sentimentalism!" I hear from some plain matter-of-fact reader. Well, perhaps it is, yet I always feel that my moral nature is refined and purified by such a communion with Nature and with Nature's God.

An incident intimately connected with this subject is engraven with a pen of iron upon the most sacred tablet of memory, and time can never efface the record there. One bright morning in the early Autumn time, when the shadow of a recent affliction had darkened our household, there came to us a little dark-eyed, brown-haired fairy, like a ray of sunshine dispelling every cloud, and creating by her presence an atmosphere of joy and love. She was the child of a sainted sister, and we loved her, first, for her mother's sake, and afterward, for her own sweet self. She seemed a little miniature embodiment of all that was pure and beautiful, and to me she became dearer than all the world beside. Through house and garden, in kitchen and parlor, we heard the musical tones of her voice, and strangers who came to the house murmured blessings upon the fair child, and parted with regret from one who seemed formed only for love. But our darling was too pure for earth, and Heaven had need of her. While sitting on a low stool at my feet, and singing, in her peculiarly sweet and varied tones,

"I want to be an angel,"

she complained of sudden faintness, and as she became rapidly worse, we sent for the family physician. The child was a particular favorite of the good old doctor, and though he told us there was hope, yet I could gather little encouragement from his words when I noticed his agitated voice and manner, which he vainly attempted to control. But why linger over a scene more painful than words can describe. Three days of intense anxiety for us, and of the most excruciating pain for the little sufferer, and then our idolized Lulu was "an angel." We gazed for the last time on that loved countenance, beautiful even in death, with a smile still hovering about the rigid lips, and then they buried her forever from our sight.

During all that long, melancholy day, dark clouds had obscured the brightness of a summer sky, and though the evening brought no change, yet I could not resist the strong impulse that prompted me to visit our darling's new-made

grave. Reaching the place alone, I threw myself beside the little mound. A long time I lay thus, shedding no tears, uttering no sound, and in the deep despair of my heart I thought that Heaven was cruel thus to afflict one who had done naught to deserve this overwhelming sorrow. With these unconsoled, sinful thoughts still in mind, I chanced to cast mine eyes toward the now cloudless heavens, and the unrivaled beauty and sublimity of the scene which met my upward gaze, caused an instant revulsion of feeling. The moon was shining clear and full upon the still, quiet earth, and to my excited imagination seemed like a reproving angel, with a serene, sorrowful countenance, chiding mine unbelief, and at the same time whispering of heaven, where was our lost darling, singing the praise of Him whose goodness I had so wickedly doubted. Tears of repentance were soon flowing fast upon the fresh-lain sod, and with a choking voice, but a peaceful, resigned heart, I murmured, "Not my will, O Lord, but thine, be done." FRANCES.
Cherry Grove, N. Y., 1859.

A WORD TO FRETFUL WIVES.

There you are, with your mouth puckered up again! What's the matter! Are your friends all dead? No,—well, have you lost every cent you ever owned? No,—are your children sick? Is your husband cross? Have you got the toothache, or heartache? Neither of these, and still as cross as a young bear! We wonder how your family can endure your presence. Those young hearts, whose sun you ought to be—how you chill them with your frowns and pettishness! No wonder they long to get out of the house. And now you have struck your little child because "he would not stop teasing." Friend, that blow fell on his soul, and left an indelible scar there. He will feel it long after he has forgotten it. Many years from now, when your head is laid low in the grave, that blow, given without cause,—impatiently, angrily, will do its work.

Why can't you be good-natured? Were you never so? Memory points to the days of your girlhood—seldom the lines of anger disfigured your brow then. And the man who won your love thought what a happy home she will make for me! How sweet it will be to sit down by her side after the cares of the day are over! How beautiful to read for her pleasure—to be repaid by smiles and kisses. And the home was ready, and the bride established—but she proved unworthy of the trust reposed in her. Instead of meeting care with a hearty laugh, and "get behind me Satan," you worried and fretted, and began to tell every little trouble to your husband. It was not womanly; it betrayed a weakness of both head and mind! Imperceptibly its influence crept into his spirit, chilling it with a worse chill than that of death, till it made a shroud of iron for the disappointed heart, and the charm of love and family and home was gone.

"Was once!"—how often these words drop from your lips. "I was handsome once—I was this, that, the other once"—and why not now? You yourself have willed your own destiny—you have chosen the sordid's office; you must receive the sordid's deserts. A little philosophy, a few words breathed to heaven for patience—a new, resolute hope for to-morrow if to-day be stormy—a little self-denial in telling petty crosses—a great deal less selfishness—a desire to make home a sanctuary for yourself and little ones as well as your husband—and to-day you would have been happier, handsomer and more beloved.

Fretting sister in light affliction, let us ask a few plain questions. Does a spirit of fault-finding lighten your cares? If your bread is burned to a cinder, does it bring you a good, light, sweet loaf, to sit down and worry about it? If the baby is cross, does it make him smile like an angel to shake him almost out of existence? If it rains on washing day, will your anathemas hurry out the sun until he stops right over your clothesline? But if your quick hands should turn to the flour barrel to mold another loaf—if you soothe the weeping babe with sweet words of a mother's pitying love; if you devote your washing day to some appropriate work, how smoothly care will iron down his features, and become your humble slave, instead of the tyrannical master he would be.

It is not too late yet. Surprise your husband with a smile,—it will be worth a dollar to see his glance of astonishment; hold the salted water of thoughtfulness in your mouth, that you may say nothing unpleasant, and the angel that has been lying prostrate in his heart with folded wings will begin to flutter, and lift itself heavenward and look out of his eyes with the love of the olden time, and your home will yet be the paradise you once coveted.

TRIBUTE TO WOMAN.—The celebrated traveler, Ledyard, paid the following handsome tribute to the female sex:—"I have observed," he says, "that women in all countries are civil, obliging, tender and humane. I never addressed myself to them in the language of decency and friendship, without receiving a friendly answer. With man it has often been otherwise. In wandering over the barrens of inhospitable Denmark; through honest Sweden and frozen Lapland; rude and churlish Finland; unprincipled Russia; and the widely-spread regions of the wandering Tartar; if hungry, dry, wet, cold or sick, the women have ever been friendly, and uniformly so; and to add to this virtue, (so worthy the appellation of benevolence,) these actions have been performed in so free and kind a manner, that if I was dry I drank the sweetest draught, and if hungry ate the coarsest morsel with a double relish.

FRESH AIR.—Give your children plenty of fresh air. Let them snuff it until it sends the rosy current of life dancing joyfully to their temples. Air is so cheap, and so good, and so necessary withal, that every child should have free access to it. Horace Mann beautifully says:—"To put children on a short allowance of fresh air, is as foolish as it would have been for Noah, during the deluge, to have put his family on a short allowance of water. Since God has poured out an atmosphere of fifty miles deep, it is enough to make a miser weep to see our children stunted in breath."

"PICTURES OF MEMORY."

"Or all the beautiful pictures
That hang on memory's wall,"
That one of the old home parlor
I love the best of all.

Not for the dark old walnut
Where the ancient portraits hung;
Not for the low, deep windows
Where the dark green ivy clung.

Not for the high carved arches,
The mantle-piece beside—
Not for the huge old chimney,
Not for the heart-stone wide,

Not for the tall, old-fashioned vase,
Nor the lounge where I used to rest;
Nor the old arm chair nor sofa—
It seemeth to me the best.

But I once had an aged mother,
With eyes that were blue and mild;
And in this old home parlor
She, dying, blest her child;

Her silvery hair, like a halo,
Upon her forehead lay,
Betokening the white spring blossoms
Of an eternal day.

Gently her pale hands folded
As a glory lit her face—
I knew she was gently sinking
In the angel's soft embrace.

And when the arrows of sunset
Fell on the curtain's crimson fold,
She passed in her saint-like beauty
Through the gates of pearl and gold.

Therefore, "of all the pictures
That hang on memory's wall,"
The one of the old home parlor
I love the best of all.

Written for Moore's Rural New-Yorker.
ANTICIPATION—RETROSPECTION.

The materialist and the unimaginative are always praising the beauties and blessings of the present and the real, and cannot perceive the pleasures that others claim for dreaming upon the past, or hoping for the future. They dwell on the bountifulness of the harvest, the kindness of friends, and the joys of their every-day life. But do we not find more real pleasure, and more true, unalloyed happiness in the vagaries of imagination,—in the ideal past which memory brings, or in the unexplored future which hope fills with all that will be bright? Amid the hard struggles of life do we find any scenes like those when we, happy children, without care or trouble, sported around the haunts sacred to us as the home of father and mother? Who has not turned from the brightest present and the joys it gives, when the heart seems warm with sunlight, to some by-gone hour when he was far happier than now? It is so with us all.

Ask the youth "in life's green spring," whose smile is like a ray of light, so much of joy it gives "My brightest days are in the future, its strifes I long to join, to taste the supreme joy of wealth, and fame, and thick clustering honors. What are the joys of boyhood to them?" Ask the maiden. She tells of a happy home, of a loving heart, and the society of her friends; or, perhaps, she hopes for pomp, for the homage of the noble and the gifted, who should be happy in her smile; or she dreams of Oriental splendor and luxurious ease. The praise and respect she receives she cares not for, as they are but shadows of what her fancy has painted. Ask the bridegroom, whose last wish is gratified in the possession of the long sought prize. He, too, turns to the ideal, and fancy paints a beautiful home, shaded by trees of his own planting, where he shall see her smile for him alone. The gratification of one hope sends him again on the chase, and wealth, which shall be all for her; honors, that shall crown her head as well as his own; fame, whose trumpet shall proclaim her name and his alike—all these come thronging in prompting to new effort. And when years have passed, and memory reverts to this time, he will sigh that we can only enjoy the present as the glass through which we see joys and pleasures magnified, far in the future—summits still unattained and victories still unwon.

Ask the man of honors—the man who has gained the object of his ambition, and on whose brow the laurel wreath sits with the grace of worthiness. He speaks not of all this, but he may point to some little brown house, some favorite old haunt, some mother, whose fingers were twining in his hair, whose ready hand conceived, and ready hand bestowed blessings innumerable on him, her idol. He has seen life in all its phases—from the poor school-boy to the man of wealth, of honor, and of fame—and he knows that all is false that glitters so brightly. He remembers as the only true friendship the sunny-eyed mate of his boyish sports—the only happiness is narrowed down to the hours of his childhood, and the only true love in the holy affection of a mother.

But time passes, and we find that all is not as we hoped. He still looks forward to the comforts of old age—thinks of the arm-chair by the fireside; the happy smiles of those to whom he will be a father; the welcome paper which is to be the link binding him to the external world; when, with his toil completed, he feels that he can surrender the cares to those who have so long looked to him for guidance. Hope gives the joy that thus far has eluded his grasp. Memory turns his eyes to the past, and his greatest pleasure is in reverting to many a happy hour—many a good deed.

Geneva, N. Y., 1859.

We should be very careful, that in our anxiety to get the outward part of an action performed to our mind, we do not destroy that germ of spontaneity which could alone give any significance to the action.—*Fruits of Leisure.*

THE VALUE OF EMPLOYMENT.

Body and soul, made for perpetual activity, must work, and work together, in order to be in good condition. Of all engines, the human body is the most amazing. From the days of Socrates, as reported by Xenophon, philosophy has been studying the mechanics, the chemistry, the vital forces, the adaptations, the final causes of this structure, so fearfully, so wonderfully made.—There is no step forward to new principles in physics, in optics, in the growth of structures, which does not find itself anticipated by some marvellous realization of its idea in the human body. Considered as a working engine, there is none which works so cheaply, with so little waste, and so long, or which contains such provisions for its own repair.

How every survey of the skillful mechanism shows that it was made to move. Its central, propelling engine never stops, except in cases which cause instant dread of death. Heart, lungs, and brain, play on through all the thousand nights of sleep. An instinct of nature prompts the young to be in almost perpetual motion. Absolute rest there is none. And if from necessity or choice, any approach to immobility becomes the habit of body, as is the case in some sluggish and morbid natures, the result is lethargy and endless disturbances of the vital functions. This frame was made for labor.

Equally true is this of the yet more subtle, because spiritual part. The soul is essentially active. Of a mind that does not think, no man can frame a notion. The human mind is made to be active. It is inquiring, and athirst for knowledge. Its active powers irresistibly seek for some object on which to exert themselves. Healthful, moderate repose, chiefly by change of employment, is good; but entire, continual, unbroken quiescence, is misery.

Never was there a more dire mistake than that of men who abandon the honest and useful business of life, under the pretext of rest. Unless they have singular resources, in science, literature, or philanthropy, they sink into hebeticude, weary of the everlasting holiday, let their hearts corrode with sullen thoughts, and sometimes fall a prey to evil habits of premature dotage. Philosophy, no less than religion, enjoins—unless where invincible necessity from infirmity or age clearly speak another language—that we should live working, and die in the harness.

Hence the value of a trade or calling, and of working at it. I believe it lengthens life. I believe it staves off tribes of maladies and conceits. I am sure it promotes that spring and elation of soul, without which life is a long disease. If you would find the most wretched man or woman in your neighborhood, look for the one that has nothing to do. Unless allowed to prescribe employment, even the best physician cannot cure the valetudinary complainer. For after all has been said, employment begets cheerfulness; and a "merry heart doeth good like a medicine."—Rev. J. W. Alexander.

GOLDEN AUTUMN.

OCTOBER is with us, introducing the nut-brown maid Autumn, who comes to garner in the fruits of her departed sister, Summer. Pomona lays her tempting offerings at her feet, and Ceres, rejoicing in abundance, fills her lap with cereals. Gently does she smooth the couch of declining Nature, preparing her, by gentle changes, for the rude hand of Winter. Mildly she tempers the northern blasts; coquetting with gentle zephyrs; at times relapsing into the refulgence of Summer, anon chilling, with an icy breath, a foretaste of her relentless successor. The forest, which she finds verdant and beautiful, she leaves bare and desolate; but see the bright green change into hues radiant and diversified; one by one its leaves wither and fall, and its feathered inhabitants forsake it for more favored climes. We cannot but think there is beauty in the decay. So Autumn leads us with a soothing hand from the gorgeous realms of Summer to the ice bound regions of stern Winter, preparing us step by step, beguiling us on our way with sweet offerings and pleasing reminiscences, storing our granaries, and inuring us to the cold embrace of the coming season. Though she found us surrounded with beauty and splendor, and leaves us bleak and drear, yet was her reign so benign, her touch so soothing and gentle, and so tenderly did she accomplish the sad change, that we bid her adieu with sadness, as sighing through the forest her last echoes die away.

THE BRIGHT SIDE.

Look on the bright side. It is the right side. The times may be hard, but it will make them no easier to wear a gloomy and sad countenance. It is the sunshine, and not the cloud, that makes a flower. There is always that before or around us which should cheer and fill the heart with warmth. The sky is blue ten times where it is black once. You have troubles, it may be. So have others. None are free from them. Perhaps it is as well that none should be. They give sinew and tone to life—fortitude and courage to man. That would be a dull sea, and the sailor would never get skill, where there was nothing to disturb the surface of the ocean. It is the duty of every one to extract all the happiness and enjoyment he can, without and within him; and, above all, he should look on the bright side of things. What though things do look a little dark? The lane will turn, and the night will end in broad day. In the long run, the great balance rights itself. What is ill becomes well—what is wrong, right. Men are not made to hang down either heads or lips, and those who do, only show that they are departing from the paths of true common sense and right. There is more virtue in one sunbeam than a whole hemisphere of clouds and gloom. Therefore, we repeat, look on the bright side of things. Cultivate what is warm and genial—not the cold and repulsive, the dark and morose.—*Selected.*

There is nothing like a fixed steady aim, with an honorable purpose. It dignifies your nature and insures your success.

Written for Moore's Rural New-Yorker.
THOUGH MOURNING, I REJOICE.

I HAVE still the golden sunlight,
Flooding bill and mossy dale;
I have still the winking starlight,
I have still the moonlight pale.

I have music still to cheer me—
Voices of singing bird and bee;
Voices of laughing wind and water;
Voices of mountain echo free.

I have gentle, human voices,
Breathing words of pleasant cheer;
Breathing words that soothe in sadness—
Breathing words of import dear.

I have many left to love me;
I have many left to love,
Though the ones I loved most dearly
Now are loving—loved above.

I have still the love of Heaven,
Lingering in my bleeding heart;
Oh, no earthly source of pleasure
Peace like this can e'er impart.

Oh, my FATHER—God—I thank Thee,
Though of joys I am bereft—
I will praise Thee—I will love Thee
For the blessings Thou hast left.

Hillsdale, Mich., 1859. BERNARD DAY.

Written for Moore's Rural New-Yorker.
SELF-DENIAL REQUISITE TO BENEVOLENCE.

CAN benevolence exist without self-denial? If not, what do we know of benevolence? How many of us practice it? Of what do we deny ourselves to benefit others? If a case of suffering or want presents itself, and we can, without foregoing any comfort or luxury, render assistance, we will do so; but who of us has sufficient moral courage to appear in unfashionable attire, or wear our last year's garment another season, for the sake of helping forward the cause of benevolence? If retrenchment in our wardrobe, in order to benefit a suffering fellow creature, becomes a necessity, who of us is sufficient for the emergency?

The Spirit of Christ is one of self-denial. For us He laid aside His glory, assumed our suffering humanity, and died the ignominious death of the cross. We put on the livery of His disciples, and call ourselves by His name—we ask Him to make us like Him, and go forth to the world and act as if we dreaded its frown, more than that of our SAVIOUR. Where the world forbids us to tread, we dare not venture—its commands we hasten to obey—in the race after fashion we bemoan our sensibilities and stifle our convictions of right, until to do as others do, becomes our standard and aim. Alas! that to do as others do, we should dishonor the Holy name by which we are called, and open afresh a SAVIOUR'S bleeding wounds!

It is a fearful consideration that the sum annually expended by the daughters of Zion upon needless ornaments, is three times as great as the entire amount received by all the benevolent societies of the day. There are many who excuse themselves entirely from giving anything for purposes of benevolence, yet whose dress and living are of the most approved style. Surely we may not with impunity indulge this needless expenditure, and shut our hearts to the claims of Christian charity. The requirements of God change not to suit the degeneracy of a luke-warm Christianity, nor will it avail us in a dying hour, or at the judgment day, that it was to do as did others that we attired ourselves in gorgeous apparel and fared sumptuously every day, while the cause of Christ languished for want of aid.

O! how long must fashion rule us with iron sway, and we be content to kneel at her shrine? How long must the spirit of pride and selfishness, which this love of display engenders, be indulged? It is surely time for the church to consider her position, and ask herself whether it is one God can approve. While we go up to His sanctuary so attired that only those who can emulate our style dare enter there, do we not virtually deprive the poor of the means of grace, and will not God hold us accountable therefor? If we do not deny ourselves for Christ and His cause—if we do not seek to conform ourselves to His requirements, preferring His approbation to that of the world,—what reason have we to hope He will own us as His, in the great day of His final appearing.

Sherburne, N. Y., 1859. LINA LEE.

THE HOUR OF DEATH.—I have lived to see that this world is full of perturbations; and I have long been preparing to leave it, and gathering comfort for the awful hour of making up my account with God, which I now apprehend to be near. And though I have, by his grace, loved him in my youth, and feared him in my age, and labored to have a conscience void of offence towards all men; yet, if thou, Lord, should'st be extreme to mark what I have done amiss, how shall I avoid it? Where I have failed, Lord, show mercy to me; for I plead not my righteousness; but the forgiveness of unrighteousness, through His merits who died to purchase pardon for penitent sinners. And since I owe Thee a death, Lord, let it not be terrible, and then choose Thy own time; I submit to it. Let not mine, O Lord, but Thy will be done.—*Bickard Hooker.*

PRAYER.—Prayer draws all the Christian graces into its focus. It draws Charity with her lovely train, Repentance with her holy sorrows, Faith with her elevated eyes, Hope with her grasped anchor, Benevolence with her open hands, Zeal looking far and wide to bless, and Humility looking at home.—*Hannah More.*

DIVINE THREATENINGS.—What are the threatenings of the law, but the warnings of divine love? They are a fence thrown round the pit of perdition to prevent rash men from running into ruin.

CHART OF TEMPERATURE AND CLIMATE.

The CLIMATE forms one of the most interesting subjects belonging to Physical Geography,—a study, by the way, which has been almost totally neglected in our common schools. This term, as generally understood, denotes the temperature of the air in the various portions of the globe; but taken in its more general sense, it signifies all atmospheric states and conditions which directly affect animal or vegetable life. In connection with the Chart of Temperature and Climate, given above, we condense from the "Outlines of Physical Geography" the following list of causes for these variations, the full comprehension of which will prove of great utility to the reader:

Climate is determined by a variety of causes, the chief of which are:—1. The latitude of a country; that is, its geographical position with reference to the equator. 2. Elevation of the land above the sea-level. 3. The proximity to, or remoteness of a country from, the sea. 4. The slope of a country, or the aspect it presents to the sun's course. 5. The position and direction of mountain chains. 6. The nature of the soil. 7. The degree of cultivation and improvement at which the country has arrived. 8. The prevalent winds. 9. The annual rain that falls in a country.

The latitude of a country, and the consequent direction in which the solar rays fall upon its surface, are the principal causes of the temperature to which it is subject. At the equator, and within the tropics, the greatest heat is experienced, because the sun is always vertical to some place within those limits, and the solar action is more intense in proportion as the rays are perpendicular to the earth. As we recede from the equator, they fall more obliquely; and because fewer of them are spread over a larger space, they are less powerful, and consequently less influential in promoting temperature. It has been calculated that, out of 10,000 rays falling upon the earth's atmosphere,

8,123 arrive at a given point if they come perpendicularly; 7,034, if the angle of direction is 50°; 2,821, if it is 7°; and only 5, if the direction is horizontal.

The temperature of countries is largely affected by the extent of their elevation above the level of the sea. As we ascend in the atmosphere the cold increases,—an effect due to the rarefaction of the air, and to the circumstance of being farther from the heat reflected from the surface of the earth. We may travel several hundred miles from the equator towards the poles, along the level surface of the earth, before we become sensible of a diminished temperature; but the moment we begin to increase our elevation, a rapid change of temperature is experienced, until we arrive at a point where constant frost prevails.

The ratio of the diminution of temperature usually given, is 1° for 300 feet of height; 2° for 595 feet; 3° for 872 feet; 4° for 1,124 feet; 5° for 1,347 feet; and 6° for 1,539 feet. In the temperate zone generally, if one site is a thousand yards higher than another adjoining, it will have a climate 12° colder; and the higher the latitude the lower the snow line becomes, till it meets the surface of the earth in the frigid zone.

The nearness to, or remoteness of a country from, the sea, is an important element in determining its climate. The ocean preserves a much more uniform temperature than the land, far lower than its extreme of heat, and higher than its extreme cold. The winds that sweep over it have this character to some extent impressed upon them, and communicate it to the countries over which they range. Hence islands and maritime districts have milder climates than inland regions under the same parallel of latitude,—the currents from the ocean tempering their summer heat, and moderating their winter cold.

The slope of a country, or the aspect it presents to

the sun's course, has an important influence on its climate. The angle at which the sun's rays strike the ground, and consequently the power of those rays in heating it, varies with the exposure of the soil relatively to that luminary. The irregular surface of the earth,—sunk into deep valleys in some parts, and raised into table-lands and mountains in others, with slopes at all possible angles with the general level,—presents every variety, so far as the greater or less obliquity of the sun's rays is concerned.

The position and direction of mountain chains.—Mountains affect climate in more ways than one. They condense the vapors of the atmosphere, and thus give rise to those violent rains which are so often experienced in the neighborhood of lofty ranges. At Bergen, in Norway, there falls annually 88½ inches of water, which is more than at any other city in Europe; this is because the clouds from the Atlantic are driven forward by the southwest winds into the fjords, where they are arrested by the mountains, and accumulated, and the water (as it were) mechanically squeezed out of them. Mountains also afford shelter from the winds, while the absence of them often exposes regions to the chilling blasts of the north or the burning winds of the south.

Another cause which affects climate is the nature of the soil. One soil acquires heat, keeps it acquired heat much longer, or radiates it more readily than another. All the varieties of soil,—light and open, vegetable molds, gravelly and rocky tracts, stiff, wet clays, and sandy plains,—have, it can not be questioned, their different powers of radiation and absorption; and whether a district be clay or sand, bare or covered with vegetation, for a like cause, greatly affects its temperature. The differences of surface so observable in various kinds of foliage,—their darker or lighter colors, their more or less glossy leaves,—are all

circumstances which affect the radiation of their heat with an infinite variation.

The degree of cultivation and improvement at which a country has arrived.—The clearing of forests, the draining of swamps and marshes, the cultivation of the soil, etc., are among the operations of man by which the climate of a country is greatly modified and improved. The clearing of a country from trees has the effect of raising the mean annual temperature, but at the same time greater extremes of heat and cold are introduced. Open grounds are always frozen deeper than woodlands, but the latter retain the snow and ice of winter much later in the spring than the former.

The prevalent winds of a country constitute another cause which affects its climate. In the United States the winds from the north are usually noted for their coolness, a property they derive in the frozen regions of Hudson and Baffin Bays, while these from the south, coming from the Gulf of Mexico, impart a mildness throughout the whole country. The comparatively mild climate of the British Isles is owing to the prevalence of westerly winds, which are warmed by sweeping over the region of the Gulf Stream. In Venezuela, the temperature, which is from 87° to 90° in March, rises to 104° or 105° whenever the wind blows from the parched surface of the Llanos or great plains.

The annual quantity of rain that falls in a country considerably affects its climate by imparting a greater or less degree of humidity or dampness to the atmosphere. In general, more rain falls in islands and on sea-coasts than in inland districts, among mountains than in level regions, and within the tropics than in the other zones; the great heat which prevails in the equatorial regions causes the amount of evaporation to be much greater than in higher latitudes, and hence the atmosphere becomes loaded with a greater quantity of moisture.

CITY LIFE vs. COUNTRY LIFE.

MR. EDITOR:—I have long desired to contribute my mite towards sustaining the Young Ruralist column of your valuable paper. I have been a resident of your city most of my life, until within two or three years past. In fact, I was born and reared in the city. Two years ago I exchanged the noise and bustle of your busy streets for the stillness and healthfulness of the country, and by this time perhaps I am able by experience to speak rightly in regard to the desirableness of life in the Rural districts over that of a life in the town.—True, you have advantages and privileges which we are in a great measure deprived of. Your school, church, and social privileges are greater. Your opportunities for knowing the current news of the day in regard to events which are taking place in the political, moral, and social worlds, are somewhat more extensive. But, on the other hand, you are not permitted to breathe the pure, health-giving atmosphere by which we are so bountifully surrounded. You cannot rise in the morning and cast your eyes upon green fields, waving grain, and a glorious sun-rise. You cannot view the glorious works of Nature, and look through them up to Nature's God, so freely and cheerfully as we can who are constantly surrounded by them. And the labors of a Farmer are so varied, pleasant, and health and strength imparting. With these considerations alone in view, life in the country is, in my estimation, by far the most desirable. I have tried both, and this is the conclusion I have arrived at.

I have chosen for life the Farmer's vocation, and I love my calling more and more every day; and am I to be the only one of the young men of your city who shall leave off looking to mercantile and professional pursuits for a livelihood, and instead, to become tillers of the soil? How strange it is, since mercantile pursuits are so precarious, and the professions are so crammed full, that young men will still continue to squeeze themselves into the same ranks, when there is hardly room for another one. How few succeed in acquiring wealth in mercantile pursuits. How few lawyers and doctors rise to eminence in their professions, and even get a good living. The Science of Agriculture (for indeed it is a science, in the most enlarged sense of the word,) offers health, wealth, and happiness to its votaries.

To all who stand at the desk or behind the counter, suffering with headache and dyspepsia, let me say, leave the shop or the office and start for the country; apprentice yourself to some good farmer, learn your business thoroughly and practically, and then start on your own hook. This is the course I have taken, and I do not regret it. I am healthier and happier for the change. Instead of suffering with the horrors of dyspepsia, and looking on the dark side of life continually, I can now enjoy life and health, and feel, talk, and act in a more pleasant and cheerful manner than I once did.

Livonia, N. Y., Sept. 20, 1850.

QUESTIONS FOR DEBATE.

EDS. RURAL NEW-YORKER:—As there was some inquiry a few weeks ago in the RURAL for questions to be debated in Lyceums, and having a little time this rainy day, I thought I would send some to you, to be inserted in your paper for the benefit of the young:

Resolved, That NOAH WEBSTER was a greater benefactor to his country than DANIEL WEBSTER.

Which exerts the greatest influence, oral or written communications?

Ought foreigners to hold civil offices in the United States?

Does the hope of reward stimulate to greater exertion than the fear of punishment?

Are professional men more beneficial than mechanical?

Is man governed more by reason than habit?

Would it be a good policy for the United States to annex to themselves the Sandwich Islands?

Is it for the interest of the young men of New England to settle in the Western States?

Does pride exert more influence upon mankind than religion?

Is it right to require a man to be able to read before allowing him to vote?

Adams, N. Y., 1859. L. E. FISH.

FOLLOW THE RIGHT.—No matter who you are, what your lot, or where you live, you cannot afford to do that which is wrong. The only way to obtain happiness and pleasure for yourself is to do the right thing. You may not always hit the mark, but you should nevertheless always aim for it, and with every trial your skill increases. Whether you are to be praised or blamed for it by others; whether it will seemingly make you richer or poorer, or whether no other person than yourself knows of your action, still, always and in all cases, do the right thing. Your first lessons in this rule will sometimes seem hard ones, but they will grow easier and easier, till, finally, doing the right thing will become a habit, and to do wrong will seem an impossibility.

THE DANGERS OF INDOLENCE.—Indolence is one of the vices from which those whom it once infests are seldom reformed. Every other species of luxury operates upon some appetite that is quickly satiated, and requires some concurrence of art or accident which every place will not supply; but the desire of ease acts equally at all hours, and the longer it is indulged is the more increased. To do nothing is in every man's power; we can never want an opportunity of omitting duties. The lapse of indolence is soft and imperceptible, because it is only a mere cessation of activity; but the return to diligence is difficult, because it implies a change from rest to emotion, from privation to reality.

The Reviewer.

THE WHEAT PLANT: Its Origin, Culture, Growth, Development, Composition, Varieties, Diseases, etc., etc. Together with a few Remarks on Indian Corn, its Culture, etc. By JOHN H. KLEMPERER, Corresponding Secretary of the Ohio State Board of Agriculture; Member of the Academy of Natural Sciences, &c., &c. With One Hundred Illustrations. (12mo.—pp. 703.) Cincinnati: Moore, Whitcomb, Keys & Co. 1850. Rochester: E. Darrow & Bro.

Such is the title of a handsome volume which has been awaiting examination and notice for some weeks—during the season of Agricultural Fairs. And, though we have been unable to bestow upon it that attention and critical perusal its importance demands, we are constrained, from a somewhat cursory examination, to commend it to the notice of all interested in wheat growing. It is apparently the most complete work on the subject extant, containing a vast amount of information not obtainable in any other work. The following extract from the author's Preface comprises his reasons for, and objects in, preparing the work:

"Several years ago I became aware of the fact that wheat—the staple crop of Ohio—was annually diminishing in its yield per acre; that in less than fifty years the average product was reduced from thirty to less than fifteen bushels per acre. I also learned that, in Great Britain, the yield had increased from sixteen bushels to thirty-six per acre during the same period. A knowledge of these facts induced me to investigate the subject of wheat culture, as well as the collateral subjects, in order to ascertain the cause of the decrease on the one hand, and the increase on the other, as well as to learn what remedy, if any, might readily be applied to restore our soils to their former productiveness. The result of this investigation is embodied in the present volume. I am not aware that any apology is necessary for introducing this volume, imperfect as it necessarily is, to the agricultural public. To me it has been a matter of surprise that no American has produced a treatise on the wheat plant; and more than all that even professional agricultural writers have been content to leave the 'scattered fragments of thought' on so important a topic as the physiology, culture, varieties, diseases, etc., of the wheat plant dispersed through a multitude of journals or serial publications. That portion of the present volume published in the Ohio Agricultural Report for 1857, caused the entire edition of 20,000 copies to be absorbed in less than sixty days from the date of publication. The urgent solicitation of personal friends, in the correctness of whose judgment I have the utmost confidence, again indicated to me a want, which I had previously scarcely felt, of a work which should embrace all that is known relative to the wheat plant. Such a work I

have endeavored to produce; and this work is now presented to the public with the assurance that there is no other work in the English language so complete on all subjects relating to this indispensable cereal."

—E. Darrow & Bro., of this city, are the sole agents for the work in Monroe county.

THE NEW AMERICAN CYCLOPEDIA: A Popular Dictionary of General Knowledge. Edited by GEORGE RILEY and CHARLES A. DANA. Vol. VII. Edward—Fuera. (Royal octavo.—pp. 758.) New York: D. Appleton & Co. Rochester—E. E. Hall, No. 5 Athenaeum Building.

The seventh volume of this great American work has been issued, and equals its predecessors in both contents and appearance. A memorandum from the publishers mentions the authorship of some of the principal articles, as follows:—Edwards, (Jonathan) by George Bancroft—the paper read by him before the New York Historical Society; Egypt, by Robert Carter; Electricity, Engraving, Fire Engine, Fossil Foot-Prints, by J. T. Hodge; Elephant, Entomology and Ethnology, by Dr. Kneeland; Queen Elizabeth, History of England, Prince Eugene, by C. G. Hazewell; Episcopal Church, by Rev. Dr. Wilson; Epizoa, Entozoa, Epiphylla, by Dr. White; Europe, by Mr. Raster; Alexander Everett, Edward Everett, by G. S. Hilliard; Euripides, by Prof. C. G. Felton; France, by P. Arpin. Among the biographies of living men are those of Rev. Dr. Ellis, R. W. Emerson, G. B. Emerson, Hon. Thomas Eliot, Rev. Dr. Fuber, T. S. Fay, Prof. C. O. Felton, W. P. Fessenden, Rev. Dr. Finney, Henry S. Foote, Peter Force, Rev. Dr. Frothingham, Richard Frothingham, Jr. Most of the law articles in this volume are contributed by Professor Theophilus Parsons, of Harvard University.

The Cyclopaedia may be obtained of E. E. Hall, No. 5 Athenaeum Building, who is Subscription Agent for Rochester and vicinity.

A BACHELOR'S STORY. By OLIVER BURTON. New York: Knickerbocker.

THE BACHELOR'S STORY is somewhat of the style of the Reveries of a Bachelor, by L. MARVEL, which created so much enthusiasm a few years since. Though not quite its equal, the "Story" contains many thought-provoking, some of which have found their way into our "Spice-Column." For sale by DEWEY.

ONE HUNDRED SONGS OF IRELAND: Music and Words. Boston: Oliver Ditson & Co.

In this little work we have a strange compound of the grave and gay, the sentimental and the ridiculous. The kindly feelings so characteristic of Erin's children gem the lines of many of these melodies, while others are brimming with the wit and humor of the jolly, rollicking Irishman. For sale by W. S. MACKIE.

Books Received.

ADVANCED COURSE OF COMPOSITION AND RHETORIC: A Series of Practical Lessons on the Origin, History and Peculiarities of the English Language, Punctuation, Style, and its Essential Properties, Criticism, and the various Departments of Prose and Poetical Composition; Illustrated with Copious Exercises. Adapted to Self-Instruction, and the Use of Schools and Colleges. By G. P. QUACKENBOS, A. M., Associate Principal of "The Collegiate School," New York; author of "First Lessons in Composition," etc. (16mo.—pp. 451.) New York: D. Appleton & Co. Rochester—ADAMS & DABNEY.

FORTY YEARS IN THE WILDERNESS OF PILLS AND POWDERS; or, The Opinions and Confessions of an Aged Physician. (12mo.—pp. 334.) Boston: John P. Jewett & Co. Rochester—E. Darrow & Bro.

FIRST LESSONS IN COMPOSITION.—In which the Principles of the Art are Developed in Connection with the Principles of Grammar: Embracing full Directions on the Subject of Punctuation—with Copious Exercises. MEMOIRS OF ROBERT HOODIN, Ambassador, Author and Conjuror. Written by Himself. Edited by Dr. R. STEINON MACKENZIE. (16mo.—pp. 445.) Philadelphia: G. G. Evans. [From the Publisher.]

INDUSTRY AND GENIUS.—There are many teachers who profess to show the nearest way to excellence, and many expedients have been invented by which the oil of study might be saved. But let no man be seduced to idleness by specious promises. Excellence is never granted to man but as the reward of labor. It argues, indeed, no small strength of mind to persevere in habits of industry without the pleasure of perceiving those advances which, like the hands of a clock, whilst they make hourly approaches to their point, yet proceed so slowly as to escape observation. There is one precept, however, in which I shall only be opposed by the vain, the ignorant and the idle. I am not afraid that I shall repeat it too often. You must have no dependence on your own genius. If you have great talents, industry must improve them; if you have but moderate abilities, industry will supply their deficiency. Nothing is denied to well-directed labor; nothing is to be obtained without it.—Selected.

Evil men speak what they wish rather than what they know.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I AM composed of 33 letters.
My 24, 6, 4, 11, 19, 23, 30 is an aerial monster.
My 18, 12, 8, 27 are as sweet sometimes as my 35, 16, 20, 25, 31.
My 1, 3, 23, 13, 33, 36, 17 I am very fond of.
My 2, 26 is a kind of liquid.
My 2, 15, 27, 29, 11, 9 is my mother's name.
My 5, 14, 7 is the plural of 5, 9, 34.
My 17, 6, 5, 29, 32, 35 is my father's name.
My 37, 23, 21, 9 is a mount.
My 10, 8, 30, 31, 34 is a girl's name.
This Enigma is respectfully dedicated to 9, 5, 18, 33—35, 29, 16, 23, 33, by his affectionate sister, 6, 12, 3, 25, 16, 14—10, 4, 8, 35, 35.

My wife is a saying and the name of a poet,

RIDDLE.

My face is smooth and wondrous bright,
Which mostly I keep out of sight
Within my house; how that is made
Scent with much brevity be said.
Composed of timber and of steel,
Covered with bladders warm, within,
Here I lie snug, unless in anger
I look out sharp, suspecting danger;
For I'm a blade of mighty wrath,
Whichever provoked I really forth;
Yet quarrels I frequently decide,
But never am known to change my side,
Though often so much the parties vary,
In all disputes my point I carry.
Thousands by me are daily fed,—
As many laid among the dead.
I travel into foreign parts,
But not in coach conveyed, nor cart.
Ladies, for you I often war,
Then, in return, my name declare.
Attica, Ohio, 1859. E. B. TANNER.

ANSWERS TO ENIGMAS, &c., IN No. 509.

Answer to Miscellaneous Enigma:—Friendship, love and truth.
Answer to Problem:—Five feet per second.
Answer to Charade:—Miss Night-en-gale.

TO RURAL AGENTS, SUBSCRIBERS, &c.

The Rural New-Yorker enters upon a New Quarter this week, and we embrace the occasion to notify its Agents, Subscribers and other friends that single and club subscriptions—either for a year, or three months, on trial—are now in order and respectfully solicited. To those who know and appreciate the paper, we need only say that the quarter upon which we now enter, and the ensuing volume, will be worthy the enviable reputation the Rural has attained—and all others are invited to give it a careful examination. It has thousands of ardent and influential friends, each of whom will, we trust, make some effort (during the ensuing few weeks and months) to augment its circulation and usefulness in their respective localities.—Now is the Best Time to Commence the Canceas. As liberal Premiums and Gratuities will be given for Clubs, &c., as last year.

ROCHESTER, N. Y., OCTOBER 22, 1859.

DOMESTIC NEWS.

Matters at Washington.

The N. Y. Herald's Washington correspondent says it is understood that Lord Lyons has received a peremptory and important dispatch from his government, demanding explanations from the government touching the course of Gen. Harney in the San Juan affair, to which Mr. Cass is now preparing a reply, which will vindicate fully our rights. A communication has also been received from the British government, through Lord Lyons, requesting that their acknowledgements may be conveyed to our Minister to China, and also to Commodore Tatnall, for his friendly conduct in the affair on the Peiho.

The N. Y. Times has advices from Washington stating that Mr. McLane is about to resume his official post near the Mexican government.

Information has been received here that as soon as Col. Sumner heard of the attack on the Santa Fe mail with fatal results, he dispatched a company of dragoons to Pawnee Fork to punish the offending Indians. Hopes are entertained that this prompt action on the part of Col. S., will result in the capture of the murderers, and the rescue of the passengers by the overland mail. It will probably be found necessary to station troops at Pawnee Fork, to escort the mail through to Cold Springs, and thus obviate the recurrence of such outrages.

The Government is satisfied that the yacht Wanderer is the only vessel that has landed Africans on our coast, but with a view to prevent any further violation of the law, the most stringent efforts have been, and will continue to be made to intercept any such cargoes destined for the United States.

A private letter from London says that our Minister, Mr. Dallas, is exerting himself to procure the recognition of the Mexican Liberal government by England, while other prominent gentlemen are similarly engaged.

The Consul General of the United States in Canada, writes to the State Department that gigantic efforts are on foot to divert from American into Canadian channels the products of the North Western States that seek an outlet to the ocean.

Insurrection at the South.

DURING a goodly portion of yesterday (Monday) the telegraph was conveying dispatches calculated to cause intense excitement throughout the country. The first of these ran as follows:

"BALTIMORE, Oct. 17.—A dispatch just received here from Fredericksburg, dated this morning, states that an insurrection had broken out at Harper's Ferry, where an armed band of abolitionists have full possession of the government arsenal. The Express train going east was twice fired into, and one of the railroad hands and a negro killed while they were endeavoring to get the train through the town. The insurrectionists stopped and arrested two men who had come to town with a load of wheat, and seizing their wagon loaded it with rifles and sent them into Maryland. The insurrectionists number about 250 whites, and are aided by a gang of negroes. At last accounts fighting was going on.

The above is given just as it was received here. It seems very improbable, and should be received with great caution until confirmed by further advices."

The third dispatch, which was received at Baltimore at one o'clock P. M., stated that "It is apprehended that the affair at Harper's Ferry is more serious than even citizens here are willing to believe. The wires from the Ferry are cut, and consequently we have no intelligence beyond Monocacy station. The Southern train which was due here at an early hour this morning, has not yet arrived. It is rumored there is a stampede of negroes from this State."

The President, at 2 P. M., ordered the U. S. Marines stationed at Washington, and three companies of artillery at Old Point, Va., to repair immediately to the scene of disturbance, and the Governor of Virginia has also ordered out several of the independent military companies. At 10 P. M. we received the following:

"MONOCACY BRIDGE, Oct. 17.—The train arrived here at 9 o'clock. Luther Simpson, baggage-master of the mail train, gives the following particulars:

I walked up the bridge; was stopped, but afterwards permitted to go up and see the captain of the insurrectionists. I was taken to the armory,

and saw the captain, whose name is Bill Smith. I was kept prisoner more than an hour, and saw from five to six hundred negroes, all having arms. There were two or three hundred white men with them. All the houses were closed. I went into a tavern close by Mr. Chamber's; thirty of the inhabitants were collected there with arms; they said most of the inhabitants had left, but they declined, preferring to protect themselves. It was reported that five persons had been shot.

Mr. Simpson was escorted back over the bridge by six negroes. The train with the Fredericksburg military, is at Point Rock. A train with the Directors of the Pennsylvania Railroad on board, is on the other side of Harper's Ferry. It was believed that the insurrectionists would leave as soon as it became dark. Orders have been received here that the train shall stop at Sandy Hook until Colonel Lee, who is following in a special train, arrives. There are any amount of rumors, but nothing certain."

Personal and Political.

COL. PHILIP HICKEY died in East Baton Rouge, La., on the 1st inst., at the age of eighty-two. He was, some time before his decease, the only citizen in Louisiana who was born within the present limits of the State, a subject of Great Britain, and who had lived under the Governments of the three Great Powers, of Great Britain, Spain, and the United States, without any change of his civil status, his residence, or the exercise of his own will.

The venerable Rev. Samuel Willard, D. D., of Deerfield, Mass., died in that town on the 7th inst., in the eighty-third year of his age. For half a century he has been a most acceptable preacher and beloved pastor, receiving the respect of men of all creeds, and exerting great influence in the region where he has labored. For about forty years the deceased has been blind. He graduated at Harvard College in 1808, and was the class mate of the famous Dr. Payson, the late Dr. Asa Eaton, and others widely known.

The American State Committee of Massachusetts have voted that it is inexpedient to call a State Convention to nominate candidates for State officers.

The two branches of the Vermont Legislature convened on the 13th inst. Lieut. Gov. Martin called the Senate to order, when the oaths were administered. Rev. William H. Lord was elected Chaplain. The House organized by electing Mr. Edmonds, of Burlington, as Speaker—ballot standing as follows:—Edmonds, Rep., 179; D. Dunn, of Bernard, Dem., 40; scattering, 18. Charles Cummings, of Brattleboro, was elected Clerk.

A LEAVENWORTH dispatch to the St. Louis Republican says that the Topeka Convention on the 12th nominated a full ticket, headed by C. Robinson for Governor, and J. F. Root for Lieut. Governor. M. F. Conway was nominated for Congress. The Convention was harmonious. The election for State officers will take place in December.

The New Hampshire Democratic State Convention was held at Concord on the 11th inst., and was quite fully attended. The ballot for candidate for Governor resulted as follows:—Asa P. Cate, of Northfield, 122; J. S. Cheney, of Manchester, 99; scattering, 4. Cate's nomination was made unanimous. The Convention did not act upon the question of delegates to the Charleston Convention.

We are without anything very definite as to the result of the recent elections; still, from such figures as are attainable, it seems to be apparent that nearly all have resulted in favor of the Republicans. We give such information as has been received.

MINNESOTA.—A dispatch to Chicago, on the 14th inst., gives the following Republican gains:—Ramsey County, 500; Hennepin Co., 500; Dakota Co., 400; Rice Co., 170; Washington Co., 100; Anoka Co., 100; Crow Co., 100. The Republicans are known to have gained two Representatives in Ramsey Co., one Senator and one Representative in Anoka, and probably five Representatives in Dakota. The Democrats gain four in Winona. There is but little doubt of the election of the Republican Congressmen, Governor, and State ticket, and a Republican majority in both branches of the Legislature.

OHIO.—The Republican majority on the State ticket will be 17,000. To the Senate, 25 Republicans and 10 Democrats are elected, and to the House 64 Republicans and 20 Democrats.

IOWA.—There being but four telegraph offices in the State of Iowa, some days must elapse before the result of the election there can be definitely ascertained. The vote received thus far is about the same as in 1857, when Low, Rep., was elected by 2,000 majority.

GEORGIA.—Brown's majority for Governor of Georgia is about 20,000.

PENNSYLVANIA.—The "Peoples' Party" journals figure up a majority of about 20,000 on the State ticket. The Assembly is strongly Opposition—nearly the same as last year, when it stood 63 to 37. The Senate (last year Democratic), is also nearly two-thirds Opposition. The Leconteites have carried one of the eleven Senators chosen this year—Crawford over Irwin, in the Perry and Juniata District.

News Paragraphs.

SUP'R BRALE writes from Fort Tejon, California, of the great advantage of camels in the public service of the West. He tested the comparative value of mules and camels as pack animals, and the experiment proved beyond all question the great superiority of the camel, both as regards rate of speed and amount of burden. He finds no difficulty in rearing camels.

DR. JEWETT has left the Boston Traveler an ounce or two of fine starch, extracted from only eight horse-chestnuts, picked up in the street.—The experiment shows this nut to be so abundant in starch it may readily be turned to valuable account.

The temperature of the frozen well at Brandon, a few days since, 40 feet below the surface, was 34 degrees, while in the open air it was 68. From observations made in that vicinity it is shown that a stratum of underground frost exists there, extending over a large area.

NEARLY \$2,500,000 in gold and silver was received at New York from California and Central America, on the 13th inst., the largest amount of treasure that ever arrived at the port in one day.

A SAN FRANCISCO writer, of late date, says the following are about the rates of wages now paid in California:—Carpenters from \$4 to \$7 per day; brick layers and masons, from \$4 to \$6; blacksmiths, wheelwrights, machinists, painters, tin-smiths, from \$3 to \$4.50; common laborers, \$3; farm hands, from \$30 to \$40 per month, and found; cooks from \$30 to \$50.

It is said that Queen Victoria's second daughter—now the first on the marriage roll—has expressed a wish to resign her "royal dowry" in order to become a professed Catholic. The Court papers insinuate that this is a step to court the young King of Portugal, who lately lost his wife. When Don Pedro was in England, a few years ago, the Princess Alice was "smitten," but religion was in the way, and there the affair dropped.

Among the many reforms contemplated by the Emperor of Austria, is one which will place all forms of religious worship upon an equally free basis, removing all the restrictions placed upon Protestants and Protestantism. The number of Protestants in Austria is estimated at about three millions—two millions two hundred thousand of whom are in Hungary, or about one-fourth of the people of the Kingdom. This is a much larger number than is generally supposed to be there, and the reform will be hailed with delight by them.

THE last statement made by the Commissioners of Emigration shows that there has been a decrease of 1,670 in the number of persons arriving at the port of New York, compared with the same period last year.

RECENT advices from Genoa, state that while the United States frigate Wabash was lying at the port a large fire occurred in the city, when her commander, desiring to assist in subduing it, dispatched to the aid of the city a portion of her officers and crew with the fire engines of that ship.—Shortly after the occurrence a letter was received by the commandant of the Wabash from the Vice-President of the Royal Chamber of Commerce, attesting their gratitude, as well as of all Genoa, for the important services rendered.

THE Pacific wagon road has been finished. During the Summer some 1,500 wagons, 12,000 head of cattle and about 4,000 persons have passed over it. Grass, wood and water are found abundantly along the entire route. It commences at the South Pass, leaving the Sage Plains to the Southwest, and going directly through the Wasatch Mountains by way of Thompson's Pass, crosses the head waters of Bear and Great Snake Rivers.

A TRAVELER stopping at one of the hotels in Minnesota, recently, saw the phrase "Fried Water Chickens" on the dinner bill of fare. Desiring to know what this meant, he sent for a dish of water chickens. They came, and sure enough looked very much like the smallest and whitest of fried spring chickens. He tried them—found them excellent—recommended them to the rest of his party, ladies and all. All who tried them liked them wonderfully; and so, nearly all of them became frog-eaters, almost without knowing it.

ROCHESTER UNIVERSITY AND THEOLOGICAL SEMINARY.—We see it stated, says the Democrat, that sixteen new students have been admitted to the Theological Seminary in this city, the present term, and about fifty-five to the University—forty of them forming the Freshman Class. This, we believe, is the largest number ever admitted to the University at the opening of the Academic year.

KING WILLIAM'S ISLAND.—The Albany Journal says:—King William's Island, the spot where the remains of the Franklin Arctic Expedition were found, is one of the southernmost islands of the Arctic Ocean. It is but a little north of the upper shores of Hudson's Bay; is twelve degrees of latitude further south than the spot where Dr. Kane wintered safely, and three hundred miles further south than are the Danish Settlements in Greenland. It has long been known and visited. Because it was so near by, and so far south, the Expeditions have never dreamed of looking there before, but have prosecuted their search in the icy regions further north.

THE SOURCE OF THE NILE.—The great problem of the source of the Nile, which has occupied the attention of the world during so many ages, may now be considered as definitely solved. Capt. Speke, who has just returned to England from an extended tour in Central Africa, in company with Capt. Burton, discovered a lake, called by the natives Nyanza, but by the Arabs Ukerewe, which appears to be the great reservoir of the Nile. It extends from 2° 30' south to 8° north latitude, lying across the equator in east longitude 33°. Its waters are the drainage of numerous hills which surround it on almost every side. The new lake washes out the Mountains of the Moon as at present existing in our atlases. An expedition has been formed in Bombay for the purpose of continuing and completing the discoveries of Captains Burton and Speke. Mr. J. Kenelly, Secretary to the Bombay Geographical Society, and Dr. Sylvester are at the head of it. They are to set out in November, and will attempt a thorough exploration of the great lake region, which is now known to contain the source of the Nile.

OPERATIONS OF THE U. S. MINT.—The gold coinage of the United States Mint in Philadelphia for the month of August was \$95,151.50, in double eagles, eagles and quarter eagles. The silver coinage was \$64,497.15, being in quarter dollars and dimes. Of cents \$25,000 were coined. The whole number of pieces coined was 2,738,542, of the aggregate value of \$174,688.20. The total gold deposit of the month was \$111,650, of which \$66,566.81 were from California, and \$45,083.19 were from other sources. The silver deposited was \$84,900. Total deposits for the month \$176,550.

A RIGHTIOUS JUDGMENT.—In the injunction case of the Halifax Telegraph Company, the European news monopolists, against the American Telegraph Company, praying in substance that the latter may be compelled to forward to the speculators the European news in advance of the report to the Associated Press, the Judge refused to grant the injunction.

Important from Texas.

ADVISED from Brownsville, Texas, are received, stating that that place was attacked on the 28th ult., by a band of Guerrillas, who killed five citizens, broke open the jail and freed all the prisoners. The most intense excitement prevailed, and the Mexicans had sent aid from Matamoros. The Guerrillas were headed by Castina, who shot the Sheriff of Brownsville last July, while he was attempting to arrest him.

A party of outlaws, one hundred strong, rode through the city on horseback, and posted sentinels, when Gen. Cavarej and others from Matamoros arrived, and persuaded five to leave. Fort Brown was garrisoned with Mexican troops from Matamoros, and the citizens had formed a patrol to keep a watch on the outlaws, who were encamped near the city 200 strong. The Mexican General visited their camp, and obtained a promise from them that they would not molest the city any more. The citizens, however, expect still another attack, as the outlaws stated that they had more on their list to kill. An express had been sent to San Antonio for troops.

The Brownsville Flag, in an extra, thanks the military and civil authorities of Matamoros for their aid, and blames the Government for leaving them defenceless. The Sheriff with a posse came down to Point Isabel with the Arizona's mails. The cause of the difficulty is said to be a desire on the part of Castina for revenge for injuries which he alleges he has received. The citizens of Brownsville had mostly fled to Matamoros, having no faith in the promises of the outlaws, that they would molest them no more.

ADVISED from San Antonio state that Gen. Twiggs has responded to the call for aid from Brownsville, that he has not men enough at his disposal to drive the Indians from the frontier, and can therefore do nothing. The ranches on the Texas side of the Rio Grande, have been abandoned on account of the Indian depredations. The citizens of San Antonio were raising two companies of rangers, and other places were raising volunteers on account of General Twiggs' inability to protect the country.

From the Pacific Side.

THE steamship North Star, from Aspinwall on the 4th inst., arrived at New York on the 12th inst., bringing 700 passengers, \$600,000 in specie, and California dates to the 20th ult.

THE duel between Senator Broderick and Chief Justice Terry, took place near San Francisco on the morning of the 13th. Broderick fell at the first fire, having been pierced through the lungs. He lingered until half past 9 o'clock on the morning of the 16th, when he died. Some of the San Francisco papers evince a disposition to make it appear that Broderick was the victim of a conspiracy. Broderick's pistol went off before it was in line with his antagonist. Terry's shot took effect two inches from the right nipple, carry away part of the breast bone. Mr. Broderick suffered intense agony from the time he was shot until he died.—Judge Terry had been arrested. The public were much incensed at the killing of Broderick. His funeral was the most imposing ever witnessed in San Francisco.

VICTORIA dates are to the 7th ult. The Colonial says that the United States troops on San Juan Island were throwing up a fortification on the summit of a hill below the Hudson Bay Company's station.

THE Portland, Oregon, papers of the 10th, publish a reply by Gen. Harney to Gov. Douglas' letter of August 30th, in which he accepts Douglas' explanation as an apology for his past conduct, but evidently reposes no faith in the Governor's professions, and declines to withdraw his troops from San Juan until the pleasure of President Buchanan is known on the subject.

There was but little business doing in the San Francisco market, but prices were sensibly weaker.

FROM SANTA FE.—The Santa Fe mail of the 15th ult., reached Independence on the 10th inst.—Messrs. Otero, Porter and Cranshaw arrived, and confirm the attack on the mail party. The Indians took all the mules, provisions and clothing, but did not molest the mail, which was taken forward by the next out-going party. The incoming party found the dead bodies of four men, supposed to have been Pike's Peakers. Two subsequent attacks on the outward-bound mail caused the detention of the incoming party, owing to the train behind them having been apprised of the difficulties ahead by a Mexican. The combined strength of two trains probably prevented another attack. A company of cavalry had been ordered to march immediately to Fort Riley, to chastise the Indians.

FROM MEXICO.—A conspiracy on the part of the leading officers in Miramou's army, with the object to overthrow Miramon and recognize the Liberals, was divulged on the 21st ult., and the execution of the officers would take place on the 25th. The other conspirators, not in the army, would not, it was supposed, be punished at Vera Cruz. Active preparations were making to seize upon Jalapa, Cordova and the Capital. Corbas' division was entirely routed on the 23rd by the Liberals of Oaxaca. Large numbers of persons were taken, but were pardoned. The Church party had taken Moreno and others, and they had been shot. Mr. Connor, Consul at Mazatlan, has secured concessions of great advantage to our commerce on the western coast.

WHAT THE WAR COST.—The two months campaign in Italy can scarcely be said to have been a cheap amusement for any of the parties concerned. The Allgemeine Zeitung figures up the cost to the immediate parties to the war, and also to the neutral Powers who were required to make preparations for contingencies, in the following table:

Austria, about.....	\$20,000,000
France.....	20,000,000
Piedmont.....	4,000,000
Other Italian States.....	800,000
Russia.....	1,000,000
England.....	850,000
Germany.....	5,320,000
Total.....	\$52,000,000

This makes the snug little aggregate of \$52,000,000—or nearly one-third of the whole national debt of England.

The News Condenser.

- Austria is making great concessions to the Protestants.
- The receipts of the St. Louis Fair amounted to \$50,000.
- Potatoes are selling for 15 cents a bushel at Hastings, Minnesota.
- Hoops and widely extended skirts are going out of fashion in Paris.
- The Chinese navy consists of two vessels mounting in all ten guns.
- The American Board of Foreign Missions is in session in Philadelphia.
- It is thought that the value of the wine trade in Ohio this year will be over 1,000,000.
- On Friday last the large quantity of 143,000 bushels of wheat was shipped from Chicago.
- In 51 counties of Indiana, according to the assessor's returns, there are 1,245,950 hogs.
- In the city of Chicago there are over 1,600 saloons, of which 690 are regularly licensed.
- The yellow fever has appeared in New Orleans, much to the alarm of Northern visitors.
- Senator Sumner is still bathing at Frascati, near Havre, and is daily expected in Paris.
- Gov. Morgan, of New York, has fixed on Thursday, November 24th, as Thanksgiving Day.
- In Paris, it is computed that each inhabitant consumes 216 bottles of wine during the year.
- With four weights, viz: 1lb., 3lb., 9lb., and 27lb., any number of pounds, from 1 to 40, may be weighed.
- The name of the Chinaman who was in command of the victorious armies on the Peiho, is Heng—General Heng.
- The Spaniards are going to send 12,000 men against the Moors, and the troops are to be "thrown into transport."
- The annual value of the brandy produced in France is about \$12,000,000, at an average cost of 48 cents per gallon.
- The Bishop of London has closed the Pascey Church, where the congregation have recently been so riotous.
- The city of Detroit is about to erect a new City Hall, at a cost of \$250,000, and workhouse at a cost of \$50,000.
- The wine crop of France this year will be a good one, probably exceeding the annual average of 800,000,000.
- The black tongue is committing dreadful ravages among the cattle in the neighborhood of Belleville, Indiana.
- The Northern Albany Railroad has just been sold at auction. Stockholders and bondholders lose over \$3,000,000.
- Mr. George Gregory, of Janesville, Wis., has put down 144,000 eggs in a pickle composed of salt, lime and water.
- The products of the various manufacturing departments of Cincinnati for the present year are valued at \$112,254,000.
- The Post-Master General is making some arrangements for the more effective return of dead letters to their writers.
- They have a giant in Ohio, who, though only 17 years old, weighs 397 pounds, and is seven and one-third feet high.
- Patrick Riordan, a respected and eminent citizen of New Orleans, died in that city recently, at the advanced age of 103.
- A fire engine, made in London in 1689, was, only two years ago, still in working order, in the village of Bethlehem, Penn.
- Wise, the aeronaut, says that in 234 balloon ascensions, he has only met with two accidents, and two losses of his balloon.
- The Cleveland Herald has introduced a new feature in its matrimonial notices. It gives the names of bride-maids and bride-men.
- The Kansas corn crop is so good that the article is worth only 15 cents a bushel at Leavenworth. The wheat crop is excellent.
- Recent accounts from Roman Catholic authorities state that three hundred priests are at work in China, propagating their faith.
- The N. Y. Board of Education have made out their estimates for 1860 at one million three hundred and fourteen thousand dollars.
- A large body of land, 62,000 acres, lying in the counties of Highland, Randolph and Pendleton, Va., has been sold for \$60,000.
- A good step has been taken towards erecting a monument to Kane, one of the noblest of the noble army of martyrs to science.
- Six hundred and fifty-seven mules were sold at public sale in Paris, Kentucky, on Monday week for the aggregate of \$33,495.20.
- Parke Godwin has in press the first volume of a History of France, which will be a valuable contribution to American literature.
- Daniel Stafford stole a yoke of oxen at Detroit, and in 14 hours was arrested, convicted and on his way to State Prison for five years.
- The Cooperstown papers say that the supply of hops will not be large enough to supply the current brewing demand for the year.
- The Cherokee Indians are getting civilized. They have a debt—small, to be sure—but so large that they cannot pay the interest of it.
- Autographs of John Milton and his wife were lately bought by a Philadelphian in England for two hundred and fifteen dollars.
- A statistical publication just issued, states that the cost of keeping up permanent armies on the continent amounts to 60 millions sterling.
- "Grace Greenwood" is in the list of lecturers before the Albany Young Men's Association. Her subject is "the heroic in common life."
- The Eastern country has had a large supply of rain. At Mauch Chunk, Pa., the water was running last week three feet deep through the streets.
- In California the Chinamen test brandy by applying to it a lighted match, and if it does not yield a blue flame, they pronounce it "no good."
- Prof. Agassiz has opened his class at Cambridge, with between 60 and 90 pupils. Among the number are ladies from ten different States.
- The Great Eastern is earning \$3,000 per day at her dock in England, this being the amount of admittance fees. She had better say there awhile.
- Arizona is beginning to yield her silver liberally, and but for the Apache's she would do better still. We fear they will have to be—"civilized."
- A genuine "wooden nutmeg" was one of the features of the Hartford county fair last week. It is said to have deceived even Connecticut folks.

Fall and Winter Campaign—1859-60.

Fall and Winter Campaign—1859-60.

NOW IS THE TIME
TO SUBSCRIBE FOR AND CIRCULATE

MOORE'S RURAL NEW-YORKER,

The leading and largest circulated AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER, as a New Quarter commences on 1st October. The *Ruralist* is widely known as the Best and the Popular Journal of its class—its Correspondents being of the first order. (Useful, Entertaining and Pure,) and its APPEALS are unique and attractive. Though published less than ten years. It is the acknowledged

CHAMPION OF THE RURAL PRESS

In Ability, Enterprise and Circulation! It not only treats ably and fully upon Agriculture, Horticulture, Rural Architecture, &c., but has many other distinct and carefully conducted Departments—under such headings as Domestic Economy, Educational, The Traveller, Useful Hints, Choice Miscellany, Sabbath Musings, Useful Oils, (Gleanings, &c.) The Story Teller, Young Ruralists, Youth's Corner, &c., with a complete Summary of News, Market Reports, &c., &c.

The present (10th) volume is pronounced, by its Patron and the Press, the most perfect model of a RURAL AND FAMILY JOURNAL ever published, and we invite a comparison with any others extant.

THE ELEVENTH VOLUME, FOR 1860,

WILL FULLY equal the present in all respects—in Quality of Matter, Paper, Printing, Illustrations, &c., &c. As the long evenings and leisure of Winter are coming on apace, a friends of the Rural, and its objects are invited to subscribe and form Clubs for the leading advocate and promoter of Rural "Progress and Improvement"—A Journal which ever ignores trash and humbug, and faithfully seeks to advance the *Best Interests* of Individuals, Families, Communities and the Country.

Style, Terms, &c.—The Rural is published Weekly each week commencing EIGHT DOLLAR QUARTO PAGES (forty columns)—printed and illustrated in superior style with Title Page, Index, &c., at close of volume. Only 3¢ year—\$1 for six months, with great reduction and liberal inducements to clubs and agents. Local Club-Agents wanted in every section where the Rural is not circulated.

For Specimens, Show Bills, &c., sent free to all applicants. We shall be glad to furnish "the documents" to any and all persons desirous of examining or circulating the "*Economist, Rural and Family Weekly of America.*"

* Newspapers giving the above brief Prospects, and directing attention to the same, will receive the 11th volume of the RURAL (and also the last half of 10th volume) desired, without sending to us in exchange.

WINTER WORK—From three to five dollars per day can be made. Work easy and pleasant. Send stamp for particulars. **G. O. CLARK,**
609-17
Draiver 212, Rochester, N. Y.

600,000 ACRES OF HANIBAL AND ST. JOE-PI. RAILROAD LANDS For Sale of Long Credit and at Low Rates of Interest.
These Lands granted by Congress to aid in constructing the Road, lie to a great extent, within Six Miles and within fifteen Miles of the Road, and are connected through a country unsurpassed in the salubrity of its Climate and Fertility of its Soil. Its latitude adapts it to a greater variety of products than land either north or south of it, rendering the profits of its farm more certain and its cultivation less expensive.

his position is such as to command at Low Rates of Freight both Northern and Southern Markets.

For further details and to obtain the better condition, to enable you to wish to invest money in the West, or any in search of prosperous Home, these Lands are commended.

Land Commissioner Hannibal and St. Joseph Railroad
605-136 Hannibal, Mo.

NEW GROCERY ESTABLISHMENT

No. 20 Front Street, Rochester, N. Y.

JOHN J. JARVIS has opened a Grocery Store, where he can be had a choice lot of Groceries—Tea, Coffee, Sugar, Molasses, Spices, Raisins, Prunes, Zante Currants, Nutmegs, Indigo, Tobacco, Cigars, &c.

Rochester, Sept. 13, 1859. JOHN J. JARVIS, 601-136

GUANO.—We would call the attention of Guano Dealers

GUANO, Planters and Farmers to the article which we have
on hand and for sale at **THIRTY PER CENT LESS** THAN
PREVIOUSLY. It is a well known and long established support
for all Guano or fertilizer users, and is manufactured in
this country. This Guano is imported by **W. M. WEBB** of
New York, from Jarvis & Bakers' Island, in the "South
Pacific Ocean," and is sold genuine and pure as imported.
It is an excellent fertilizer for all crops, and is
furnished, and analyzed by the most eminent and popular
Agricultural Chemists and found to contain (as will be seen
by our circulars) a large percentage of *Zinc Phosphate* and
Iron Phosphate. **Good crops** of all kinds can be raised
with it, yielding abundantly such soil to produce immediately
abundant crops, besides substantially enriching the soil. It
can be freely used without danger of burning the seed or
the plants, and is a well known and long established support
for all Guano or fertilizer users, and is manufactured in
other fertilizers; retaining a great degree of moisture, it
enables the plant to grow in a healthy condition, and
experience has proved, *free of insects*. For orders in large
quantities, (each order will be sent by express, and
planters, maintaining full particulars of analyses and tests of
farmers, apply to

THE LOGAN GRAPE.—The earliest ripening black
hardy grape with which we are acquainted. Its fruit
is large, and of a fine purple color. The cluster grows
out of doors. Berry oval; bunch compact.
Our Illustrated and Descriptive Catalogue of over 70 sorts
of Grapes, sent to applicants who indicate interest.
J. C. P. BISSELL & SALTER, Rochester, N. Y.

THE DELAWARE GRAPE VINES, PROP.
Grown from the original stock price \$5 to \$8. Also, Lo-
ran, Rebecca, Diana, Concord, Hartford Prolific, and other
new varieties. \$1 to \$2—all strong and well rooted, ready
for planting or for the fall. W. O. WATKINS, Jr.
August, 1889. (603-135) Delaware, Ohio

PUPPS UNION FEMALE SEMINARY

The next School Year of this Institution, commences on the first Thursday of September next. For Terms, see Catalogue at this Office, or apply to

TO HOUSEKEEPERS. — SOMETHING NEW
B. T. BABBITT'S
BEST MEDICINAL SALERATUS,

is manufactured from common salt, and is pre-
pared entirely as matter extracted in such a
manner as to produce Bread, Biscuit, and all
kinds of Cakes, without containing a particle of
poison. The former is made in such a manner
thereby producing wholesome results. Every
particle of Saleratus is turned to gas, and passes
off with the steam of the water, leaving behind
scarcely anything remains but common Salt,
Water and Flour. You will readily perceive by
the taste of this Saleratus that it is entirely differ-
ent from all other Saleratus.

It is packed in one pound papers, each wrapper
branded "B. F. Bahnhit's Best Medicinal Soda."
The picture of a man in a military uniform, with
a glass of effervescing water on the top. When
you purchase one paper, you should purchase one
wrapper, and be particular to get the exact exch-

Full directions for making Bread with this Saleratus and Sour Milk or Cream Tartar, will accompany each package; also, directions for making all kinds of Pastry; also, for making Soda Water and Seltz Water.

MAKE YOUR OWN SOAP,

MOORE'S RURAL NEW-YORKER

AGRICULTURE LITERATURE EXCELSIOR SCIENCE ARTS NEWS

TWO DOLLARS A YEAR.

"PROGRESS AND IMPROVEMENT."

[SINGLE NO. FOUR CENTS.]

VOL. X. NO. 44.

ROCHESTER, N. Y.,—FOR THE WEEK ENDING SATURDAY, OCTOBER 29, 1859.

[WHOLE NO. 512.]

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it zealously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

For Terms and other particulars, see last page.

NEW YORK STATE FAIR.

Morning connected with the Annual Fair of this State, and we presume the same is true of other States, is more interesting and profitable, or better enjoyed by the farmers in attendance, than the evening discussions. At these, after the labors of the day, judges and superintendents, exhibitors and spectators, meet to compare views and relate experiences bearing on the subjects presented to the consideration of the meetings. A few years since, a score or so of persons was all that could be induced to attend these discussions, generally held in the parlors of some hotel; now a large hall will scarcely accommodate those who are anxious to be present. In this respect there is a gratifying improvement. We notice, also, an improvement in another respect, but not as rapid and thorough as we could desire. Those who talk in these meetings are not always those who possess the most information, but those who feel confident that they can express their ideas in a proper and pleasing way. Many a man, with important facts in his possession which would perhaps overturn some false but plausible theory, or account for contradictory statements which seem strange and irreconcilable, hides his light under a bushel, and deprives thousands of the benefit of his knowledge, because he lacks, or imagines he lacks, the ability to tell what he knows. The discussions are, therefore, confined to few—left too much with the talkers, and not sufficiently participated in by the thinkers and workers. The plain, stubborn facts are what should be brought out on these occasions; and those that have such a faculty for talking that they can make "the wrong appear the better reason," should not be permitted to take the lead in these farmers' meetings. We know of but one effectual remedy for this, and that is for the farmers to organize clubs in every town, for discussions during the winter. Here, among their friends and neighbors no embarrassment would be felt, but all would freely express their views as calmly as though sitting by their own firesides. A little practice of this kind would be of great benefit; and those who persevere in this course, will find that in a little while they will have no difficulty in telling what they know, even before thousands.

These remarks are not designed to reflect on any of the speakers at the meetings reported; but we noticed a backwardness on the part of farmers, which should be corrected. Many a man turned to his neighbor during these discussions, and whispered in his ear truths either confirmatory or contradictory of what was said. These facts, thus kept secret, would have been spread before the meeting, but for the evil which we are attempting to correct.

DISCUSSION.—LAST EVENING.

The discussion on Thursday evening was fully as interesting as that of the preceding, and every seat in the Society's large Lecture Hall was occupied. At the suggestion of Hon. T. C. PETERS, Dr. CARPENT, of Ulster county, was called to the chair. The discussion on *Manures*, and the *Best Modes of Applying Them*, was resumed, though *Soiling*, as on the previous evening, occupied a large share of attention.

Mr. LEBLAND, of Saratoga, wished, as much had been said about spreading manure, and its evaporation, to know the experience of farmers in

spreading manure in the winter, when the evaporating season is over. Mr. L. thought in the falling weather in the fall, winter and spring the manure gained more from the atmosphere than it lost. There was a great difference in soils, which must be taken into consideration in applying manures. Where Mr. L. lived plaster did no good.

Judge BLODGETT, of Lewis, thought the most important question in the treatment of land had been overlooked,—that was its *preparation* for manure and for a crop. It should be well broken up, made deep and friable, and then the full benefit of any manure applied was received. The Judge found it difficult to reinstate a good pasture after the land had been disturbed and robbed of its virgin fertility. Avoided disturbing pasture as much as possible, but when it became necessary, did the work thorough—underdrained, cultivated and enriched the soil, and in this way a good pasture was again secured. His treatment of meadows was different—plowed deep, and incorporated the manure with the soil, as far down as pulverized. Sowed but little grass seed, for if the soil was natural to grass, it would soon become as thick as necessary or profitable. After a meadow was started right—with a rich, well-prepared soil—top dressing might answer, but top-dressing would not be of much benefit to a poorly-prepared meadow. Manure is of much more benefit on good land than poor. Manure that, when applied to a meadow giving two tons of hay to the acre, would increase it to three tons would hardly be perceived if put on a meadow giving one ton or less to the acre.

L. F. ALLEN said that in England land had remained in pasture ever since the conquest. In Massachusetts land had lain in pasture for more than 150 years. The *Southern Tier* is the finest dairy region in this State, and there pastures are never disturbed, but remain with their cradle knolls, and any man would be thought a fool who disturbed them. On the surface there is a thin coating of decayed leaves, and buds, and branches, just right for the roots of the grass, but turn this under, and the soil that comes in contact with the roots is uncongenial.

At this stage of the meeting Mr. PETERS introduced Hon. JOSIAS QUINCY, Jr., of Massachusetts of whom many present wished more particular information in regard to his system of soiling, of which he gave some account at the last meeting.

Mr. QUINCY said that had he known what would have befallen him, he hardly thought he would have ventured into the room last evening. For he had stated about ten o'clock last night that the manure of a cow was worth as much as her milk, and gave his reasons for thinking so, the figures on which the estimate was founded, and the endorsement of the celebrated chemist, DANA. That morning, about 10 o'clock, on taking up a New York paper, he was surprised to read a paragraph saying "Mr. QUINCY stated at the meeting of farmers last evening, that cow manure was as valuable as milk." This, without any explanation, he feared his friends at home would take as pretty good evidence that he needed looking after. Mr. Q. said he would endeavor to answer the questions that had been asked him, and would give all other information in his power.

What is the Best Material for Soiling? Grass, oats, corn and barley were all used. Begun with grass, and continued its use until about the 1st of July. About the 5th of April sowed oats, four bushels to the acre, and made another the 20th of April, and another the 1st of May. The oats furnished food during the months of July and August. After the first of May planted Southern corn in drills, and again the 1st and 20th of June. This supplied food after the oats were gone, during the months of September and October. Next sowed barley, making several sowings about ten days apart, until the 1st of August, and that gave plenty of food until time to dig the roots, when the tops were fed. English writers thought that seven cows could be kept by the soiling system for one by the old plan. With Mr. Q. an acre would keep three or four cows, the difference depending upon the manuring. It is almost impossible for us to realize the value ascribed to manures in England. Mr. MACOM, at Tipton, used all his manures in a liquid state, forced through iron pipes by an engine. The crops produced by this system seemed incredibly large. At the *Willow Bank Dairy*, manure is applied liquid by carts and casks. The crop is cut green for soiling, and then the land is deluged with manure water. The result is four or five crops in a season, seeming almost fabulous in amount. The farmer must rely on home-made manures, and the making manure must be a main feature in all good farming. Our artificial manures were greatly adulterated. Farmers thought that milk was the only article that could not be adulterated. Muck was of great value in saving manure and

in increasing the manure heap. By composting with muck the amount may be trebled. Mr. Q. read a letter from Dr. DANA, endorsing the statement he had made the previous evening, that the manure of a cow was worth as much as her milk in his own stables made a trench 4 inches deep and 18 wide, water-tight, at the back of the stables, and over the barn cellar. Filled these trenches with muck, to save the liquid manure. In England similar trenches were sometimes filled with water. Into these all the manure was swept, when it was allowed to run into a reservoir, and the trenches were again filled.

In answer to a question in regard to the health of his stock, Mr. Q. said he had not had a sick animal in a long time. They appeared quite comfortable. Let them out in a yard for an hour or so, morning and afternoon, but they generally appeared glad to return to their quarters. The cows don't need much exercise. In the pasture, when feed is plenty, they eat what they need, and then lie down carefully and comfortably and chew the cud. Just in the best season pasturing may be as well, and perhaps give a little more milk, but this only lasts for a few days—just in the flush of grass. Mr. Q. was much in favor of soiling—liked it; made it easy to keep a large amount of stock on a small farm—thus increasing the fertility of the land and the numbers of farms and farmers. The farmers were the conservative element in this country. When we read of the *Dead Rabbits* in New York and the riots in Baltimore, we were apt to have some misgivings as to the stability of our institutions, forgetting this conservative element. The ocean is of the same temperature at all seasons, and modifies that of continents. So the farmers, with the lore of home and country—virtuous and patriotic principles—strongly implanted in their breasts, will modify these destructive elements, and preserve all that is right and true in our institutions. He once asked the elder ANAS when he first became convinced that the Colonies would sever their connection with the mother country—if it was at the first outbreak at Lexington, or Boston—and he replied that he first became convinced of this fact when he taught school at Worcester and learned the sentiments of the farmers. In answer to further inquiry, Mr. Q. said, in a well-arranged stable it was very little trouble to take care of stock in this manner.

BARTHOLOMEW GEDNEY, of Westchester, drew out manure in the spring, with all the juices; then plowed under, for corn. Saves all the liquid manure from the cows. It runs into a cistern prepared for the purpose, and is pumped up with a chain pump. The result was entirely satisfactory.

Mr. STEWART, of Erie, had practiced soiling for three years. One acre with this system is equal to four tilled in the old way. The extra manure pays for all extra labor, and the saving in fence is no small item. Adopting this system would double any man's farm. *Steaming food* he had also found of great advantage. Straw, cut, steamed, and mixed with a little meal, he found better than the best Timothy hay. One man can take care of more than fifty cows; had kept that number, and it did not occupy all a man's time. Considered that steaming and soiling was worth more to him this year than \$500. Raised a good many carrots, and fed these until about the 20th of May, or until clover was ready to cut. Fed with this until corn was large enough to cut. Corn comes the nearest to fresh grass in the manufacture of butter. In winter fed roots largely, with about three bushels of oat and steamed straw to a cow, and a pint of meal to each bushel of straw. The roots were steamed with the straw.

GEORGE CLARK, of Otsego, was willing to learn, but wished to learn from those who knew more than himself of farming, and not from those who live in cities and ride out in their carriages two or three times a week to see what PATRICK is doing, and to furnish the money for him to work with. Was opposed to this high farming; it would grow so large crops, and make produce so plenty, as to bring down prices and ruin farmers. In fact, should all go into this system, there wouldn't be months enough in the world to consume the produce. Some years ago, growing hops was very profitable in Otsego county. Rather small crops were raised, which sold at a high price, and those engaged in the business made money. But others went into raising hops, exercised a good deal of skill at the business, grew large crops, and for the last seven years hops have been a drug, and all have lost money. So it would be with grain, cheese, butter, &c., if we all go in for raising large crops. It is better to keep on in the old way, only improving gradually as fast as there was a demand for more produce. This speech caused a good deal of merriment.

Mr. DARLINO, of Cincinnati, wished to endorse what had been said about steaming food for stock.

He found it of great advantage, particularly to corn stocks, which cattle would eat up clean when cut, steamed, and mixed with meal.

Mr. GANNEY of Westchester thought one acre of corn used in soiling worth as much as ten acres of good rowan pasture.

GEO. GEDDES of Onondaga County, asked no man to adopt his mode. Don't attach so much importance to manure as the farmers of the vicinity of the Hudson River. Yet followed a system that increased the productiveness of the soil, and that was the true rule upon which all farmers should act.

Mr. GOLDSWORTHY of Dutchess County said that it was the practice of many farmers to sow corn to feed when pastures grow short, which practice they found profitable, and so they did to feed meal largely.

Mr. CORVIS of Tompkins wanted to know if farmers could afford to haul manure half a mile, when they can buy clover seed at \$5 a bushel, and plaster for 10 or 12 cents a bushel. Clover seed was the cheapest manure that he could use.

Mr. DAX of Genesee County was in favor of manuring with clover, when he can make it grow, but finds great difficulty in getting the seed to germinate, and then he is obliged to haul manure, no matter how far, because if he neglects to manure his land he gets no profitable returns.

At 9 o'clock a motion was made to adjourn, but was voted down, with a strong manifestation to hold on and gather all the information possible.

SOLON ROBINSON, being called for, said that he had no desire to occupy the time. He wanted practical farmers not to be afraid to speak, and he urged all present who felt the importance of these Farmers' Club meetings to organize them in their own neighborhoods, and try to learn facts from each other's experience, and above all to try to learn what are facts.

Mr. GEDDES said, that although he did not think the mass of farmers of this State were prepared to adopt the system of soiling recommended by the Hon. JOSIAS QUINCY, Jr., yet he moved a vote of thanks to Mr. Q. for his interesting and valuable remarks. The vote was unanimously passed.

Several other persons spoke, and at 10 o'clock the meeting adjourned, every one apparently fully pleased; and thus ended the discussions.

EUROPEAN AGRICULTURE.

Editor.—At certain periods the columns of the Agricultural Press of our country teem with articles concerning this fungus, and its baneful effects upon stock. It would almost seem,—if we may judge from the tenor of these various communications,—that farmers generally do not readily recognize the appearance of this parasite in their grain or grass, and that the result of its use is first apparent upon the animals to which it has been given in their fodder. The stock-producing interest of the country has grown to such magnitude, and the welfare of both breeder and consumer has become so intimately connected, that any information calculated to promote the health and vigor of our domestic animals possesses an almost universal value. This being the case, our readers will cheerfully acknowledge the propriety of making the following extract from the London *Agricultural Gazette*:

"The existence of ergot on many varieties of grass, has been proved beyond all doubt, and in like manner we have strong evidence of its influence upon breeding cattle. Two conditions appear necessary for its production: first, the formation of the seed; and secondly, that peculiar condition of climate which predisposes the seed to favor the development of the ergot. An examination of the seed stems of our meadows will generally give evidence of this disease, but it is only when it is abundant that its influence is so manifest. Unfortunately much of the grass land in the moist climate of the West is too frequently the cause of trouble and loss by causing the abortion of the cows fed thereon. The disease is seldom found upon grass land which has been mown in the same season, and even when it is found its appearance is so casual as to be of little importance. The land which has been grazed during the summer is that upon which the ergotized grass is found to exist most abundantly, because the stock having avoided the seed stems, these have been enabled to fulfill their special functions and produce seed which has subsequently become diseased. It is clear that if prevention is the object to be aimed at, this will be best attained by keeping breeding stock from land thus bearing a diseased produce. This may be accomplished on the majority of farms by removing the breeding cows and heifers from their summer pasturage, say in July, and keeping them afterwards upon land which had been mown that season. The removal of the stock should not be delayed until any case of abortion has positively occurred,

because having once commenced it rapidly spreads through any herd, and often in opposition to every care. As soon as there is seed formed upon the seed stems of the grass, the prudent breeder may take notice of danger, and his wisest policy will undoubtedly be to put his cows and heifers upon the after grass. There are very many districts where the climate, from being dry, does not render this precaution necessary, but at the same time there are numerous tracts of land where the moisture of the climate acts upon the grass seeds, and favors the growth of ergotized grass, and such land is noted for the difficulty experienced in keeping the stock in proper breeding order. The age of the fetus appears to be a matter of small importance, for it varies from two months upwards at the time when the abortion takes place. Some stock are much more sensitive to its influence than others, and this is doubtless dependent upon their health and vigor; and thus stock which are well bred, &c., nearly related, are more liable to injury in this way than those which are inferior in this respect: for although by judicious breeding we improve the general character of an animal, yet at the same time this altered character is generally accompanied by diminished vigor.

JUNE GRASS AFFECTED WITH ERGOT.

"This explains how the best bred cows and heifers will often throw their calves, whilst some common stock about which the breeder is indifferent, will frequently escape, although their treatment and food may be similar, and each may have partaken of this ergotized grass. Knowing as we do the action of this diseased form of grass seed, it becomes highly important that we should avoid a cause so prolific of trouble and loss to many of our best breeders. The preventive treatment is simple and readily available, and we trust that attention having been drawn to this very much overlooked cause of abortion, it may help our readers to avoid a recurrence of the losses and disappointments which we regret to know have been so frequent."

In connection with the foregoing we give an illustration of the appearance of June grass when this poison is prevalent. Our engraving represents a head of the *Poa pratensis*, natural size, infected with ergot: 1, spikelets in the natural condition; 2, 2, 2, 2, ergotized spikelets. Thus it is seen that the ergotized grains protrude beyond the chaff, or glumes; 3 is the ergot magnified, surrounded with the glumes at the base, which are also partially covered with a white, fibrous, cotton-like substance, doubtless fungoid, that does not appear at the base of a healthy seed; 4, the ergot detached from the glumes; 5, glume, with the cottony substance attached.

SHEEP BREEDING IN GREAT BRITAIN.—At the recent sale of Mr. HARDING'S South-Downs, Mr. YEATMAN gave the following facts and figures relative to the breeding of sheep in the United Kingdom, and their influence upon the manufacturing and pecuniary interests of the country:—"There are few persons, perhaps, aware of the circumstance that this is a branch, looking at it relatively, looking at it positively, which is of immense importance. Permit me to state, upon the authority of one of the most able writers we have met with in this country, Mr. MACQUEEN, that there are not less than 48,000,000 head of sheep in the United Kingdom. Just fancy the importance in a national point of view of carrying to the highest possible point of perfection the improvement of these 48,000,000 of sheep, yielding 246,700,000 lbs. of wool. And remember again, gentlemen, for it appears almost incredible, that the capital invested in this stock amounts to £266,578,335, according to Mr. MACQUEEN. Permit me also to state that the value of the wool grown in this country, leaving out fractions, is not less than £14,000,000 per annum. Permit me further to state that the importation of foreign wool does not amount to more than £4,000,000. So that out of the £18,000,000 sterling worth of wool used by this country, which employs no less than 1,250,000 manufacturers and operatives, the large propor-

tion of £14,000,000 worth is provided by our agriculturists, the affording means for the employment of labor, the investment of capital, and the increase of the wealth of this country. Allow me to say that we are deeply indebted to the sheep breeders of England, and to them is due every honor for thus adding to the common wealth of the United Kingdom. Well then, gentlemen, you have in that class such names as the Duke of Richmond, Mr. Jonas Webb, Mr. Rigden, our excellent friend Mr. Harding, and our honorable friend on my left, who has lately come with all his honors blushing about him.—Mr. Wood. When, again, I look at the Vice President, whose shelf is not wide enough for the number of cups he has won, I ask permission, honestly and conscientiously, to say that I do believe such men are not merely entitled to the passing thanks of the present moment—they are not merely entitled to those honors that old Dorset can offer, but I do believe they ought to be considered as benefactors to their country."

"IT IS THE GOOD CROP THAT PAYS."

The above remark, once overheard from a practical farmer, may sound like a bald truism to some, but it contains, on the contrary, a great and important truth, often denied even in theory, and still more generally ignored in practice. The idea is this:—The increased expense necessary to insure a good crop, is always, when judiciously applied, more than repaid by the increased value of the crop and land. For instance, in a crop of corn, the increased cost in time and money necessary to produce one hundred bushels per acre, instead of fifty, bears small proportion to the increased value of the crop, besides the impossibility of leaving the ground in as good condition after the poor crop as after the good one. The interest upon the value of the land—plowing, planting, &c.—are all the same, or nearly the same, upon the acre yielding fifty bushels as upon the one yielding one hundred, and these are the always heavy items in the expense. A good coating of manure (which, however, benefits the land more than the first crop,) and a little extra attention during the summer, constitute the principal extra expense, with the exception of increased harvesting, at which, however, no farmer would grumble. And yet nothing is more common than to hear farmers saying they cannot afford to make some needed improvement because they cannot spare the money, even when they admit it will repay twenty to thirty per cent. interest on investment. (That is a kind of logic you never heard from any but farmers. Any other class of men would have money to invest at such profit.) Even in regard to draining—the greatest bugbear of all, because most expensive of farm improvements—nothing is more certain than if farmers cannot afford to drain, they certainly cannot afford to farm at all. On two-thirds of our land underdrains will pay fifty per cent. on cost, and often with a wheat crop nearly or quite paying for their construction in one year. Besides, they are a permanent investment, and after paying for their cost, as they will in a year or two, all increased gains from their construction are clear profit.

It may well be doubted, whether, with the high price of lands in Western New York, farming is a paying business—the interest alone of the value of a farm of one hundred acres, worth sixty-five dollars per acre, being nearly five hundred dollars, besides the cost of working farm, stock, tools, &c. But if farming can be made profitable, it must be thorough farming. Every acre must be kept in good condition, for the interest on the land is accumulating as fast under poor management as under good. And this will cost far less than is generally supposed. There are thousands of farms worth now from five to eight thousand dollars, where the expenditure of five hundred or a thousand dollars in draining and manuring would double the value of produce to be sold from the farm, and without causing any extra expense in production after the first outlay. Thus, the farmer would get the same interest from five or ten hundred dollars invested in improvements that he gets from five to eight thousand invested in land. If he cannot make money with the improvements, he certainly cannot without them.

Henrietta, N. Y., 1859.

W. J. FOWLER.

THE QUEEN BEE.

EDS. RURAL NEW-YORKER:—To solve the reason why eggs laid by the same queen should produce, respectively, queens, workers and drones, has been one of the greatest puzzles to bee-keepers. The theory of DEIBERON is, that to produce drones, coition of the queen with the male is unnecessary, while the semen of the drone is essential to the development of the more highly organized workers and queens, and Prof. LINCOLN has shown that this peculiarity is common with various kinds of insects. Dr. DUNBAFF, of Germany, artificially impregnated some drone eggs, causing them to produce workers, thus showing that the semen of the drone will bear exposure to the open air without destroying its vitality. In a letter received from Mr. QUINBY, (who has the largest apiary in the United States,) I find that he has succeeded in producing a queen in a colony that had none, before drones made their appearance, by giving them eggs, or young larvae. This shows that if impregnation is necessary, it must have been done by the workers, from semen deposited by the drones in the summer or fall before. And it is probably a wise provision of Providence that the drones should deposit their semen in cells before they are destroyed, in order to raise young queens before drones make their appearance in the spring, in case of any accident to the old one.

This deposit of semen, near, or with the bread, or pollen, has induced observers to suppose that queen bees were produced by being fed a peculiar kind of food, called royal jelly, which is as absurd as that a highly cultivated piece of ground would produce a crop without any seed. Almost all modern writers are now agreed that the ovaries of the queen are filled with eggs that will produce drones only, but that impregnation is essential to the production of workers. My own opinion is that a still further impregnation of the egg, after

it is laid, is necessary to produce a queen. This is certainly as rational as the authenticated fact that a drone egg, by impregnation, will produce a worker. The bees have certainly power, from their brood comb, to produce workers, drones, or queens, as may be necessary to the existence of the swarm, and I see no other way in which they can make such changes, and regulate the character of the new colony, except by artificially impregnating the eggs with the semen of the drone. To suppose that they can effect these great changes in any other way, is to impeach the wisdom of Him who reserved in the Ark all the various kinds of animals and insects, and His veracity in declaring that such should produce after its kind.

Henrietta, N. Y., 1859.

EXPERIENCE IN HEDGE GROWING.

EDS. RURAL NEW-YORKER:—Should the following be worthy an insertion in your paper, please publish it for the benefit of those whom it may concern. A mite of practical knowledge, though often dearly bought, is of more worth than a volume of theorizing. In the absence or scarcity of cedar in this country for farms and suburban fencing, resort has been had to various expedients to supply the deficiency. Patent metalho and movable board fences have been presented, both of which are either too expensive or flimsy to warrant general introduction. The Hedge, too, has had its advocates. Who, that is a lover of Nature, and has seen a full-grown hedge, properly trimmed, has not admired it, especially when occupying a position contiguous to one's house.

Though owning a cedar lot, I was induced, six years ago last spring, to have an Osage Orange Hedge, set about my yard and fruit garden, (sixty rods in all.) Directions as to cultivation and trimming were fully followed. The hedge grew luxuriantly, and gave promise of an early and well matured fence, sending forth shoots of four feet growth in one season, as the soil in which they were set was a warm, gravelly loam, but each succeeding spring exhibited naught of my hopeful hedge but a mass of lifeless twigs, to within one foot of the ground. My only hope was in acclimation, but the last spring found my hedge in a more hopeless condition than any preceding one. So that I am fully prepared to say that the cultivation of the Osage Orange in this latitude, as a hedge, is a hoax. Still desiring an ornamental hedge fence, will you, or some of your correspondents that have been successful in the cultivation of the English Hawthorn, give their experience with that plant, the time and method of setting, and after cultivation? Should it be set in single or alternate rows?

Wm. B. RICE.

Elbridge, N. Y., 1859.

ABOUT BOUGHTON WHEAT.

EDS. RURAL NEW-YORKER:—In your paper of Oct. 10th, I noticed an article in reference to Boughton wheat—you having received a sample from Mr. Wm. R. DUBYNE, of Nunda, Livingston Co., and stating that he weighed 65 lbs. per bushel. Also a communication from Mr. JOHN HOLMES, of Burnt Hills, Saratoga Co., giving his experience with Boughton's wheat, and stating that he weighed 64½ lbs. per bushel. Now, Mr. Editor, I will give you my experience with the same kind of wheat. I obtained one bushel from Baltimore, and had it sown the 7th of September. It got a very fine growth before the inclement weather set in, and was not injured in the least by the frosts of winter, but the frost of June 5th injured it very much, as it was just in the milk. I obtained only eleven bushels and three pecks. After reading the articles alluded to, I thought I would weigh some of mine, as I had some left, and it weighed 60 lbs. per bushel. I think, Mr. Editor, that the little town of Gates can send friendly greetings to her sister towns, and challenge them to produce heavier wheat. It is not quite as white as the Soule's, but ripens much earlier—I had mine cut the 6th of July. It is far superior, in my judgment, to the Dayton wheat,—and would not be surprised if it should become the favorite wheat of Western New York.

Gates, Monroe Co., N. Y., Oct., 1859.

SENECA COUNTY FAIR.

Our three days' Fair closed last week. Some \$1,500 was taken at the gates, including the amount received for show privileges, terraced seats, &c.—Had it not rained all the morning of the last day, when the trotting was to come off, the receipts would have been larger.

The show of Equines, Bovines, Sheep, Pigs, and Poultry, was creditable to this very fertile and all arable little county; and Floral Hall, if not in full bloom, contained, nevertheless, a goodly show of substantial vegetable productions, as well as those of the dairy, workshop, &c.—not forgetting the fine paintings, pictures, embroidery, &c., and the merry toned melodeon, a pretty specimen of which was constantly under the fair fingers of some one of the bewitching rural fair ones, doing execution that constantly encircled her with an admiring host—including, of course, more than one admiring, if not mystified swain? But that which interested me most, as it gave an earnest of our country's astounding progress in mechanical industry, was the show of improved Mowers, Reapers, Straw Cutters, and other farm implements; and the large and varied handicraft contributions of newly-invented domestic articles, powerful and unique forcing pumps, &c., &c., fresh from the workshops of that growing little Birmingham of our county, Seneca Falls? There was also on exhibition, and in successful operation, our townsman, A. LATOURETTE'S improved tile machine. It moulded and turned out from two to seven, fourteen inch tile, according to size, at each revolution.

One great inducement for a general turn out to the Fair, was the generous privilege granted by JOSEPH WRIGHT, the proprietor of the grounds, to every farmer and family to drive in and over the whole twenty acres. It was sad to see how soon the fine clover sward was cut up by wheels and hoofs into an unctuous semi-vegetable compound! The Plowing Match, on the second day, with three plows, came off on a stoneless meadow of

clay loam. The work was beautifully done, and the best execution was with the plow of NEWCOMB & RICHARDSON, Iron Founders here; yet strange to say, except the judges, there was but one farmer present to see the work done! It would seem of late that farmers go to an Agricultural Fair to enjoy, rather than to learn. When they drop the plow handles at home, they go to the Fair to forget the plow, and to patronize the races shows exhibited—to see the trotting, and the aesthetics generally—while those who have animals or other products on show, are stimulated by premiums hoped for, and if disappointed, they enjoy the privilege of cursing the poor judges. "Thank God," said one of the premiless, "they are no judges."

Waterloo, N. Y., Oct. 19, 1859.

FARMERS' CLUB FAIR AT LITTLE FALLS.

The Farmers' Club at Little Falls, Herkimer Co., held a Fair on the 11th and 12th of October. Although this Club is of but two or three years standing, the exhibition redounds to the praise of directly concerned. There was an excellent display of Vegetables, not inferior to those in many of our best County Fairs. The exhibition of Fruit was fine. Many superior specimens of apples loaded the shelves, and pears and grapes of several varieties made the show of fruit magnificent. The needle work, fancy articles, &c., (very many of them beautiful in design and exquisite in completion,) could not easily be excelled. The show of stock was not large, but met the expectations of the Club. Of farming and mechanical implements there was an ample display; and, to digress, while looking at the mowers and reapers, my mind reverted to the time when the sickle laid low the waving grain, the heavy stroke of the flail threshed, and the plodding team drew it to the distant market. How did folks live without reapers, threshers and locomotives—or, to express it concisely, without machinery.

During the forenoon of the last day of the Fair, a poem, witty and logical, was read by Mr. BUNGAY, of the Central Independent, and in the afternoon an address by Judge GRAVES, of Herkimer.

The Fair was doubtless a success, and may the like happy results ever crown Farmers' Clubs,—for they, like the capillaries of the circulatory organs of the human system, carry the life blood of agricultural enterprise to the heart, and where the arteries, the larger organs do not permeate. The State and County Societies do not form that microscopic net-work essential to the proper nutriment of the whole agricultural system. There must be a more complete circulation commence where those arteries terminate, to effectually nourish every tissue of the body, and Farmers' Clubs are the capillaries that perform that function—that secrete and convert the nutrient materials of the husbandman's enterprise into "bone and muscle,"—thus making the system of Agriculture athletic and imposing.

St. Johnsville, N. Y., 1859.

CRAWFORD COUNTY (Pa.) FAIR.

EDS. RURAL NEW-YORKER:—Allow one of your constant readers a short space to speak of the County Fair held at Coneauville, Pa., on the 5th, 6th and 7th of October. The June frost was particularly damaging in this section of country, and the idea pretty generally prevailed that Agricultural Exhibitions would prove slim affairs this fall. Indeed, out of a dozen such in the adjacent country, held in the month of September, several proved entire failures, and not one came up to their usual standard, either in variety, quality or quantity of articles exhibited, or number of people in attendance. But the Crawford County Fair was a decided success; indeed it was the best exhibition of the kind ever held in Western Pennsylvania, or Northern Ohio. There were 1,500 entries for premiums, and some 500 for exhibition. Over 1,000 head of cattle and horses were on the ground, comprising as full, and as good grades of stock as is frequently witnessed at State Fairs. Every department was full, including the best lot of Grain and Vegetables I ever witnessed.

The farmers and citizens of Crawford county have long been celebrated for their energy and thrift, but this last demonstration has added more than all others to their deserved fame, and if we mistake not, will prove of lasting benefit. From five to seven thousand persons were in attendance each day, and I learn the Society will have quite a fund on hand after paying off debts, premiums and expenses. The secret of our success is liberal, just and equitable regulations, promptness in carrying them out; officers who know their duty, and are vigilant and active, backed by a noble and progressive community. If you or your readers wish to see a model Fair, come to Crawford county next year. We can convince you there is a Yankee spirit at work, even in the sober land of PENN. s.

Coneauville, Pa., 1859.

SORGHUM AND OTHER MATTERS.

EDS. RURAL NEW-YORKER:—As the molasses subject is again being discussed to some extent, I will give you, and your readers, an idea of what we are doing in Central Iowa, in the manufacturing of molasses. A great many who tried it in 1858, became disgusted, and did not plant any cane in 1859, but, notwithstanding, the army of experimenters is greatly increased, and it is now apparent to all that with a fair season here, Central Iowa will produce more than sufficient for home consumption. I have the best yield of any in my neighborhood—about 85 gallons of good thick molasses to one-half acre. The use of mill and evaporating cost me about 10 gallons. We have all been greatly encouraged in the cultivation and manufacture of the sorghum. The greatest difficulty is in the seed, it being easily mixed, and some have lost the whole crop. I had a few seed of the *Amphiox*, or African Sugar Cane, and although late planted, and not fully matured yet, I got a greater yield from it than the Sorghum, and the molasses is far superior, with the same mode of manufacture.

I am greatly pleased with the Japan Apple-pie Melons (as a substitute for green apples),—they grow to great size in our prairie soil, some as heavy as 53 pounds, have been grown here this season. The Hubbard Squash, so highly spoken of East has maintained its reputation as "A" No. 1. Squash.

Sam'l M. DRAB.

East Des Moines, Iowa, 1859.

Rural Spirit of the Press.

Milk vs. Beef.

The following article, which we clip from the *Maine Farmer*, contains a great deal of "food for reflection." We hope that the class of our readers especially interested in the subject discussed, will give it proper consideration, and furnish their own opinions and experiences for publication:—"It was allowed, we believe, by all who visited the State Show and Fair last week, that there were never brought together in Maine a better collection of cattle. They were, taken as a whole, large and in good order. This is all very well. The progress made by our farmers in breeding stately oxen and heavy beef is commendable. But there was another thing observable, and that was the comparatively small number of milch cows entered, and the still smaller number of real good milkers presented for examination. This should not be. There can be no denial of the fact, that in the desire and in the efforts of raising cattle superior for work and beef, the farmers of Maine are going astray in rearing superior animals for the pail. Our dairy stock is not being improved. The question very naturally occurs, Why is this? The earlier Durhams introduced into Maine were good milkers—they are not so now. The earlier Devons were good milkers—they are not so now. What is the reason? There are undoubtedly two good reasons for this. The first is, the selection of animals that have a more natural tendency to fatten than give large quantities of milk, to breed from. The second is, the mode of rearing the young, or feeding, is such as to stimulate the fat gathering or adipose vessels of the system, instead of the milk gathering or lactiferous vessels.

We may be wrong in our theory in this last assertion, but we will endeavor to give our reasons for it as plainly as we can. There is in the human system, and indeed in all the mammalia or milk giving animals, two sets of vessels. The office of one set is to secrete and gather fat. The office of the other is to secrete and gather milk. Now the action of each of these organs is entirely and essentially opposite to the other. They may act together in a moderate degree—thus, an animal, a cow for instance, may be moderately fat and at the same time give a moderate quantity of milk, but if you push the action of one set of vessels to the extreme, you diminish proportionally the action of the other. You cannot get your cow extremely fat, and at the same time have her a great milker. On the other hand, you cannot have a great milker and at the same time have her excessively fat. Hundreds of examples may be cited where great milkers, when made excessively fat, have been ruined as milkers. The famous Oakes cow is a case in point. After becoming celebrated as a dairy cow, she passed into new hands, where she was fed liberally with meal. She became fat, and was nothing extra after that for the dairy.

Our farmers are now wide awake for large, fat animals. It seems as if they had imbibed the belief, that to grow and accumulate a great pile of coarse beef in one hide is the 'chief end of man.' This was manifested by the array of large, stately calves at the show. How these calves were brought up to the point of fat and stature was also abundantly evident. Scarcely one of them came upon the ground without having a wet nurse by its side, in the form of a meek old cow—not its mother, but some one that would give a good supply of milk to the young giant, at the expense of her own thrifty appearance.

Now, according to our theory, these calves can never become good milking stock. Why? Because from their very birth the fat gathering or adipose organs have been set into active operation, at the expense of the milk or lactiferous system, and they will always keep the ascendancy. But, say you, how can we stimulate the milk-gathering organs of a calf? We answer, by not overtaxing the fat-gathering organs. The leaner or poorer you can keep a calf, and at the same time keep it in a thrifty, growing state, the better milk it will become. Understand us fairly in this position. We do not contend that poor keeping of calves will inevitably make great milkers of them, but it will have a tendency to make better milkers than if kept excessively fat. For instance: you may take two heifer calves—twins, if you please—put one of them into liberal feed, and keep it fat all the time until it is mature. Put the other into moderate feed, where it shall grow moderately well until mature, but not fat, and this last will make much better milk than the first. We could cite innumerable instances to prove this. We could tell some experiments of our own in proof of this. The complaint that the Durhams and the Devons have lost their former good milking properties, arises from the over-feeding of their progeny. Select from each breed those that have good milking points, and breed them on the moderate pressure principle, and you will again get good milkers from them."

A PROFITABLE FLOCK OF SHEEP.—Mr. Thomas J. Marvel, of Dover, Md., furnishes *Wilkes' Spirit of the Times* a statement of his gains from a small flock of sheep, the last spring and autumn. In the spring his flock consisted of 22 ewes and 2 wethers. The increase was 24 lambs, 8 of which he sold for \$37 60, and 7 for \$20. He has left 8 lambs, for which he has been offered \$45, and one buck lamb, for which he has been offered \$5. He also sold from the same flock \$36 worth of wool, making altogether \$148 60. Who can beat it?

FATTENING SWINE.—A NEW IDEA.—A lot of 1,500 hogs arrived at Urbana, Ill., last week, by railroad, all the way from Pennsylvania, for the purpose of being fattened. They were let out to the farmers of the vicinity for \$3 per hundred, and are to be taken back fattened at the same rate. We hear that other lots are on the way. Seventeen car loads were put off at Dudley, and let out to the farmers in the same manner.

CHANGING SEED.—A writer in the *New England Farmer* says the yield of his potato crop is increased from fifty to one hundred per cent. by procuring seed potatoes which on an entirely different soil, fifteen or twenty miles apart. And this plan of changing seed is a good one, and should be remembered by all practical cultivators.

Agricultural Miscellany.

EXPLANATORY.—Absence from home much of the time for several weeks—attending Agricultural Fairs, &c.,—and recent dangerous illness in family, have precluded the Editor of the *Rural* from devoting time to many matters requiring his personal attention. This explanation is due those who have addressed us on various subjects, and were entitled to replies or other attentions which we could not bestow. And as it will save all parties time and trouble of correspondence, we may be excused for saying, in this connection, that we cannot consistently make any engagements to lecture before Farmers' Clubs or other associations until after the first of January ensuing.

For reasons above stated we have been unable to prepare Show-Bill Prospectuses, &c., for the Eleventh Volume of the *Rural*, and hence cannot comply with the requests daily received from agents and other friends for such documents. As soon as issued, however, bills, &c., will be mailed to all agents and other applicants disposed to lend influence in extending our circulation—and it will afford friends of the *Rural* pleasure to learn that we never received so many applications, or such encouraging letters (at the same season of the year), as during the past month.

AGRICULTURAL INSTRUCTION AT YALE COLLEGE.—At a discussion on *The Dissemination of Agricultural Knowledge*, (during the Conn. State Fair,) Prof. FOSTER described a plan of popular Agricultural Instruction which it is proposed to adopt at Yale College the ensuing winter. Some twenty men, noted far and near for their success in various departments of field, garden and orchard culture, and stock raising, have consented to lecture on subjects with which they are familiar. It is therefore proposed to have a course of instruction to occupy about one month—during which lectures will be given (three or four in a day) upon the most important practical subjects connected with general farming and fruit culture. At the close of each lecture, some time will be spent in answering inquiries, &c. In the evenings it is intended to hold meetings for free discussion—farmers' club meetings—to be participated in by all attending the course as lecturers or hearers, an important and indispensable part of the plan. The course is to comprise from 80 to 100 lectures, which will be fully illustrated by models, diagrams, &c. Among the lecturers named are F. BARRY, Esq., of this city, on General Propagation and Pruning of Fruit Trees, and Dr. C. W. GRANT, of Iowa Islands, on Grapes—both admirable selections, as no more competent gentlemen, for the specialties named, can be found in the Union. The lecturers on other subjects are also well qualified—such as Hon. M. P. WILDER on Pears, Judge FARNER on Drainage, etc., etc.

We highly approve of this plan, and trust it will be brought to a successful issue. It will do much toward properly deciding the "irrepressible conflict" between Knowledge and Ignorance among American Agriculturists and Horticulturists.

HOSPITALITY AT SOUTHERN FAIRS.—Here is an item proving that they have abundant *fare* at southern fairs, and that Kentucky hospitality is fully equal to that credited to "Old Virginia," and the Southern States generally. A gentleman attending the Agricultural Fair of Mason and Bracken counties, Ky., says, in his description of the scene about "feed time," that "each family brings enough 'grub' to feed a company of half-famished soldiers, and the heads of families lie in ambush around the Secretary's office and the judges' stand, for unsuspecting strangers, in order that they may 'take them in.' He was compelled to accept or decline some sixty invitations to dine, and pleasantly refers to the groups of five to fifteen spread about over the grass, disposing of roast pig, chicken and the usual *cetera* of a good feed, *sans ceremony*, but with an excellent appetite, heightened by the spirit of genuine social hospitality.

AGRICULTURE IN TUSCANY.—A correspondent of the Newark Advertiser gives this account of the slow-coach, non-progressive mode of securing the harvest in Central Italy:—"To-day—in this nineteenth century—one sees here unshod women and girls, cutting, or hacking rather, the grain, with ill-shaped, twelve inch sickles, and beating it out, sheaf by sheaf, on a stone, with the hand, aided only by a rough stick. Threshing instruments are almost unknown in Tuscany; and then what a winnowing, without machines, follows the reaping. It is done in this wise:—The grain heaped upon the ground in one place, is thrown by shovelfuls through the air to another place, the wind being winnowed, and supposed to blow away the chaff as it passes. One watches this bodily-time operation with his teeth on edge with the sense of gritty bread, and the prospect of eating his 'peck of dirt' in Italy before him."

SHELTER VS. EXPOSURE OF STOCK.—As cold weather approaches, we again adjourn upon farmers the economy of providing good shelter for domestic animals. Warmth—protection from chill blasts and storms—will pay largely in saving feed, and the judicious farmer will see that his cattle, sheep, etc., are well sheltered, especially in a season of scarcity of fodder. It has been proved by experiment, in England, that sheltered sheep eat one-third less of lined cake and two pounds less of turnips per day, and yet the increase of those sheltered as compared with those that were not, yet consumed more food, was as 66 to 35.

SELF-WEIGHING BEE-HIVES.—The Tribune says:—"Here is a chance for Yankee ingenuity. It is to make a weighing balance upon a cheap plan, so that every bee-keeper can afford to attach one to each hive, upon which it hangs suspended, to indicate each day the weight of the swarm and its stores. Such a thing will prove highly satisfactory, and should at once be invented."

THE ANGORA GOAT.—The Angora Goat is being extensively acclimated in France. The fleece sells at from \$2 to \$2 60, and the wool, or rather hair, makes excellent velvet. A few of these beautiful animals were imported into South Carolina in 1840. They have increased to upward of 50 of the pure breeds, besides many more half breeds.

ORLEANS COUNTY AG. SOCIETY.—At the Annual Meeting of this Society, held at Albion on the 18th inst., the following board of officers was elected for the ensuing year:—President—DAVID N. HATCH of Murray. Vice-President—A. STEWART, Albion. Secretary—A. R. PATTERSON, Albion. Treasurer—JOHN E. WRIGHT, Albion.

A FAIR NORTH AG. SOCIETY.—Some gentlemen have organized in Douglas Co., Wis., the "Lake Superior Agricultural Society," and have awarded a dollar a pound for the best, and fifty cents a pound for the second best butter made in the county, and \$10 for the best barrel of flour from wheat grown there.

FEEDING SHEEP FOR BEVER.—MERCY, who is a highly enlightened and practical English agriculturist, says he is convinced that beef must sell at 20 per cent. higher than mutton to make them pay alike. He also remarks that he agrees with a friend of his who says that he who keeps many bullocks will never make a will.

HORTICULTURAL

AUTUMN WORK IN THE GARDEN.

MAKING WALKS—PROTECTION FOR CLIMBING ROSES—FALL TREATMENT OF RHUBARB AND ASPARAGUS—LIST OF GOOD AND HARDY CHERRIES.

I have some few questions about Autumn work in the garden to ask, and I trust you will take the trouble to answer them, as I presume some of them, if answered through the RURAL, would also meet the desires of others.

First.—How to make Gravel Walks so that grass and weeds will not grow through them; in fact, what is the best way to make them?

Second.—The best way to protect Climbing Roses during the winter. I have some very fine ones, and they have been killed down bad the last two winters. They have made a fine growth of some fifteen feet, or a little over, this season, and I very much dislike to have them injured this winter by the cold, as they are as fine specimens as one often sees.

Third.—The best course to pursue with Rhubarb—cover it with manure in the fall or in the spring? And, what is the best course to pursue to get the best and earliest growth?

Fourth.—I would make the same inquiries in regard to Asparagus that I have in regard to Rhubarb.

Fifth.—Will you give me a list of some good reliable cherries, free quality; trees hardy, and bark not liable to gum and crack?

If you will please answer the above very soon you will greatly oblige
L. A. GRISWOLD.
Vernon, N. Y., 1890.

MAKING WALKS.—Mark out the walk precisely as you wish it to be when done, being careful to get the direction you wish, nice, easy curves, if it is not a straight walk, and the width, from one end to the other the same. This is best done by small stakes put pretty close together, and these can be changed until you are satisfied that it is in all respects as you desire. Now remove the earth from the walk to the depth of one foot, leaving the edges smooth and straight. Fill this walk or ditch, as it now appears, with rough stones, gathered from the farm, or old bricks, or any similar material, putting the largest at the bottom until within about four inches of the surface. Then level off with smaller stones, and finish off with about three inches of gravel, making it a little rounding. The stones in the bottom act as a drain, and if an outlet is provided at the lowest point of the road, all the better. No grass can take root and grow through such a mass of material, and the two great points are therefore secured—a clean and a dry walk. A little earth will wash from the sides upon the gravel, and here a little grass will start occasionally, but this can be kept down without much trouble. A heavy dressing of salt once or twice a year will be effectual, or the hoe may be used when necessary. A little fresh gravel should be added occasionally, as the walk should be well-filled at first, and kept full.

PROTECTION FOR CLIMBING ROSES.—A very little protection only is necessary for Climbing Roses, and this may be provided in several ways. Where the situation is such as to make it convenient they may be taken down and covered with earth or straw, or they may be covered with straw on the pillar or trellis. The prettiest winter covering for all shrubs or vines is one of evergreen branches—such as the Arbor Vitæ—when it can be obtained.

FALL TREATMENT OF RHUBARB AND ASPARAGUS.—Give Rhubarb a very heavy coating of manure in the autumn. In the spring fork this in lightening up the earth around the roots. Cut away the old stalks of Asparagus the latter part of October or November, and cover the bed with three inches of manure. In the spring fork this in very carefully, so as not to wound the crowns of the plants.

LIST OF GOOD AND HARDY CHERRIES.—We dislike very much to make out a small list of fruits—for there are so many good kinds, each having some desirable quality that makes it valuable,—as we are compelled to discard many favorites. The Duke and Morello cherries are the hardiest class, and should be planted in localities where the Hearts and Bigarreaux are found too tender, and gum and crack, as we suppose they do somewhat in Vernon, by the remarks of our correspondent. Of this class we would name as the best, *Belle de Choisy*, *May Duke*, *Reine Hortense*, *Carnation*, *Belle Magnifique* and *Early Richmond*.

A few remarks further in regard to Autumn work, now that our attention is called to the subject, will not, we think, be out of place or unprofitable. All rough garden work, such as making walks, grading, trenching, &c., should be done in the autumn, if possible. Our springs are short, unpleasant and uncertain, and much work that remains undone until spring, remains also in the same condition during the summer. Those who planted *Lettuce* or *Spinach* in September for early spring use, should now give it a little protection. Beds of Cabbages, Hyacinths, and other bulbs, should have a coating of manure or leaves thrown over them. All plants that are not completely hardy and that need protection, should be covered. This may be done in many ways, old boxes or barrels with holes bored through their tops are good for shrubs, roses and the like, and straw, mats, and evergreen boughs are all useful. Every hour spent in protecting Strawberry, Raspberry and many other plants and vines, even our hardy grape vines, is time well expended, as the next fruiting season will most abundantly prove.

Many tolerable gardeners seem to think it no disgrace to have their gardens look almost all the winter, but there is no necessity, and indeed no excuse for this. All the weeds should be cut down in the fall, and decayed leaves and litter of every description should be removed from the garden and placed upon the manure heap. Stakes used for supporting plants, bean poles, &c., should be gathered up and stored away until again needed.

Hundreds, and we have no doubt thousands of our readers are spending money this fall for fruit trees, and whether this money is a profitable investment or a total loss depends very much upon the manner in which the trees are treated. Have the ground well prepared, enriched, deeply cultivated and drained. Then plant carefully, remembering that there is a vast difference between setting a post and setting a tree. Remove all injured roots, spread them out in their natural position, on a bed of fine mellow soil, and cover them with the same. Then throw up a mound of earth around the stem to keep them steady during the storms of autumn and spring. If you do not design to plant until spring, unpack the boxes or bundles, and place the roots in trenches, covering them well up the trunk with earth. If your trees reach you during a cold snap, and you think they are frozen, place the bales or boxes in the cellar until they are completely thawed out, then heel in, as before advised.

See that all trees planted last spring, or before, are in a proper condition to endure the winter, and if not, bank up or stake. A tree that has made one summer's growth is worth three times its original cost, and is worthy of some attention.

TASTE IN PARIS.

It is generally admitted that the French are a people of fine taste, and this taste is carried into the smallest matters, even what we would consider trifles. Even the apple pedlar would arrange his fruit nicely in his basket, putting the red, perhaps, in the centre, surrounded by the yellow, and the green nicely arranged around them, and all made bright and glossy by rubbing, instead of tumbling them promiscuously together, as is the custom here. Then the cherries will be fastened to a stick by the stems, with leaves interspersed, making a pretty and tempting bouquet. All the American seller would think of, would be to twist them up in a piece of brown paper. We have seen something like this done in other parts of Europe, but never recollect of seeing anything of the kind in this country. A correspondent of the *London Cottage Gardener*, writing from Paris, calls attention to the fact we have mentioned, and gives a very good drawing of one of these *Cherry Bouquets*, and also of a very cheap and convenient *Garden Seat*, which we copy with the accompanying remarks:

"All who have lived here only for a few days, will admit, I think, that the Parisians show a good deal of taste in setting off or arranging their goods in the most attractive manner. It is common to have large plants at each side of the shop door, and numerous flowers in the window. Even the meat in the butcher's shop may frequently be seen studded with flowers, and the intervening spaces filled with tall Rose trees, Hollyhocks, Fuchsias, and other sorts.

CHERRY BOUQUET.

"The very firewood in the wood-yards is generally piled up so that the facade may represent a number of ornamental figures; and I have often seen melons and vines, covered with fruit, growing along the sides. The poorest vendors in the street have usually some notions of ornament; if it is only a few Cherries that are sold for a sou, they are always displayed in the form of a small bouquet, worked up with the leaves of Lily of the Valley, one or two Pansies being stuck in at the top. Two or three leaves are left open at the summit, but all the others down the sides have their points tied in.

FIG. 2.—GARDEN SEAT.

"When I was in the country some short time ago, I noticed a very simple form of garden seat, of which the enclosed sketch will give a better idea than the longest description (fig. 2). It is made of common pine boards, and may be put together with great facility and little expense."

TORONTO FRUIT MARKET.—Green fruit continues to be freely offered, the bulk of the supply coming from the other side of the lake. For the best varieties of apples \$2 to \$2.25 per bbl. is got, and for common \$1.50 to \$3. Pears are in small supply, at \$5 per bbl. and \$3 per bushel. Quinces scarce, at the same rate. Grapes 7c. to 10c. per pound. *Toronto Globe*.

SWEET POTATOES.

THE SOIL. should be mellow and rich,—a sandy loam is the best. This, however, is not essential.

SPROUTING THE SEEDS.—This must be done in a hot bed which should be prepared from the first to the 20th of April. The potatoes should not be put in for about a week after the bed is prepared.

PREPARING THE GROUND.—About the first of May the ground for the crop should be prepared; plowed and harrowed till it is completely pulverized. Then plow it up in ridges by throwing 3 or 4 furrows together with a team and plow, after which go over it with a hoe and smooth it off ready for the plants which may be set in as soon as all danger of frost is over. Set after a rain, or if put in when the ground is dry, the plants should be watered.

CULTIVATION.—Keep the ground free from weeds and grass, &c. Some recommend pulling the vines loose from the soil, as they spread over it and strike root. As to the utility of this I cannot say, but think it would pay.

HARVESTING.—The crop should be gathered before the vines are killed by frost, if not, the tubers will be injured and will not keep so long. Should the vines be frozen before digging, go over the lot with a sharp hoe and cut off the vine close to the tubers, as soon as possible after the frost. This saves them the worst effects of the freeze.

SAVING SEED.—The only good way I have ever found is to select the nicest of the small tubers, place them in a box that will hold half a bushel, with fine soil, in which they grow. Nail down the lid, taking care to leave small cracks for ventilation, but not so large as to admit mice. Then place them in a cool bank which is dry, and sufficiently far from the entrance to secure an even temperature. Then, if your potatoes are not disturbed by mice, or other causes, you may be sure of finding them safe and sound in the spring, ready to sprout for another crop. *ENOCH ENGLE.*
Industry, Beaver Co., Pa., 1889.

RENOVATING OLD ORCHARDS.

EDS. RURAL NEW-YORKER:—The failure of apple orchards is a subject of very general remark. In this vicinity it is caused by insects, and the lack of proper nourishment in the soil, which has become exhausted. The fall is the best time to apply manure to renovate old trees. If the orchard is covered with turf, tear it up to the depth of three or four inches, by running a plow very shallow, or with a harrow or cultivator. The roots must not be injured. Now, how shall the manure be applied? I have seen several orchards where the manure was piled about the trunk of the tree, to the depth of a foot or more, extending but three or four feet each way from it. Is this right? The roots of a tree will always extend as far as the top, and therefore fill a circle with roots twice the diameter of it. Sometimes they will extend much further. The extremities of the roots supply the nourishment to the tree. Consequently the manure should be scattered evenly over this circle. In orchards where the trees stand thirty or forty feet apart, the whole ground should be covered.

Trees seem to do well when the ground is rooted by hogs. It is doubtless poor economy to work them, but if they are allowed to root, they destroy a great number of worms. In the spring of the year put straw, or very coarse manure, in small piles upon the ground, of a sufficient thickness to shade the ground, and keep it moist. The worms will collect under this. The hogs will soon learn to root over these piles, mixing them with the soil, forming an excellent manure and mulch, and destroying the worms which may have collected under them. *MARK D. WILLSON.*
West Bloomfield, N. Y., 1889.

STRAWBERRIES.

EDS. RURAL NEW-YORKER:—Although the season of strawberries has passed, we still retain the charms of that first and finest of fruits. We must not now forget them until another bearing season's return, for they must have annual attention to produce annual crops.

As horticulturists differ so widely as to the best varieties, and the best mode of cultivation, I propose publishing my experience. Have always had what we believe is the *Hautbois*—found in all our gardens—and during many years we cared for them without the return of a single berry, while some of our neighbors had fine returns. We finally discovered staminate plants among beds of successful amateurs, got some ourselves, while they were in bloom, and contiguous berries developed that season. During this time we had *Hovey's Seedling*, with a staminate variety growing near—only separated by an alley—but the *Hautbois* had never been impregnated by these, showing that different varieties may not mix readily—that certain hermaphrodite kinds may not impregnate certain pistillate kinds. These two are all the kinds we had until last summer, when the bearing commenced of over twenty kinds "of all the newest and best varieties," received from C. W. SEELYE, Rochester Central Nurseries, who previously advertised in the RURAL. Our *Hovey's Seedling* appears to be the most trifling of berries, being scarcely as large as the *Early Scarlet*, more sour, (so sour that nobody likes them,) and far inferior in bearing. We certainly never had any much over half an inch in diameter. We got them from a nursery in this county some years ago, when it was called the berry. Have we the right *Hovey's Seedling*, or not?

Another interrogation as to *Hooker's Seedling*, received from Rochester. They are pistillate, and in every respect resemble *Schnitzke's Pistillate* and *McAdoo's Red*—good bearers, but very sour and tender, blunt, and of color, form, and habits of our *Hovey's Seedling*, but larger. Is there a mistake in *Hooker's*, or not? We call them comparatively poor for marketing or amateur purposes.

Experience teaches that the advice of Geo. W. DRAN is wisdom:—"Find what is best for your soil and climate, then plant them exclusively." Our soil we call upland, sandy clay—so clayey as to need frequent stirring to keep mellow and moist; will produce fair crops. Our idea of cultivation

now is to plant in rows six or eight feet apart, with other truck between, the first year. Keep free from weeds, and the next spring fill these rows with good sets, and trim down and thin the older rows from six to twelve inches wide, and a few inches apart. After bearing, destroy these old rows, these to be reset by vigorous plants the next spring from the new rows, which may then be called old; and after bearing destroy as before. It seems necessary that plants should be kept vigorous and free from weeds.

Our earliest are, in order—*Burr's New Pine*, *Jenny Lind*, *Monroe Scarlet*, *Large Early Scarlet*, *Geeses*, *Ohio Mammoth*, &c. *Best producers*—*Willson's Albany*, *Jenny Lind*, *L. E. Scarlet*, *Monroe Scarlet*, *Hooker's Seedling*, *Triomphe de Gand*. *Flavor*—*Scott's Seedling*, *Black Prince*, *Walker's Seedling*, *Ingram's Prince of Wales*, *Burr's New Pine*, &c.

We made out a list of the comparative merits on nine qualifications of over twenty varieties, which we would be glad to present to your readers, as it differs materially from Horticultural Societies' Reports, &c., in other sections of the Union. Of course lists as to flavor, &c., are very indefinite, for some would report tobacco better than honey! Our experience thus far teaches us to care most for *Jenny Lind*, *Scott's Seedling*, *Burr's New Pine*, *Triomphe de Gand*, *Black Prince*, *Willson's Albany*, *L. E. Scarlet*, &c. A nurseryman of Salem Ohio, says his *Burr's New Pine* is not early, but ripens with *Rival Hudson*. Which is right? Let us keep these matters straight as far as possible, through the press, which should be a boon of intelligence and truth to all mankind. But we despise long articles unless they are good!
East Fairfield, O., 1889. T. & S. B. McMillan.

HOOKER STRAWBERRY.

REMARKS.—The *Hooker* is a large berry, nearly as large as *Hovey's Seedling*; the engraving shows a medium sized specimen. Color, very dark, shining red. Form, rather long, conical, sometimes flattened in large specimens, very rich and high flavored. The plant is a vigorous grower, hardy, and an abundant bearer. The flowers are perfect. That is its character here.

NUMBER OF PLANTS TO AN ACRE.

EDS. RURAL NEW-YORKER:—Will you be kind enough to give your readers a table showing the number of plants contained on an acre at one foot apart, and so on up to fifty feet? Such a table would be a great convenience, save a good deal of figuring, and some mistakes and false calculations. *YOUNG GARDENER.*

The following table will be found correct and useful, and should be saved for reference:

DIS. APART.	NO. PLANTS.	DIS. APART.	NO. PLANTS.
1 by 1	43,560	7 by 7	885
1 1/2 by 1 1/2	19,360	8 by 8	640

PEAR TREE BLIGHT.

EDS. RURAL NEW-YORKER:—A correspondent, I observe, is troubled with the bark blight of the Pear tree. My pear trees being likewise diseased, my remedy as practiced has been to underdrain the land, make the soil lighter and more porous about the roots, scrape off the black bark to that which is alive, and wash the body repeatedly during the summer with caustic soda wash or strong soap suds, although caustic soda wash is the best. In so doing I have had marked success in promoting the health and vigor of the tree, and in the perfection and quality of its fruit.—*S. N. HOLMES, Syracuse, N. Y., Oct., 1889.*

REMARKS.—About a year ago, while at Syracuse attending the State Fair, we visited Mr. H.'s garden, and must confess that we never saw anything before that looked so much like curing the pear blight without amputation. From many of the trees the dead bark had been removed, and a new and healthy bark had almost entirely covered the wounds.

RAISING SQUASHES.—In a recent number of the RURAL a contributor speaks of the grubs and bugs that infest his vines, and inquires for a remedy. Having been encroached upon in the same way, among other remedies I sprinkled the vines a number of times during the summer with whale oil soap suds, with decided effect, and I think if I had done so a few more times, I would have got rid of the pests altogether. My neighbor, last spring, who sells fresh fish in his market, had a few his customers did not call for in season, and getting stale, he put one or two under each bill of his squashes, some four or five inches deep, and now has just gathered a splendid crop of squashes. No bug or grub has presumed to touch his vines the past season.—*S. N. HOLMES, Syracuse, N. Y.*

Take precautions to secure your trees from mice. An hour's labor may save many years of regret.

COOKING BEEFSTEAK, CIDER PIE, &c.

EDS. RURAL NEW-YORKER:—I noticed in your valuable paper a recipe for frying beefsteak which, although very good, can, I think, be somewhat bettered. My method is this:—Take a good, tender steak, place it in a frying pan, add a teaspoon of sweet milk and set it over a slow fire, boil until the milk is boiled away, then add a piece of butter and fry until done. Meat done in this way is no only very tender, but very sweet and juicy. Try.

CIDER PIE.—As the season for cider is at hand I will send you a recipe for cider pie, which we think is excellent:—One egg; 2 tablespoonsful of flour; 2 cups of boiled cider; 1 cup sugar—line a deep dish with rich pie-paste, beat the egg and flour together, then add the cider and sugar, stir well and pour into the paste. Bake until done, and you cannot fail to pronounce it extra.

NOTTINGHAM PUDDING.—Take small-sized, tart apples, pare them and remove the cores with the point of a penknife, without breaking the apples, cover the bottom of a pudding dish with them, setting them on the end so that they may be filled with batter, then make a batter with six eggs, well beaten, as much sweet cream or milk as you have eggs, a teaspoonful of salt, and flour enough to make as thick as sponge cake. Cover the apples with this, then put another layer of apples and more batter, continuing to do so until your dish is filled, then bake until the apples are done which you can ascertain by trying with a fork.—Serve with any sauce you like. This pudding is also good steamed.
LIZZIE.
Niles, Mich., 1889.

CAKES, PUDDINGS, &c.

SPONGE CAKE.—Three eggs; 8 tablespoons melted butter; 1 cup of white sugar; 1 of flour; 1 teaspoon of cream tartar; 1 of soda.

BUTTERMILK PUDDING.—One quart of good buttermilk; 2 teaspoons of saleratus; 1 cup of molasses; 1 teaspoon of cinnamon; 3/4 teaspoon of ginger; same of salt; thicken with meal to suit yourself; 1 egg; scald the buttermilk.

MINUTE PUDDING.—One quart of sweet milk; 3 eggs. Beat the flour and eggs together, and stir it all in your milk till thick enough for pudding. Serve with sugar and cream. This equals the best corn starch pudding.

TO RESTORE STAINED LINEN.—Rub the stain, on each side, with wet brown soap; mix some starch to a thick paste with cold water, and spread it over the soaped places; then expose the linen to the air. If the stain does not disappear in three days, rub off the mixture, and repeat the process with fresh soap and starch. Then dry it, wet it with cold water, and wash.

REMEDY FOR A BEZ STING.—As quick as possible slice an onion, and pound it till you start the juice, then bind it on. *FARMER'S DAUGHTER.*

EGG PUDDING.—I send you a recipe, which you may use if you please—perhaps some of the young housekeepers who take your paper may like it. To one quart sweet milk add six eggs, well beaten, together with seven tablespoons of flour, and one teaspoon of salt. Bring the milk to a boil; add three spoonfuls (table) of cold sweet milk to the flour and eggs; then stir all slowly into the boiling milk, and (stirring all the time) let it boil one minute; then pour into a wet dish or mould. When cold, serve with rich, sweetened cream. The dish being wet will enable it to be turned out nicely moulded into whatever shape you please.—*M. K. T.*

LOAF CAKE.—Six lbs. of flour; 4 of sugar; 8 of butter; 6 eggs; 6 nutmegs; 1 1/2 lbs. raisins; 1 cup of good yeast.

CREAM CAKE.—Two cups of cream; 2 of sugar; 4 of flour; 8 eggs; 1 teaspoon of saleratus, nutmeg or lemon.

COOKIES.—Three cups of sugar; 1 of butter; 1 of cream; 3 eggs; 1 teaspoon saleratus; nutmeg.

CUP CAKE.—One cup of butter; 2 of sugar; 3 of flour; 4 eggs.—*Mrs. E. PAINE, Orwell, Ohio.*

A REMEDY FOR CHILDLAIN.—I noticed an inquiry in the RURAL, from F. L., of Springfield, Mich., for the cure of chilblains. I have tried lard skin, and found it very beneficial. I have been badly afflicted with them, and have tried several remedies, all of which proved worthless until I tested the above, and, to my great relief, it proved effectual. I sewed them on the inside of my stockings, so as to cover the affected part, and, as long as I wore them was not much troubled.—*SCOTT, Tunbridge, Vt., 1889.*

VINEGAR PIE.—Take 1 large-sized cup of sugar; 1 do. of vinegar; a heaping tablespoonful of flour; a little lemon peel. This makes a good pie.

BOILED CIDER PIE.—Will some reader of the RURAL please inform me how to make Boiled Cider Pie; also how to color soiled white kid gloves, and oblige—*MARIAN, McGrapville, N. Y.*

CITRON FOR CAKE AND PIES.—As an answer to an inquiry on this subject, I send the following recipe:—Take the outside or solid part of common melons, and boil in water until tender; then preserve in sugar as for citron sauce; dry on plates, and pack in glass jars. The syrup can be used for mince pies.

INDIAN BREAD.—I send you a good recipe for Indian Bread—hope all your readers will try it: Two cups sweet milk; 1 of sour cream, or buttermilk; 2 eggs; 2 cups corn meal; 1 of flour; 1 teaspoon saleratus; 1 tablespoon sugar; a little salt. Bake one hour.—*M., La Grange, N. Y., 1889.*

UNDER THE VIOLETS.

BY O. W. BOLMERS.

Her hands are cold; her face is white;
No more her pulses come and go;
Her eyes are shut to life and light;
Fold the white vestures, snow on snow,
And lay her where the violets blow.

But not beneath a graven stone,
To plead for tears with alien eyes;
A slender cross of wood alone;
Shall say that there a maiden lies
In peace beneath the peaceful skies.

And gray old trees of hugest limb
Shall wheel their circling shadows round
To make the scorching sunlight dim
That drinks the greenness from the ground,
And drop their dead leaves on her mound.

When o'er their boughs the squirrels run,
And through their leaves the robins call,
And ripening in the autumn sun,
The acorns and the chestnuts fall,
Doubt not that she will heed them all.

For her the morning choir shall sing
Its matins from the branches high,
And every minstrel-voice of spring,
That trills beneath the April sky,
Shall greet her with its earliest cry.

When, turning round their dial track,
Eastward the lengthening shadows pass,
Her little mourners, clad in black,
The orioles, sliding through the grass,
Shall pipe for her an evening mass.

At last the rootlets of the trees
Shall find the prison where she lies,
And bear the buried dust they seize
In leaves and blossoms to the skies—
So may the soul that warmed it rise!

If any, born of kinder blood,
Should ask, What maiden lies below?
Say only this: A tender bud,
That tried to blossom in the snow,
Lies withered where the violets blow.

[Atlantic Monthly.]

Written for Moore's Rural New-Yorker.

THE SOCIAL DEMON.

THE white head-stones of yonder quiet graveyard mark the silent resting-place of many whom we knew and loved in life, and the snow wreath lies lightly above the tiny form of childhood, the prouder, stronger, beauty of riper years, and the locks grow white with fullness of days and the icy hand of death led them to the gate through whose portals none ever return. We stand beside the coffin and the open grave, and lift not hand nor voice in opposition, because we know that One mightier than we has appointed to all "once to die." But a darker doom than this palsies the limbs, and dims the eye of strong and vigorous youth. The mother, sister, wife, who watches tearfully the death seal as it gathers on the brow of the beloved, crushes within the depths of her own aching heart the fearful thought that one day she may stand beside the death-bed of that dear one, almost with a feeling of relief. She can then thank God that He has removed from her path the blight that made her once fair cheek grow pale, her voice low and sad, and the laugh that rang so merrily in other days, a stranger to her lips and her heart forever.

The Social Demon,—can you not read its name, its terrible history, in the sparkling cup that the careless, unthinking youth raises to his lips? Often-times the glittering poison is unpleasant, is even nauseating to the taste, but boon-companions drain the glass, and he may merely taste it. Beside, (I know you will not confess it openly young man, yet you are aware that it is none the less true,) there are few, very few, who are not sadly lacking in moral courage. They would not hesitate to avenge an insult, no matter how great the opposition,—they would not shrink from any act that requires merely animal courage,—but when this dashing friend, this pleasant companion, offers the brightly-tinted goblet, how can they refuse. They dare not stand up like men and say to the tempter as their Master said to the Evil Spirit, "Get thee behind me, Satan."

"He'll never be a drunkard—he, so strong in the pride of his young manhood become the wretched, brutalized apology for the name of man." Take care, focus as fair and forms as active as yours have lain upon a drunkard's death-bed,—gone down to a drunkard's grave. You have not passed so blindly through the world that you have seen no instance of this,—they are on every side, and what surely have you, that such may not be your fate? "Oh, I don't drink enough to hurt me." You see not its effects now, but you surely will. That poor, helpless being, was once only a moderate drinker,—doubtless he has often made the same plea. Do you think he drinks enough to hurt him now? Go to his wretched home and ask that pale, care-worn woman, if in that bloated face there remains one trace of the manly beauty which won her maiden heart, and made her thrice blessed in the husband of her youth. Ask that little child,—old far beyond her years, in looks and acts,—why she shrinks with fear and trembling as her listening ear catches the echo of the unsteady footsteps. If she can, for her tears, she may tell you, perhaps, of a father's love cast upon the fearful shrine of intemperance, and of a father's curse,—the only inheritance of a drunkard's child. Yet that man's youth promised as fair as yours, but the Social Demon wound its loathsome clasp around him, and as well might you turn the river from its source as attempt to stay, at this late hour, his head-long race to destruction.

We are all aware how strong any habit may become by indulgence, and how few inducements there are for the moderate drinker to refrain from his cups,—save those which his own heart and reason dictate,—and how many to continue on in evil. Saloons of the worst description, although

often most attractive, open their demon arms at every step, and many wait to entice the unwary into the path which once trodden is seldom deserted.

Custom and society sanction this wholesale murder of body and soul, but the persons who wink at trifling excesses, and smile sweetly upon moderate votaries of the intoxicating cup, will be the first to desert its victim when he allows the demon to gain the ascendancy, and the wisely judging world pronounces the, at one time, much courted companion, that degraded thing—a drunkard. Like him of old these summer friends pass by on the other side, and bestow their approbation upon the individual who, regardless of everything but gain, "maketh his neighbor drunken," enriching himself with the "dirty shillings," taken in exchange for that which draws down upon his fellow the anger of Him who has said, "no drunkard shall inherit the Kingdom of Heaven."

Albion, N. Y., 1859.

CLARA.

WHY DON'T LADIES LEARN TO COOK?

ON all sides we hear complaints of the difficulty of finding, and of retaining when found, a cook who can roast a leg of mutton, and make batter-pudding or pea-soup. In point of fact, we have heard of ladies who have it in serious contemplation to dispense with servants altogether, as the least troublesome alternative. Without wishing matters carried quite so far, we are convinced that many of our fair friends would lose nothing, either in point of respectability or happiness, while they could add at least one-third to the effective incomes of their husbands, if they were to spend a little more time in their kitchens, superintending the preparation of the family dinner, instead of contenting themselves with ordering it.—If, indeed, they condescend to do even that. Some forty years back, ladies were driven to shoemaking as a fashionable way of killing time. Why not try a little cooking? Thanks to the modern stoves, with their nicely-arranged skillets and stew-pans, which science and mechanical skill have substituted for the blazing kitchen hearth of other days, young ladies of the nineteenth century, just passing its prime, may cook without soiling their fingers, or injuring their complexions. Were it not so, we would not recommend them to cook. We would rather live on bread and cheese all the days of our lives.

It will be said, perhaps, that our notions with regard to female education and employment, are too antiquated; that in these matters, as in everything else, a new era has dawned, and the solid course of instruction now given in colleges for ladies will be triumphantly appealed to. Ladies, however, who possess these solid acquisitions—who, like Lady Jane Grey, prefer Plato to a pie-nic—will be least likely to neglect the economy of the kitchen. They will thoroughly understand the dignity of employment, and call to mind all the poetry of cooking. To say nothing of the dinner which Milton describes Eve as preparing, when "on hospitable thought intent," there are the Homeric banquets at which kings literally "killed their own meat," and at which queens and princesses turned the spit for the roasting, or drew the water and chopped the wood for the boiling. Cooking is classical, and no lady will disdain to take part in it who has read of these feasts in the original Greek. Let it be observed that it is the middle and working classes on whom we wish to urge the importance of the study. A gentleman's daughter can afford to be so ignorant of common things as not to be able to recognize chickens in a poultry yard, because they do not run about with a liver under one wing and a gizzard under the other, though our modern poultry shows, it must be confessed, will tend much to dissipate this error. A knowledge, however, of the art of cooking is of more importance to the wives of the laboring population than to those of the middle classes, because it is the art, when properly cultivated, of making a little go a great way.—*Godley's Lady Book.*

REFLECTIONS ON MARRIAGE.—The leading features in the character of a good woman are mildness, complaisance and equanimity of character. The man, if he be a provident husband, is immersed in a thousand cares. His mind is agitated, his memory loaded and his body fatigued. He retires from the battle of the world, chagrined perhaps by disappointment, angry at insolent and perfidious people, and terrified lest his unavoidable connections with such people should make him appear perfidious himself. Is this the time for the wife of his bosom, his dearest and most intimate friend, to add to his vexations, to increase the fever of an overburdened mind, by a contentious tongue or discontented brow? Business, in the most prosperous state, is full of anxiety and turmoil. Oh! how dear to the memory of man is the wife who clothes her face in smiles, who uses gentle expressions, and who makes her lap soft to receive and hush his cares to rest. There is not in nature so fascinating an object as a faithful, tender and affectionate wife.

IS HE RICH?—Many a heart is broken, many a life is rendered miserable, by the terrible infatuation which parents often evince in choosing a life companion for their daughters. How is it possible for happiness to result from the union of two principles as diametrically opposed to each other as is virtue to vice? And yet, how often is wealth considered a better recommendation to a young man than virtue! How often is the first question which is asked respecting a suitor of a daughter, "Is he rich?" Is he rich? Yes, he abounds in wealth! but does that afford any evidence that he will make a good husband? Is he rich? Yes, he has thousands floating on every ocean; but do not riches some times take to themselves wings and fly away? and will you consent that your daughter shall marry a man who has nothing to recommend him but his wealth?—Ah! beware—the gilded bait sometimes covers the barbed hook. Ask not if he has wealth, but if he has honor.

KIND words are the brightest flowers of earth's existence; they make a paradise of the humblest home the world can show.

NATURE'S PICTURE-GALLERY.

BY ANNE SUMMERS.

Who reared this hall—the paintings dyed?
What purpose did the pencil move?
Our Father, human minds to guide
Unto the infinite Source of love.
More splendid 'tis than eastern dome,
Which, brilliant, dazzles those who gaze;
Or mosque, whose countless minarets loom
Till drowned in floods of pearly haze.
The ceiling silver-sprinkled blue,
Arched perfectly by skill Divine,
With walls of varied emerald hue,
And carpets wrought in rose and vine.
At morn, Sol bathes it in his light,
And warms it with his genial ray—
A thousand golden lamps at night
Hang from the vaulted canopy.
Listen for music's varied chime
Comes floating 'long the temple aisles,
New in a louder-tono sublime—
Now sweet and pure as angel smiles.

I love to tread this grand old hall,
Hallowed by steps of ages past,
Study the pictures on its wall—
Pictures by Master Artist cast—
Of forests which have braved the storms
Of centuries, still towering high,
E'en to the moss and flower-germs,
Which, child-like, on Earth's bosom lie.
There, through the leaflets, shimmers white,
Silvery water docted with curls
Of foam which glimmers in the light
Like royal Cleopatra's pearls.
Fishes are gambolling in the wave,
Care-free they skim the surface o'er,
Then, diving 'neath, their jewels lave,
Naught sighing for the verdant shore.
See yonder cliff, whose craggy aldes,
Strewed thick with sombre, jutting rocks,
Hang dizzily o'er caverns wide,
Where mystic nymph her treasure locks.
Songsters with plumage of rarest dye,
In rural fane are gathered now,
Pouring their bird-notes to the sky,
As if the grateful heart to bow.
There in the back-ground waving fair
Are fields with treasure richly laden;
Here prairie-billows dance in air,
While flowers gay its bosom ride.

The Artist guards His pictures well;
Time's dusty fingers touch them not—
Ages roll on, and still they tell,
"The Artist never hath forgot."
A lesson beautiful they teach—
If He forsake His pictures never,
His infinite care will surely reach
Those for whose sake He paints them o'er.
Rochester, Mich., 1859.

Choice Miscellany.

TRUE HONOR.

THE desire for honor is natural to man, and whether that desire shall be a blessing or a curse, depends upon our views in regard to what constitutes true honor. Ambition is a vice or a virtue, according to its object. Many expect to derive honor from military achievements. They are willing to fill earth with the lamentations of widows and orphans, if they may but fill the mouths of their fellow-mortals with their praise. And they often gain their object. A large portion of the labor of the historian is expended in recording the deeds of heroes. But do they gain true honor? Can the fame that results from the overthrow of empires and the blessing of the happiness of thousands, be sought after by a noble mind?—As the world progresses in virtue, the hero will receive less and less praise, until there will come a time when he will cease to be worshiped by the populace. Robbed of the false glare that is now thrown around him, by poets and historians, he shall become the object of the world's detestation. Reader, do you desire such a fame—a fame that is only significant of ignorance and disgrace?

But does not literary fame bring true honor with it? Surely the son of genius cannot be destitute of an enviable reputation. The possessor of a superior intellect, when his mental powers are properly employed, is an honor to his country. The genius of PASCAL reflects more true credit upon France than all the victories of NAPOLEON. NEWTON has spread more glory upon England than all the heroes to whom she ever gave birth. Perhaps DANTE's immortal poem has done more to perpetuate the fame of Florence than all the wealth that once made her the mart of trade and commerce; and BYRON's poetry may be read in a hundred dimes, when the names of CERERO GORDO and MONTEZUMA shall have faded from the memories of men. All honor to the virtuous man of genius. He is one of the noblest gifts that heaven ever bestows upon our race.

But genius used to pervert mankind, confers nothing but infamy upon him who is cursed with it; and many of earth's intellectual giants have gained for themselves only an immortality of shame. Who, that has not devoted himself of every noble emotion, can look with any other feeling than that of disgust upon the man of talent perverting his powers of mind to the service of the evil one? Who ever felt any real esteem for BYRON? Thousands have read and praised his works, because in them they find apologies for their vices; but at the same time they could not help despising the poet in their hearts. Had VOLTAIRE's talents been used aright, they might have made him the favorite of the virtuous and the intelligent, but their perversion robbed him of the esteem of all whose praise was worth gaining. More genius cannot, then, confer true honor upon its possessor.

True honor belongs only to the good man. All men admire virtue and respect him who exhibits it in his life. The philanthropist and the patriot, may not be the favorites of their own age. They may even arouse the anger of their contempo-

ries by their opposition to the desires of the populace, and their denunciations of vice. Still, in their hours of sober thought, the most vicious cannot but respect them—while time shall wipe from their characters every stain that envy or malice has attempted to fix upon them. Man's highest honor, however, is derived from the favor of heaven, and this belongs to every good man. It confers upon all who seek it a nobler heritage than thrones and coronets ever gave to their possessors.
S. L. LEONARD.
Butler, Wis., 1859.

POWER OF THE BEAUTIFUL.

THERE is another important power that the instructor should call to his aid, and that is the power of the beautiful. A more important element in the formation of character than this the teacher has not within his command, for all that is truly beautiful is truly good, and upon it rests the basis of all character worth possessing. The whole human species acknowledge its power in some form. From the monarch on his throne to the wild Indian of the forest, its power is felt and sought after; but what a poor idea do they conceive of it, and how sadly and sometimes how miserably do they attempt to express it. With the lowest of the human species this power ceases. The brute knows nothing of the forms of beauty or of ornament. The glorious trees that spread their floral crowns above his head attract no admiration. The silken-petaled flowers beneath his feet are less to him than the ugly weed from which he wins a savory morsel.

And so with the lower orders of human life. The minds that are most allied to the brute have little or no love of the truly beautiful; and wherever we cultivate this love, we cultivate the higher nature of man. For beauty, symmetry, harmony, are only forms of that perfect union and completeness which is the great aim of the Creator; and an appreciation of the beautiful is in some degree necessary to a full comprehension of the charm of virtue, or the power of truth. That outer garden of earthly beauty with which God has surrounded us, is but the symbol of that inner garden of the heart which he has commanded us to cultivate to its fullest perfection for ourselves, and to teach its culture to those who are placed under our charge. We all know the ennobling effects of this love of the beautiful, and the love of virtue and the love of God that is called out by it; and to some extent we are adding this power to the means used for the culture of the young. There is nothing that so shows the gleaming love of the great All-Father as the wondrous beauty with which the earth is spread. Without this bond, what are we? What is the bond that binds us to virtue and truth? Let us cultivate it then, not only by surrounding our school room yards and walls by beautiful objects, but by teaching the mind as well as the eye to look into and appreciate them. When the mind of the student is weary with his efforts at some dry study—some science into whose dark chambers he sees but dimly—call him aside with you to listen to the flowers while they whisper of that love and harmony that formed all nature, and underlies all science, and he will turn back refreshed and strengthened, feeling that even the iron gate through which he must enter is carved and hewn into forms of beauty. Not only moral but mental strength has been imparted to him, and he is better able to battle with difficulties in his way up the hill of science, for the time spent in the more lovely and delightful walks of nature.

"For sure of all that in this mortal frame,
Contained is, naught more divine doth seem,
Or that resemble more the immortal flame
Of heavenly light than beauty's glorious beam."

The student who finds no echo in his heart for the beautiful is a student to be feared. If that principle cannot be awakened into activity, what else may be taught him will but add tenfold power to the discordant elements within him.—*Pres. Arey.*

WHERE THE STRENGTH LIES?

WHERE is the strength and safety of a people? Is it in their multitude? Look at Europe, and behold the million the sport of the few—look at the nations and races, trampled by a tithe of their numbers in the dust—look at the myriad slaves whom a thousand tyrants and taskmen scourge in the fields, and camps and dungeons. The strength of a people is not alone in multitudes. Is it in the power of revolutions and massacres, or in the bayonets they can fling to the gleam of the sun? Did bayonets save Rome—did they save Poland, and Hungary, and France, and Germany to the people? The strength and safety of a people lie in their knowledge of their rights, and their union in defense of them. Ignorant and disinclined, the greater danger of a people. They fall upon and destroy themselves. In their hands bayonets become suicidal. Give a people a true knowledge of themselves, and no power can oppose them. Liberty comes with intelligence, and the unarmed, intelligent million are stronger than ignorant, armed millions. The strength of the American people lies least in the number of their cannon and most in their school-houses, newspapers and books.—These are indestructible weapons, to which age adds knowledge and might;—and armed with these, we are safer and stronger than soils bristling with murderous steel. Armed with these, millions lean together, and strike mightily, but bloodlessly as one man, through the ballot-box:

"A weapon surer yet,
And mightier than the bayonet;
A weapon that comes down as still,
As snow-flakes fall upon the sod,
And executes a freeman's will,
As lightnings do the will of God!"

DEEDS.—Deeds are greater than words. Deeds have such a life, mute, but undeniable, and grow as living trees and fruit trees do; they people the vacuity of time, and make it green and worthy. Why should the oak prove logically that it ought to grow and will grow? Plant it, try it; what gifts of diligent, judicious assimilation and secretion it has of progress and resistance, of force to grow, will then declare themselves.—*Carlyle.*

SWEET HOURS.

BY LIBBY KEAL.

To me those are the sweetest hours
I ever knew,
When wand'ring through the enchanted bowers
Of friendship true,
When, 'mid a group of chosen ones,
I plainly spoke
My honest thoughts, in kindly tones,
Without a cloak—
When they, with frankness, in return,
Their feelings told—
O, those are hours I would not spare
For stores of gold!
How kindred spirits sweetly blend
In harmony,
When they, around the fireside, spend,
In unity,
The happy winter evening—when
The blast without
Is chilling, piercing—then, O, then,
Must vanish doubt—
Or when, in some secluded nook,
We there would read—
Would turn the leaves of Memory's book,
And o'er them brood—
Would note with care each time-worn page
That bears the name
Of friends who are treading life's rough stage,
(Perchance, to fame;)—
Or when we ramble by the side
Of those we love,
To gather flowers that, nestling, hide
'Neath leaves above,
O, where can sweeter joys be found
Than these bespeak?
Though earth with these and more abound,
Still are they weak
Compared to those which Heaven bestows
On faithful ones
Who seek to rise, wherever glows
Sunlight from the throne.
Ah, yes! those hours are happier yet
Than Earth employs,
When 'neath the sacred desk we sit
'Mid Heavenly joys,
And dream of sacred hours of bliss
And purity,
In a fair world remote from this—
In your bright sky.
And blessed, too, those hours of prayer
When communion sweet
We have, and every burden bear
To th' mercy seat.
When to our Maker's patient ear
Our woes we tell,
Assured that He alone can hear,
And that He only will.

THE EXISTENCE OF GOD.

"The fool hath said in his heart, there is no God."—
Psalms 14: 1.

This sentence seems to be applicable to many of the present age. It can be applied quite appropriately to that class of persons who endeavor, by unceasing effort and the use of dishonorable means, to accumulate wealth. They make it their great object to become rich in earthly possessions, forgetting that time will soon cut them off, and they must leave all behind. They have said in their hearts, "There is no God,"—no one to reward the good, or punish the wicked.

How terrible must be the feelings of the Atheist on the bed of death. He cannot look forward with the fond hope of beholding Jesus and dwelling forever in his presence,—all is darkness to him. He struggles with death, and passes away without hope and without Christ.

All nature declares the existence of God. The whole universe bears the stamp of a First Cause, infinitely wise and powerful. Every plant, and every atom on the face of the globe, bears witness of a Deity. We cannot look upon even a spider's web, or the ant's gnarled, without acknowledging that there is a higher being than a creature, who has implanted this genius in them. When we look upon a garment, we know there has been a weaver; when we see houses and ships, we understand there has been a carpenter and an architect; when we look upon the solar system, we know there is a God. We might as well doubt that there is a sun, when we witness its dazzling rays, as to doubt there is a God when we see his mighty works.

The existence of a God has been acknowledged by all nations, and in all ages. However barbarous or profligate they have been, they have confessed a Higher and more Infinite Being than man. It is folly for any to shut their eyes and stop their ears, and attribute those things to chance which nothing but a Being infinitely wise and powerful could effect.

The last moments of the dying Christian furnish another and a powerful argument. His death is like the morning star which goeth not down in the darkness, but melts away in celestial brightness. He leaves this world with the solemn assurance that he will go to a better, where he will be at the right hand of Jesus, singing His praise forever.
Gulfport, Mead Co., O., 1859. J. A. CLARK.

WANT OF SYMPATHY.—The immense defect the want of sympathy is, may be strikingly seen in the failure of the many attempts that have been made in all ages to construct the Christian character, omitting sympathy. It has produced numbers of people, walking up and down one narrow plank of self-restraint, pondering over their own merits and demerits, keeping out, not the world exactly, but their fellow creatures from their hearts, and caring only to drive their neighbors before them, on this plank of theirs, or to push them headlong. Thus with many virtues, and much hard work, at the formation of character, we have had splendid bigots or censorious small people.—*Friends in Council.*

SIR JOHN FRANKLIN'S FATE ASCERTAINED.

RETURN OF LADY FRANKLIN'S EXPEDITION.

For more than two hundred years the attention of the principal nations of Europe has been directed to the Arctic regions. Of this cold climate, locked in everlasting ice, little was known, and that little so strange, so romantic, as to excite a strong desire for further knowledge. Expeditions of hardy and courageous adventurers, aided and encouraged by Governments, Geographical and other Associations, have from time to time been sent on perilous voyages of discovery to these inhospitable seas and shores. The earliest attempts to navigate the Arctic seas were induced by the hope of finding a north-west passage to the East Indies, a problem that for a long time engaged the attention of the commercial world, but as the hope of any practical advantage in this direction decreased, the love of science—the desire to add to the sum of human knowledge—was found quite sufficient to induce men of science and courage to peril their lives in this hazardous work. The extension of trade in oils and furs, the principal products of the polar regions, however, was one of the objects sought and gained by these expeditions. Of late years our own countrymen have taken an active share in these perilous adventures, impelled partly by love of excitement, partly from hope of profit in the whale and seal fisheries.

Among the noted adventurers in these regions may be mentioned the names of PUIPPERS, DASHNEW, BRUNING, BILLINGS, VANCOUVER, FORDISHER, BARTON, BARROW, PARRY, ROSS AND FRANKLIN. FRANKLIN sailed from England on the 26th of May, 1845, with 138 men and two ships, the *Erebus* and *Terror*. The expedition was not expected home, nor were tidings expected from it, until the close of the year 1847, but when that time arrived without bringing any intelligence, the public became alarmed for its safety. Since that time, the expeditions to the Arctic have been undertaken with higher and nobler motives—the desire to rescue, if possible, these noble men from their icy prison house. In 1848 three expeditions were sent by the British Government in search of FRANKLIN; in 1850 three more were sent out by the Government, beside two by Lady FRANKLIN, two by public subscription, and one by HENRY GRINNELL of New York. FRANKLIN's first winter quarters were found, but nothing more. In 1862 Sir EDWARD BELCHER sailed from England, in search of him, with five vessels, and Commander DAYLEFIELD with a screw steamer. In 1853 Dr. KANE went out as commander of the second Grinnell Expedition; Lady FRANKLIN sent a steamer and sailing vessel; Dr. RAE started for a second exploration of Boothia, and two vessels were sent in aid of Sir EDWARD BELCHER. In 1854 Dr. RAE heard from Esquimaux a story of forty white men sledging toward the south, near King William's Land, in the spring of 1850, and later, of thirty white corpses and some graves on the continent, and five corpses, considerably eaten, on an island a few miles to the north-west of the mouth of Back's River. Dr. RAE found telescopes, guns, and watches among the natives. Mr. ANDERSON visited the island in 1855, and found many articles, but no bodies. He was unable to reach the principal scene of disaster. The fate of Sir JOHN remained a mystery until the discovery of M'CLINTOCK, of which we give a full account, with a portrait of Sir JOHN FRANKLIN, and a view of *Winter Quarters in the Arctic Region*.

The London Times, from which we copy, Capt. M'CLINTOCK's Report, says—"The Fox screw discovery vessel, Capt. M'CLINTOCK, R. N., which had been sent to the Arctic Regions, at the expense of Lady FRANKLIN, to discover traces of the missing expedition, arrived off the Isle of Wight on Wednesday, Sept. 21. On landing, Capt. M'CLINTOCK at once came on by train for London, bringing with him two cases containing relics of the long-missing expedition of Sir JOHN FRANKLIN. The following are copies of original papers left by Sir JOHN FRANKLIN, and found by Capt. M'CLINTOCK on *Prince of Wales Island*:

—of May, 1847.

Her Majesty's ships *Erebus* and *Terror* wintered in the ice in lat. 70 deg. 5 min. lon. 93 deg. 23 min. W. Having wintered in 1846-47 at Beechey Island, in lat. 74 deg. 43 min. 28 sec. N., 91 deg. 39 min. 15 sec. W., after ascending Wellington Channel to lat. 77 deg., and returning by the west side of Cornwallis Island.

All well. Commencing Expedition. Whoever finds this paper is requested to forward it to the Secretary of the Admiralty, London, with a note of the time and place at which it was found, or, if more convenient, to deliver it for that purpose to the British Consul at the nearest port.

The same in French.
The same in Spanish.
The same in Dutch.
The same in Danish.
The same in German.

Left the ships Monday the 25th of May, 1847, the party consisting of two officers and six men.
G. M. COLE, Lieutenant.
CHAS. F. DES VOEUX, Mate.

The words "Wintered in 1846-47 at Beechey Island," should be "in 1845-46," as in 1846-47 they were beset in the ice, and the ships abandoned in April, 1848. The same mistake occurs in both papers.

Admiralty, Sept. 22.
We give in full the report of Capt. M'CLINTOCK, after the first winter, in which nothing of general interest occurred.

CAPTAIN M'CLINTOCK'S REPORT TO THE ADMIRALTY.

The Fox effected her escape out of the main pack in Davis' Straits, in lat. 63½ deg. N., on 25th April, 1858, after a winter's ice drift of 1,194 geographical miles. The small settlement of Holstenborg was reached on the 28th, and such very scanty supplies obtained as the place afforded.

On May 8th our voyage was recommenced; Godhavn and Upperaurik visited, Melville Bay entered early in June, and crossed to Cape York by the 26th. Here some natives were communicated with. They immediately recognized Mr. Peterson, our interpreter, formerly known to them in the Grinnell expedition, under Dr. Kane. In reply to our inquiries for the Esquimaux dog driver "Hans," left behind from the Advance in 1858, they told us that he was residing at Whale Sound. Had he been there I would most gladly have embarked him, as his longing to return to South Greenland continues unabated.

On the 12th July communicated with the Cape Warrender natives, near Cape Horsburgh, they had not seen any ships since the visit of the

Phoenix in 1854, nor have any wrecks ever drifted upon their shores.

It was not until 27th July that we reached Pond's Inlet owing to a most unusual prevalence of ice in the northern portion of Baffin's Bay, and which rendered our progress since leaving Holstenborg one of increasing struggle. Without steam power we could have done nothing. Here only one old woman and a boy were found, but they served to pilot us up the inlet for 25 miles, when we arrived at their village. For about a week we were in constant and most interesting communication with these friendly people. Briefly, the information obtained from them was, that nothing whatever respecting the Franklin expedition had come to their knowledge, nor had any wrecks within the last 20 or 30 years reached their shores.

The remains of three wrecked ships are known to them; two of these appear to have been the whalers *Dexterity* and *Aurora*, wrecked in August, 1821, seventy or eighty miles southward of Pond's Inlet. The third vessel, now almost buried in the sand, lies a few miles east of Cape Hay. This people communicate overland every winter with the tribes at Iglook. They all knew of Parry's ships having wintered there in 1823-3, and had heard of late years of Dr. Rae's visit to Repulse Bay, describing his boats as similar to our whaleboat, and his party as living in tents, within snow-houses, smoking pipes, shooting reindeer, &c. None died. They remained there only one winter.

No rumor of the lost expedition has reached them. Within Pond's Inlet the natives told us the ice decays away every year, but so long as any remains whales abound. Several large whales were seen by us, and we found among the natives a considerable quantity of whalebone and many porpoise' horns, which they were anxious to barter for knives, files, saws, rifles, and wool; they drew us some rude charts of the inlet, showing that it expands into an extensive channel looking westward into Prince Regent's Inlet.

We could not but regret that some of our own whaling friends—from whom we had recently received so much kindness—were here to profit by so favorable an opportunity. Leaving Pond's Inlet on the 6th August, we reached Beechey Island on the 11th, and landed a handsome marble tablet, sent on board for this purpose by Lady Franklin, bearing an appropriate inscription to the memory of our lost countrymen in the *Erebus* and *Terror*.

The provisions and stores seemed in perfect order, but a small boat was much damaged from having been turned over and rolled along the beach by a storm. The roof of the house received some necessary repairs. Having embarked some coal and stores we stood in need of, and touched at Cape Hotham on the 18th, we sailed down Peel Strait for 25 miles on the 17th, but finding the remainder of this channel covered by unbroken ice, I determined to make for Bellot Strait on the 19th of August, examined into supplies remaining at Port Leopold, and left there a whale-boat, which we brought away from Cape Hotham for the purpose, so as to aid us in our retreat should we be obliged eventually to abandon the Fox. The steam launch had been forced higher up on the beach, and somewhat damaged by the ice. Prince Regent's Inlet was unusually free from ice; but very little was seen during our run to Brentford Bay, which we reached on the 20th of August. Bellot Strait, which communicates with the western sea, averages one mile in width by 17 or 18 miles in length. At this time it was filled with drift ice, but as the season advanced became perfectly clear; its shores are in many places faced with lofty granite cliffs, and some of the adjacent hills rise to 1,600 feet; the tides are very strong, running six or seven knots at the springs. On the 6th of September we passed Bellot Strait without obstruction, and secured the ship to fixed ice across its western outlet. From here, until the 27th, when I deemed it necessary to retreat

Our wintering position was at the east entrance to Bellot Strait, in a snug harbor, which I have named Port Kennedy, after my predecessor in these waters, the commander of one of Lady Franklin's former searching expeditions. Although vegetation was tolerably abundant, and our two Esquimaux hunters, Mr. Peterson, and several sportsmen, constantly on the alert, yet the resources of the country during eleven months and a half only yielded us eight reindeer, two bears, eighteen seals, and a few water fowl and ptarmigan.

The winter was unusually cold and stormy. Arrangements were completed during the winter for carrying out our intended plan of search; I felt it to be my duty personally to visit Marshal Island, and in so doing proposed to complete the circuit of King William Island.

To Lieut. Hobson I allotted the search of the western shore of Boothia to the magnetic pole, and from Gateshead Island westward to Wynniatt's furthest. Capt. Allen Young, our sailing master, was to trace the shore of Prince of Wales Land, from Browne's furthest; and also to examine the coast from Bellot Strait northward, to Sir James Rae's furthest.

Early Spring journeys were commenced on the 17th of February, 1859, by Capt. Young and myself, Capt. Young carrying his depot across to Prince of Wales Land, while I went southward, toward the magnetic pole, in the hope of communicating with the Esquimaux, and obtaining such information as might lead us at once to the object of our search.

I was accompanied by Mr. Peterson, our interpreter, and Alexander Thompson, quartermaster. We had with us two sledges drawn by dogs. On Feb. 28, when near Cape Victoria, we had the good fortune to meet a small party of natives, and were subsequently visited by about forty-five individuals.

For four days we remained in communication with them, obtaining many relics, and the information that several years ago a ship was crushed by the ice off the north shore, off King William Island, but that all her people landed safely, and went away to the Great Fish River, where they died. This tribe was well supplied with wood, obtained, they said, from a boat left by the white men on the Great River.

We reached our vessel after 25 days' absence, in good health, but somewhat reduced by sharp marching and the unusually severe weather to which we had been exposed. For several days after starting the mercury continued frozen.

SIR JOHN FRANKLIN.

None of these people had been there since 1857-8, at which time they said but little remained, their countrymen having carried away almost everything. Most of our information was received from an intelligent old woman. She said it was in the fall of the year that the ship was forced ashore. Many of the white men dropped by the way, as they went toward the Great River; but this was only known to them in the winter following, when their bodies were discovered. They all assured us that we would find natives upon the south shore, at the Great River, and some few at the wreck; but unfortunately this was not the case. Only one family was met with off Point Booth, and none at Montreal Island, or any place subsequently visited.

Point Ogle, Montreal Island, and Barrow Island, were searched without finding anything except a few scraps of copper and iron in an Esquimaux hiding-place. Recrossing the Strait to King William Island, we continued the examination of its southern shore without success until the 24th of May, when, about ten miles eastward of Cape Herschel, a bleached skeleton was found, around which lay fragments of European clothing. Upon carefully removing the snow a small pocket-book was found containing a few letters; these, although much decayed, may yet be deciphered. Judging from the remains of his dress this unfortunate young man was a steward or officer's servant, and his position exactly verified the Esquimaux's assertion that they dropped as they walked along.

On reaching Cape Herschel next day, we examined Simpson's Cairn, or rather what remains of it, which is only four feet high, and the central stones have been removed, as if by men seeking something within it. My impression at the time, and which I still retain, is that records were deposited there by the retreating crews, and subsequently removed by the natives.

WINTER QUARTERS IN THE ARCTIC REGIONS.

On the 2d of April our long projected Spring journeys were commenced; Lieut. Hobson accompanied me as far as Cape Victoria; each of us had a sledge drawn by four men, and an auxiliary sledge drawn by six dogs. This was all the force we could muster.

Before separating we saw two Esquimaux families living out upon the ice in snow huts, from them we learned that a second ship had been seen off King William Island, and that she drifted ashore in the fall of the same year. From this ship they had obtained a vast deal of wood and iron.

I now gave Lieut. Hobson directions to search for the wreck, and follow up any traces he might find upon King William Island.

Accompanied by my own party and Mr. Peterson, I marched along the east shore of King William Island, occasionally passing deserted snow huts, but without meeting natives till the 8th of May, when off Cape Norton we arrived at a

After parting from me at Cape Victoria on the 28th of April, Lieut. Hobson made for Cape Felix; at a short distance westward of it, he found a very large cairn, and close to it three small tents, with blankets, old clothes, and other relics of a shooting or a magnetic station; but although the cairn was dug under, and a trench dug all around it at a distance of ten feet, no record was discovered. A piece of blank paper folded up as was found in the cairn, and two broken bottles, which may perhaps have contained records, lay beside it, among some stones which had fallen from off the top. The most interesting of the articles discovered here, including a boat's ensign, were brought away by Mr. Hobson. About two miles further to the south-west, a small cairn was found, but neither records nor relics obtained. About three miles north of Point Victory, a second small cairn was examined, but only a broken pick-axe and empty canister found.

On 8th May, Lieut. Hobson pitched his tent be-

side a large cairn upon Point Victory. Lying among some loose stones which had fallen from the top of this cairn was found a small tin case, containing a record, the substance of which is briefly as follows:—This cairn was built by the Franklin Expedition upon the assumed site of James Ross' pillar, which had not been found. The *Erebus* and *Terror* spent their first winter at Beechey Island, after having ascended Wellington Channel to lat. 7° N., and returned by the west side of Cornwallis Island. On the 12th September, 1846, they were beset in lat. 70° 05' N., and long 98° 38' W.

Sir J. Franklin died on the 11th of June, 1847. On the 23d of April, 1848, the ships were abandoned five leagues to the N. N. W. of Point Victory, and the survivors 105 in number, landed here under the command of Capt. Crozier. This paper was dated 25th of April, 1848, and upon the following day they intended to start for the Great Fish River. The total loss by deaths in the expedition up to this date was nine officers and fifteen men. A vast quantity of clothing and stores of all sorts lay strewn about, as if here every article was thrown away which could possibly be dispensed with; pick-axes, shovels, boats, cooking utensils, iron-work, rope, blocks, canvas, a dip circle, a sextant engraved "Frederic Horaby, R. N.," a small medicine chest, oars, &c.

A few miles southward, across Back Bay a second record was found, having been deposited by Lieut. Gore and M. des Voeux, in May, 1847.—It afforded no additional information.

Lieut. Hobson continued his search until within a few days' march of Cape Herschel, without finding any trace of the wreck or of natives. He left full information of his important discoveries for me; therefore, when returning northward by the west shore of King William Island, I had the advantage of knowing what had already been found. Soon after leaving Cape Herschel, the traces of natives became less numerous and less recent, and after rounding the west point of the island they ceased altogether. The shore is extremely low, and almost utterly destitute of vegetation. Numerous banks of shingle and low islets lie off it, and beyond these Victoria Strait is covered with heavy and impenetrable packed ice.

When in lat. 69° 09' N., and long. 98° 27' W., we came to a larger boat, discovered by Lieut. Hobson a few days previously, as his notice informed me. It appears that this boat had been intended for the ascent of the Fish River, but was abandoned apparently upon a return journey to the ships, the sledge upon which she was mounted being pointed in that direction. She measured 38 feet in length, by 7½ feet wide, was most carefully fitted, and made as light as possible, but the sledge was of solid oak, and almost as heavy as the boat.

A large quantity of clothing was found within her, also two human skeletons. One of these lay in the after part of the boat, under a pile of clothing; the other, which was much more disturbed, probably by animals, was found in the bow. Five pocket-watches, a quantity of silver spoons and forks, and a few religious books, were also found, but no journals, pocket-books, or even names upon any articles of clothing. Two double-barreled guns stood upright against the boat's side, precisely as they had been placed eleven years before. One barrel in each was loaded and cooked; there was ammunition in abundance, also 30 or 40 lbs. of chocolate, some tea, and tobacco. Fuel was not wanting; a drift-tree lay within 100 yards of the boat.

Many very interesting relics were brought away by Lieut. Hobson, and some few by myself. On the 5th of June I reached Point Victory, without having found anything further. The clothing, &c., was again examined for documents, note-books, &c., without success; a record placed in the cairn, and another buried ten feet north of it. Nothing worthy of remark occurred on my return journey to the ship, which we reached on the 19th of June, five days after Lieut. Hobson.

The shore of King William Island, between its north and west extremes, Capes Felix and Crozier, has not been visited by Esquimaux since the abandonment of the *Erebus* and *Terror*, as the cairns and articles lying strewn about, which are in their eyes of priceless value, remain untouched.

If the wreck still remains visible, it is probable she lies upon some of the off-lying islets to the southward between Capes Crozier and Herschel.

On the 28th of June, Capt. Young and his party returned, having completed their portion of the search, by which the insularity of Prince of Wales Land was determined, and the coast-line intervening between the extreme points reached by Lieut. Osborne and Browne discovered; also, between Bellot Strait and Sir James Ross' furthest in 1849, at Four River Bay.

Fearing that his provisions might not last out the requisite period, Capt. Young sent back four of his men, and for forty days journeyed on thro' fogs and gales with but one man and the dogs, building a snow hut each night; but few men could stand so long a continuance of labor and privation, and its effect upon Capt. Young was painfully evident.

Lieutenant Hobson was unable to stand without assistance upon his return on board; he was not in good health when he commenced his long journey, and the sudden severe exposure brought on a severe attack of scurvy; yet he also most ably completed his work; and such facts will more clearly evince the unflinching spirit with which the object of our voyage has been pursued in these detached duties than any praise of mine.

We were now, at length, all on board again. As there were some slight cases of scurvy, all our treasured resources of Burton ale, lemon juice, and fresh animal food were put into requisition, so that in a comparatively short time all were restored to sound health.

During our sojourn in Port Kennedy we were twice called upon to follow a shipmate to the grave. Mr. Geo. Brands, engineer, died of apoplexy, on the 6th of November, 1858; he had been out deserting for several hours that day, and appeared in excellent health. On the 14th of June, 1859, Thomas Blackwell, ship's steward, died of scurvy; this man had served in two of the former searching expeditions. The summer proved a warm one; we were able to start upon our homeward voyage on the 6th of August, and although the loss of the engine driver in 1857, and of the engineer in 1858, left us with only two stokers, yet with their assistance I was able to control the engines and steam the ship up to Fury Point. For six days we lay there closely beset, when a change of wind removing the ice, our voyage was continued almost without further interruption, to God-heaven, in Disco, where we arrived on the 27th of August, and were received with great kindness by Mr. Olick, Inspector of North Greenland, and the local authorities, who obligingly supplied our few wants. The two Esquimaux dog drivers were now discharged, and on the 1st of September we sailed for England.

From all that can be gleaned from the record paper, and the evidence afforded by the boat, and various articles of clothing and equipment discovered, it appears that the abandonment of the *Erebus* and *Terror* had been deliberately arranged, and every effort exerted during the third winter to render the traveling equipments complete.

It is much to be apprehended that disease had greatly reduced the strength of all on board—far more, perhaps, than they themselves were aware of. The distance by sledge route from the position of the ships when abandoned to the boat, is sixty geographical miles; and from the ships to Montreal Island, 220 miles. The most perfect order seems to have existed throughout.

F. L. M'CLINTOCK, Captain, R. N.
Commanding the *Fox* Searching Expedition.
Yacht *Fox*, R. Y. S., off the Isle of Wight, Sept. 21, 1859.

TO RURAL AGENTS, SUBSCRIBERS, &c.

THE RURAL NEW-YORKER enters upon a New Quarter this week, and we embrace the occasion to notify its Agents, Subscribers and other friends that single and club subscriptions—either for a year, or three months, on trial—are now in order and respectfully solicited. To those who know and appreciate the paper, we need only say that the quarter upon which we now enter, and the ensuing volume, will be worthy the enviable reputation the RURAL has attained—and all others are invited to give it a careful examination. It has thousands of ardent and influential friends, each of whom will, we trust, make some effort (during the ensuing few weeks and months) to augment its circulation and usefulness in their respective localities, and now is the best time to commence the canvass. As liberal Premiums and Gratitudes will be given for Clubs, &c., as last year.

TERMS, IN ADVANCE:

FOR ONE YEAR.	FOR SIX MONTHS.
One copy, 1 year, \$2.00	One copy, 6 mos., \$1.00
Three copies, 1 year, 5.00	Three copies, 6 mos., 2.50
Six copies, 1 year, 9.00	Six copies, 6 mos., 4.50
Ten copies, 1 year, 13.00	Ten copies, 6 mos., 6.50
Twelve copies, 1 year, 15.00	Twelve copies, 6 mos., 7.50
Twenty copies, 1 year, 23.00	Twenty copies, 6 mos., 11.00
Thirty copies, 1 year, 30.00	Thirty copies, 6 mos., 13.00
Forty copies, 1 year, 37.00	Forty copies, 6 mos., 15.00
Fifty copies, 1 year, 43.00	Fifty copies, 6 mos., 17.00
Sixty copies, 1 year, 50.00	Sixty copies, 6 mos., 19.00
Seventy copies, 1 year, 57.00	Seventy copies, 6 mos., 21.00
Eighty copies, 1 year, 64.00	Eighty copies, 6 mos., 23.00
Ninety copies, 1 year, 71.00	Ninety copies, 6 mos., 25.00
Hundred copies, 1 year, 78.00	Hundred copies, 6 mos., 27.00

MOORE'S RURAL NEW-YORKER

NEWS DEPARTMENT.

ROCHESTER, N. Y., OCTOBER 29, 1859.

DOMESTIC NEWS.

Matters at Washington.

The correspondent of the N. Y. Times writes that Secretary Cass has received a letter from the Mexican Consul at Brownsville, stating that the men engaged in the recent outrages in that place are all American citizens—no Mexicans by birth. They reside in Texas, and only four of them passed over into Mexico. The Consul visited their Chief in person, and induced the party to disperse.

Latest accounts from Texas say Gen. Twiggs had ordered two companies of Infantry to Brownsville, and a body of Cavalry were scouting through that region.

The Government has not yet been officially advised that Minister Ward has reached Peking, but information received in diplomatic quarters leaves no doubt of the fact. It is confidently expected that the ratification treaty will reach here before the meeting of Congress.

The names of various gentlemen have been named in connection with the mission to France, but no action has been taken, and it is doubtful whether it has yet been even considered by the President.

Mr. Irving, Secretary of the British Legation, is among the recent arrivals.

The President has commenced the preparation of his annual message.

District Attorney Ould and Col. Lee have returned from Harper's Ferry. The former has had a conference with the President, and the latter an interview with the Secretary of War. U. S. Marshal Johnson, of Ohio, now here, says one of the parties engaged with Brown was prominent in the Oberlin rescue.

Parties have been arrested at Washington for uttering counterfeit gold dollars and halves, remarkably well executed, but lighter than the genuine. It is supposed that several thousand dollars worth have been thrown into circulation. They were brought from Pennsylvania.

Receipts of the Treasury for the week ending Monday, were \$1,021,000. Amount subject to draft, \$4,677,000—an increase over previous week of \$108,000.

The Harper's Ferry Insurrection.

In the last issue of the RURAL we gave such particulars of this insurrection as had then been received, (leaving the insurgents in possession of the National Armory there situated,) and we now furnish our readers with all important details down to the defeat of the rioters and the suppression of the movement.

On the morning of the 18th Colonel Shute approached with a flag of truce, and demanded a surrender. After expostulating for some time the rioters refused, and the storming of the Armory was determined upon. The first attack was made by a detachment of the Charleston Guard, which crossed the Potomac river above Harper's Ferry, and reaching the building where the insurgents were posted, by the canal, on the Maryland side. Smart firing occurred, and the rioters were driven from the building. One man was killed. A man went out and tried to escape by swimming the river. A dozen shots were fired after him—his face blown off, and the body taken possession of. His coat skirts were cut off, and in the pockets were found a captain's commission to Capt. E. H. Leeman, from the "Provisional Government." The commission was dated Oct. 15th, 1859, signed by A. W. Brown, Commander-in-Chief of the army of the Provisional Government of the United States. A party of five of the insurgents, armed with miniature rifles, and posted in the rifle armory, were next expelled by the Charleston Guards. They all ran for the river, and one who was unable to swim was drowned. The other four swam out to the rocks in the middle of the Shenandoah, and fired upon the citizens and troops on both banks. This drew on them the muskets of between 200 and 300 men, and not less than four hundred shots were fired at them from Harper's Ferry, about 200 yards distant. One was finally shot dead; the second, a negro, attempted to jump over the dam, but fell short, and was not seen afterwards; the third was badly wounded, and the remaining ones taken unharmed. The white insurgent, wounded and captured, died in a few moments after.

For nearly one hour a running and random firing was kept up by the troops against the rioters. Several were shot down, and many managed to limp away wounded. During the firing the women and children ran shrieking in every direction,

but when they learned the soldiers were their protectors, they took courage and did good service in the way of preparing refreshments and attending to the wounded.

In the meantime the Marines had advanced to the charge, and endeavored to break the door down with sledge hammers, but it resisted all their efforts. A large ladder was then used as a battering-ram, and the door gave way. The rioters fired briskly, and shot three Marines; the Marines firing in turn through the partly broken door. The Marines then forced their way through the breach, and in a few minutes all resistance was at an end. The following list comprises those killed and wounded among the insurgents, with their proper titles under the "Provisional Government":—Capt. Oliver Brown, dead; Capt. Watson Brown, dead; Capt. Aaron C. Stevens, of Conn., wounded badly—he has three balls in him—cannot possibly recover; Lieut. Coppie, of Conn., unburt; Lieut. Albert Haselett, of Pa., dead; Lieut. Leeman, of Maine, dead; Capt. John E. Cook, of Conn., escaped.

Privates—Stewart Taylor, of Canada, dead; C. P. Bidd, of Maine, dead; Wm. Thompson, of New York, dead; Adolph Thompson, of New York, dead; John Kage, of Ohio, dead; Jeremiah Anderson, of Ind., dead; three whites previously sent off, making seventeen whites. Negroes—Dangerfield, lately of Ohio, raised in Virginia, dead; Emperor, of N. Y., raised in South Carolina, not wounded but a prisoner—the latter was elected a member of the "Provisional Government" some time since; Lewis Leary, of Ohio, raised in Virginia, dead; Copeland, of Ohio, raised in Virginia, wounded, prisoner at Charleston. Gen. Brown has nine wounds, but none fatal.

The Gen. Brown above referred to is now a prisoner, and in conversation with various individuals, states that he is old Ossawatimie Brown, whose feats in Kansas have had such wide notoriety; that his whole object was to free the slaves, and justifies his action.

The first active movement in the insurrection was made at about half-past 10 o'clock on Sunday night. William Williamson, the watchman at Harper's Ferry bridge, whilst walking across toward the Maryland side, was seized by a number of men, who said he was their prisoner and must come with them. He recognized Brown and Cook among the men, and knowing them, treated the matter as a joke, but enforcing silence they conducted him to the Armory, which he found already in their possession. He was detained till after daylight, and then discharged.

The watchman who was to relieve Williamson at midnight, found the bridge lights all out. Supposing it an attempt at robbery, he broke away, and his pursuers tumbling over him he escaped. The next appearance of the insurrectionists was at the house of Col. Lewis Washington, a large farmer and a slave owner, living about four miles from the Ferry. A party headed by Cook proceeded there and rousing Col. Washington told him he was their prisoner. They also seized all the slaves near the house, took a carriage, a horse, and a large wagon with two horses.

Gen. Brown has made a full statement, in which he says he rented a farm from Dr. Kennedy six months since and the rent is paid till next March. He never had over twenty-two men at the farm at one time that belonged to the organization, but he expected reinforcements from Maryland, Kentucky, North and South Carolina and Canada. He had arms sufficient for 1,500 men. He had 200 revolvers, 200 Sharp's rifles, and 1,000 pistols. He left them at the farm; he had abundance of powder and other ammunition; he brought all the arms from time to time from Connecticut and other eastern points to Chambersburg, Pa. They were directed to J. Smith & Sons, Kennedy Farm, his assumed name; they were packed in double boxes so as to deceive the parties who handled them to the farm; he says he made one mistake, in either not detaining the train on Sunday night, or permitting it to go along unmolested. This mistake, he seemed to infer, exposed his doings too soon, and prevented his reinforcements from coming.

A detachment of marines and some volunteers made a visit to Brown's house. They found a large quantity of blankets, boots, shoes, clothes, tents, and fifteen hundred pikes with large blades affixed. They also discovered a carpet bag containing documents throwing much light on the affair, printed constitutions and by-laws of an organization, showing or indicating ramifications in various States of the Union. Also letters from various individuals at the North—one from Fred. Douglas containing \$10 from a lady for the cause. Also a letter from Gerrit Smith about money matters, and a check or draft by him for \$100, endorsed by the Cashier of a New York Bank.

The Independent Grays, of Baltimore, found two wagon loads of arms at Brown's house. The arms consisted of boxes filled with Sharp's rifles, pistols, &c., all bearing the stamp of the Massachusetts Manufacturing Company, Chicopee, Mass. There were also found a quantity of United States' ammunition, a large number of spears, sharp iron bowie knives fixed upon poles, a terrible looking weapon, intended for the use of the negroes, with spades, pick-axes, shovels, and everything else that might be needed—thus proving that the expedition was well provided for, that a large party of men was expected to be armed, and that abundant means had been provided to pay all expenses.

Personal and Political.

The Rev. John Angell James died in Birmingham, England, on the 1st inst., in his 76th year. He was well known as a philanthropist and a religious writer; his "Anxious Inquirer" having been, says the Birmingham Journal, more extensively read than any other work, except the Bible and "The Pilgrim's Progress."

The people of Canada have purchased William Lyon Mackenzie a fine Homestead in Toronto. This substantial compliment has been richly earned by an earnest (though sometimes mistaken) zeal for the people, during the past 30 years.

ALBERT GALLATIN, grandson of the former Vice President, died 18th September, in the 85th year of his age, at Geneva, Switzerland, having sailed from Philadelphia on the 20th of June last, for the

benefit of his health. Pure, high minded and honorable, he was widely esteemed, and was likewise distinguished in his profession for sound judgment and accuracy of legal investigation. He died in the birth-place of his grandfather, who was a Swiss.

A LETTER from Paris dated Oct. 6th, says that Senator Seward would leave England in two or three days for home.

It now appears that Dr. Willing has been elected Delegate to Congress from Jefferson Territory, instead of Mr. Williams, as announced.

INTELLIGENCE has reached Leavenworth, Kansas, direct from Nebraska City, that Daily, Republican, is elected Delegate to Congress by a majority of 48 over Eastbrook, Democrat.

TWENTY-FIVE counties in Minnesota give 2,716 Republican majority. The seven to hear from gave a Republican majority in 1857. The St. Paul Times of the 15th, says the Republican majority in the State Senate is 7, and in the House 14.

The House of Bishops has refused to restore Bishop Onderdonk conditionally or otherwise.

HON. ROBT. P. DUNLAP, Ex-Governor of Maine, Past Grand High Chief of the Royal Arch Masons for the United States, died on the evening of the 20th inst., at his residence in Brunswick.

IOWA ELECTION.—As far as heard from, the Republican majority is 2,066. The Senate (counting 14 Senators holding over, half of whom are Republicans and half Democrats,) stand thus far 25 Republicans to 14 Democrats. The House stands 45 Republicans and 24 Democrats, with 11 districts yet to hear from. The entire number of Senators elected is 43, and Representatives 86.

News Paragraphs.

A CITIZEN of Brooklyn bought an old clock at auction a few days ago for ten dollars. On taking it home he discovered that a looking glass which was in the back of the clock was cracked. He took it out with the intention of having a new one put in, when to his astonishment he discovered notes of the Bank of England behind it amounting to about \$3,000.

The servant girls in New York city have struck for higher wages—they want \$10 a month. The Journal of Commerce says it is in consequence of assessments for the new Fourth Avenue Cathedral.

A COMPANY of Americans have launched a steamer on the Amoor River, on the southern portion of Siberia, and expect to make a profitable commercial enterprise out of it. The Russian officials show the greatest favor to them.

A MOVEMENT has been started in New York, among the Hebrews, for the formation of a Board of Representatives of the Jews in the United States. The plan proposes the formation of a Consistory of Delegates from each congregation in the United States. This body, like the British Board of Representatives, will look to and forward Jewish interests.

The volcano at Maui, Sandwich Islands, was not so active at last accounts. The lava stream has cooled, so that horses cross without difficulty. A long point has been formed, running out into the sea at Kiholo, with a depth of water at the outer edge of sixty-three fathoms, and the liquid rock is still dropping out seaward.

MR. LA MOUNTAIN's balloon, the Atlantic, which was abandoned by him in the Canada woods, has been secured and returned to Watertown, somewhat torn, but serviceable.

A COMPARATIVE statement of the wheat inspections in the State of Virginia, during the past quarter, ending Sept. 30, and same period of three preceding years, shows that the crop of 1859 is the largest ever grown in the State.

An exchange paper says:—"The best safety-valve to a boiler is a sober engineer. Congress may legislate till doomsday, but as long as the officers carry too much steam, the boats will follow their example."

The Russian government has just commenced a railroad to connect Kiev to Odessa. It will take fifteen years to build it, and will involve more difficulties and a heavier outlay than would a road from St. Louis to San Francisco.

A COUPLE of women, quarreling for place and power in the fancy needle-work department of the Canada Provincial Fair at Kingston, last week, came near breaking up the show—the husband of one of them removing his articles from exhibition, thus taking away the most of that department.

In a case at Worcester, the Supreme Court of Massachusetts have decided that where confidential communication between client and counsel is overheard by a third person, such person may testify thereto. Communications to counsel are only so far privileged that the counsel cannot be permitted to testify to them.

The people of the Southern counties of California have given a large majority in favor of separation from the rest of the State, and of the erection of themselves into a new Territory to be called Colorado.

SOME one insinuates that in America it takes three to make a pair—he, she, and a hired girl.—Had Adam been a modern, there would have been a hired girl in Paradise to look after little Abel and "raise Cain."

A FEARFUL malady has broken out among the Omaha Indians in Nebraska, and fifty of them have died. The Indians think it is the effect of eating the meat of the buffalo affected with bloody murrain. The Indians had thrown away all the meat of the one thousand buffaloes which they had put up for winter use, and were preparing for another buffalo hunt.

TWENTY YEARS ago the number of colored men in Canada West was 3,400; now there are more than 40,000. In four months after the passage of the Fugitive Slave Law, 10,000 poured into the country.

WESTWARD EMIGRATION.—According to advices received in St. Louis, 3,449 emigrant wagons have passed over the Western plains this season, for California and Salt Lake City—eight-ninths of them were going to California. Loose cattle estimated at from 120,000 to 140,000; sheep, 6,000.

FOREIGN NEWS.

GREAT BRITAIN.—The Great Eastern quitted Portland at a quarter before 4 P. M., on the 8th, and anchored in Holyhead a quarter before 4 P. M. on the 10th, having accomplished the voyage round under favorable circumstances. The distance run during 48 hours is said to be something over 550 miles. The average rate of speed for the whole trip is stated to be a little over 18 knots, though during the greater part of the time the engine did not go at more than half that speed. The greatest speed attained was over 14½ knots, or nearly 17 miles per hour. This was accomplished without any special exertions on the part of the engines, but a considerable quantity of canvas was spread. The weather during the trip was squally, and at times heavy ground swells were experienced, causing, according to some authorities, a good deal of pitching and rolling on the part of the vessel, while others say that the motion, if at all, was most slight.

It was reported that the Great Eastern would remain at Holyhead 10 or 12 days, and then proceed to Southampton to have her boilers thoroughly repaired, in accordance to the requirements of the Board of Trade. The correspondent of the London Times, on board the steamship, writing before the ship will not leave England during the winter, and that Southampton will probably be her winter quarters.

The London Times, in another editorial on the San Juan difficulties, reiterates the denunciation of Gen. Harney's course.

Rumors were current of considerable differences, and even a split in the English Cabinet, on the Chinese question.

Great hope had been raised that the builders' strike in London was about to be terminated, but on the day preceding the steamer's departure these hopes were dispelled, the pending negotiations having terminated in an unsatisfactory manner.

The official correspondence between the British Government and its officials in China, relating to the measures taken for the ratification of the treaty at Peking, is published. The Hon. Col. Bruce, British Ambassador, states positively that if Admiral Hope had expressed any doubts as to the result of attempting to force the passage of the Peiho, they would not have been shared by the squadron, and if it be decided that the means at command were insufficient to justify so bold a line of policy, Col. Bruce accepts the responsibility of Admiral Hope's act. Bruce, in one of his letters, shows the position occupied by Mr. Ward, the American Minister, and expresses the opinion that the Chinese will not make difficulty about exchange and ratifications with him, as the conditions under which the American Minister is alone entitled to visit Peking, contain nothing offensive to Chinese pride. Col. Bruce expresses much gratification at the friendly feeling and assistance experienced from Mr. Ward and flag-officer Tatnall, and concludes as follows:—"Mr. Ward's position is one of considerable difficulty, nor do I see, after our unsuccessful attempt at Peiho, that any course was open save the one which he has adopted. He has acted cordially and frankly in the spirit of his deliberations at Hong Kong, and it is a matter of satisfaction to me that his concert in previous proceedings is a strong argument in favor of the conduct pursued by Mr. Debourbon and myself."

FRANCE.—Nothing further has been received regarding the proceedings at Zurich, beyond the general assertion that progress continued to be made toward the signing of the peace treaty.

The Paris Constitutionnel, containing an article by its chief editor, says that the preliminaries at Villa Franca had rescued Italy from every foreign intervention, no matter under what name or form, wherever it might come. France confines herself to giving Italians proper advice. If followed by them, that advice would have insured the prosperity of Central Italy; but having in vain offered advice, she cannot go so far as to dictate orders to Italy.

The prorogation of the Conference is anticipated. Difficulties still remain unadjusted, and it was doubtful when the treaty would be signed. The plenipotentiaries of all the three Powers held conferences on the 19th inst., and couriers were afterwards dispatched to Vienna and Turin.

The Times' Paris correspondent says that the delay is attributed to Austria; that the Vienna Cabinet was doing all that it could to win over the Emperor to its views, while at the same time it was reported to be preparing a collision against him in Germany.

The Emperor and Empress had quitted Biarritz and arrived at Bordeaux on the 10th. Their reception was enthusiastic. On the 11th inst., the Emperor received the authorities of Bordeaux.

The Cardinal Arch Bishops addressed a speech to the Emperor, who read a reply to it. Both speech and reply produced the most favorable impression. The Emperor said that the Government, which was the means of restoring the Holy Father to the Throne, would only give utterance to such respectful counsels as were directed by sincere devotion to the interests of His Holiness, could be alarmed about the day, which is not far distant, when Rome will be evacuated by the French troops. It is necessary, instead of appealing to the ardent passions of the people, to search with calmness for the truth, and pray to Providence to enlighten the people as well as their sovereigns, under a wish for the fulfilment of their rights, and that they may well understand their duties. All the Bishops have received orders from Rome to preach the restoration of Italian duties.

A Paris journal says that Napoleon is becoming disgusted with the procrastination of Austria, and for the moment French policy inclines to more intimate understanding with England.

COMMERCIAL.—Broadstuffs.—Messrs. Richardson, Spence & Co. report decline in broadstuffs. Flour dull and quotations maintained with difficulty; new American 10½¢ per bushel; wheat was also dull, and had declined 1½¢ per bushel; western red 74½¢; western white 84½¢. Corn dull and declined 6¢ per quarter; mixed 85½¢; yellow 86¢; white 74¢. Beans, Biscuit, Altaya & Co. quote a decline in corn of 6¢ per bushel. Provisions.—Beef in fair demand. Pork dull. Small sales of American at 50¢. Lard quiet but steady. Tallow unchanged. Sugar steady. Coffee quiet. In the London market wheat was firm, and a partial advance of 1¢ per quarter had been obtained.

The News Condenser.

- In Paris, child stealing has become quite fashionable.
- Sixty Pin river Indians have been killed by a party of whites.
- There are seven revolutionary soldiers still living in Maine.
- There are now going up in the city of Brooklyn nearly 900 buildings.
- The yellow fever is very fatal at Houston, Texas, ten deaths occurring per day.
- It is stated that Senator Broderick is the first U. S. Senator that has fallen in a duel.
- One thousand dollars have been raised in New York to aid the London strikers.
- A decree has been published abolishing slavery from the Island of Java from Oct. 1.
- It is said that our government has made a peremptory demand on Chili for redress.
- Mention is made of much injury to the potato crop in some parts of Connecticut by the rot.
- Twenty-five gambling houses are in one little circuit of the business portion of Chicago.
- Kossuth has returned to London to resume his melancholy watch over European affairs.
- The Schooner Geo. D. Downman, of Cleveland, O., was at Constantinople on the 20th of Sept.
- Severe shocks of an earthquake were felt at Baton Rouge and Bayou Sara, La., on the 29th ult.
- Elder Knapp, the famous Baptist revivalist, has been engaged to spend the winter in Boston.
- Information has been received of the death of Geo. B. West, Consul at Bay Islands, New Zealand.
- President Juarez, of Mexico, has ordered the erection of a statue in honor of Alexander von Humboldt.
- D. G. Brown contemplates an early resignation as Chief of the Agricultural Branch of the Patent Office.
- The Provincetown Banner says the catch of cod-fish has not been large, but on the whole a fair average.
- Lady Franklin has spent all her fortune in Arctic researches. She is in the south of France in ill health.
- Col. Sol. Meredith, of Wayne county, Indiana, carried off \$700 worth of premiums at the Indiana State Fair.
- The colored people of Canada have been holding a meeting to consider the expediency of seeking a new home.
- The letters I. O. S. M. (Independent Order Sons of Malta), have been interpreted to mean, "I Owe Some Money."
- After 11,000 observations, M. Charles Defour has made the discovery that white stars twinkle more than red ones.
- Three bears were killed the other day in Cambria, Co., Pa., by a farmer. They had come right up to his front door.
- Judge Terry has been placed under \$10,000 bonds to appear for trial on the charge of killing Senator Broderick.
- A snow storm of fifteen minutes duration prevailed at Florida, Mass., on Wednesday, and nearly whitened the ground.
- A number of interesting drawings and manuscripts by Michael Angelo have just been discovered at Florence.
- Gen. Twiggs has gone to the Rio Grande to drive off the Red Skins who threaten to ravage the settlements on its border.
- The railroad bridge across the Ohio river at Marietta has been completed and opened for travel. It is 535 feet long.
- There is some talk of connecting Charlestown and Roxbury to Boston. This would give Boston a population of 280,000.
- Our naval force in the Pacific consists of 8 vessels of war, of 11,825 tonnage, carrying 150 guns, and a force of 2,350 men.
- The merchants and business men of California design to erect a monument to the memory of the late Senator Broderick.
- The Tuscan Government has, by a decree of the 15th of Sept., raised Maj. General Garibaldi to the rank of Lieut. General.
- S. E. Cohen, the compiler and Gen. Superintendent of Cohen's Philadelphia Directory, puts the population of that city at 650,000.
- The amount of tar, pitch and turpentine, shipped to England from North Carolina during the year 1858, is valued at \$3,176,870.
- The overland immigration to California this season has, according to the latest accounts from Salt Lake, reached ten thousand.
- The Waterville (N. Y.) Times reports that during the last week about 60,000 pounds of new hops have changed hands at 10¢.
- The Mercantile Library Association of San Francisco paid Bayard Taylor \$5,000 for a series of lectures, and cleared \$1,500 profit.
- A smart earthquake shock was felt at San Francisco on the morning of the 26th September. It was strong enough to cause some alarm.
- We have seen it stated that the aggregate of cold is greater the present year than during any one for 70 years past, except that of 1845.
- During August, 89,885 ounces of gold were deposited in the San Francisco mint; 86,920 ounces of silver were purchased; \$663,000 coined.
- John Wise writes that out of 113 balloon ascents in which he reached an altitude of three miles, the balloon sailed to the east 112 times.
- In Cincinnati, on Monday, two youths were united in marriage, and both are waiting transportation to the State Penitentiary, each for one year.
- Barrow, the Chinese traveler, computes that there is more material in the great wall of China than in all the houses of England and Scotland.
- The report that Bohmyl was betrayed into the hands of the Russians is now denied. He was captured in a regular fight, the Russians say.
- The Quaker City for Havana broke her machinery when off Hatteras, and nearly all her passengers have arrived by a sailing vessel at Norfolk.
- The Louisiana Sugar Planter says the yield of sugar this season will be less than that of last year by over one hundred thousand hogsheads.
- A fire in the town of Monte Christo, Cal., destroyed \$92,000 worth of property. By another at Diamond Springs \$40,000 worth were consumed.
- Pike's Peak gold is making its appearance quite freely in Chicago. Several thousand dollars were sold to gold dealers there on Wednesday week.
- The Utah mail brings intelligence of the trial and sentence to two years' imprisonment in the Penitentiary of McKenzie, the forger of Government checks.

CONTENTS OF THIS NUMBER.

AGRICULTURAL.	
New York State Fair—Discussion, Last Evening.	330
European Agriculture.—Ergot—June Grass Affected with Ergot. (Illustrated.) Sheep Breeding in Great Britain.	330
The Queen Bee.	330
Experience in Hedge Growing.	330
It is the Good Crop that Pays.	330
About Bountiful Wheat.	330
Borghum and other Matters.	330
Reverend Conary Fair.	330
Farmers' Club Fair at Little Falls.	330
Crawford County (Pa.) Fair.	330
Rural Spirit of the Press.—Milk on Beef: A Profitable Stock of Sheep: Fallowing—Explanatory: Agricultural Instruction at Yale College. Hospitality at Southern Fairs. Agriculture in Tuscany: Shelter on Exposure of Hues: Re-creating Bee-hives: The Aurora Trust, Orange County, N. Y. Society: A Far North Ag. Society: Feeding sheep on Bees.	330

HORTICULTURAL.	
Autumn—Work in the Garden.	331
Making Walls.	331
Protection for Climbing Roses.	331

STORY TELLER.	
The Ample of New England. (Poetical): Anything Here for D. B. T. Moore—Woman's Mission.	334

LIST OF NEW ADVERTISEMENTS.

Rochester Premium Cutting Box—A. Gordon, Agricultural Publishing House, 100 N. Main St., Rochester, N. Y.	334
New Volume—New Story—Life Illustrations—A. Gordon, Agricultural Publishing House, 100 N. Main St., Rochester, N. Y.	334
James Pile's Dietetic Saleratus—J. P. Pile, 100 N. Main St., Rochester, N. Y.	334
Wild Turkeys Wanted—Special Notice—J. P. Pile, 100 N. Main St., Rochester, N. Y.	334

WILD TURKEYS.

WANTED—A pair of Turkeys, entirely of the Wild Blood, but well domesticated. Persons having them will please communicate with Sanford Howard, 48 Commercial street, Boston, stating age, weight and price. October, 30, 1899. 512-21

POWDER MILLS BLOWN UP—SEVEN PERSONS KILLED.—At about 11 o'clock on the morning of the 22d inst., four of the powder mills in Washington, Del., exploded with a terrific crash. Seven persons and one horse were killed.

AN ERIC CANAL PROPELLER ON A LONG TRIP UP IN WISCONSIN.—The little propeller *L. L. Britton*, of Albany, we hear of up in Wisconsin. She passed up the Lower Fox River last week to Fond du Lac, for a cargo of wheat, as an experimental trip. The *Britton* is one of the Eric canal steam propellers, of about 300 tons burden, and if the experiment should prove successful it will establish a new era in the freight business between Lake Winnebago and the Atlantic.

THE OUTRAGES AT BROWNVILLE, TEXAS.—Advices from Brownsville to the 10th inst., have been received. There had been no further outrages. The citizens had formed themselves into four battalions, which perform, alternately, guard duty during the night. Advices from Monterey of the 8th ult., state that Durango, in the province of the same, had been taken and sacked by a band of robbers numbering about two hundred. Troops afterwards came to the relief of the town and dispersed the robbers, killing many of them.

DEATH OF THE AMERICAN MINISTER TO FRANCE.—The last steamer announces the death of Hon. John Y. Mason, of Va., the American Minister to France. Mr. M. has occupied a conspicuous place in the political and diplomatic history of the country. He had many good points of character; and although by no means among the most gifted of our Statesmen, he commanded the respect of several of the Democratic Administrations, and maintained an unsullied reputation among the diplomats of Europe.

FROM BUENOS AYRES.—Advices from Buenos Ayres of the 26th of August, are unimportant. The previous report of the appearance of the Argentine Squadron off Buenos Ayres and the exchange of shot, is confirmed. A Montevideo letter states that a forgery of 60,000,000 bonds had been discovered, and the forger arrested. He proved to be the captain of a Spanish vessel plying between that port and Rio. The discovery served to unsettle business affairs, and create a great run on the banking houses of Senor Macra. Mr. Henderson, British Charge to Paraguay, had demanded his passports in consequence of Carostad affairs not having been satisfactorily settled.

SUNDAY CARRIAGE DRIVING FORBIDDEN.—Mayor Weaver, of Pittsburg, Penn., has made a final decision in the carriage case which has attracted so much attention at Pittsburg. Some back drivers took pay from invalids riding on a Sunday, and were prosecuted therefor, under the act of 1794, expressly forbidding all worldly employment on that day under penalty of a stated fine. The Mayor considered the act clear and unambiguous in its terms, forbidding all worldly employment, and accordingly gave decision against the defendants. A fine of \$25 was imposed upon each driver, and judgment was entered accordingly.

Markets, Commerce, &c.

NEW YORK, OCT. 29.—At market 1500 beaver, 1100 stores 700 sheep and 1000 lambs, 1100 sows. Poultry—Market beef—Extra, \$3.00; first quality, \$2.75; second, \$2.50; third, \$2.25. Pork—Market, \$1.50; extra, \$1.75; first quality, \$1.50; second, \$1.25; third, \$1.00. Butter—Market, \$1.00; extra, \$1.25; first quality, \$1.00; second, \$0.75; third, \$0.50. Eggs—Market, \$1.00; extra, \$1.25; first quality, \$1.00; second, \$0.75; third, \$0.50.

THE WOOL MARKETS.—The wool market is quiet. The demand is moderate for native and foreign wools. The price for this month being \$4.50 per 100 lbs. of clean wool. The wool market is quiet. Fall and Winter Campaign—1859-60.

NOW IS THE TIME TO SUBSCRIBE FOR AND CIRCULATE MOORE'S RURAL NEW-YORKER.

The leading and largest circulated Agricultural, Literary and Family Newspaper in New York, commencing with October. The Rural is widely known as the Best and Most Popular Journal of its class. Its contents being of the first order, (Useful, Entertaining and Pure), and its appearance unique and attractive. Though published less than ten years, it is the acknowledged

CHAMPION OF THE RURAL PRESS. In Ability, Enterprise and Circulation! It not only treats fully and fully upon Agriculture, Horticulture, Rural Architecture, &c., but has many other distinct and carefully conducted Departments—under such headings as Domestic Economy, Educational, The Traveler, Ladies' Portfolio, Choice Miscellany, Sabbath Schools, Useful Hints, (Scientific, &c.) The Story Teller, Young Readers, Youth's Corner, &c., with a complete Summary of News, Market Reports, &c., &c.

The present (10th) volume is pronounced by its Patrons and the Press, the most perfect model of a Rural and Family Journal ever published, and we invite a comparison with any others extant.

THE ELEVENTH VOLUME, FOR 1860. WILL FULLY EQUAL the present in all respects—in Quality of Matter, Paper, Printing, Illustrations, &c., &c. As the late evenings and leisure of Winter are coming on, all friends of the Rural and its objects are invited to subscribe and form Clubs for the leading advocate and promoter of "Progress and Improvement"—a Journal which ever ignores trash and humbug, and faithfully seeks to advance the Best Interests of Individuals, Families, Communities and the Country.

Style, Terms, &c.—The Rural is published Weekly, each number comprising Eight Double Quarto Pages (forty columns)—printed and illustrated in superior style—with Title Page, Index, &c., at close of volume. Only \$2 a year—\$1 for six months—with great reduction and liberal inducements to clubs and agents. Local Club-Agents wanted in every section where the Rural is not circulated.

Specimens, Show-Bills, &c., free to all applicants. We shall be glad to furnish "the documents" to any and all persons desirous of examining or circulating the "Best" Rural and Family Weekly of America.

Address D. B. T. MOORE, Rochester, N. Y.

600,000 ACRES OF HANNAH AND ST. LOUIS RAILROAD LANDS. For sale on Long Credit and at Low Rates of Interest. These lands, granted by Congress to aid in constructing the Road, lie to a great extent within six miles and are situated in the best of the land in the State of Missouri, and are well adapted for the raising of stock, and for the raising of grain and other crops. The lands are well watered, and are well adapted for the raising of stock, and for the raising of grain and other crops. The lands are well watered, and are well adapted for the raising of stock, and for the raising of grain and other crops.

THE APPLES OF NEW ENGLAND.

BY MRS. M. A. DENISON.

A GLORIOUS scene on a glorious theme. Let us no longer stammer the Golden Pippin and Bell-flower as apples of discord, but delectable look on them as fore-runners of peace, as the "Early Harvest" of good things.

The apples of New England!
How hang their loaded boughs,
Over the gray stone fences,
In reach of the dappled cows;
Oh! every red-checked Sallow
Has a merry song to sing
Of some old moss-roofed cottage,
Where the farmer is a king.

Yes, king of his beaming acres,
Where grain takes a thousand hues
In the wondrous tinting sunbeams;
Yes, king to his contented acres;
King of the sturdy plowman;
King of the sturdy reaper;
King over God's full meadows,
Budding in white and green.

The Ruses of New England!
What ruddy fies they see,
Where the crack of the volley waives;
And the crack in the pine agree;
Where the birds hang high in the chimney,
And the cat purrs on the hearth,
And the frolicking boys guess riddles,
With many a shout of mirth.

And they bear the fearful stories
That trouble the children's sleep,
Of ghosts seen in the valleys,
And specters in the deep;
And they burst their sides with laughing,
And sing their rich wares round,
Or dance to a wailing piping,
As the corn pops without a bound.

Oh! the Sweetings of New England!
Of the old Rhode Island stock—
Brought from the English gardens
To grace the land of rock;
As fair as Britain's daughters,
As hardy as her men;
But fairer lads and lasses
Have plucked her fruit since then.

Oh! the Pearmain of New England!
With its blended milk and rose,
There's a smelt of Albion's orchards
Wherever the good tree grows;
A stout old pilgrim brought it,
And to cradle it seed he broke
The sacred soil of Hartford,
By the roots of the Charter Oak.

Oh! the Pippins of New England!
What lovers' smiles they see,
When their yellow coats in letters
Tell tales at the apple-tee;
What rosy cheeks at the quillings,
What kissing in bustling throng!
That soon lead off to the parson,
Or end in a wedding chime.

Oh! the apples of New England!
They are famous in every land;
And they sleep in the silver baskets,
Or blush in a jeweled band;
They swell in delicious dreaming
On a beautiful crimson lip,
And taste of the purest bliss,
No lover has dared to lip.

They go to the southern islands,
They go to the western wild,
And they tell of their glorious birth-places
To every frolicking child;
Of the home where men are noble,
And the women as good as fair—
Oh! the apples of New England,
They are welcome everywhere!

Story Teller

ANYTHING HERE FOR D. B.?

BY LEINAD.

Tom and I had just come up from breakfast. It had been a sorry one, and we were discontented and vexed. Threats of removal had been made for months; but the horrors of moving, even to two comparatively unencumbered bachelors, had prevented the accomplishment. We were in the Irishman's first floor of a boarding-house, where all the miseries, and none of the "comforts of a home," had been borne by us for months.

"Dudley," I looked up from my paper—"Dudley, we must move; I can't, I shan't endure it any longer. This elevation in lodgings don't tend to a corresponding elevation of spirits. This plain fare may be healthful, but it's decidedly uncomfortable. This vile coffee might have been a fair fiction on Job, but, in my present condition, I don't feel called upon to endure such fare. So, 'as thou lovest me, Dud,' look up different quarters, and I will as ever be your obedient ohum."

I replied nothing, but turned over to the "Beard and Rooms" column of the Herald. I found nothing that would do.

"Well, Tom, I will put an advertisement in the paper, and await the result. How the 'elegant brown stone fronts, in genteel locations, references exchanged, dinner at six o'clock,' etc., will flow in upon us."

The morning thereafter you might have read the following advertisement:

"Two young gentlemen with two rooms on the second or third floor, in a house situated between Fourteenth and Twenty-third streets, and Sixth Avenue and Broadway. Address, stating terms, D. B., Union Square Post-Office."

A day or two after I went into Godfrey's, and asked the boy behind the Post-Office railing—"Anything here for D. B.?"

"A few," was the response; and he showed me a pile consisting of some thirty or forty letters, each bearing the superscription "D. B." It was a pretty sight, that two score of letters. Here a neat white envelope, with the letters as delicately traced as if by the pen of a fairy; there a business buff, with great masculine chirography; but these epistles were all on the most material of subjects,

and I did not stop for sentiment. The boy was paid his demanded charge; his quizzical, inquisitive, impudent face left unnoticed, while I sat down to read these answers to our inquiries.

As near as I can now remember—all this happened some four years ago—the first one I opened ran thus:

"My DEAR MISS—(Miss! some mistake here)—Your inquiry in yesterday's Herald (oh! I see, a mere slip of the pen—Miss for Messrs.)—was seen, and awakened in my heart (visions of—dollars a week in advance, fire and lights extra, sensations such as it had not known for years. I have long sought for one, (there are two of us, won't do I'm afraid,) to take the vacant room (sentimental boarding-house proprietor this) in my soul." (Soul! what does this mean? We don't want a room in his soul. Is the fellow deaf? Its addressed to D. B.") Says, "Your advertisement in the Herald of yesterday." What can it mean?"

Just at this moment light began to come in upon my darkened and confused mind. I asked the boy for a yesterday's Herald, and there I found, under the head matrimonial, the following advertisement:

"A young lady of good family in this city, with ample fortune, tired of the inconstancies of fashionable society, desires to cultivate the acquaintance of a young man of like social position, with a view to matrimony. Please address, D. B., Union Square Post-Office."

The puzzle was over. There were two D. B.'s in the world, and I had some letters belonging to the other; moreover I had been reading them—reading a lady's private correspondence I sat and thought awhile. The indecency of the advertisement either told of woe, or of ignorance, or the lack of some one of the fun-loving school-girls of New-York; so no great harm will be done to the feelings of the writer. I can only open them all, and hand back to the boy those for the other D. B.

It was time to explain to him, however—for the young official stood gazing at me, as I sat with the first opened letter in my hand, and with all the others untouched beside me. I told it all to him, what I proposed doing; he assented, astonished that such a coincidence should have happened, even in that place of queer doings, Union Square Post-Office. I turned to my correspondence again; the next was as it should be, a business offer of rooms; the next a matrimonial one. I had got about to the tenth of these alternate layers of matrimony and boarding-houses, when a lady entered the store. I have reason to remember her, and I think I can describe her appearance even at this time. She was of medium height, and this means five feet two inches in woman, with brown hair, worn, as a handsome one of the sex will always wear it, behind the ears; a hazel eye, cheeks just tinged with rosy coloring, pouty, yet inviting lips; and her hand was ungloved, showing not the exquisite taper so much admired in ideal, yet seldom seen, but a charming chubbiness. Her foot (this I have learned since) was a pretty one, and expressed as much by its tapping as the flashing of many a beauty's eyes. She wore—here I must stop; I cannot recollect that. She was dressed with taste; whether her bonnet was straw or silk, her dress green or gray, I can't say. Imagine what would be becoming such a one as I have described, and you have what she wore, provided you are a lady reader.

It was a sort of a mischievous glance that she threw at me, as she passed me perched on the high counter stool, with the pile of letters at my side; but she stopped not, and walking up to the pigeon-hole where letters are delivered, she asked the very same question I had asked ten minutes before—"Anything here for D. B.?" The boy pushed his head from the sanctum, and turned two imploring, puzzled, quizzical eyes on me. The lady turned also—I looked in vain for relief, and for two instants—they seemed moments—three puzzled faces were gazing together.

"Miss," I began, and I went through with an explanation, how I was "D. B.," that I had opened some letters, and now advised the opening of the remainder, tendered an apology, etc., etc.—in fact, stumbled through the best sort of an explanation my confused intellect would allow.

I should like to see again the expression I saw in that face, as the color came and went; then abode there until the whole countenance was suffused with blushes; and then the tears came, and the little foot patted hurriedly.

I was prepared for embarrassments, for blushes, but for tears—no, not for them; and I stood still like a convicted school-boy. She remained standing, also; a queer picture was it, this side-view in the great panorama of New York life. At last I offered the letters.

"I don't wish them, sir. I was but joking—how foolish!" and she turned from the store. She went across the Park, up Broadway, then into one of the twenty streets. I know, because I was near her—yes, walking by her side; and when we stopped at No. —, Daisy Bartlett and Dudley Barnwell were conversing easily and freely.

"It had been a joke, and she had not expected such a finale. She did not want a husband introduced in this way. 'She thought,' with a shy smile, 'she might get one in a more womanly manner. If I could get a mutual acquaintance to introduce me, she would be glad to know me; but she was not romantic enough to consider the coincidence of the two 'D. B.'s' a sufficient claim to an acquaintance.' So we talked, or she did, and I congratulated myself on obtaining evidence of her impression that I was a gentleman; for, if not, why should she advance apologies for conduct of hers?"

I left her at the door. I went home; I told Tom, and he sat back in his luxurious old rocking-chair and laughed.

"Well, will you find the mutual acquaintance? and will you cultivate the acquaintance of Miss D. B.?" and will you—oh! it is rich," and he relieved himself by more ha, ha's! "Fine eyes; yes, I see, only a joke—not foolishly romantic—must have a knowledge of your antecedents—your family—before she will receive you as an acquaintance. Yes, I see; but don't she know that you will find the mutual acquaintance. Let me be seer and prophet for a time." Tom stood up and gazed at vacancy in the orthodox, oracle style. "I see in the dim future a castle—an airy one; yet not

all in the clouds, but resting on the more tangible foundation of terra firma; in that castle sits a man and woman—husband and wife; material furniture is there, and let my increasing vision see on a wall, in a room, in that aforesaid structure, a gilded frame, which encircles two advertisements—the one asks for a room, the other for a husband; the faces of the pair seem to say that the advertisements have been answered—that Daisy Bartlett has a husband, and Dudley Barnwell a room—in Daisy's heart. What say you old fellow?"

Reader, if you will come up to me, and see me—us, I mean—I will tell you how true a prophet Tom was; tell you that I asked some if there was "Anything there for D. B.?" and how she answered.—Home Journal.

MARRIAGE—WOMAN'S MISSION.

READER, marriage is not the end of life; it is but the beginning of a new course of duties; but I cannot now follow Beulah. Henceforth, her history is bound up with another's. To save her husband from his unbelief, is the labor of her future life. She had learned to suffer, and to bear patiently; and though her path looks sunny and her heart throbs with happy hopes, this one shadow lurks over her home, and dims her joys. Weeks and months glide swiftly on. Dr. Hartwell's face lost its stern rigidity, and his smile became constantly genial. His wife was his idol; day by day, his love for her seemed more completely to revolutionize his nature. His cynicism melted insensibly away; his lips forgot their iron compression; now and then his long-forgotten laugh rang through the house. Beulah was conscious of the power she wielded, and trembled lest she failed to employ it properly. One Sabbath afternoon she sat in her room, with her cheek on her hand, absorbed in earnest thought. Her little Bible lay on her lap, and she was pondering the text she had heard that morning. Charon came and nestled his huge head against her. Presently she heard the quick tramp of hoofs and whir of wheels; and soon after her husband entered and sat down beside her.

"What are you thinking of?" said he, passing his hand over her head carelessly.

"Thinking of my life—of the bygone years of struggle."

"They are past, and can trouble you no more. 'Let the dead bury its dead!'"

"No, my past can never die. I ponder it often; it does me good; strengthens me by keeping me humble. I was just thinking of the dreary, desolate days and nights I passed, searching for a true philosophy, and going further astray with every effort. I was so proud of my intellect; put so much faith in my own powers: it was no wonder I was so benighted."

"Where is your old worship of genius?" asked her husband, watching her curiously.

"I have not lost it all. I hope I never shall. Human genius has accomplished a vast deal for man's temporal existence. The physical sciences have been wheeled forward in the march of mind, and man's earthly path gemmed with all that a merely sensual nature could desire. But looking aside from these channels, what has it effected for philosophy, that great burden which constantly recalls the fabled labors of Sisyphus and the Danaides? Since the rising of Bethlehem's star, in the cloudy sky of polytheism, what has human genius discovered of God, eternity, destiny? Metaphysicians build gorgeous cloud palaces, but the soul cannot dwell in their cold, misty atmosphere. Antiquarians wrangle and write; Egypt's mouldering monuments are raked from their desert graves and made the theme of scientific debate; but has all this learned disputation contributed one iota to clear the thorny way to strict morality? Put the Bible out of sight, and how much will human intellect discover concerning our origin—our ultimate destiny? In the morning of time, angels handled these vital questions, and died, not one step nearer the truth than when they began. Now, our philosophers struggle, earnestly and honestly, to make plain the same inscrutable mysteries. Yes, blot out the records of Moses, and we would grope in starless night; for notwithstanding the many priceless blessings it has discovered for man, the torch of science will never pierce and illumine the recesses over which Almighty God has hung his veil. Here we see, indeed, as 'through a glass, darkly.' Yet I believe the day is already dawning when scientific data will not only cease to be antagonistic to scriptural accounts, but will deepen the impress of Divinity on the pages of holy writ; when the torch shall be taken out of the hands of the infidel, and set to burn in the temple of the living God; when Science and Religion shall link hands."

I reverse the lonely thinkers to whom the world is indebted for its great inventions. I honor the tireless laborers who toil in laboratories; who sweep midnight skies in search of new worlds; who upheave primordial rocks, hunting for footsteps of Deity; and I believe that every scientific fact will ultimately prove but another lamp, planted along the path which leads to a knowledge of Jehovah! Ah! it is indeed peculiarly the duty of Christians 'to watch, with reverence and joy, the unveiling of the august brow of Nature, by the hand of Science; and to be ready to call mankind to a worship ever new!' Human thought subserves many useful, nay, noble ends; the Creator gave it, as a powerful instrument, to improve man's temporal condition; but oh, sir, I speak of what I know when I say, alas for the soul who forsakes the divine ark, and embarks on the gilded toys of man's invention, hoping to breast the billows of life, and be anchored safely in the harbor of eternal rest! The heathens, 'having no law, are a law unto themselves'; but for such as deliberately reject the given light, only bitter darkness remains. I know it; for I, too, once groped, waiting for help."

"Your religion is full of mystery," said her husband, gravely.

"Yes, of divine mystery. Truly, 'a God comprehended is no God at all!' Christianity is clear, as to rules of life and duty. There is no mystery left about the directions to man; yet there is a

divine mystery infolding it, which tells of its divine origin, and promises a fuller revelation when man is fitted to receive it. If it were not so we would call it man's invention. You turn from Revelation, because it contains some things you cannot comprehend; yet you plunge into a deeper, darker mystery, when you embrace the theory of an eternal, self-existing universe, having no intelligent creator, yet constantly creating intelligent beings. Sir, can you understand how matter creates mind?"

She laid her Bible on his knee, her folded hands rested upon it, and her gray eyes, clear and earnest, looked up reverently into her husband's noble face. His soft hand wandered over her head, and he seemed pondering her words.

May God aid the wife in her holy work of love.

—Beulah.

For Moore's Rural New-Yorker. POETICAL ENIGMA.

In searching the records of antique lore,
My birth you will find was with Adam and Eve—
I attribute man to grasp more and more,
I have always wronged him, and I always deceive.

Very cunning and shrewd my actions oft are,
To delude and to cheat I am always alert,
I investigate crime in man, and debate
From justice and right—his mind I pervert.

The wrongs and the sufferings man doth endure,
Most of their origin may be traced unto me;
I govern the nations—I lead them to war—
Tyranny and slavery would cease but for me.

Though a vessel has men ever been unto me,
Guided with cares, oft wearied with time,
Might his servitude cease and thus become free,
Would he cease to obey those mandates of mine.

How happy and useful his days might remain,
While in his probation on earth here below,
Were he to refuse us a place in his brain,
No longer would trouble his mind undergo.

ANSWERS TO ENIGMAS, &c., IN No. 501.

Answer to Geographical Enigma.—Stephen A. Douglas.

Answer to Algebraical Problem.—The Enigma speaks contains 64, second 40, third 203, and fourth 84.

A CHILD AT PLAY.—It is always a most curious spectacle to watch a child alone at play, and see it contriving pleasure and mimic business for itself. It is marvelous what imagination does for this little poet, who works, not with words, but creates strange visions for itself out of sticks, and stones, and straws. Dive, if you can, into the urchin's mind, and follow to its source that exclamation of joy and surprise which a mere nothing has called forth! It is a most curious spectacle. But when, at the same time, we call to mind that we ourselves have been just such another charming simploton, there arises before us one of the most fascinating of day-dreams which the grown-up man can indulge in. It is veritably a fairy land we are peeping into.—Thorndale.

It is necessary to allow the night to pass over the injuries of the day.

Wit and Humor.

PROFESSIONAL "JOKERS."

Clerical.

A RENOWNED clergyman of New York lately preached rather a long sermon from the text—"Thou art weighed in the balance and found wanting." After the congregation had listened about an hour, some began to get weary and went out; others soon followed, greatly to the annoyance of the minister. Another person started, whereupon the parson stopped in his sermon, and said:—"That's right, gentlemen; as fast as you are weighed, pass out!" He continued his sermon at length, but no one disturbed him after that.

A CLERGYMAN from a town near Providence, R. I., and one of his elderly parishioners, were walking home from church one day last winter, when the old gentleman slipped and fell flat on his back. The minister looked at him a moment, and being assured he was not much hurt, said to him, "Friend, sinners stand on slippery places." The old gentleman looked up, as if to assure himself of the fact, and said, "I see they do, but I can't."

Medical.
Doctor Bolus, who was very angry when any joke was passed on his profession, once said:—"I defy any person whom I ever attended, to accuse me of ignorance or neglect." "That you may do safely, doctor," replied a wag, "dead men tell no tales."

"Doctor," said a gentleman to a physician, "my daughter had a fit this morning, and continued for half an hour without knowledge."—"Oh," replied the doctor, "never mind that, many people continue so all their lives!"

Physicians in India raise blisters with red-hot iron, and dress them with cayenne pepper. If such treatment does not make people "smart," we don't know anything that would.

This venerable lady of a celebrated physician, one day casting her eye out of the window, observed her husband in the funeral procession of one of his patients, at which she exclaimed:—"I do wish my husband would keep away from such processions; it appears too much like a tailor carrying home his work."

MOORE.—Here, Tommy, is some nice castor oil, with orange in it. Doctor.—Now remember, don't give it all to Tommy; leave some for me. Tommy—(who has been there)—"Doctor's a nice man, ma; give it all to the Doctor."

Legal.
A MAN who had brutally assaulted his wife was brought before Justice Kavanaugh, of New York, lately, and had a good deal to say about "getting justice." "Justice," replied Kavanaugh, "you can't get it here. This court has no power to bang you."

When the celebrated Dunning, afterwards Lord Ashburton, was "stating law" to a jury in Turkey, Lord Mansfield interrupted him by saying—"If that be law, I'll go home and burn my books." "My lord," replied Dunning, "you had better go home and read them."

A TRAVELER writes—"We started from a little town in the vicinity of Holstein. I would not undertake to spell or pronounce the name; but if you will take Trechucken and Kioeje-d, and mix them up with Ompompanoshe, Scotch snuff, and Passamaquoddy, and pronounce the whole backwards with a sneeze, you will get within about six miles of it."

"John, did Mrs. Green get the medicine I ordered?"

"I guess so," replied John, "for I saw craps on the door the next morning."

"Why are you always looking into the glass, madam?" "Sir, the glasses I look into help me to improve my appearance; those you look into degrade yours."

A DANDY's occupation is to show his clothes; and, if they could but walk themselves, they would save him the labor, and do his work as well as himself.

THE young ladies' best friend—their looking-glass, because it always gives them "aids to reflection."

He whose soul does not sing, need not try to sing with his throat.

Why does a sailor know there is a man in the moon? Because he has been to sea.

THE FOUR P's.—Pride breakfasted with Plenty, dined with Poverty, and supped with Penury.

What would Neptune exclaim if the sea were taken from him?—I have not a notion.

If a man marry a shrew, are we to suppose he is shrewd?

MOORE'S RURAL NEW-YORKER,

THE LARGEST CIRCULATED

Agricultural, Literary and Family Weekly,

IS PUBLISHED EVERY SATURDAY

BY D. D. T. MOORE, ROCHESTER, N. Y.

Office, Union Buildings, Opposite the Court House, Buffalo, N. Y.

TERMS, IN ADVANCE:

Two Dollars a Year—\$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for \$5; \$15, and one free to club agent, for \$10. Ten, and one free, for \$16. Sixteen, and one free, for \$22. Twenty, and one free, for \$28. Thirty-two, and two free, for \$44. (or Thirty for \$37.50), and any greater number at same rate—only \$1.25 per copy—with an extra copy for every Ten Subscribers over Thirty Club papers sent to different Post-offices. If desired, As we prepay American postage on papers sent to the British Provinces, our Canadian agents and friends must add 12½ cents per copy to the club rates of the RURAL. The lowest price of copies sent to Europe, &c., is only \$2.50—includes postage.

ADVERTISEMENTS.—Twenty-Five Cents a Line, each insertion, payable in advance. Our rule is to give no advertisement, unless very brief, more than six to eight consecutive insertions. Patent Medicines, &c., are not advertised in the RURAL on any conditions.

THE POSTAGE ON THE RURAL is only 34 cents per quarter to any part of this State, and 64 cents to any other State, if paid quarterly in advance at the post-office where received.

IN ordering the RURAL please send us the best money conveniently obtainable, and do not forget to give your full address—the name of Post-Office, and also State, &c.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and to attract the personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it so assiduously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal, rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

For Terms and other particulars, see last page.

FALL HARVEST—CORN, POTATOES, &c.

FARMERS are now improving every moment to close up their summer's work. For the past few weeks we have had unpleasant weather for gathering in the crops, and corn-buskers and potato-diggers have suffered from cold fingers. Frosty nights and cold, windy days—cold rains, with an occasional flurry of snow, have rendered out-door work slow and unpleasant. The weather is now (Oct. 27th) clear and cold, with a sharp frost night, which will injure potatoes that lie exposed, or near the surface.

The Corn Crop in Western New York is not a medium one, and there is much more soft corn than usual. The frost the latter part of September cut the corn in some localities, and since that time we have had but little favorable weather, with occasional frosts, and late corn has not ripened. Much of the corn was so injured by the frost of the 4th of June as to make it late, and a good deal had to be re-planted. From that time to the 15th of June, and later, many were engaged in re-planting, and a favorable fall was most anxiously desired by corn-growers. In this they were not gratified. A letter before us from Ontario county, in this State, says:—"September frosts have destroyed one-half of our corn crop, or at least, diminished its value to that amount." The Connecticut, and most of the Eastern papers, say corn is much injured by frost in that section. Almost all of our Western exchanges give very favorable reports of the corn crop in the West.

POTATOES never yielded better in this section. From almost all sections of the country, however, we hear complaints of rot. When at the State Fair we were informed by growers from Long Island and New Jersey, that a great portion of the crop was diseased, and that the Peach Blow suffered more than any other variety. We were prepared to hear that this new and favorite sort was predisposed to disease, for the seed that we obtained from the East last spring was affected, and nearly one-third rotted before we got ready to plant, and a good many of the sets rotted in the ground. JOHN JONKSTON, of Seneca Co., writes to the Country Gentleman:—"I am sorry to say our potatoes are all going with the rot, and a better crop and better quality we have not had in many years. When in Canada lately I found they were also commencing to rot." Here, the potatoes grown on heavy land are very badly rotting, while on light land, as a general thing, they are sound. We have grown more than thirty varieties this season, and the Peach Blow dug late on heavy land were diseased. The Marions on the driest soil was half rotten, all others sound. The yield in all Western New York, so far as we can learn, is very great. JOSEPH RANDOLPH, of Penfield, in this county, informs us that he grew 2,300 bushels of salable potatoes on eleven acres, as measured by the buyers for the New York market. The Buckeyes yielded the best, giving 280 bushels to the acre; Peach Blow and Flukes alike, 250 bushels; and Dykemans, 200 bushels. These four sorts were the most productive. Our experience has convinced us that the David Seedling, a Massachusetts potato, of which we shall say more, is the most productive good potato grown. In hills, three feet apart each way, it produced 318 bushels to the acre; in rows two feet apart, and the sets one foot apart in the rows, 344 bush-

els, while the Prince Alberts, with the same treatment, (in hills) produced 257 bushels, and the Peach Blow 241 bushels. W. D. PERRY of Chili, in this county, presented us with fine specimens of Prince Alberts, and a statement that he had grown 800 bushels on a fraction less than an acre. The Root Crops were never better, seldom so fine, so far as we have seen or heard, and never, perhaps, were they more needed to make up for a deficient hay crop.

BUTTER AND CHEESE.

ALTHOUGH we are occasionally permitted to chronicle certain wondrous lacteal qualities exhibited by isolated representatives of the "milky herd," there would seem, judging from present prices and demand, to be a general falling off in the dairy product of this State. Individuals who can afford to butter only one side of their bread, are anxiously inquiring as to the probable cost of such an operation during the winter now before them, and after careful investigation of the facts obtainable, are ready to shrink back appalled; while those who are indifferent as to the footing up of the bills, but would gratify the palate with that which is redolent of clover blossoms, are just now enjoying an equally bleak prospect. Amid the denizens of this city, at least, the important inquiry now is—"What has become of the butter?"

This query is fraught with interest to producer as well as consumer. The agriculturist has a special investment in stock for dairy purposes, and he ought to be aware whether it is likely to yield a profitable per centage, or become a drawback upon the returns of labor expended in other departments of farm economy. He should know whether this portion of his business is furnishing its *pro rata* towards the liquidation of the demands upon his purse, and if found wanting, ways and means must be devised to restore it to a paying standard.

A month or two since we published an extract from the N. Y. Tribune, showing the increase in the average weight of cattle offered for sale to the butchers, and the figures then presented proved that a gain of about 800 pounds per head had been attained in a comparatively brief period of time. In furnishing beef to the mass of consumers, the farming community,—by the exercise of judgment, and care in the selection of animals from which to breed,—have accomplished an object the pecuniary value of which cannot be over-estimated. The success which has thus far attended the efforts of those who sought to improve the meat-producing qualities of such animals as are "good for food," is the result of close scrutiny and comparison, and by the employment of the same agencies the Dairyman can solve the question which, as we have before intimated, is agitating the public mind.

Referring to the market reports in the latter part of October for the past ten years, as they stand published in the RURAL, we note quite an increase in the prices of dairy products, and if the annual return, per cow, now equals that of 1850, we must conclude that this branch of farming pays well. Let us examine the figures:

	Cheese.	Butter.
October, 1850.....	4 1/2 @ 5 1/2	12 1/2 @ 14
" 1851.....	5 1/2 @ 6	12 1/2 @ 13
" 1852.....	5 @ 6 1/2	15 @ 19
" 1853.....	5 @ 6 1/2	16 @ 17
" 1854.....	5 @ 6 1/2	15 @ 20
" 1855.....	5 @ 6 1/2	15 @ 19
" 1856.....	5 @ 6 1/2	20 @ 21
" 1857.....	7 @ 8	17 @ 19
" 1858.....	7 @ 8	17 @ 18
" 1859.....	8 @ 10	20 @ 21

During the period selected, (October,) for the first five years of the decade presented, the average price of cheese was about six and one-half cents per pound, and of butter fifteen and one-half cents; for the closing five it advances to nearly eight and one-half cents for the former product, and nineteen and one-fifth cents for the latter,—an addition of more than twenty-five per cent. to the one, and but a fraction less than a like amount to the cost of the other of the articles under consideration. And the end is not yet. During all these years, (with, probably, the single exception of 1856,) every family which so desired could lay in a crock of butter for the winter's supply, but this privilege was denied the great majority the present season. The country within twenty or thirty miles of Rochester, has usually furnished sufficient for local consumption, but now our dealers are compelled to widely extend the area of search for a good, sweet article, and, too often, they find themselves "in the pursuit of knowledge under difficulties." Western Pennsylvania and Northern Ohio furnish a goodly proportion of the "supplies" in this particular line, and we are strongly inclined to the belief that we are more indebted to the skill of Buckeye milkmaids for our delicious "Hamburg" cheese, than to those who would fain have the credit of its production.

It is useless to ask—"Can these things be?" Twenty-eight to thirty cents a pound for butter, and fifteen cents for good cheese—we doubt not the retail rates will fully reach these figures the coming winter—are facts, plain, palpable, not admitting even the shadow of a doubt in the mind of the purchaser. Why is it thus? We have thrown these thoughts together for the purpose of calling the attention of producers to the subject, and we leave the matter in their hands, hoping to hear their solutions of the query—"What has become of the butter?"

HOW FARMERS TIME IT.

EVERY farmer should be governed by a regular system for using the hours throughout the day, so as to calculate with some degree of certainty on the daily routine of the labors of the farm. Show me a man who is not governed by a strict system, I care not what business he is engaged in, and I will show you a man who is always getting into difficulty, and who is troubled with a vast amount of what he terms "bad luck." Now, to remedy this, let me place before your notice a method for dividing the time, which, I think, if adopted by all our farmers, would be greatly conducive to their prosperity.

First—always rise before the sun, and when I say *always*, I mean seven days out of the week, and not six,—for I find that the habit of sleeping about an hour later than usual on Sabbath mornings prevails to a great extent among our farmers, which should not be, for if a farmer rises at five o'clock six days in succession, he can easily do the same on the seventh, and he not only injures his own health by sleeping longer, but he injures the health of whatever live stock he may chance to have about him also, as they should be taken care of at precisely the same hour every morning. Next, never have your breakfast till after you do your morning chores, as it is also very injurious to eat just after rising. Settle upon some hour, say about seven, and then regularly, as the hands of the clock point to the hour, take your place at the table. Observe the same regularity with your other meals, day after day, through the whole year, and we think we can safely assert that you will perform as much labor, and as advantageously, as though you had eaten your dinner some times at twelve and sometimes at two o'clock, your supper some times at five and some times at eight o'clock,—and we are sure that you will be troubled less with dyspepsia, nightmare, and all the other "petty evils that flesh is (not) heir to," but brings on by its own follies and vices.

Prospect, N. Y., 1859. G. H. WORDEN.

FAIR GROUNDS AND EXHIBITION HALL OF THE PALMYRA UNION AG. SOCIETY.

WITHIN the past five years decided changes have been made in the organization and management of Agricultural Societies, and great improvements instituted in the preparation of grounds and buildings for their exhibitions. In this State, a great impetus was given to associations designed

GROUND PLAN OF EXHIBITION BUILDING.
A. Centre of Hall.
B. Rear Piazza, 60x10, with balcony above.
C. Front Piazza, 25x10, with balcony above.
D. D. Stairs to gallery.
E. Business Office, and Gen. Room, 16x16.
F. Ladies' Room.
The posts surrounding A. support the gallery, which extends around the hall, and is 10 feet wide.
There are three large doors at each end of hall.

EXHIBITION BUILDING.—ELEVATION.

to advance Rural Improvement, by the passage (in April, 1855,) of an Act to facilitate the forming of Agricultural and Horticultural Societies—the law authorizing County and Town Societies, organized according to its provisions, to hold real estate and personal property to such an extent that they could own suitable fair grounds, buildings, etc. The act had no sooner taken effect than many of the old Societies were re-organized—electing boards of officers according to its provisions, and proceeding to render its advantages available. Many new Societies were also formed under the law, and commenced operations under favorable auspices. Most of these associations, both old and new, have secured (or are about to do so,) permanent Fair Grounds, with requisite improvements. In Western and Central New York almost every County Ag. Society has adopted the plan of permanent location, having purchased or rented grounds adapted to holding exhibitions, and many Town and Union Associations have adopted the same course. We might specify some twenty Societies, each of which has fine grounds, with proper conveniences—such as offices, exhibition buildings, &c.—creditable to the taste, enterprise and liberality of the people of their respective localities; but our present object is to give a brief description of what one of them has accomplished in this respect, in the belief that it will prove suggestive and beneficial to associations which have not yet secured desirable improvements.

The Fair Grounds of the Union Agricultural Society at Palmyra, (Wayne County, N. Y.,) are among the best we have ever seen—most creditable to all who participated in their arrangement and completion, and a good model for similar associations. So thinking, we present the accompanying diagram of the grounds, and plan of the main exhibition building,—with such references as will convey a clear idea of their arrangement, capacity and convenience.

The Grounds of the Society are situated on Jackson Avenue, within the limits of the village of Palmyra, and comprise about nineteen acres—the whole being enclosed by a substantial board fence, eight feet high. The main entrance is four rods in width, bordered with shade trees, and otherwise adorned. The arrangements for entrance of pedestrians and carriages (with ticket office convenient to both,) and also for exit, are admirable. The separate entrance for stock, machinery, etc., is very convenient,—while the abundant "water privileges" (two wells and a living stream,) should not be overlooked among the items of comfort and convenience for man and beast.

The principal exhibition building—Floral Hall—is 90 feet long, 60 feet wide, and two stories high, with a spacious gallery extending around the whole interior. It is finished throughout in a substantial manner, at a cost of over \$3,000, and is to be lighted with gas. The building has a fine, commanding appearance, (as shown in our engraving.) For beauty of location, convenience of arrangement, and adaptation to the purposes for which it is intended, it is probably

at least equal, if not superior, to any structure of the kind which we have examined in the State—the Amphitheatre of the Ontario County Agricultural Society (heretofore illustrated and described in the RURAL,) alone excelling it in cost, extent and convenience; but that is not an exhibition building of the style and class we are describing. From the elevated balconies at each end, a fine view can be had of the village and surrounding country—a panorama which would delight the poet, painter and lover of natural scenery improved by art and industry. [We believe the building was designed by CARLTON H. ROGERS, Esq.]

The arrangement and conveniences of the Grounds are so well shown in our diagram, and its references, that any detailed description is unnecessary. Could the reader have viewed the grounds (and their varied contents or covering,) during the recent Fair of the Society, as we did, he would have concurred with us in pronouncing all most complete and commendable. Be that as it may, however, we regard the subject of our notice worthy of this illustrative description, and trust its presentation will awaken a spirit of emulation in such matters among the numerous Societies within the somewhat wide range of the RURAL's circulation.

DIAGRAM OF FAIR GROUNDS.

A. Entrance for carriages.
B. Exit way for carriages.
C. Way for persons on foot.
D. Entrance for Stock.
E. Ticket Office.
F. Floral Hall, (60x90).
G. Ground for Farm Implements, &c.
H. Stalls for Horses.
I. Stalls for Cattle.
K. Pens for Sheep and Swine.
L. Stalls for Cattle.
M. Posts for hitching fat cattle.
N. N. Wells.
O. Posts for hitching Teams.
P. Judges' Stand.
Q. Track for horses, (half mile long—40 feet wide).
S. Seals, (150 feet long).
T. Village lots.
Two parallel lines, stream, bridged over at track.

WINTERING STOCK.—SHEEP.

Mr. Moore:—Some time ago I received your letter saying you had mistak my article on wintering stock, and requesting another. I can say little on the subject but what I have often written, yet as many farmers are so very remiss in wintering their cattle and sheep, it would be well if the Agricultural papers would remind them of their duty every Autumn, until there would be few farmers in the country but would keep their stock improving in winter as well as in summer; and well I know that either sheep or cattle turned to pasture when nothing but skin and bone, make but very little improvement in the pasturing season, and often go into another winter in worse condition than they ought to be at the time they were turned to pasture at the middle of May. I think a farmer would be equally excusable, who, after raising a crop of grain, should willfully waste one-half of it, as waste the flesh off his sheep and cattle for five or six months every year. I traveled through some of the western counties of this State lately, and saw many miserably poor ewes and lambs, which must be very well cared for the coming winter, else they will be food for worthless dogs long before spring—and I know that keeping sheep in that way never can pay, no matter how little the food costs. If every farmer would feed each of his sheep one bushel of corn, or 60 lbs. of oats, buckwheat or barley, (whichever he found cheapest,) during winter, with good straw, even, for fodder, they would pay him better for the grain, by far, than if he were to carry it to market and sell it for cash. But if he would feed each sheep 90 lbs. of corn, or other grain, they would still pay him better for the grain—they would yield him double the wool to what they did when he fed no grain—they would raise him double the number and much better lambs. Try it, farmers. I have practiced this for over thirty years, and think I cannot be mistaken. You no doubt will hear farmers say, "I fed grain to my ewes one year, but I will never do so again; they lost their wool, the lambs came before their time, and I lost nearly all of them." Now, let me tell you the reason of those men's bad luck. They did not begin feeding the grain until their sheep were in poverty, and the feed was too strong for them; hence it created fever, and bad luck attended them. But you that will take my advice, begin to feed grain whenever your pasture fails in fall, so as to keep up the condition of the sheep, and if you keep the dogs from them, and give them reasonable shelter, I will warrant no bad luck in losing wool, or premature lambs, will befall them. There is no animal that will pay better for good feeding than sheep, and none, as a general thing, is worse fed; if they only get half the care that is bestowed on the filthy swine, they would pay much better.

When I tell farmers that they ought to keep their sheep much better, they shake their heads and say, "It may pay you to feed grain and linned cake to sheep, but it would not pay us." Far be it from me to advise farmers to run any great risk in feeding a large quantity of grain to their sheep until they have the best of proof (experience) that it will pay them, and that double that they could get for the grain in cash; but I do wish I could persuade every farmer in the country to feed a few sheep in the way I mention, and I feel sure all who thus practice would feed their whole flocks so the next year. No farmer ought to keep a flock of Merino sheep without shearing at least five lbs. of clean wool per head. If they shear less he ought either to reduce his flock, or feed better, or both, until he gets up to that amount of wool or over; and with such feeding as I advocate, Merino wethers at three years old can be made to average (in the fall) from 120 to 180 lbs., live weight. As they are now kept it is only a picked flock that will average 90 lbs. But you must breed those that are to weigh from 120 to 180 lbs., and that from well-fed ewes, and not expect to take little, stunted yearlings or two year olds, and think to make them weigh the higher weights.

Again, if a lot of Merino wethers averaging 88 or 90 lbs., live weight, in the fall, is worth three cents per lb., a lot weighing 120 lbs. average is better worth four cents, and those averaging 130 lbs. four and a quarter cents—for the reason that the offal of the 90 lb. sheep is only a trifle less than the one weighing 120 lbs. The fact is, there is a profit every way in high feeding. It is just like high manuring, and the higher you feed the higher you manure, the manure being so much richer.

I had intended to have said something on feeding Cattle, but I have said so much for the poor Sheep I must stop. Perhaps I have said more than will be read by many. Yours, truly,

Near Geneva, N. Y., 1859.

JOHN JOHNSTON.

REMARKS.—We hope Mr. J. will give us an article on wintering cattle, for we are confident what he may have to say on the subject will be read with interest and profit. A man of his observation, years, experience, and (we cannot refrain from adding) merited reputation, ought not to be afraid of writing too much. An allusion, in a recent address, to his example and success in underdraining and other matters, was received in such manner as to assure us that Mr. JOHNSTON'S practical teachings were of the right stamp to forward farm improvement and enrichment.

HOW TO KILL WOODCHUCKS.—"J. S. M." of Fillmore, N. Y., wishes to know "if there is no way of killing woodchucks short of hunting and shooting or trapping them?" To which I reply, there is. Take a sweet apple, quarter it, make an incision in each quarter, into which insert a small quantity of strychnine, or a larger quantity of arsenic; put a piece or two into each hole. In a short time the apple will be gone, and the woodchuck a "goner."—J. S. TIBBETS, Nankin, Mich.

A GOOD COW.—Mr. MARTIN TYMORSON, of East Bloomfield, Ont. Co., states that he has a cow (three-fourths Durham,) from which his wife made and sold, last summer, from the 2d day of May to the 24th of August, one hundred and one pounds (101 lbs.) of nice, rich butter, besides what was required for the use of the family, consisting of three grown persons. During the first twenty days of June, she gave 58 lbs. of milk each day—26 lbs. in the morning, and 32 lbs. at night.

LESSONS OF THE SEASON.

READERS OF THE RURAL.—As again "we stand among the fallen leaves," and look over our fields, most of them already stripped of their productions, it seems hardly possible that any intelligent cultivator of the soil should fail to call to mind many observations which he has made during the passing season, of failures or success, and their probable causes, both in his own operations and those of his neighbors,—observations which may hereafter be of great practical importance to himself and others. There is no person that thinks who does not make such observations. And yet, through failure to record them in his journal, or in the public prints, they are unknown by others, and many of them soon forgotten by himself. In many things we perhaps do not trust our memories enough,—in others, and especially such matters as have been referred to, we trust them too much. We need something in black and white, which shall be a reminder of them when the season returns for using them.

In many parts of our country, the past season has been remarkable for frosts and other calamities to the farmer. The place where the writer resides was not only visited, on the 4th and 10th of June, by the severest frosts perhaps ever known here so late in the season, but was clean swept on the 24th of June by a devastating hail, which hardly left a green thing. Early peas, in some of our gardens, were ready for picking, and other vegetables proportionately advanced. On the morning of the 25th our gardens and plowed fields were as clean almost as if just harrowed. In these circumstances the question "What shall we plant?" was an important one. "What can we plant so late and get any return?" Some replied after the frosts, "You need not plant anything; the corn will come again, and so will the potatoes." Others said, "It is too late for corn; put in buckwheat, and by-and-by, turnips and corn for fodder." After the hail they said, "There isn't time for anything but turnips." Rather poor prospect, was it not, for comfortable living for the following nine months or more?

To these remarks I wish to subjoin a few facts which have come under my own observation during the past season, in hope that they may prove of service to some who may read them.

1. Corn, where it was frozen below the ground, did not "come again" so as to be worth the culture. Though every hill started again, and looked green for a few days, much of it died; some of it put out small, poor ears, close to the ground; and a very little of it yielded good corn.

2. Potatoes, many of them, did come again, and gave a fair crop. In some cases, however, they were frozen so severely as to make them worthless.

3. King Philip corn, planted from the 12th to the 20th of June, and a few rows in garden soil as late as the 27th and 28th of June, ripened.

4. Potatoes planted several days after the frosts, ripened perfectly, and gave a good crop. Others, planted the 28th of June, though still green in the tops when the frost came in October, gave the largest crop of large potatoes that I have ever raised on an equal area of ground.

5. I have never had better peas than from those which I planted the 28th of June, and though they came at a time of year when green peas are ordinarily only remembered as luxuries long ago past, they were declared by all who partook of them to be in good time, and a note was made to plant some peas late hereafter, frost or no frost. Beans planted the 27th and 28th of June, ripened a considerable part of the crop. Limas were not replanted.

6. Melons, squashes, &c., did not pay. Tomatoes, likewise, except those which have been for some time past under frames, with glazed covering, and additional protection when there is danger of frost. These are still affording fine ripened fruit.

7. Sweet potatoes, planted out late, gave no return. Those which "came again" after frosts and hail were little worth.

8. Turnips are fine, and having been sown in more places than usual, are more abundant. The old rule, "The 25th of July, wet or dry," will not answer well one year with another, as to time. So far as my observation goes, it is too late, except upon very quick soils, or in very favorable seasons, or with some of the quicker growing varieties.

9. Our meadows, which were greatly injured by the frosts, and wholly cut up by the hail, have many of them yielded something worth cutting in September and October.

To conclude, I wish to place on record for those who shall look over the back numbers and volumes of the RURAL in time to come for something to encourage them, when disasters to their crops in the early part of the season occur, that that kind Providence which "tempers the wind to the shorn lamb" has crowned our efforts to make up as far as possible for our losses by frost and hail, with, I believe, even unhopd-for success,—thus kindly urging us to trust ourselves confidently to His keeping who careth for us, though the peach tree should not blossom, neither should there be fruit in the vines, though the fruit of the orchard should fail, and even the fields yield no meat. H.

BREEDING HORSES FOR ALL-WORK.

EDS. RURAL NEW-YORKER:—As I am a great admirer of fine stock of all kinds, I take pleasure in reading all that appears in the RURAL on the subject; but am forced, from experience and observation, to differ with some of your correspondents. I contend that "like begets like," and that it is impossible to change the laws of nature. I therefore contend that no horse is suitable to be bred to all kinds of mares, so as to produce fine animals from all. And I furthermore contend that no stallion can produce animals suitable for all kinds of work. If thorough-bred stallions will do so, why was it not done in the blue grass country of Kentucky?

Some twenty odd years ago, everybody bred thorough-bred stallions; the consequence was that the horses became too small for everything but the saddle. Then they resorted to the other extreme, and imported a number of draft stallions. It is true they increased the size of their horses, and produced many fine animals, and at the same time

many worthless weeds. He who breeds a small mare to a thorough-bred stallion, expecting to get large draft animals,—or a mare possessing no fine gait, expecting to get a good saddle animal or a fast trotter, will assuredly be disappointed. I acknowledge that we cannot produce stylish, fast horses from draft stallions, nor can you do it with a thorough-bred horse from common mares. I have seen it tried too often; four-fifths of the time the experiment failed. I have handled more thorough-bred stallions than any other one kind, and have been forced to believe that they are not the horse to breed all kind of mares. I would much prefer a Cleveland Bay or a large Morgan to breed to promiscuously. I have neither, so I am disinterested, as I have no such stock. I have been convinced from observation that they are the best animals that have ever been brought out West, for all purposes. If the mares are under size, I would prefer breeding to a Cleveland Bay stallion; but if my mares were of good size, I would prefer a fine sized Morgan to all others. Their colts have fine size, and a great deal more style, and move better than all other horses I have ever seen. These thorough-bred men contend that "like begets like," and, in the same breath, that a horse that does not trot, (if he does, it is done very poorly,) and who cannot pace a lick, and who is a small-boned, light-bodied animal, will produce animals that will excel in trotting, pacing, and fine size. Then I contend they must get it from their dams. "That there is no uncertainty in nature's operations, the male confers the external structure of the offspring,"—all of which I believe. Then, where are the offspring to look for those traits that the sire does not possess? It is true that there are freaks of nature—that the produce differs from sire and dam, but it is very seldom. So I contend that we should first determine what we desire to raise, and breed with an eye to that point. Perfection in no particular point is gained in one cross, but it takes years to excel or produce perfection in stock. Too many expect the sire to do everything—that all they have to do is to breed to a fine animal,—and that they will get a splendid animal out of a scrub. Such persons are doomed to disappointment, I care not to what they breed. To produce fine stock, you must breed to fine animals and keep at it, at the same time taking good care of the produce. G. M. S.

Saline Co., Mo., October, 1859.

THE SORGHUM IN KANSAS.

EDS. RURAL NEW-YORKER:—A correspondent wishes to know concerning the Sorghum, and I can say, for this vicinity, we are making a good thing of it. Six mills are in operation within two miles of me, and molasses that has given good satisfaction has been made, and we think that but a small amount of molasses need be brought from the South for this vicinity in future. It is an easy crop to raise here. As this morning was our first show of frost it has had full time to mature.—Should I be able, I will send you figures of the amount made here this fall.

We have raised some wheat, but the same complaint is prevalent here as elsewhere. The yield is light, and we have yet to import both wheat and apples. We have an abundance of corn and potatoes—both sweet and common varieties—and we hope soon to raise all that our climate will allow.—JAS. WILLIAMS, Osawatimie, Kansas, Oct., 1859.

MANURES—SAFE RULES.

Are there not a few rules in regard to manures which it is safe to rely upon as unalterable? 1st. All fine or well decomposed fertilizers should be applied at or near the surface. 2d. All coarse, in contra-distinction, should be buried beneath the surface at a slight depth.

All manures are better for having been housed, unless we except the very coarse, where moisture may be needed to aid decomposition. For quick growing crops, like corn or tobacco, the fertilizing matter should (if of proper fineness,) be placed near the plant or in the hill.—W. J. PETER, Lakeville, Conn., 1859.

RAISING TURKEYS.—In a June number of the NEW-YORKER I made a few inquiries about raising turkeys, which were very promptly answered. I cannot explain my success better than by saying that I have raised more turkeys from a litter of ten, this fall, than from seventy young turkeys last spring. Shortly after the advice given in the RURAL, I had a litter of ten hatched, which I fed bread and milk, water, and occasionally a little lobbed milk, for about four weeks, according to the instructions, and have raised all except three which were caught by the hawks. After this when I wish advice, I know where to get it. Take the RURAL all.—SUBSCRIBER, Cayuga, N. Y., 1859.

GOOD BUTTER IN WINTER.—Mrs. H. wishes to send you the following method for making butter in winter, yellow, and containing as pleasant flavor as in May or June. Grate carrots, (the deepest orange color,) sift through a sieve, mix in a little milk, (water will answer,) and put into the cream when you commence churning. You will be surprised at the great difference it makes with the butter. Scores of her neighbors have tendered her their sincere thanks for the information.—C. A. H., Chicago, Ill., 1859.

SEED CORN.—Wm. S. Morgan, of Warren Co., writes to the Prairie Farmer that seed from the butt end of an ear of corn will ripen its product all at the same time, and some three weeks earlier than seed from the little end of the same ear. He recommends farmers always to break their seed corn ears in two in the middle, and use the butt ends only for seed.

OSWEGO CO. AG. SOCIETY.—At a recent meeting of the Oswego County Ag. Society (the one which held its last Fair at Fulton,) it was resolved to hold the next Fair at Oswego. The following officers were elected for the ensuing year:—President—JOEL TEARILL, Oswego. Vice-Presidents—Orson Titus, Hannibal; David Nichols, New Haven. Rec. Secretary—John U. Smith, Oswego Falls. Cor. Secretary—Dudley Farling, Oswego. Treasurer—B. G. Merriam, New Haven. Executive Committee—Thos. Askew, Scriba; John Reeves, Granby; D. C. Buell, Oswego.

Rural Spirit of the Press.

Feeding off Pasture Lands.

It is certainly advantageous to pastures, says THAYER, to remove the cattle from them often, in order that the grass may have time to recover itself. For this reason, on the best conducted farms, the pasture land is divided into separate parts.—The animals which require the most succulent and nourishing food are first turned to each separate division, and as they are removed, the other kinds which need a smaller quantity of untrifling, are fed there. By this means the whole of the grass is eaten, those kinds to which the cattle are least partial with the rest. The herbage is then left to recover itself for a sufficient time, and afterward the first herd is again allowed to feed upon it.

In commenting upon the foregoing, the editor of the New England Farmer says:—"This system possesses decided advantages over the practice of suffering the cattle to wander over the whole extent of pasture ground. If the space is large a great deal of herbage is spoiled or destroyed by the trampling of the cattle; the pasturage is never uniformly eaten off, but some portions are left to grow until it becomes dry and hard. The luxuriant but distasteful herbage is constantly increasing, and in time crowds out the finer kinds, already lessened by being cropped so closely and continually. Another advantage is, the stock are more quiet, and consequently feed better, and keep in better health. The succession of the various kinds of stock must be regulated by the circumstances of the owner. THAYER says that in spring the best pasturage is often given to ewes, because it is needed to increase their supply of milk, and give them strength to nurse their lambs with sheep in spring, if not allowed too long, has a tendency to thicken the growth of grass. But they cannot be followed by cattle immediately, with advantage; at least three weeks should intervene, to allow the smell of their dung to dissipate, and the grass to get a fresh start."

Night Soil—Its Value.

In a recent issue of the Planter's Banner the editor remarks:—"The best of all manures is the one which in our country is the most universally wasted. In Belgium, where agriculture is carried to great productiveness, they 'order things differently.' There, the estimate is, by nice calculation, that it is worth \$10 for every individual, man, woman and child. We traverse sea and land, send to Africa and South America to bring elements of fertility which at home we throw away on every farm in the country. What an immense amount is wasted in our cities. It must be the most valuable, containing the elements of all kinds of food consumed by man, and in returning these to the soil, we return the identical constituents which former crops and animals have taken from the land. Night soil contains the phosphate of lime, which is indispensable to the growth of animal's bones and to the nutriment of all plants, and which is not supplied from the atmosphere like carbonic acid and ammonia. All fluid and solid excretions should be preserved by mixing with burnt clay, saw-dust, ashes, peat or wood charcoal, muck, etc. We have a great deal to learn, and, alas, much more to practice that we have learned."

Horses and Colts.

A CORRESPONDENT of the Maine Farmer, says he has a five year old horse and a two year old colt, and wishes advice in regard to their keep and feed. The editor makes the following suggestions in reply:—"A warm stable that can be easily ventilated; good water easily come at; good, sweet hay in sufficient quantity; a feed of oats or corn and cob meal once per day. These are the requisites of good keeping for horses or colts. Some think that colts that do no work need no provender, but a moderate allowance daily, will 'pay,' as the Yankees say. In regard to cutting feed, if your hay is clean and sweet, with no mixture of coarse grasses, &c., it will be as well to let the horse do his own cutting. If you have rough fodder, or your hay is coarse, with a mixture of all sorts, it will pay to cut it and mix it with your meal and a little water in a mash tub."

Saving Clover Seed.

A CANADA WEST farmer writes to the Toronto Globe, that many agriculturists are deterred from saving clover seed for their own use, from the great trouble and expense of hulling and cleaning it. But in his section it is a common practice to sow the seed and chaff together, which is done by making a large, deep box of boards, on the top of an ordinary wagon box. The chaff is then shoveled in and hauled out to the field, and scattered over the surface from the wagon, as evenly as possible, with a straw or dung fork, just thick enough to give the ground a dark appearance. It is then harrowed in with a light harrow.

Training Steers.

At the Maine State Fair, a boy fifteen years of age, from the town of Woodstock, had a pair of three year old steers which obeyed him as an obedient boy will his parents. By a motion of his hand they would go forward, halt, and return, go to the right or left, kneel down, and perform other things much to the surprise of some older farmers who are in the habit of putting the brad through the hide. At the New York State Fair, there was a perfect RANBY of an ox tamer, who practices breaking steers for farmers, who never treats them inhumanly, but he soon has them under perfect control, and as bidable as well-trained children. So says the New York Tribune.

MANAGEMENT OF MILK.—The Homestead says:—"The milk-room and dairy management have something to do with the production of butter, and thinks an improved style of milk-room would be quite as likely to increase the yield of butter as an improved breed of cows. There is much truth in this; though there is no reason why we should not have improved breeds of cattle as well as improved dairy-houses and more skillful management. In fact, they often go together."

ONE-HORSE MOWING MACHINE.—In reply to an inquiry in the Boston Cultivator, a correspondent at North Andover, Mass., recommends Ketchum's one-horse mowing machine, which he says he has used with advantage this year.

Agricultural Miscellany.

FAILED, AND CLOSED.—"If you have tears to shed," &c. That long-time odious sub-institution known as the "Agricultural Department of the Patent Office"—so beautifully engineered of late years by D. J. BROWN, and formerly by Dr. DANIEL LEE, &c. &c.—has gone into liquidation, the Commissioner of Patents having closed the concern, and declined to ask Congress for further appropriations. According to rumor there is a \$100,000 defalcation in this branch of public service (?)—but the facts are not yet patent to the people. The "Advisory Board" should be convened and consulted—though we are credibly informed that its members considered the "branch" a humbug, and reported accordingly, which report was suppressed, perhaps to make room for plagiarized matters in the annual volume!

Now that this Patent-Office-cellar nuisance, which has been scattering foul seeds and—"Reports" for years, is abated, it may be well for those interested in the progress and prosperity of the leading interest of Rural America to agitate the propriety of establishing a distinct Bureau or Department of Agriculture.

THE AGRICULTURAL BOOK PUBLISHERS.—It will be seen by reference to an announcement in this paper, that C. M. SAXTON, BARKER & Co., of New York, have purchased the establishment of A. O. MOORE & Co., by which they unite the stock, copy-rights, &c., of the latter firm, to their already extensive business. It will be remembered that Mr. SAXTON was the projector and for many years the conductor of the first Agricultural Book Publishing House in this country, and that he disposed of the business to Mr. MOORE. Since then Mr. C. has become publisher of the Horticulturalist, as well as of many standard and miscellaneous works—and hence the purchase of the old establishment, as now announced, with his known enterprise and long experience, will give the new firm a commanding position and peculiar facilities for transacting an extensive, increasing and important branch of the publishing business. The new firm will merit, and we doubt not achieve, abundant success.

THE OREGON FARMER.—Progress.—The last number of this journal comes to us in quarto form, (about the size of the RURAL,) and changed from a monthly to a semi-monthly. This indicates prosperity and the right kind of progress. We trust it will celebrate its next anniversary by changing to a weekly—for every progressive farmer, wherever located, needs a weekly journal which shall advise him in regard to matters connected with his occupation, the markets, etc., as much as the city business man requires a daily. The Farmer is well conducted and handsomely printed.

WILSON TOWN FAIR.—We learn that the recent Fair of the Wilson (Niagara Co.) Town Ag. Society—the first held since its organization—was quite successful. In some respects the exhibition is said to have excelled that of the County Society. Wilson sustains a Farmers' Club, and of course its members would not allow an exhibition to prove a failure. "Now is the time to organize" Farmers' Clubs—a matter in which men of all political parties can and should cordially unite.

TRANSACTIONS OF STATE AG. SOCIETY.—A Subscriber, Kalamazoo, Mich., asks—"Can you inform me where or to whom I should apply to obtain a copy of the Transactions of the N. Y. State Agricultural Society, and the price? Please answer through the RURAL." [Apply to the Secretary, Col. B. F. JOHNSON, Albany, N. Y. We think the price is \$1.]

"RURAL" LETTERS FROM THE PEOPLE are quite numerous and encouraging of late. We quote from two or three of the most seasonable—simply remarking that we will cheerfully furnish duplicates to any of our friends who wear out or lose numbers of the RURAL while exhibiting them as specimens on Election or any other day.

ELECTION DAY is a good time to ask your friends and fellow townsmen to take the RURAL, as many of our friends can attest. Reader, please take a copy with you, and, after discharging your duty toward "saving the nation," politically, work a little for a paper which seeks to promote the best interests of the people and the country. Mr. A. N. HAYDEN, of Cattaraugus Co., proposes to do this, for he says:—"I would like to have you send me a show bill and a number of the RURAL if you can spare it as soon as possible, as I intend to get up a club, and I think Election day will be a favorable time to make some exertion. If you will send in time I should like it. I reside in a town where but few of your papers are taken, but think some more may be induced to subscribe by a little effort on the part of its friends; I therefore will see what I can do."

Mr. A. J. EMBERT, of Genesee Co.—a young man attending school—also proposes to do a good work on Election day, and we trust many of our young friends will emulate his example. He writes:—"As the tenth volume of the RURAL is drawing to a close, I begin to look forward with pleasing anticipations to the next, and I really hope that its subscription list may far exceed the present. I hope to send you a goodly number of subscribers this fall and next winter; at any rate I intend to do the best I can. If you please I would like a show bill—before Election day if convenient, as I think that day a favorable one to get subscribers. If possible I hope to be of enough service to you this ensuing campaign to deserve a Webster's Unabridged Dictionary, a book I have long wished to own."

—That's right!—for a Dictionary will be a good investment. And, by way of encouragement to our young friend, and all other Young Men and Maidens of like disposition, we will here make a special offer to all YOUNG RURALISTS—viz., To every minor who remits payment, according to our terms, for Forty Subscribers to the RURAL NEW-YORKER previous to Christmas Day (Dec. 25th, 1859), and completes for no other premium of gratuity, we will give a copy of WEBSTER'S UNABRIDGED DICTIONARY—the new and splendid PICTORIAL EDITION. "Boys, Do You Hear That?"

THE RURAL is highly esteemed in Canada West, and gaining in popularity. A Member of Parliament wrote us a note not long since that it was worthy of general circulation throughout the Province, especially as Canada had no such journal. And a letter just received from a gentleman in Brant county (who sent us sixty subscribers to present volume) says:—"From present appearances the RURAL'S circulation will be greatly increased the ensuing year. Several who have never taken it have already bespoken it, to commence with the new year; and several who felt too poor last year, acknowledge it very poor economy to do without it, and will join the club for 1860. You may be sure I shall do my best to secure a large club."

A TOWNSHIP AG. SOCIETY in Clayton Co., Iowa, sends us (per NORMAN HAMILTON, Secretary,) payment for thirty-two copies of the RURAL, which it has awarded as premiums. A good beginning for an Iowa Township Society. By the way, the Society is entitled to a bound volume of the RURAL, or (if preferred) \$3 in Ag. Books, post-paid. Which shall we furnish?

"A PALACE OF FLOWERS."

ALL of our readers, and particularly those among them who love flowers, have noticed in our columns the advertisements of B. K. Bliss, the flower-seedman of Springfield, Massachusetts. To many we have sent his seeds, while others, no doubt, have received them directly from Mr. Bliss, and all, so far as we have learned, have had reason to rejoice when the plants grew and bloomed so beautifully, that they had dealt with one who knew what constituted a good flower, and that he was not one of those who "know the right, and still the wrong pursue." We have planted a good many of Mr. Bliss' seeds, and in almost every case we can say we were satisfied with the result—which is no mean praise. Our show of *Asters* this fall was superb—the *Trifurcata*, *Bogusla*, *Ranunculus-Flowered*, &c., were splendid, and were awarded the Premium at our County Exhibition. Mr. B., we see by the Springfield papers, has been compelled by his increasing business to change his store for a larger, and in doing so has erected one which the Springfield *Republican* declares to be the most elegant of the many beautiful stores in Springfield:—"The room is sixty-five feet deep by thirty wide, the front-half paved with marble. The counters, frame work and all, from the plate to the floor, are of beautifully polished marble. Too much praise cannot be given to the taste that has ornamented so highly, without the introduction of a single feature that is tricky or tawdry. The element of fitness is apparent everywhere, and that of beauty is made to be its natural outgrowth and expression. The fresco painting, exquisitely done, unites harmoniously in the general effect."

We rejoice at the prosperity of our Nurserymen and Florists—at the success of all who are laboring to make the world better, and happier, and more beautiful. The New York *Tribune* calls the store of Mr. Bliss a "Palace of Flowers," and makes the following remarks:—"We have in this city some specimens to show how palaces can be built of pills; or how a Fifth Avenue mansion may be made to resemble a bottle of sarsaparilla, being built of the profits of that delectable compound; and we have some knowledge of a tall building in Chestnut street, Philadelphia, built of a panacea of the ills that human flesh is heir to here on earth. But it is only in Springfield, Mass., that a palace of flowers is to be found. 'May his shadow never grow less,' and may the cultivation of flowers so increase that a thousand other propagators may be able to live in flower palaces."

Inquiries and Answers.

HYBRIDIZING THE GRAPE.—Now that there is so much interest felt in producing new grapes, will you please give us a little instruction about hybridizing—how is it done?—N., Ontario Co., N. Y., 1859.

In response to the above, we think we could not do better than to give a brief chapter from *Allen on the Grape*:—"The Isabella, and generally the kinds that withstand our climate in Massachusetts, blossom fourteen days earlier than the Chasselas, or Early Black July. The Muscat of Alexandria is a few days later still in flowering. To remedy this difficulty, and to obtain the different kinds in flower at the same time, resort must be had to retarding the former by some process of shading, or of promoting the flowering of the European sorts by protecting them with glass, or some other covering, or the farina may be saved in a tin box, or glass bottle, from the grape, until the vines are in bloom. I have an Isabella in the grape, growing principally for the purpose of impregnation, and I may, one of these days, produce something new from it. This difference of the flowering calls in question the accounts of seedlings having been the result of a natural cross between our native sorts and foreign ones; under usual circumstances, it could not have taken place."

Seeds matured by the most healthy and vigorous plants are presumed to be best for planting, to obtain new kinds. The applying the pollen, or farina, of one variety, to the pistil, or stigma, of another, is the surer method of proceeding to obtain new sorts in the shortest time, and this is called hybridizing.

To do this properly, the bunch to be acted on should be thinned of three-quarters of the buds; the lower part should be cut away entirely, (immediately before inflorescence;) the strongest buds always to be left.

Observe them closely, and, as soon as the flowers open, with sharp scissors clip the anthers, being careful not to injure the pistil; with a soft brush, apply the pollen from the kind to be used in impregnation, or, the whole bunch which is to furnish the pollen may be cut from the vine, and gently rubbed or applied to the bunch, by frequently striking them together on every side. This should be repeated several days, until it is evident the fruit is all impregnated; a fresh bunch, with pollen in a suitable condition, must be had at each operation. The pollen must be dry, and in a falling condition, to be fit for the purpose. If your vines are so situated that a branch to be acted upon can be brought into contact with the branch of another kind, and the bunches interlaced, this will be a good method of proceeding,—cutting away the male part of the blossom from the kind that is to ripen the seed for the new kind.

The right hand figure is a magnified representation of the bud of the grape; the middle one is the blossom. The change from the bud to the blossom is usually rapid, and takes place about 30 to 40

days after the shoot appears in the spring which bears the fruit. This bud, which forms the blossom, consists of a covering, or cap, and the embryo berry with five anthers, which, when the time for inflorescence has come, is raised, or lifted, by the anthers, and the wind blows this cap free.

The third is the blossom, or embryo grape, with the anthers clipped and deprived of their farina; on the top of the embryo is the pistil; upon this is to be placed the farina, or pollen, of the male plant; when this is done, impregnation takes place, and the embryo rapidly swells off. If the operation has not been effectual, the berry will remain as it is. When the grape has attained one-third or one-half of its size, it remains stationary two or three weeks, and, at this time, it is perfecting the seed. When this is done, the fruit begins growing again; thus it appears the seed will vegetate, even if the fruit does not ripen sufficiently to be eatable.

To obtain hardy grapes, in new varieties, I should recommend the Catawba, or the Isabella, to be impregnated with the Frontignan, the Black July, the Golden Chasselas, the Pimston White Cluster, the Black Hamburg, and Esperione; a hybrid from any of these would probably be a grape ripening in less time than the first two.

SPIRUELA FOR LAWNS.—I notice in a late *RURAL NEW-YORKER* an article recommending the use of *Spiruella Ptilifera* as a substitute for grass in yards or lawns. I have a small yard, 50 by 60 feet, in which I would try the experiment if I can get the seeds or plants without too much expense. It is a sandy soil just filled in. Will you please inform me by return mail, (if you can do so without much inconvenience,) where the seed can be obtained, and at what price, and about how much should I need?—D. C. McG., McGrawville, Cortland Co., N. Y., 1859.

The article we gave was from an English journal, and contained an account of the first attempt to use this plant as a substitute for grass, which seemed very successful. The late English Horticultural journals contain advertisements of plants at from one to four shillings per dozen, according to size. We have not seen plants or seeds advertised in this country.

PLANTING GRAPE SEED—CUCUMBER SEED.—I am very desirous of some instruction with regard to the proper time and mode of planting grape seed. Should it remain in the ground during the winter, or be dried and put aside until spring? Any information either from yourself, or through the *RURAL*, will greatly oblige one who has a fancy for trying to raise seedlings. Also, can you give me the name and address of any persons or houses from which I can get the seed of Lord Kenyon's Favorite Cucumber?—R. N. P., Waterloo, N. Y.

GRAPE SEED may be planted as soon as the fruit is matured, or they may be kept in a box of sand until spring. Plant in a good, warm, mellow soil. The cucumber seed will be found advertised in this number of the *RURAL*, by the gentleman from whom we obtained the specimen from which our drawing was made. Its genuineness can, therefore, be relied upon.

KOHL-RABI SEEDS.—Will you, or some of your readers, please inform me where I can obtain some seed of the Kohl-Rabi, mentioned in the *RURAL* of Sept. 10? I think those who have it for sale will find it to their interest to advertise the same through the columns of your widely circulating paper.—R. R. C., Clinton, Conn., Oct., 1859.

KOHL-RABI SEED can now be obtained of any of the leading seedsmen who advertise in the *RURAL*.—Thorburn & Co., of New York, B. K. Bliss, of Springfield, Mass., &c.

ITEMS FROM THE FRENCH JOURNALS.

A *DIPTERA SPECTABILIS* with white flowers has been obtained by M. Rolland, a gardener at Meaux. It has been found that *Grapes sulphurea* in very hot weather and very hot places, become burnt as it were by the sulphur, but that this never happened elsewhere or at other times.

M. PAYEN proposes to drive off caterpillars and grubs attacking fruit by means of a weak preparation of oil dashed upon the trees. He mixes a few scruples of whale oil in a quart of water, adding some drops of ammonia; the mixture is beaten up into an emulsion, which is thrown upon the trees by a garden engine.

A. M. GALPIN, a gardener at Nantes, used collodion to cover the wounds in fruits that have been bitten or wounded by insects or otherwise, and that are beginning to spread in a state of decay. For this purpose he scrapes away carefully with a silver knife all the injured part, and then gently paints the place with collodion applied with a camel's hair pencil. He assures us that the decay of injured fruit is thus effectually arrested.

An amateur wishing to destroy the transparency of the glass roof of his greenhouse, bit upon the following plan:—He melted a tallow candle over a gentle fire, poured the liquid grease into a pot, and let it stand till it became unctuous—neither too soft nor too hard. On a warm day, when the condensation on the glass was all dried up, he smeared the glass in the inside with the grease, applied by a cotton dabber. He rubbed and daubed the glass until he brought the grease to a uniform surface. After which he gently passed the same dabber of cotton linen over the glass perpendicularly, which gave the glass the appearance of being finely furrowed. The roof thus prepared so completely prevented the direct rays of the sun from passing that nothing in the inside could be seen from the outside, although when in the light was clear and bright without the least glare. We are assured that this is an effectual prevention of all burning or scorching which so much disfigures plants kept under glass in summer.

BEAUTIFUL a tree as is the hardy *Sophora japonica*, it is little cultivated either in this country or elsewhere; and yet it does well in all sorts of soils except those which are cold, heavy and undrained. It appears that its buds have great importance in dyeing. The Chinese use them for a pure yellow, or with the addition of indigo for one of their greens. The yellow is particularly valuable for dark orange yellow. The flowers may be used in the same way, and indeed are richer in coloring matter; but the tint they give is browner than that of the buds. What is very remarkable is, that neither the bark, nor the wood, and scarcely the leaves, are capable of yielding this dye.

THE CHRYSANTHEMUM.

THE Chrysanthemum is a beautiful autumnal flower, easily cultivated, and thrives in any fair soil. In warm seasons it flowers out of doors in October and November, in sheltered situations in the garden, but our falls are so uncertain, or rather so certain to be cold and frosty, that the Chrysanthemum cannot be relied on in this latitude as a garden flower. In the parlor, however, it is a perfect gem. Before hard frost, the plants should be taken from the garden and placed in pots, which can be done safely even after the buds are formed. Then placed in the parlor or sitting-room or conservatory, they furnish most charming flowers until after Christmas. Most of our readers, no doubt, are acquainted with the old Indian Chrysanthemum, which formed a large plant, with semi-double flowers, a class by no means to be despised or neglected, but in 1847 Mr. Fortune sent from China a new race of Chrysanthemums, called the Chinese or Pompones, and sometimes the Button or Daisy Chrysanthemum. They are of a dwarf and bushy habit, small foliage and daisy-like flowers, small and very double like a *Ranunculus*, and are produced in profusion. Since their introduction they have been multiplied and improved by florists from seed, and every season adds to the number of choice sorts.

FLOWER OF THE CHRYSANTHEMUM, PERFECTION.

The flower shown in our engraving is the *Perfection*, a purplish lilac, of a regular and beautiful form, and blooms in large clusters. One of the best of this color.

Cuttings are generally made in March or April, and they root in a sandy soil, in pots, if kept at a temperature of 60 or 70°, in about two weeks. They may be turned out in the garden in May, in a dry, rich soil. Here a little attention in cultivation and pinching to make the plants grow bushy, is all the care they will need until the latter part of October, when they should be taken up, potted and carried to the house for flowering. A better way is to place the plants in large pots in May, and sink these pots in the border, when they can be removed to the house for flowering without trouble. The roots may also be divided in the spring and planted out, which will save the trouble of starting new plants, but young ones flower best.

Those who live near nurseries can obtain fine plants ready to flower, at the green-house very cheap, and we know nothing better for early winter flowers than the Chrysanthemum.

THE FLORAL HALL AT STATE FAIR.

EDS. *RURAL NEW-YORKER*:—In the last number I see you object to the arrangements of the fruit and flower building, and very justly, too. You might have complained of the limited space, for there was not room enough, bad as it was, to show all that was sent to the fair. Some articles were unpacked, although they arrived in season. There was not room enough for the professional fruit grower, to say nothing of the amateurs, who, by the way, were poorly represented. Your proposed ground plan is very good, only give length enough,—better have empty shelves than have the things crowded. The Fair was too late for a good show of flowers. There should be some stated time selected for the State Fair,—neither too late or too early,—say the 3d week in September, and the County Fairs could then set their time so as not to come at the same time in the locality where the State Fair is held.

This reminds me that I have heard the propriety of permanently locating the State Fair again spoken of. This putting up shanty buildings for one exhibition and tearing them down, is rather poor business, but it should not be located at any one place, not less than three places, nor for more than ten years. Albany, Rochester and Elmira, or some other place in the Southern Tier of counties, to be held in succession. By that arrangement a better show could be made, as there would be a strife between the localities which would have the best fair. They could then afford a shingled roof to protect fancy articles from the rain, and a few glass windows in case the wind blows so as to make it necessary to board up the sides.

A few words as to what constitutes an amateur florist. You mention the names of Mrs. VAN NABER and Mrs. NEWCOMB, of Pittsford, as amateur florists. They enter their articles as such, and as such get the premiums, but if the line was drawn between the professional and amateur florist as it is between the fruit growers, they would be found on the wrong side. They are both concerned in the sale of seeds and plants of all kinds in the spring of the year, and have been for some time, as any one can satisfy themselves that wishes to, by calling at the store of W. E. HAUGH, Tenth Street, Troy, and at the Agricultural House of Henry WARRICK, River Street. As an amateur, I object to this, as it gives them a pocket full of cash, that costs them nothing but the trouble of

preparation, (as there is always a surplus of plants every spring,) with which they can buy everything that comes into the market. For this reason I have kept aloof from the flowers at the State Fair. I hope to see some additional rules, if what we have already are not sufficient to keep people in their proper places. I have no objection to any one's turning nurseryman, but let them compete among their own class. A LADY AMATEUR. Saratoga Co., N. Y., Oct., 1859.

FLOWER SEEDS.

THE past season has been rather a discouraging one to cultivators of flowers. The cold, dry state of the ground during the month of May was very unfavorable to the germination of seeds, and the great June frost cut down many plants that had managed to get a start, thus putting them back, so that early Autumn frosts came soon enough to destroy tender annuals, such as Balsams, French and German Asters, &c., before they were out of flower, and too soon to allow many hardier varieties to ripen their seeds. On light, warm soil, and with a good exposure and extra care, most kinds of flowers may have come forward rapidly enough to mature a tolerable crop of seeds, but in ordinary situations, and with common cultivation, it will require close picking to find enough for next year's sowing. There will therefore, doubtless, be opportunity for benevolent persons to give away their entire surplus of these fancy wares, and it is to be hoped that such as are favored with an abundant supply of them will take pains to lay in a good stock for distribution among their less fortunate neighbors. A most delicate and acceptable service might, with little trouble, be rendered to those who would engage in the cultivation of flowers if they possessed or could easily obtain necessary seeds, by gathering, putting up in packages, and labeling such varieties as one has to spare, for presentation to neighbors and friends. Such gifts always have a peculiar appropriateness and value; and in bestowing them, the donor may properly make a distinction according to the floral circumstances of the receivers, since one does as great a favor by offering the commonest kinds to those who are wholly destitute of flowers, as in giving newer and rarer varieties to such as already have a collection of the ordinary sorts.

Least, in the pleasant excitement of preparation for next spring's gardening, all adverse experience in flower-culture should be forgotten, and, for lack of warning, beginners repeat the mistakes common to the class, let me here caution those intending to lay out their first flower bed next year against sowing seeds of high and of low-growing plants in mixed rows; especially in rows running east and west. The objections to such an arrangement are obvious on slight reflection. Tall, branching plants growing among low ones shade the latter too much, preventing them attaining their perfection of bloom and hindering the ripening of the seed. The mischief might be somewhat less in the case of rows running north and south; still, it would not allow low flowers to show to the best advantage, and is by no means a tasteful arrangement. A happier plan would be to place the highest-growing plants along the border furthest from the walk; or, if the beds be surrounded by walks, let the plants having the tallest flower-stalk stand in the middle, and graduate down to the borders. Or, if such an arrangement demands too much time and study, it will do very well to place the high and the low flowers in separate groups. To facilitate the labor of cultivators in this respect, papers containing flower seeds should always bear a statement of the height to which they grow.

The sowing of seeds seem such a simple operation that the directions of professional florists in relation to that, as well as the treatment of the plants, are quite apt to be neglected by amateurs, often to their own serious loss. As a case in point, Mr. BLISS, seedman and florist of Springfield, recommends that asters should stand ten inches apart each way, and the plants be tied to neat stakes. Now, this space, though probably limited enough for Massachusetts, seemed to me too liberal an allowance for Western New York soil; accordingly, I thinned out my plants to five or six inches, but relying on them to support themselves as they do when standing thickly together in rows, I neglected to fasten them to stakes as directed. The consequence was that owing their high growth and top-heaviness they were easily beaten down by the wind and rain, and many of them uprooted before they had fairly attained full bloom. A little care in the way of providing them suitable support would have enabled me to enjoy them much longer than I did, and perhaps gather seed for further use. South Livonia, N. Y., 1859. A.

FRUIT IN THE NEW YORK MARKET.—Apples.—The receipt of the large amount of apples recently detained by the canal break, has not depressed the market as was expected. They have been readily closed out on arrival without any material reduction in price, although many of them have been damaged by the delay, and proved poor bargains to the purchasers. The cool weather has favored this result. Good extra Winter fruit is sold readily on arrival at \$2.25, and \$2.50 has, in some instances, been reached, but the market is not quite so firm to-day. The apple crop of the country is mainly confined to the northern half of Western New York, to the northern portions of Ohio, Indiana and Illinois, and the southern portion of Michigan. The yield in these sections is large, and the quality good; but we hear that the fruit, including the Winter varieties, in the Western States, does not keep well; and, if it did, the fruit producing sections seem altogether too limited for an abundant supply, and low prices. Hence we think a still further improvement in Winter fruit may ere long be expected. We hear that a large amount of apples in Western New York were frozen badly on the trees, on the night of the 24th inst. We quote:

Western, mixed lots \$1.00 to \$2.50
Common, 7 bbl. 1.00 to 1.25
Red streaks 1.50 to 1.75
Twenty or Fifty 2.00 to 2.50
Fall Pippins 3.00 to 3.50
Greenings and Spitzenburgs 3.00 to 3.50
Quinces are very scarce indeed, and much wanted. Apple Quinces, 7 bbl., \$5.00; Pear Quinces, 7 bbl., \$3.00.
GRAPE.—Catawba 12@15c. 7 lb.; Isabella, choice, 10@14c.; do. common 6@8c.
DRIED APPLES.—Southern new, 2@3c.; State new, 1@1.5c.
DRIED PEACHES.—New Southern, best from Georgia, 11 lb., 7c.; do. common 7@9c.; best Virginia, 12-14c. 7 lb.
DRIED BLACKBERRIES.—Southern, 3@5c. 7 lb.
DRIED CHERRIES.—7 lb., 21c. 25c.
DRIED PLUMS 7 lb., 15c. 20c.
DRIED RASPBERRIES.—22c. 24c.—Tribune, Oct. 29.

OUR SOCIETY "OUT WEST."

EDS. *RURAL NEW-YORKER*:—I am a reader of your excellent paper, which is very interesting to us who live Out West, perhaps more particularly so because we used to live in the good old State of New York. It may be that some of your many eastern readers feel a little interested in western life—many have friends living in the "Great West," and some may anticipate moving in this direction. For such I will write a little about social life in this part of our beautiful and fertile State.

Times are hard, in a financial way, and the people do not feel able to spend much for luxuries, consequently they cannot give entertainment to large parties,—in a fashionable way, or such as are expected in the East, where money is more plenty. But we have social gatherings that are pleasant and proper under present circumstances, although some fashionable people might think differently,—and we are quite willing they should, as long as their opinion does not cause any interference with our social arrangements. A few of our leaders in society get together and agree to meet at a friend's house on a certain evening, (after ascertaining that they will be welcome), and then word is sent around (not invitations), to all the neighbors informing them of the time agreed upon, so that all who feel disposed may meet with the company. All who attend these parties take some provision from home for the table, picnic fashion, so that we get a great variety of good and nice things to eat in abundance, and have baskets full left. The lady of the house where they meet usually furnishes butter, tea, coffee, sugar and cream. Those who do not believe we have good suppers and a delightful social time, may "come and see."

We have some comfortable, good-sized dwelling houses on this lovely prairie, at which we have our social gatherings. The number at each party varies from forty to seventy-five, according to circumstances, weather, &c. We also have a pleasant Sewing Society here—usually meeting once in two weeks. The inhabitants of this vicinity are nearly all people who came from the Eastern States within a few past years, and are intelligent and industrious. We have a comfortable Church with a good belt, &c.;—preaching part of the time, but no permanent minister. Last winter, the first time in a number of years, we were without regular preaching. Prayer meetings are held every Wednesday evening at private houses. The choir meet for rehearsal Saturday evenings, and there is a good Singing School a little out of our neighborhood, at Sand Spring, which we attend occasionally. From these facts you may know that we still keep moving, though "hard times" may be on every tongue. A—A.

Bowen's Prairie, Iowa, 1859.

PRESERVING CRAB APPLES, CAKES, &c.

EDS. *RURAL NEW-YORKER*:—Noticing in a late *RURAL* an inquiry for the mode of preserving Crab Apples, I thought that I would answer it by telling how my mother preserves them, and also add my mite to the column of Domestic Economy.

TO PRESERVE CRAB APPLES.—To 1 lb. of Crab Apples, take 1 lb. sugar; put the sugar in a kettle with just enough water to keep it from burning; let it boil up, then skim and put in the apples.—Let them cook until you can run a straw through them, then skim out and boil the juice down to a jelly, then pour over the apples.

RICH COOKIES.—Rub together, till white, 1 tea-cup butter; 2 tea-cups sugar; beat 2 eggs and stir in the butter and sugar with a little flour; grate in a nutmeg; dissolve 1 teaspoon soda in 1 tea-cup sweet milk, or water, and strain it on the cake, then add flour till stiff enough to roll easily.

SPONGE CAKE.—Three eggs; 1 cup sugar; ¾ cup sweet milk; 1 teaspoon soda; 1 do. cream tartar; 2 cups flour.

GINGER COOKIES.—Two cups molasses; 1 cup boiling water; 1 do. sugar; 1 butter; 1 tablespoon ginger; 1 do. saleratus.

GINGER CAKE.—Two eggs; 1 cup butter; 1 do. buttermilk; 2 do. molasses; 4 do. flour; 1 tablespoon ginger—a little salt. MARY. Erie Co., N. Y., 1859.

CHARLOTTE DE RUSSE, CAKES, &c.

EDS. *RURAL NEW-YORKER*:—In compliance with a request in a late number of your paper, I inclose the following recipe for "Charlotte De Russe."—Also for Bakers' Ginger Cakes, and Old Maids' Cake.

CHARLOTTE DE RUSSE.—Take 6 eggs to a pint of milk; sugar to sweeten it; strain into it an ounce of dissolved isinglass; when baked let it cool.—Make a whip and mix with the custard,—cool it in forms. Lay in the bottom of the dish thin slices of sponge cake, alternately with jelly around the dish.

BAKERS' GINGER CAKES.—One pint molasses; ½ lb. butter; 2 eggs; 2 tablespoonfuls ginger; 1½ tablespoonfuls saleratus; 1 tea-cup buttermilk; flour to stiffen. Roll thin and cut in small cakes.

OLD MAIDS' CAKE.—One and a half pints buttermilk; 2 teaspoonfuls saleratus; 4 large spoonfuls molasses; a little salt; 2½ tea-cups each of flour and meal. Bake three quarters of an hour. These recipes I call very good. MRS. H. Bath, N. Y., 1859.

NICK CUSTARD.—Take the whites of eight eggs, beat them to a froth, add one pint and a half of new milk; three tablespoonfuls of white sugar; nutmeg to taste; bake slow and not brown; make a frosting of one egg and one spoonful of sugar, and when the custard is done put on frosting and set in the oven three minutes.—F. M. L., Westfield, N. Y., 1859.

Written for Moore's Rural New-Yorker. A WOMAN'S PRAYER.

BY CARLIE MAYNE.

THE chariot wheels of the day-god were broken,
And he has fallen into a sea of clouds that bathed
His dying head with glory. Night had come
To weep her dewy tears o'er his departure, and the
moon
Shed holy radiance on the earth, impartial as the light
Of God's eternal love. The stars, those gems that grace
Th' Almighty's crown, glistened like dewdrops
In the morning sun. The air was fragrant
With the breath of flowers. O'er all the universe
A stillness reigned, as though each living thing
Was awed to silence by earth's loveliness.

But hush!

Upon the evening air a sound arises, musical
As harp of gold by angel fingers played.
It is the voice of prayer.

"Great God of all the universe above
And God of all below; Father of love;
Thou who from everlasting art
And over shall be; O, draw near to-night
And hear my prayer, and guide my voice aright,
And bless my waiting heart.

"Yet, O, dear Father, unto Thee I come
To ask not blessings for myself alone;
Only that I may henceforth be
More Christ-like—but for him I pray
The husband of my love, who roams to-day
In distant land afar from me.

"Oh! bless him, Lord, and may he ever be
A meek and humble follower of Thee;
And grant him heavenly light
To guide him on his way, that he may not
Sin 'gainst Thy holy law in word or thought,—
Oh, guide his steps aright.

"Grant him increase of faith, that he may look above
This world of sorrow to a heaven of love,
Where all in glory bright
The cherubim and angels round Thy Throne,
And sing the glories of their heavenly home
In never ending light.

"And grant him meekness, joy, and hope, and peace,
And may his love to Thee ever increase,
And grow each day more pure,
More fervent, and upon his living soul,
In characters of light, Thy name enroll,
Lest sin his steps allure.

"Teach him submission to Thy holy will,
That midst afflictions he may love Thee still,
And praise Thy holy name.
Oh, let Thine angels watch o'er him from heaven;
And, O, I pray that unto them be given
A charge concerning him."

She ceased!
So near the angel came that caught the prayer,
She felt his breath upon her upturned brow.
He bore it up to Him, th' Unchanging One,
Who, on earth, said, "Ask and ye shall receive."

Written for Moore's Rural New-Yorker.

MEMENTOES OF THE PAST.

THE memory of the olden time. O! how it
comes rushing over my heart to-day, as I sit alone
in the place hallowed by so many youthful associa-
tions, more lovely and holy than it is often the lot
of man or woman but once to experience. Yes,
once in the life of all there is a time of vernal
bloom, when fragrant flowers spring up around
our path, and Hope whispers that they are ever-
living—when the mind, exulting in its glorious
freedom, soars to reach at once the heights which
maturity alone can scale—when the earth seems a
paradise, unsullied by the feet of Sin, and Fancy
paints her most gorgeous landscapes, luxuriant
with golden fruit, to be ours with the simple
grasp. This is the time of youth. Slowly, but
surely, the realities of life creep over our path, at
first dimly and in misty obscurity, like the sub-
dued sunshine of the early summer; dreamy
hours of life's rising sun, when the mind strives to
read the foreshadowing of its sober destiny, the
fulfillment of which forms a leaf in the biography
of mankind, written in living characters of imper-
ishable beauty.

That glorious youth is the time of which I write,
when we were a band of merry boys and girls.
The school-house was not an old, or a red one,
but new and white. We had no brook to cross,
but there was one down the great hill, and a beau-
tiful place it was in the warm, bright summer.
We reveled amid the trees and rejoiced by the
dancing brook till our cup of happiness was full
—yet mine was not so full that after years did not
drink it all. The other girls had their boyish
lovers and I had mine, for now I remember a
fancy wedding by an old gray stone on the mossy
hillside. There, where the blue sky bent tenderly
above us, and the awaying trees nodded assent to
the mimic ceremony, RUFUS ALLEN called me his
little wife. We all thought it very nice—and so it
was. I wondered if I ever should be really mar-
ried, but I have ceased wondering now, since my
maiden love has been turned to its fountain, and
the reservoir at last removed. It was not RUFUS
ALLEN that I loved so much. His was not the ar-
dent and impulsive nature which my earnest
spirit sought. It was a mercenary disposition,
and young as he was (only thirteen), his con-
versation was of sheep and cattle, dollars and cents,
and of his future farm in Ohio. Surely, he was
as good a specimen of a rustic farmer's son as
ever entered into the conceptions of a city belle.
He waited on me to and from the little singing-
school where we sang Ortonville, Lanesboro,
Dundee, Marlow, and a score of other tunes—dear
to our fathers and mothers, for the teacher was an
old-fashioned man.

This school-boy preference was not destined to
last, and now California is his fortune's home, or
his silent grave. His sordid soul may feast on
glittering baubles, all his own, and his untimely
grave may be made in Pluto's secret caves,
Yet life with love were sweeter far,
Though poverty his lot;
And death has less of victory
Within the native cot.

As blooming maidenhood gradually advanced, a
dark-haired youth, whom I will call EDMUND, sud-
denly discovered that he loved me, and behind
the master's back, perfect as EDMUND was, a frank
declaration of his attachment came across the
aisle, which only received a non-acceptance and
promise of remembrance. But when he declaimed
that evening, I as suddenly discovered that he
was noble, intellectual and good, and one in all
respects fit to be the recipient of my affections,
which had never before flowed so pure and ten-
der, constant and exalted, as in this, my first love.

As the years passed swiftly and happily away, I
knew naught of disappointment. But while
EDMUND was at a neighboring academy, a change
came. Through the secret agency of a malicious
person, a misunderstanding arose. I censured
him, and he me, until the last farewell was said,
and each returned to take up the burden of life
again. Often since has he sought to renew the
old love, but I, proud and unyielding, repelled
each advancement until now, alas! my blooming
sister will, ere long, be folded to that heart, which
should have been the high prerogative of mine.
All too late, Truth unveiled her mysteries. Now
I, the taught, am myself the teacher, and as these
familiar walls echo to the sound of merry voices,
it seems but the dirge of childhood's departed
joys, or the requiem of departed friends who are
now scattered far and wide, from the shores of
the mild Pacific to Atlantic's troubled waters.
Although but five years have passed since then,
it seems that the sorrows of a longer life, and the
experience of maturer years than mine, have been
crowded into the short space which has sufficed to
work so many changes. Yet I can take up the
duties of life with a firmer band, and bear its
disappointments with a more chastened spirit
than would have been possible had I been the
happy recipient of consummated hopes. May I
be thankful that the admonition has come thus
early. "The glory of man passeth away."
Prospect Cottage, N. Y., 1859. IDA.

COMFORT vs. SHOW.

FASHIONABLE society contrives very ingeniously
to destroy the happiness of its votaries. It makes
them live for others, not for themselves, and yet
bestows none of those substantial joys which fol-
low self-denial. The *New York Times* says:

"Call in at any brown stone front above
Bleeker, at any time, except on the occasion of a
great 'spread,' and it has the air of a very nice old
maid in morning-gown and curl papers—a cross
between iron precision and painful desolation.
Everything exists in a state of bagginess. The sofa
is a mute, inglorious corpse in a dimly wind-
ing-sheet. The chairs are put away in aprons and
pantalettes. The chandelier wraps its night-gown
around it. The shutters are closed to keep from
fading the carpets, and only here and there, through
the cracks, a little bit of scared light
peeps in and looks around, in a tremulous and
sickly way. Everything smells of brown Holland,
and everything looks as if it considered you fear-
fully impertinent for daring to come and disturb
its elegant uselessness and brown linen repose. It
is very much like going into a family vault after
an epidemic, and having a lively time with a party
of corpses in fresh grave-clothes. In fact, you
feel decidedly like asking the mistress of the house
why she doesn't complete the picture by putting
up the clothes-lines in the parlors, and hanging
up the week's wash.

"Soberly, this show-shop arrangement, which
makes home a nuisance, and drives father and son
out of doors for that comfort which their own
house is far too fine to afford them, is a growing
nuisance, and lies at the bottom of half the social
evils. When a man comes home after the fatigues
of business, he doesn't want a show-wife nor a
show-shop house. He doesn't want an invisible
palace; but a visible home. He wants something
made to wear and use, and allowed to be used after
its kind. He wants chairs that he can lean back
in; and carpets made to be walked on; and a
house alive all over; and a wife and children
whose daily thought is how it can all be made
happiest, cheeriest, most thoroughly comfortable
for him."

COLOR AND DRESS.

You ought never to buy an article because you
can afford it. The question is, whether it is suit-
able to your position, habits and the rest of your
wardrobe. There are certain clothes that require
a carriage to be worn in, and are unfit for walking
in the streets. Above all, do not buy wearing
apparel because it is mislabeled cheap. There is no
such thing; cheap clothes are dear to wear. The
article is unsalable because it is either ugly, vul-
gar, or entirely out of date. One reason why you
see colors ill-arranged is, that the different articles
are purchased each for its own imagined virtues,
and without any thought of what it is to be worn
with. Women, while shopping, buy what pleases
the eye on the counter, forgetting what they have
got at home. That parcel is pretty, but it will
kill by its color one dress in the buyer's wardrobe,
and be unsuitable for all others. An enormous
sum of money is spent yearly upon women's dress;
yet how seldom a dress is so arranged as to give
the beholder any pleasure! To be magnificently
dressed certainly costs money; but to be dressed
with taste is not expensive. It requires good
sense, knowledge, refinement. We have seen fool-
ish gowns, arrogant gowns. Women are too often
tempted to imitate the dress of each other, without
considering "the difference of climate and com-
plexion." The colors which go best together are
green with violet; gold color with dark crimson or
lilac; pale blue with scarlet; pink with black or
white, and gray with scarlet or pink. A cold
color generally requires a warm tint to give life to
it. Gray and pale blue, for instance, do not com-
bine well, both being cold colors.—*Dickens's "All
the Year Round."*

It requires not time nor proof to make virtuous
hearts coalesce; there is a language without
sounds, a recognition, independent of visual
organs, which acknowledges the kindred of con-
genial souls almost in the moment they meet.
"The virtuous mind knoweth its brother in the
dark."—*Jane Porter.*

THE AMERICAN AUTUMN.

BY FANNY KEMBLE.

Thou comest not in sober guise,
In mellow cloak of russet clad—
Thine are no melancholy skies,
Nor hueless flowers, pale and sad;
But, like an emperor, triumphing,
With gorgeous robes of Tyrian dyes,
Full flush of fragrant blossoming,
And glowing purple canopies.
How call ye this the season's fall,
That seems the pageant of the year?
Richer and brighter far than all
The pomp that spring and summer wear,
Red falls the western light of day
On rock, and stream, and winding shore;
Soft woody banks and granite gray
With amber clouds are curtained o'er;
The wide, clear waters sleeping lie
Beneath the evening's wing of gold,
And on their glassy breast the sky
And banks their mingled hues unfold.
Far in the tangled woods the ground
Is strewn with fallen leaves, that lie
Like crimson carpets all around
Beneath a crimson canopy.
The sloping sun, with arrows bright,
Pierces the forest's waving maze;
The universe seems wrapt in light,
A floating robe of rosy haze.
Oh, Autumn! thou art here a king—
And round thy throne the smiling hours
A thousand fragrant tributes bring
Of golden fruits and blushing flowers.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

"THE DAY OF DEATH IS DARK."

Is it a dark day for the warrior when he rests
from the battle he has won, when the laurels are
on his brow?—dark for the tempest-tossed mar-
iner who has gained the port he had despaired to
enter? Is it a dark day for the cherub child who,
in a moment's warning, is snatched away from
this cold clime to one where flowers forever bloom,
and skies are forever blue; and can it be a dark
day for the Christian, who has come up through
great tribulation, when he shall receive the plaudit
"Well done good and faithful servant!"

This life is but a probation, the first stage of an
endless existence,—why should we fear to enter
the second? All the knowledge we acquire here we
can carry with us,—this is the only imperishable
wealth we can accumulate in this world,—this is
pure gold which pays better for the search than all
the mines of California. But, *here*, how slowly
we gather knowledge,—what hard work we have
to comprehend the geography of this little planet,
—there we shall stride rapidly on in our celestial
education. That bright comet which we saw
careering in its orbit through the heavens yester-
night, will no longer be a source of mystery and
wonder to us, for, if Astronomy is true,—and who
doubts it?—thousands, it may be hundreds of
thousands of these splendid bodies are coursing
their joyous journey through infinite space, and
in our second stage of existence, we may be able
to comprehend their structure, to examine them
for ourselves, and, as Dr. Dick, observes "go from
star to star to view the handiwork of God." Here
we cannot imagine how beings, at all constituted
as we are, can live on the interior planets, Mer-
cury, for instance,—where the mean temperature
must be hot as boiling water,—or, in the other
extreme, how life can be sustained in Neptune,
the exterior or outermost planet in our system,
where water can exist but as a solid, and to the
inhabitants of which our sun must have dwindled
down to the size of a star. Hundreds of such
mysteries puzzle and bewilder the student in
Astronomy, for, alas! *here* we see "through a
glass darkly," but in the bright day ahead we
shall "see face to face."

The great telescope, Mr. CRAIG's, has revealed
thousands of stars so distant that a ray of light
from them takes sixty thousand years to reach our
earth—or, in other words, the light by which we
would see them to-night left those stars sixty thou-
sand years ago. As Mr. CRAIG remarks, "the
very stars themselves may have been extinguished
in space, and still appear to us to shine on from
the light transmitted to us in past ages, on the
same theory that we do not see the stars in the
place they really occupy; or the sun in the place
it was eight minutes before we looked at it, as it
takes time for light to travel; though it does
move with the rapidity of twelve millions of miles
every minute." There are, too, according to Mr.
CRAIG's supposition, suns and systems stretching
away and away beyond those revealed to our gaze,
and which, to even his powerful telescope, appear-
ed a dim light, but which he supposes will yet be
defined and resolved into separate stars or suns
as the before mentioned have been.

We will now close this too lengthy paper in the
words of a rare lover of and writer on astronomy:
"When we cast a rude glance upon the evening
sky, we behold a few whitish spaces, which may
appear as no more than an accidental tinge across
the firmament, but which are, in reality, composed
of millions of splendid suns, where not a single
orb can be seen by the naked eye. The distance,
the number, and the magnitude of these brilliant
globes overpower the imagination; the grandeur
and magnificence connected with such august
objects are utterly overwhelming. We cannot
comprehend the extent of the solar system, or
even the dimensions of the sun; but what is one
sun or one system, in the presence of twenty
millions of suns, perhaps far exceeding ours in
magnitude and splendor, and forty times that
number of mighty globes that revolve around
them? What is the number of the inhabitants
of earth to the countless myriads that populate
this universe of solar systems! Language is
inadequate to express the emotions of the mind
when we reflect upon such a stupendous scene;
but it is sufficient to call into lively exercise all

the feelings of reverence and devotion, and to
compel us to bow in humility and adoration before
Him

"Whose nod is Nature's birth,
And Nature's shield the shadow of his hand,"
whose words spake into existence this vast aggre-
gation of suns and worlds, and whose kingdom
ruleth over all." M. I. STEPHENSON.
Fair Haven, Carroll Co., Ill., 1859.

Written for Moore's Rural New-Yorker.
THE PHILOSOPHER.

THE philosopher, whatever position he may oc-
cupy, or whatever may be his surroundings, whether
a palace or a cottage, is an instructor of his
fellow-men. He deals in principles, and is clear-
sighted enough to discover them in facts and cir-
cumstances a common observer would think trif-
ling. He is a searcher after truth, both in the
things of nature and in the actions of men. If
any assertion or opinion can be proved false, he
rejects it, though it may have received the homage
of men for centuries. If he can demonstrate a
truth, he embraces it though all the world oppose.
He is an earnest thinker. Though in society he
may appear the most absent and unobservant of
all men, yet his keen eye and quick ear, are ever
furnishing food for his busy brain to work upon.
From his point of observation, he watches the
mass of humanity surging around him. He ob-
serves, but slightly shares in their ambitions. He
is more a teacher than an actor. He seeks quietude
more than the busy scenes of strife, and in his
calm retreat, does the thinking for that portion of
humanity which never stops to think for itself.—
Does he read a book, it is to him rich in sugges-
tion, and often does he pause in its perusal to fol-
low some train of thought it awakens. Pleasure
is not the object of his search, but truth. Does
he come in contact with anything unaccountable
or new, he rests not till reason and investigation
have done all they can to cast light upon it. He
loves truth more than notoriety, and the success-
ful solution of a problem in nature or science
gives him more pleasure than all the garlands of
fame. M. O.
Butler, Wis., 1859.

THE POET'S SLEEP.

THAT sensitive organization which causes vivid
impressions, that fertility of the mind that makes
it, as Herbert says, a kingdom, accounts for the
peculiar enjoyment of sleep by the poets, both as
a vital fact and a subject of contemplation. Its
luxury has never been more attractively set forth
than by Tennyson in his "Palace of Sleep," and
"Sleeping Beauty," and one of the bitterest
touches in the "Locksley Hall" is the "drunken
sleep" of the unloved bridegroom; Shelley cele-
brates its "mighty calmness," and Wilson's Ode to
a Sleeping Child is full of pathos; Keats unfolds
it in a classic voluptuousness. How exquisite is
the description of Madeline asleep:

"Blessedly hushed both from joy and pain;
Clasped like a mummy where swart Paynim pray;
Blinded alike from sunshine and from rain,
As though a rose should shut, and be a bud again."

Notwithstanding the eloquent beauty and the
profound truth of such apostrophes, perhaps the
indirect and casual references of the bards to sleep,
more nearly hint its benign economy and its latent
significance. Thus criticism has recognized a
peculiar aptness in the phrase of Shakspeare—"how
sleeps the moonlight on this bank," so to the point
of Collin's description of Fear is that on the "ridgy
steep" of "some loose overhanging rock, he
throws himself to sleep." Leigh Hunt utters a
natural exclamation in his vigil by a sick child—
"sleep breathes at last from out thee." Talfourd
well attributes an invigorating rest to the "select-
est fountains of repose;" and Coleridge has a fine
expression in the Ancient Mariner:

"O, Sleep! it is a gentle thing,
Beloved from pole to pole!
To Mary Queen the praise be given—
She sent the gentle sleep from heaven
That slid into my soul;"

while Mrs. Browning describes the aspect of death
as "long disquiet merged in rest."

An infinite variety of epithets might be gleaned
from Shakspeare to the same effect, as when he
calls sleep a "golden dew," and compares patience
to the "midnight sleep." But it is in its relation
to the passions that he has treated of this mystery
of our being as only the Poet of Nature can. How
memorably the wakefulness of Remorse is unfolded
in Macbeth!—of Jealousy in Othello, whom "not
poppy nor mandragora, nor all the drowsy syrups
of the world, can medicine to that sweet sleep he
knew but yesterday,"—of haunted and cruel ambi-
tion in the dream of Richard, and of fantasy in
Mercurio's description of Queen Mab; how chastely
beautiful the sleep of Imogen, how innocent that
of the infants in the Tower! How Duncan's ven-
erable sleep unnerved his murderer's hand! How
profoundly Hamlet mused of its relation to immor-
tality—"to sleep—perchance to dream!"—and
how natural, in the midst of the supernatural, the
Ghost's allusion to his custom in life "of an after-
noon" to sleep. Cleopatra's wondrous fascina-
tion is indicated memorably in death:

"She looks like sleep
As she would snare another Antony
In her strong toll of grace!"

And what a comprehensive epitaph is this—
"after life's fitful fever he sleeps well?" or where
shall we find in the same space a better picture or
philosophy of the whole subject than in King
Henry's familiar soliloquy!—*H. T. Tuckerman.*

CONVERSATION.—Conversation may be too timid
and respectful to be either pleasant or profitable.
It is the collision of the flint and steel that brings
the fire out. Southey says, finely and truly:

"There is a pleasure in frank dialogue,
When mind meets mind in free and full debate;
Men may live years and never know the strength
That is in others or within themselves."

ETHERE there is dignity in intellectual rank, or
there is not; if there is, no other rank is needed;
if there is not, no other rank can give it; for dig-
nity is not an accident, but a quality.—*G. H.
Lewes.*

Written for Moore's Rural New-Yorker.
THE RECORDING SPIRIT.

THE sun has through his full course rushed,
The western clouds have faintly blushed,
And once again earth's din is hushed,—
The spirit of another day
Has penned its record, and away
Has fled on the last glimmering ray.

He watched thee as each moment passed,
The first, the second, and the last
That sped with thee along so fast;
He saw thy gay hours and thy sad;
He marked thy good deeds and thy bad,
And every thought which thou hast had
Of evil, or of right, is known
To that swift spirit who has flown
From earth to yon Eternal Throne.
The record which he bore away,
With others, too, in strong array,
Will meet thee on a coming day.

Not only all the sleeping dead,
But e'en the hairs which crown thy head
Have numbered been by Him who's fled;
Nor has thy bosom heaved a sigh,
Nor gushed a teardrop from thine eye,
Whose record does not stand on high.

The pages of that book unfold
Many a bloody crime untold,
Whose only cause was madd'ning gold.
And many a proof that earnest prayer
Can shield thee from temptation's snare,
In glowing type, is written there.

And hast thou friends in heaven? If so,
Didst ever think how oft they go
And read that book thy deeds to know?
Ah, weep they not, if tears there be
In a spirit's eye from sin set free,
Such black and fearful lines to see?

There hastes a day when thou shalt look
Upon the pages of that book,
And read the doom thyself hast took.
Oh, write it, then, with greatest care,
And place no damning sentence there,
But mingle every line with prayer.
Disco, Mich., 1859. A. J. C.

THE SABBATH.

"WHEN the heavens and the earth were finish-
ed and all the host of them, God rested on the
seventh day, wherefore God blessed the seventh
day, and sanctified it." Well did the morning
stars sing together, and all the sons of God shout
for joy, as looking through the vista of coming
years, they saw all the blessings which would ac-
cure to man from this institution,—indicative of
the Eternal Sabbath above.

The Sabbath is always and everywhere beau-
tiful! As the dawning light throws open its sacred
portals, what a throng of hallowed memories rush
into every willing heart, and brood with a dove-
like peace over the slumbering world. We in-
stinctively allow our memories to float backward
and gaze at its onward march through the track
of time, like a guiding pillar of fire or a refresh-
ing pillar of cloud, interweaving with all its light
new beams of discovery and promise, until now it
stands forth more beautiful than when its rays
were reflected from the tiny dew-drops, or imbibed
by the flowers of Eden,—more awful than when
it was proclaimed by the thunder-toned trumpet
of Sinai. It stretches up its hand to heaven, and
plucking beauties which "bloom eternal" upon
the green banks of the "River of Life," it strews
them at the feet of every humble worshiper.

A Sabbath in a crowded city is beautiful, but to
my mind a Sabbath in the solemn stillness of the
country is far more sublime. All nature both ani-
mate and inanimate, seems to know and welcome
its coming. Every sound which breaks upon the
ear seems mellowed into notes of exquisite sweet-
ness,—the rivulet glides with a gentler murmur—
the birds send forth their sweetest strains,—the
spirit of beauty takes possession of the hours and
leads them on from the time the sun rises above
his eastern hills, until he hides his brightness be-
hind the pleasant glories of the western sky.—
And when the Sabbath-bell sends forth its pealing
notes, chiming in sweet concord with the beauties
of nature, methinks earth can present no lovelier
scene.

The only discordant notes which are heard are
from man, for whom the Sabbath was created.—
He will not allow all this glory to have its design-
ed effect upon him, but would willingly raise his
tiny hand to pluck from God's Holy Day its robe
of hallowed rest, and mar the perfect picture. Sad
indeed must be the state of those who will shut
their hearts against all the sweet, wooing influ-
ences, which would fill them with love and praise
to God, and willfully trample, not only upon
God's command, but upon their own most blessed
privilege. Man may say, I will use the Sabbath
for my own pleasure.—I will not interfere with
others,—but this cannot be. We are all so placed
by Divine Providence that each has an influence,
from the highest to the lowest, all are so joined in
a social compact that no one can fall without
drawing down others.

The steps which lead to the desecration of the
Sabbath are easy and regular, and may tempt you
to follow them, but shun them as you would a
deadly viper, for if you begin with no Sabbath, you
will end with no God. M. I. C.
Newark, N. Y., 1859.

ONLY BELIEVE.—Jesus himself had no higher
remedy for sin, for sorrow, and for suffering, than
these two words convey. At the utmost extremity
of his own distress, and of his disciples' wretch-
edness, he could only say, "Let not your hearts be
troubled; ye believe in God, believe also in me."
"Believe, only believe."

BEAUTIFUL was the reply of a venerable man to
the question, whether he was still in the land of
the living: "No, but I am almost there."

Spice from New Books.

How we Abuse our Stomachs.

No other civilized people, probably, are accustomed to abuse their stomachs so badly as we Americans of the United States. Our food is often badly chosen, still more frequently spoiled in cooking, and always eaten in utter disregard of dietetic rules. We eat far too much flesh-meat, (and especially pork, in its most objectionable form,) and too little bread, vegetables and fruits. Our hot, soda-raised biscuits, hot griddle-cakes, saturated with butter, and the hot, black, intolerable coffee, which form the staples of our breakfast, are, in the way in which they are taken, among the most deleterious articles ever put upon a table. Pies are another American abomination, and have no small share of our ill-health to answer for. The mince-pie, as it is generally made, is the abomination of abominations. Some describe it as "very white and indigestible at top, very moist and indigestible at the bottom, and untold horrors in the middle." Even our bread is unwholesome. It is made of the finest of fine flour, and fermented till its natural sweetness and a large portion of its nutritive elements are destroyed, or raised with those poisonous chemicals, soda and cream of tartar. In either case, it is unfit to be eaten. The rich cakes which our good housekeepers deem so indispensable, are still worse, and so on. Now, add to our badly chosen dishes and our objectionable cookery, the rapid eating and imperfect mastication, and the continually interrupted digestion which our intense and feverish life necessitates, and we have a complication of abuses, which would, one must believe, have long since utterly destroyed the vital stamina of any people not originally endowed with marvelous physical powers.—JACQUES' "Hints towards Physical Perfection."

What can be done with Paper.

A WRITER in *Blackwood's Magazine* says it is wonderful to see the thousand uses, as well as ornamental purposes, to which paper is applicable in the hands of the Japanese. He states that he saw it made into materials so closely resembling Russian and Morocco leather and pig skin, that it was very difficult to detect the difference. With the aid of lacquer varnish and skillful painting, paper made excellent trunks, tobacco bags, cigar cases, saddles, telescope cases, the frames of microscopes; and he even saw and used excellent water-proof coats, made of simple paper, which did keep out the rain, and were as supple as the best Mackintosh. The Japanese use neither silk nor cotton handkerchiefs, towels nor dusters; paper in their hands serves as an excellent substitute.—It is soft, thin, tough, of a pale yellowish color, very plentiful and very cheap. The inner walls of many Japanese apartments are formed of paper, being nothing more than painted screens; their windows are covered with a fine translucent description of the same material; it enters largely into the manufacture of nearly everything in a Japanese household; and he saw what seemed to be balls of twine, but which were nothing but long shreds of tough paper rolled up. If a shop-keeper had a parcel to tie, he would take a strip of paper, roll it quickly between his hands, and use it for the purpose; and it was quite as strong as the ordinary string at home. In short, without paper, all Japan would come to a dead lock; and, indeed, lest by the arbitrary exercise of his authority, a tyrannical husband should stop his wife's paper, the sage Japanese mothers-in-law invariably stipulate that the bride is to have allowed to her a certain quantity.

Chinese Characteristics.

In illness, and that dreadful wrench of soul and body we call death, the Chinese character shows itself. The pig-tailed men believe that the pain of illness is the result of the attempts the soul makes to leave the body. They believe that tricks, treats, prayers, may sometimes compel the errant soul to return to its frail prison. They first try kind words, run after it, entreat it to come back, and describe what they must suffer if it will not hear reason. They urge and flatter it; they weep, they cry, "Come back, come back—what have we done to you? What motive can you have for going away?—come back, we implore you!" If the soul still struggles outward, tired of its bondage, the Chinese mourner gets bullying, lets off fireworks, shouts, pushes to force back the soul. The men run about, crying they are on the track. They carry lanterns, if it is at night, to light the soul back again. When fairly dead—and most quiet people die at once to get rid of all this noise and torment—they say the person has "saluted the age," has "thanked the world," every one belonging to the deceased at once puts on white caps, girdles and shoes. The body is covered with quicklime, and kept sometimes till the anniversary of the death. The day of the funeral is like an Irish wake. Every one smokes, drinks tea, gossips, laughs, till the time comes to gather round the coffin; then they shed tears, groan, sob, and address the dead in passionate and pathetic monologues. Every Chinese can weep and laugh at will, like an actor.—*The Kingdom of Flowers.*

Origin of the term "Old Dominion."

Few things are so well calculated to awaken in the mind of the proud Virginian, when wandering in foreign lands, touching reminiscences of home and kindred, as the simple mention of the "Old Dominion." And yet there are comparatively few who are aware of the origin of the term which has so generally been applied to Virginia. It originated thus:—During the Protectorate of Cromwell, the colony of Virginia refused to acknowledge his authority, and declared itself independent. Shortly after, when Cromwell threatened to send a fleet and army to reduce Virginia to subjection, the alarmed Virginians sent a messenger to Charles II., who was then an exile in Flanders, inviting him to return in the ship with the messenger, and be king of Virginia. Charles accepted the invitation, and was on the eve of embarkation, when he was called to the throne of England. As soon as he was fairly seated on his throne, in gratitude for the loyalty of Virginia, he caused her coat of arms to be quartered with those of England, Ireland and

Scotland, as an independent member of the empire, a distinct portion of the "Old Dominion." Hence arose the origin of the term. Copper coins of Virginia were issued even as late as the reign of George III., which bore one side the coat of arms of England, Ireland, Scotland and Virginia.—*Notes and Queries.*

Written for Moore's Rural New-Yorker. WEYER'S CAVE.—No. II.

RETURNING to the main passage we enter the "Twin Room." Here our attention is directed to a couple of statues, from the similarity of which the apartment derives its name. A part of this chamber is called the "Baluster Room," from the ridges in the walls, formed by rows of stalactites resembling, in size and form, rows of balusters.—In this room is a deep hollow, dark and bottomless, (so you are told,) which bears the significant title of the "Devil's Bake-Oven!"

The "Tapestry Room" is, perhaps equal, in the beauty and magnificence of its adornings, to any part of the cave. Here the walls are ornamented with clusters of pillars and masses of drapery, falling in fluted folds and broad wavy sheets.—These stone curtains are translucent, and on being struck emit musical sounds. Some of them are bordered with minute and elegant designs wrought out on the rocky fabric, through the darkness and silence of ages. Nature has been lavish of her workmanship, and in that portion of the room known as the "Cathedral," she has erected a circular throne "like the ancient stone chair in which the Kings of Scotland were crowned," and overhung it with the most elegant drapery conceivable. Lofty aisles, ornamented with pillars, reach to the groined ceiling, and pendent crystals glitter in the torch-light like stars in the vault of night. Still farther on, an enormous sheet of spar hanging from the roof in heavy folds, has received the name of the "Drum." On being struck with the hand it gives out a sound as deep and mellow as the finest toned bass drum.

We have now reached the largest division of the cave—the "Ball Room." It is a hundred feet in length by forty in breadth, and has a floor of hard, smooth earth, which renders it a convenient place for dancing. An annual illumination of the principal rooms was formerly the custom and at such times the hours were whiled away by the votaries of Terpsichore in this subterranean chamber, as gayly and as thoughtlessly as if no Hand Divine had left its tracery on each wall of living rock.

"Santag's Hill" is a gradual ascent, named in honor of a French traveler, who unfortunately lost his light and his way near this spot. Luckily the guide was sufficiently well acquainted with the intricacies of the cave, to follow the main path, and thus to restore the benighted traveler to the light of day. From this hill, a narrow passage, called the "Devil's Race-Path," leads us to a room bearing the still more suggestive name of the "Devil's Dungeon." Before reaching the room, however, we exchange the perils of the "Race-Path" for a flight of natural steps, whose steep and narrow grade made the passage quite difficult. It is called "Jacob's Ladder," and certainly the "angels" that ascend and descend it from time to time, perform no easy task. Here are also "Jacob's Tea-Table" and "Jacob's Ice-House."—Were there any more stalagmites in the room, we should undoubtedly be favored with representations of various other utensils in the domestic establishment of the patriarch.

The "Senate Chamber" is named from the circumstance of its having a gallery of stone projecting from one of the side walls and extending half way across the apartment. This gallery is sometimes called the "Natural Bridge." Beyond is "Congress Hall." A similar gallery in this room is called the "Lobby." A sloping projection from the side wall is named, from its fancied resemblance to the promontory of the same name on the Hudson, "Anthony's Nose." A side path leads to the "Spar Room," from which visitors are permitted to gather specimens.

BERTHA MORTIMER.

Newark, Wayne Co., N. Y., 1859.

NATURE has strange ways of doing the most beautiful things. Out of the oozy earth, the mud and rain of early spring, come the most delicate flowers, their white leaves borne out of the dirt, as unsoiled and pure as if they had bloomed in the garden of Paradise.

PRIDE is not pleasing to the mind of men, yet it is the original motive of almost all our actions.

Written for Moore's Rural New-Yorker. CLOUDS.

DOES thou know the balancing of the clouds, the wondrous works of Him which is perfect in knowledge?—BIBLA.

CLOUDS reveal the wisdom of the hand that formed them, and are a connecting link between the far, strange depths of ether, and our less spiritual world. They catch the evasive rays of light from the setting sun, and hold them up to our view in beautiful succession. Clouds hold the treasures of snow and rain, and moderate the burning heat of summer, and the fierce cold of winter. They unite the useful and the beautiful, the terrible and the playful. The clouds of April are fleecy and graceful; incense that the fiftal princess offers to her patron Spring. November clouds are grim and stern, like warriors looking from their battlements. Clouds are changeable and fanciful, assuming all sorts of shape and delighting in all sorts of motions. Now they are curved in comely shape, now jagged and rough. Now they roll softly to and fro upon the waves of air, and now they chase each other through the sky like the fierce wild steeds on an Arabian desert.

If you think the clouds are not capable of awakening strong emotions, watch the rising of a storm, as they gather themselves together in close array. "Like a flock of mighty birds," they cover the heavens, while the air trembles with the beating of their wings. Lightning flashes, and thunder rolls like heavy artillery along their line. The broad battle-plain of heaven is filling up, and the eclipsing shadow falls upon the earth. But see! In another quarter of the sky there is another storm rising, and the two approach each other, leaving but a narrow belt of blue, which is fast decreasing. What if they should rush together, and pour a dreadful deluge upon us. Amidst this din and strife a sweetly solemn voice speaks to our trembling hearts, "Dost thou know the balancing of the clouds, the wondrous works of Him which is perfect in knowledge? Who can number the clouds in wisdom, or who can stay the battles of heaven?" And you answer in reverence, "God." Harmlessly they pass, the storm ceases, and the smiling earth also answers, "God."

To us, clouds are uncertain things, at the mercy of every wind; but to Him who rules the universe they have their appointed course to run.—They are messengers of mercy to men, and sometimes, too, of wrath. He who is taught in the school of the Christian can rejoice in truth that they are under the control of a wise and loving Father.

BUTLER, Milwaukee Co., Wis., 1859.

STOVES AND FURNACES.

WITHIN a few years the air-tight stove has been substituted for the iron dogs, and for the first time since men began to live in houses we have no "fire-places." The shrine of the Lares has been removed, and our houses have been literally pillaged—robbed of the domestic hearth, towards which so many associations have been poured, and which, in all ages, have been regarded as the symbol of home with its social comforts.

Not content with this, these enemies to our race have still more lately taken away the stoves, which, destitute of the essence, still occupied the places, and served to remind us at least of the ancient fire-places; and instead they have built for us iron furnaces—*Etnas*—under ground, so that now what of the oxygen we are not able to consume and convert into carbonic acid, is vitiated by impure gas escaping from its hidden chambers, by invisible particles of coal dust, and by other impurities which clog up the air-cells, and close the avenues of life, or stick along the parched fauces as if reluctant to convey their poison to the lungs.

Stoves have no doubt abridged the sum of human life, but by these subterranean iron furnaces we are cut short in the middle. It is an error to suppose that hot-air furnaces can ever be so constructed or managed, at least in private houses, as not in any degree to prove detrimental to health. We wish we could persuade ourselves that this is not so, for it is certainly very agreeable, in a climate like ours, to enjoy throughout all the rooms and passages of the house warm and uniform temperature; but it is just this even warmth which is one of the sources of mischief. The inmates are so little accustomed to the cold within doors, and become so morbidly sensitive, that they shudder at the idea of going out, and if they ever do venture into the air, the frost enters into their open pores, and they hasten back to their shelter, chilled, exhausted and discouraged. They are no better able to endure the storms of winter than a plant reared in a hot-house. It was the venerable Bede, I think, who said:—"When men lived in houses of willow, they were of oak, but when they lived in houses of oak they were of willow."

QUEER TRADES.

MANY years ago, when rice was dear in Eastern China, efforts were made to bring it from Luzon, where it was abundant. At Manila there was, however, passed a singular law, to the effect that no vessel for China should be allowed to load with rice unless it brought to Manila a certain number of cages full of the little "butcher birds" well known to ornithologists. The reason for this most eccentric regulation simply was that the rice in Luzon suffered much from locusts and these locusts were destroyed in great numbers by the butcher birds.

A somewhat similar business is carried on between England and New Zealand. This latter country at particular seasons, is invaded by armies of caterpillars, which clear off the grain crops as completely as if mowed down by the scythe. With the view of counteracting this plague, a novel importation has been made. It is thus noticed by the Southern Cross. "Mr. Brodie has shipped 300 sparrows on board the *Swordfish*, carefully selected from the best hedge-rows in England. The food alone, he informs us, put on board for them, cost £18. This sparrow question has been a long-standing joke in Buckland, but the necessity to farmers to keep down the grubs is admitted on all sides. There is no security in New Zealand against

the invasion of myriads of caterpillars, which devastate the crops."

The most singular of such traffics is the toad trade. On some of the market gardens near London, as many as five crops are raised in one year, the principle object being, however, to raise the finest possible specimens for high prices. Under such a system of culture, slugs and other insects are very formidable foes, and to destroy them, toads have been found so useful as to be purchased at high prices. As much as a dollar and a half a dozen is given for full grown lively toads, which are generally imported from France, where they have also been in use for a long time in an insectivorous way. Who can say but that Shakespeare, who knew everything, guessed everything, and foresaw everything, thought of this latent value when he said that the toad, though

"ugly and venomous,

Wears yet a precious jewel in his bead."

—*Philadelphia Bulletin.*

EXERCISE AND AMUSEMENT.

BORN exercise and amusement are necessary to the young. The youth in our cities and villages need exercise to develop the muscle, to build up strong, well-developed, healthy bodies, able to endure the battle of life. The youth of the country, as a general thing, perhaps, have exercise enough, but yet many of the muscles of the body lie dormant, suffering and languishing, weak from want of proper exercise. To prove this, let any of the farmers' boys engage in a different employment, be it work or play, that calls into action a different set of muscles from what they usually employ, such as rowing or playing ball, and they will experience a soreness that will plainly tell how illy these muscles were prepared for the work they were called upon to perform. It may be asked, Cannot all this be accomplished by a change of work? Not exactly, for the mind needs relaxation, and the spirit needs enlivening, which can best be accomplished by any innocent, manly sport. We all know what the old proverb declares to be the effect of "all work and no play." Nothing like lively, cheerful conversation at table, helps digestion. This, it is the opinion of the best physicians, is better than all the medicine in the world for dyspepsia.

In this country too little attention is given to building up a healthy body,—with one class it is all study, and with another all work. In England, among all classes, this is better understood, and the children even of the nobility, boys and girls alike, are encouraged to take regular and systematic exercise. In reading the life of the Rev. ROBERT NEWTON, a celebrated English minister, we were struck with a remark which he once made, that he had preached on an average six times a week for forty years, had traveled by stage and horse-back thousands of miles every year, had traveled about half the nights in all these forty years, and yet could not say that he had ever been tired, or ever incapable, from physical causes, of performing his duties well. How many American ministers could perform a quarter of this labor without complaining of being over-worked. The great evil of the country is, that we neglect the body until we are reminded of our folly by pains and penalties which make life a burden. This being our feelings, we were much pleased to see the young men engage so earnestly in the game of *base-ball*, which bids fair to become a national game, and if kept free from evils which often become connected with athletic sports, such as betting and drinking, and late suppers, we are satisfied that good will result from them.

THE GAME OF CRICKET.

The favorite English game of ball is *Cricket*, in which old and young, rich and poor, delight. Some cricket clubs have been formed in this country, and on their invitation eleven of the best players in England visited us, and played five match games with twenty-two of the best players in this country and Canada—at Montreal, New York, Philadelphia, Hamilton and Rochester. The game closed here on Tuesday of this week, and we thought a description thereof might be interesting to our young friends. The engraving shows a player at the bat, just ready to receive the ball from the bowler. Three stumps are inserted in the ground, about three inches apart, connected together at the top by two pieces of wood called bails, which lie loosely on the top, ready to fall from the least touch of the ball.

BATSMAN IN POSITION TO RECEIVE THE BALL.

At the distance of twenty-two yards, three other stumps are similarly placed, and in front of the stumps, or wickets, as they are termed—a line, distant four feet from the wicket, is drawn, marking the boundary of the batsman's ground, outside of which he is liable at all times to be put out. The object of the bowler is to knock down the stumps

or hit the bails off with the ball—the aim of the batsman being to prevent him, and at the same time to hit the ball a sufficient distance to admit of his running from wicket to wicket before the stumps are knocked down with the ball. For every such run he scores one. Twenty-two players are engaged in a regular contest—eleven on a side. Eleven go into the field, taking various positions—such as those of bowlers, of which there are two—wicket-keeper, long stop, point, slips, cover-point, mid-wicket, off and on—that is, to the right or left of the batsman who first receives the ball—long-leg, short-leg, &c.; these positions being chiefly those in the field where the ball is most frequently hit by the batsman.

Behind the stumps the wicket-keeper stands, his duty being to stop the balls when they pass the batsman. Behind him again is the long-stop, who stops all balls that pass the wicket-keeper. The great activity and nerve requisite in the onerous duty of wicket-keeper, renders it one that few are found to fill, even creditably, much less with marked ability. When a run is obtained without the ball being hit it is termed a bye, and when touching the person of the batsman, a leg bye—byes being generally obtained from balls that pass the long-stop. The ball must be bowled, not thrown or jerked, and the batsman is put out when the ball passes his bat and knocks the wicket down, or when he hits the ball in the air and it is caught before touching the ground, or if the bails are knocked off while he is out of his ground.

According as agreed upon, the game is either four over or eight over, which means that when four or eight balls are bowled from one end—the game-keeper calls "Over!"—the players reverse their positions, and another bowler plays his ball from the opposite wicket.

All balls bowled outside of the parallel lines shown in the engraving, and over three feet from the wicket, on either side, being considered out of the reach of the batsman, are called *wide*, and each wide counts one in favor of the club having their innings.

If a batter has his leg before his wicket when the ball is played, he is ruled out by the umpire. The single straight line in the engraving; indeed, the figure shows the proper place and position for the feet.

An innings consists in all the players on one side either being caught or run out.

When the batter strikes the ball he runs from wicket to wicket; the other party in at the same time does likewise. As many runs as are made by the batter are added on his score.

The ball must weigh not less than five ounces and a half, nor more than five ounces and three-quarters.

The bat must not exceed four and a quarter inches in the widest part; it must not be more than thirty inches in length.

The stumps, or wickets, must be three in number, twenty-seven inches out of the ground.

A DIARY FOR YOUNG RURALISTS.

EDS. NEW-YORKER:—I have been a constant admirer of the *RURAL*, and have written some articles which were duly published. Below I send you a form of Diary Book for the use of all Young Ruralists, as well as old:

1859.	October.
Day week.	Day month.
Monday.....	3.—Husking corn.
Tuesday.....	4.—Husking corn in the forenoon—rain in the afternoon.
Wednesday..	5.—Husking corn one-half day—went to mill.
Thursday....	6.—Finished husking corn.
Friday.....	7.—Digging potatoes—finished the same.
Saturday....	8.—Plowing. Fair weather.

You might use, in connection with the above, a Weather Book. I commenced keeping a book, similar to the above, while quite a lad, and am still continuing with it. It is much better than to trust to memory alone. Note down in your book at evening what has been your occupation during the day, and take my word for it, after three or four years, money could not buy the book. Its worth is not estimated in dollars and cents. You cannot tell its true value. It will be a source of pleasure to you in old age to peruse its pages, and see the vast amount of labor those calloused hands have wrought. It will be a pattern for your children to imitate when you are gone. Besides, it may be of service to you in court, if any trouble should occur, as you could refer to its pages any moment.

OSCAR BERRY.

Fon du Lac, Wis., 1859.

KOHL-RABI.

EDS. RURAL NEW-YORKER:—I wish to make a few inquiries, and if I may be permitted, through the *RURAL*, 1st. Where can I obtain some seed of that species of turnip called the Kohl-Rabi, mentioned in a late number of your paper? Also, is this vegetable ever used for the table? 2d. Being ignorant of the names of any seedsmen around Boston or Philadelphia, I wish to be informed on that point, as I wish to get some seed of Lord Kenyon's Favorite Cucumber. 3d. Which is the right season for planting grape seeds to insure their growth, and at what depth should they be planted? 4th. Will the Diana thrive as well in Central as in Western New York? A YOUNG SUBSCRIBER.

Canastota, N. Y., 1859.

1st. Kohl-Rabi seed can be purchased of almost all our leading seed-dealers—Hovest & Co., of Boston; B. K. BLISS, of Springfield, Mass.; THORNTON & Co., of New York, &c. Prepared for the table like the turnip, the Kohl-Rabi is very similar in all respects. 2d. Answered above. 3d. Grape seed may be planted as soon as obtained from the fruit. Cover with three-fourths of an inch of earth. 4th. The Diana Grape will succeed, we have no doubt, in Central New York. In fact, there are not many localities in this State, where corn crops are planted, where this grape could not ripen well.

OPPOSITES.—The most dangerous vermin are too often to be found under the fairest and sweetest flowers, and the fairest glove is often drawn upon the foulest hand, and the richest robes are often put upon the most diseased bodies; so are the fairest and sweetest names upon the greatest and most horrible vices and errors that are in the world. O, that we had not so many sad proofs of this among us!

LIST OF NEW ADVERTISEMENTS.

MOORE'S RURAL NEW-YORKER NEWS DEPARTMENT.

ROCHESTER, N. Y., NOVEMBER 5, 1859.

THE RURAL NEW-YORKER FOR 1860.

"PROGRESS AND IMPROVEMENT."

THE ELEVENTH VOLUME of the RURAL NEW-YORKER will commence January, 1860, in a New Dress and with other improvements—as we have resolved to celebrate its Tenth Birth-day in a manner worthy of its age, success and reputation. As stated in the accompanying Prospectus, the new volume will FULLY EQUAL (if not far excel) the present in all important essentials. To its thousands—aye, tens of thousands—of ardent friends all over the land, we offer no special or detailed pledges to insure their continued confidence and support. They know the RURAL, and that its Conductor has ever fulfilled his assurances and obligations to community, regardless of pecuniary and personal sacrifices—and can judge of the future from past knowledge and experience. That its friends will continue to lend it their individual support we are confident;—would that we were as certain of their introducing the RURAL to the notice and support of others, thereby augmenting its usefulness. We hope many will make some effort in that direction during the ensuing few weeks—and now is the best time to begin.

The great success which the RURAL has attained, is justly attributable to the efforts of its earnest, working, influential Agent-Friends—those who have manifested their appreciation of it as a progressive, high-toned, reliable, instructive and entertaining RURAL AND FAMILY NEWSPAPER, by increasing and extending its circulation in their respective localities. This we gratefully appreciate and acknowledge. And we frankly ask all who have so generously aided in placing the RURAL in its present eminent and useful position, to second our efforts and those of new friends in fully maintaining its standing and increasing its influence for good throughout the country. Will not some kind friend of the paper and its objects—You, Reader, see that the people of every town where a copy is taken have an opportunity to subscribe? We are satisfied its subscription list may be doubled or quadrupled in hundreds of towns, if the people are only asked to take the RURAL—for all who have ever read it, know it is a good, safe and reliable paper for every progressive class, and especially for the Rural Population. The most important requisite is to secure for the paper a representative in every locality where it has no active agent,—some one who will see that its claims and merits are properly presented to individuals, families and community. And if you, Reader, (instead of waiting for some one else to begin) will think and act in its behalf, or enlist the right person in the good work, the object will be attained and the interest of all parties promoted.

—For reduced Club Terms, Special Notices, &c., see first column of next page.

DOMESTIC NEWS.

Matters at Washington.

The last mail from England brought advices to the Government, from distinguished sources, respecting the present unsettled condition of affairs in Europe, by which it appears none can see how the difficulty attendant on the Italian question can be settled, or what will be the result of the Zurich Conference. It is evident that the various sovereigns are all armed, being apprehensive of a general war. England, it is said, has no power to depend on excepting Germany, and being favorable to the reform movement in Italy, she knows not how to act between the two, as she is fearful of losing the friendship of the one in the advocacy of the other. Russia, who, since the Crimean war, has had no more continental alliances, awaits events before coming to a decision as to what part she will take, and with the view of acting intelligently, the Emperor has ordered his ministers from the principal courts to join him at Warsaw, in order to give him ample information on the state of the respective courts to which they are diplomatically assigned. For prudential reasons, more than the usual caution seems to be observable in official quarters, in concealing from the public the present condition of the San Juan Island question, and hence the contradictory statements prevalent concerning it.

Intelligent gentlemen who have just arrived in Washington from the Pacific coast, say that the people there will be surprised at the visit of Lieut. Gen. Scott to San Juan, as only in the Atlantic States has that island been magnified to the importance of a continent, while it belongs to the United States, and will be retained. They add that it is really not worth quarreling about, and that its value has been surprisingly over-estimated.

The Herald's Washington correspondent says that a treaty has been signed between Spain and the Miramon Government of Mexico, upon the following basis:

1st. Acknowledgement of all existing treaties between that Government and Spain, and perhaps of all conventions.

2d. All crimes committed at Cuernavaca and at other places, to be punished.

3d. Pecuniary indemnification for damages and losses suffered by public and private interests on account of said crisis, and in consequence of Mexico having failed to fulfill the conditions of former conventions, with regard to Mexican and Spanish subjects. Finally, the arbitration of either

the Emperor of the French or the Queen of England in any differences arising between the negotiations in the question of indemnification and pecuniary arrangements. The importance may be seen in the fact that while this apparently provides for the settlement of difficulties which have for years existed between Mexico and Spain, and on account of which Spain had assumed a warlike attitude towards Mexico, it is a hostile proceeding against the government of Juarez. It is said the Liberal party of Mexico will rejoice at this prospect of a war with Spain, as it will enable them through outside assistance to conquer Spain.

The Treasury receipts for the week ending Monday, were nearly \$106,000; drafts paid, \$1,213,000; drafts issued, \$1,275,000. The amount subject to draft is \$4,503,000, being a reduction from the amount on hand the preceding week of \$169,000.

Personal and Political.

HON. WM. JARVIS, of Vermont, who was a noted politician of by-gone times, and was appointed Charge d'Affairs to Portugal by President Jefferson, died last week at the age of 80 years, on the farm where he has lately lived in retirement.

ROBERT STEPHENSON, the celebrated English Engineer, whose death is announced, was born in 1803. He first gained distinction by winning a prize for "constructing the best locomotive," in 1828, being then proprietor of a steam engine factory at Newcastle. He supervised the construction of the London and Birmingham Railway and others then in progress, and was afterwards called abroad by the Kings of Belgium and Norway, to advise in regard to railroads in their dominions. The achievements which gave him his highest reputation, however, were the Tubular Bridges over the Menai Straits and the Conway, unparalleled works in art. He has been in Parliament, and was politically a Conservative and Protectionist.

The Republicans of Kentucky will meet in Convention on Wednesday, Nov. 16th, at Newport, to organize the party in the State; to form a Presidential Electoral ticket; appoint two Senatorial delegates for the State at large, and transact such other business as may come before the Convention.

All persons concede the election of Roger A. Pryor, of the Fourth Congressional District, Va., by a majority of from 1,200 to 1,500.

The official returns of the late election in Pennsylvania have been published from every county in the State except Venango, which has not yet been received. Without Venango the vote stands as follows:—For Auditor General—Thos. E. Cochran, Opposition, 179,818; Richardson L. Wright, Democrat, 162,707—majority for Cochran, 17,106. For Surveyor General—Wm. H. Keim, Opposition, 180,270; John Rowe, Democrat, 162,218—majority for Keim, 18,052. The returns from Venango will add a trifle to these majorities. The total vote of the State will be about 23,000 less than it was in 1858, and about 115,000 less than it was in the Presidential election of 1856.

In the details concerning the Insurrection at Harper's Ferry, as heretofore published, the Hon. Joshua R. Giddings seemed to be more or less intimately connected with the movement. Mr. G., at a meeting in Philadelphia the other day, denied all knowledge of the affair.

Cook, another of the Harper's Ferry filibusters, was arrested at Montello, fourteen miles from Chambersburg, Pa., on the 26th ult. His printed commission, signed by Brown, was found upon his person. He was fully armed, and made a desperate resistance. He was almost starved, and came from the mountains into the settlement to obtain provisions. Gov. Wise made requisition, and Gov. Packard surrendered him to the Virginia authorities. He arrived in Charleston on the 28th.

The Kansas Democrats held their State Convention at Lawrence on the 27th ult., and nominated Samuel Medary for Governor; John A. Holdeman for Congress, and Judge Williams, present Surrogate Judge, for Chief Justice.

Sinking of the Steamer New World.

At 7 o'clock on the evening of the 26th ult., a terrific accident happened to the steamer New World, while on her way from New York to Albany. She was opposite Tabby Hook, about twelve miles from New York, when the engineer was startled by the ringing of the alarm bell. He was in the fire-room at the time, and instantly springing toward the machinery, saw that it was out of order, and, stopping the engines, gave orders to the firemen to put out the fire, but before this could be done, the walking-beam broke, and in its course took the piston rod along with it. These carried the rest of the machinery with them, which fell, breaking through the bottom of the steamer with a heavy crash, and leaving a large hole through which the water rushed with dreadful force. In a few moments it was ascertained that she was sinking rapidly, and the excitement became intense. Three hundred passengers were on board, and inevitable death appeared to be staring them in the face, as no vessels were near. The night was pitch dark, and the snow fell thick and fast. The pilot had turned her bow towards the west shore, with the intention of running her aground, but she only went a short distance, as her machinery being broken, the propelling power soon ceased.

About fifteen minutes after the accident occurred, the shouts of the passengers on the hurricane deck had attracted the attention of the crew of the sloop Jack Downing, Captain Erastus W. Crane, bound for Albany, from Elizabethtown, with a cargo of coal. By the exertions of the Captain and the crew, she neared the sinking steamer, and ropes were thrown from the vessel. With her heavy load of coal the little sloop could not, with safety, take but one-quarter of the passengers; and the ropes were cast off. At this moment—the steamer, sinking lower and lower—the steamers Ohio and Mercury came alongside and carried off the rest of the passengers. It is thought that all were saved—if not those who perished were the victims of uncontrollable fear. The New York papers say it is estimated that at least \$20,000 worth of freight has been destroyed, and the damage to the boat cannot fall short

of \$75,000. The saloons are ruined, furniture destroyed, and the machinery rendered completely useless. Add to this the cost of raising the wreck, and the total loss of property will amount to little less than \$125,000, upon which there is but a partial insurance. The frame which supported the walking beam was quite rotten, and the only wonder is that the accident did not occur long ago. The break occurred about five feet from the top, and the force with which the heavy mass was thrown forward snapped large iron rods as though they were pipe stems.

News Paragraphs.

The arms recently furnished to a colored volunteer company of the city of Philadelphia, have been taken away by the Adjutant-General, in consequence of the Harper's Ferry affair.

The Washington Constitution contains a list of one hundred and seven post offices in the Southern and Western States and Territories which were discontinued by the Postmaster General during the week ending Oct. 8.

In Jolly Fraction, Monroe County, Ohio, only one vote was cast for Senator, Representative and Member of Board of Equalization. To poll that vote the employment of six persons were necessary, viz: two clerks, three judges, and a messenger to bring the returns to the clerk's office. The cost to the county cannot be much less than fifteen dollars for that single vote.

The largest bar of gold ever brought to this country was received on Monday week by the American Exchange Bank, of New York, from California, by the steamship Star of the West. It weighed 2,237 ounces, and worth \$41,226. It has been sold to shipment for England.

The amount of salt manufactured at Syracuse, New York, is seven millions of bushels yearly. The annual revenue to the manufacturers is three millions of dollars, and the income to the State seventy thousand dollars, as a tax of one cent per bushel is charged by the State on all salt manufactured. The whole amount of salt manufactured in the United States is sixteen millions of bushels yearly.

Minor names were almost unknown one hundred years ago. In an old Boston paper of Oct. 1759, the Transcript says out of 68 names of persons in the paper, not one has a middle name.

The annual income of the Marquis of Westminster, who owns about one-half of the "West-end" of London, besides vast landed estates in the Provinces, is £800,000, or \$5,500,000 in our money. The late Dwarkanath Tagore, of Calcutta, died of a broken heart some twelve years ago, because in the commercial panic of 1847 his fortune had dwindled down to only ten millions of dollars. With us, when a man is supposed to be worth \$100,000 he immediately obtains the title of Millionaire.

PAPER MONEY was first made by Massachusetts in 1690; by Connecticut, in 1709; Pennsylvania, 1723; Maryland, 1740; Rhode Island, 1744,—and in 1759 almost every province issued paper currency. It was first issued by Congress in 1775.

A BILL is under consideration in the Legislature of Tennessee, providing that all free persons of color over eighteen and under fifty years of age, shall either leave the State or go into slavery.

The St. Louis Democrat says that on Wednesday last, 25,000 pounds of New Mexican wool arrived at St. Joseph from Leavenworth city, for shipment to the East by the Hannibal and St. Joseph Railroad. The consignees at St. Joseph are looking for the arrival of 150,000 pounds more in a few days.

Of the three thousand voters of Washington Territory, two thousand are desirous of entering the matrimonial state, but there are no marriageable girls there. The Puget's Sound Herald plaintively calls for New England damsels to satisfy the demand for "a good article."

An Illinois court has recognized the legal character of the Jewish Sabbath, which begins at three o'clock P. M., on Friday, and lasts for twenty-four hours. How many Sabbaths have we?

Gov. WELLEN, of California, has just transmitted \$1,000 to the Washington National Monument Society, being the amount the State, through its Legislature, has resolved to contribute annually until the monument is finished.

A firm in Portsmouth, Va., has received a consignment of two tiers of sugar and two tiers of molasses from Liberia. The consignment was from Chas. Cooper, a colored man who left that city in 1856, and was the product of his farm.

There are within the limits of the city of Selma, Ala., fourteen artesian wells, which have an average depth of about four hundred feet, several of them throwing water to the extent of 600 gallons per minute.

TRIAL OF "OSSAWATOMIE" BROWN.—Prosecution and defence in this trial closed their labors, as far as the introduction of evidence is concerned, on Saturday evening, 29th ult., and were to sum up to-day,—Monday. Messrs. Green and Botts, counsel for Brown, threw up the case, because of the defendant's declaration of a lack of confidence in them. Hoyt of Boston, Magruder and Chilton, of Washington, had it in charge at last accounts, and Judge Tilden of Ohio, was expected to assist. We learn by telegraph that Cook has been all day busily writing, and is understood to be preparing a full confession, by the advice of Gov. Willard, in hope of obtaining a pardon.

ARRIVAL OF THE OVERLAND MAIL.—The Overland Express from Denver City, the 20th, with \$6,000 in dust, arrived at St. Louis on the 27th ult. The election of Dr. Williams as Delegate to Congress, is confirmed. An election for or against a provisional government was to come off on the 24th. Mining operations were drawing to a close for the season.

FEMALE SHARP-SHOOTING.—At Hartford, Ct., on Friday, Mr. Robert Chadwick, having just finished a contract for one million cartridges, gave an entertainment to his employees at the Sharp's Rifle Factory, one feature of which was a target shoot by thirty young ladies, who handled the Sharp's rifles with a skill that would have been creditable to the other sex.

FOREIGN NEWS.

GREAT BRITAIN.—The London Times says that the terms of the Zurich treaty are almost identical with those of the Villa Franca arrangement.

The London Post says the preliminary negotiations for Congress are only going on, it being much easier to plan a Congress than to complete the necessary preliminaries. England is pledged to enter no Congress until the independence and free action of Italy are previously understood to be guaranteed.

The Post had a dispatch from Paris, on the 19th ult., stating that three distinct instruments will be signed at Zurich. The treaty between France and Sardinia will be signed in a day or two. The tripartite treaty will be signed subsequently.

The Post further says, that assuming its information being correct, the further proposals concerning the questions left open, which it is intended to submit to the approval of the Congress, are of such a nature that the diplomats at Zurich have only heaped up materials for fresh difficulties. England can and will take no part in any Congress of which the first principle be not the recognition of the right of the Romagnese and Tuscans, no less than the Modenese and Parmesan States, to self-government. The first cannon shot fired to force on the people of Romagna, Modena and Tuscany, any other rules than the Italian Prince, in whom they so fondly put their trust, will be the signal of a conflict as deadly as the one just brought to a close.

FRANCE.—A treaty of peace was signed between France and Austria on the 17th ult.

The rumor that France demands 300,000,000 of francs as a war indemnity from Piedmont is pronounced false. She claims only a reimbursement of the 60,000,000 francs advanced to that government in arms and provisions.

It was reported that the Arch-Bishop of Bordeaux will visit Rome to press on the Pope the necessity for a reform in the government of the States of the Church.

It was asserted that France will not recall her troops from Rome until the form of government there renders their presence no longer necessary. Deputations from Parma and Tuscany had had a satisfactory interview with Napoleon.

Several fruitless attempts had been made to revolutionize Venetia and Southern Tyrol.

It was asserted that the Pope, in concert with Napoleon, is about addressing a manifesto to the States of the Church.

Reports were current of approaching changes in the French Ministry.

The *Moniteur* explains that the French fleet will be sent to Morocco on account of the attitude assumed by England towards Spain—the English fleet, probably being intended to counter-balance its operations.

The *Paris Patrie* contradicts the statement that the Sultan had ordered the suspension of the works on the Suez canal, but it nevertheless asserts that the works had been entirely discontinued.

ITALY.—The news from Italy is interesting, and indicates approaching trouble. The banking house of Nosedà & Borwer, at Milan, had subscribed 100,000 francs towards the Garibaldi fund for purchasing muskets. It is stated that the whole Neapolitan frontier was lined with troops, and the Montreassini fortified with cannon.

The Grand Duke of Tuscany had written to his partisans to abstain from every attempt in favor of his dynasty.

The idea of occupying Parma with Sardinian troops had been abandoned.

Great activity was apparent in the arsenals of Naples. The army was also being placed on a war footing.

A dispatch from Florence states that the exequator of the American Consul at Leghorn had been withdrawn on account of his having engaged in political intrigues. An explanatory dispatch has been sent to President Buchanan by the Florentine Cabinet.

The official Piedmontese Gazette states that on a representation made by Sardinia, Austria had suspended the works at Bocco d'Orfo, and had notified her that the mines were blown up by mistake, expressing at the same time regret at the occurrence.

The Sardinian Government was considering the expediency of fortifying Brescia, Lonata and Cremona.

The report that Naples had promised military assistance to Rome is discredited, as the King of Naples fears the invasion of his own territory.

A Revolutionary Committee at Ferrara was giving the Austrians great annoyance. It was formed for the purpose of assisting the Venetians to join the National Army.

The Neapolitan corps d'armie on the frontiers was continually increasing, and will amount to 30,000 men.

CHINA.—The *Times*' correspondent regards the reception of Mr. Ward as a most politic stroke of the Pekin Cabinet, but it does not at all remove the treachery to the British Ministry.

The *Friend of China* says, that as the American treaty gives the United States liberty to tender their good offices in any difficulty with the Western Powers, Mr. Ward will soon have an opportunity of testing the virtue of this clause.

INDIA.—Late news had been received from India by the Red Sea Telegraph.

Central India was still unsettled. The frontier districts of Nepal were occupied by Nana and his followers. The Maghars were still in insurrection, and a force was to be sent against them. The authorities at Pekin are represented as ready to receive the British Minister on friendly terms; meanwhile the India Government had been applied to for 15,000 troops for China, and two regiments were under orders to depart.

COMMERCIAL.—Broadstuffs.—Broadstuffs depressed, the improvement noted at beginning of the week being all lost. Flour 22c@24c; Red Wheat 90c@91c; White do. 89c@90c; Yellow Corn 6c@6.5c; White do. 6.5c@6.75c. Provisions.—Very little doing in beef. Sales of pork at 60c. Lard quiet.

It appears, from a report just published, that during 1858 the railroads of Great Britain transported 140,000,000 persons, of these only twenty-six were killed—one in five millions.

The News Condenser.

—Money is worth in San Francisco from 24 to 30 per cent.

—Bishop Kemper, of the Episcopal Church resigned.

—The population of Mobile is set down at thirty-two thousand.

—Amicable relations are established between Turkey and Persia.

—Mills' Statue of Washington was cast last week at Washington city.

—In the wine districts of France, each person drinks 780 bottles in the year.

—The emancipation of the peasants of Russia has been adjourned for one year.

—A fire at Louisville, Ky., Saturday week, destroyed property to the value of \$103,000.

—A well-preserved colossal bronze bust of Cicero has been discovered near Pompeii.

—Advices from Houston and Galveston to the 13th ult., state that the fever is unabated.

—Advices from Northern Mexico indicate the thorough disorganization of the Liberal forces.

—Troops have been sent to Brownsville, Texas, to protect our citizens from the Mexican banditti.

—Sardinian Journals speak of an insurrectionary movement having shown itself lately at Palermo.

—The ranches on the Texas side of the Rio Grande have been abandoned on account of Indian depredations.

—General Scott left Acapulco on the 9th ult., and must be at the seat of the San Juan difficulties by this time.

—The loss to English spinners by the "sanding" of American cotton is computed at £1,500,000 sterling yearly.

—Colonel Hebron, of Vicksburg, Miss., has 10,000 pear trees, from which he realized over \$30,000 last season.

—P. T. Barnum is doing the people of East Bridgeport a great service in planting shade trees on their streets.

—Senator Douglas has recently had born unto him an heir of his fame and estate, who will be known as "Ellen."

—Deaths from eating toadstools are recorded in various quarters. Mushroom seekers should take warning.

—The earnings of the Auburn State Prison for the nine last months exceed the ordinary expenditures \$9,193.90.

—Thomas Francis Meagher has gone to Costa Rica as bearer of dispatches to the United States Minister at that point.

—Cast-iron axle boxes have been lined with glass and in a few instances the wearing condition proved satisfactory.

—Port-au-Prince advices to Oct. 1st represent the city to be in a state of siege; the excitement was abating, however.

—The dome of the court house in St. Louis, which cost \$30,000, has been condemned as insecure and perilous to life.

—A consignment of 10,000 cigars for Louis Napoleon has arrived at Norfolk, Va., en route for France. They cost \$300 per M.

—At the opening of the Court of Common Pleas in Cleveland, last week, there were 55 applicants on the docket for divorce.

—All the women of the villages on the Gulf of Mexico are in the habit of swimming. The young ladies are all diving belles.

—Some of the members of Rev. Dr. Chapin's church, in New York, have presented him with a \$24,000 house, on Thirty-Fifth street.

—M. Victor Mennet, a well known scientific writer, informs the world that the next deluge will not take place for 6,300 years.

—The natives of the Sandwich Islands, like the Indians of this country, appear to fade away upon the approach of foreigners.

—Letters from Naples say the King had offered to lead troops to the Pope, in consequence of the withdrawal of the French.

—The San Francisco Times of the 10th ult. says three distinct shocks of earthquake were felt at Mariposa on Monday night previous.

—The amphitheater at the Fair Grounds near Independence, Ky., was destroyed by fire on Sunday week. Loss \$5,000; no insurance.

—Intelligence has been received at Boston of the death of Mrs. Marsh, one of the Missionaries of the American Board at Mosul.

—Shipments of wheat from Milwaukee last week were 500,000 bushels—five times as much as during corresponding week last year.

—Gen. Garibaldi has issued a Proclamation summoning the Italians of the Legations to arms, and a collision is shortly expected.

—Recently Mr. Treshaw, late Rabbi of the Jewish synagogue to Quebec, was, with his whole family, baptized in the Methodist church.

—J. C. Gangooly, the converted Brahmin, is writing a book to correct the erroneous ideas of Americans with regard to the Hindoo religion.

—A New York paper says that "Rev. Wm. H. Milburn, the blind preacher, lectured last evening upon 'What he saw in England.'"

—A *Revue Spirite*, containing reports of table-turning, spirit-rapping and other like manifestations, has been recently started in Paris.

—The *Utica Herald* says "marriages have become epidemic among us. Bachelors and maids will soon be as scarce as summer flowers."

—Hotel life is to be eschewed by many of the members of Congress, who will take houses and reside with their families in Washington.

—The receipts of gold dust at Leavenworth and vicinity during the last fortnight, amount to two hundred and fifty thousand dollars.

—The papers of Prussia complain that great numbers of young men leave that country clandestinely for the U. S. to avoid military service.

—A frightful explosion took place at Birmingham, Eng., Sept. 23, in a percussion cap manufactory. Eighteen killed and as many wounded.

—The monument of Henry Clay, in Lexington, Ky., is nearly completed. It is said to be one of the handsomest works of art in the country.

—Gold has been found in some of the cobble-stones brought from the mining district east of Sacramento to pave the streets of San Francisco.

—The British aristocracy, says a London paper, like our modern ships, is not built of British oak only, but of timber from all parts of the world.

—Mr. Fawkes, the inventor of the steam plow, has received an order from a gentleman in Scotland, to manufacture and ship a plow to that country.

A FAHNESTOCK & SONS

OFFER GREAT INDUCEMENTS AT THE
TOLEDO NURSERIES.
 Horticulturists and others wishing to purchase small stock
 for the West and South, would do well to call and examine
 the following desirable articles, offered at the lowest rates:
 10,000 Apple Trees, 3 to 4 feet, very fine, \$30 per 1,000; by
 quantity, \$15 per 1,000.
 500 feet Apple Trees, 1 year from graft, \$35 per 1,000; by quan-
 tity, \$20 per 1,000.
 50,000 Apple Trees, grafted this coming winter and sent out
 in the spring, at \$5 per 1,000; when 20,000 are taken, at
 \$6 per 1,000.
 20,000 Standard Pears, 1 year old, very strong, from bud,
 \$20 per 100; \$100 per 1,000.
 25,000 Dwarf Pears, 1 year old, very strong, from bud, \$15
 per 100; \$150 per 1,000.
 10,000 Dwarf Pears, 3 years from bud, \$35 per 100; \$300
 per 1,000.
 3,000 Standard Plums, on plum stock, 1 year, \$30 per 100;
 \$300 per 1,000.
 15,000 Cherries, Standard, 5 to 7 feet, very fine, \$15 per 100;
 \$150 per 1,000.

15,000 Blackberries, from cuttings, very strong,
 \$30 per 1,000.
 40,000 Currants (in 13 varieties,) very low; Red and White
 Dutch, \$40 per 1,000.
 15,000 Lawton Blackberries, \$3 per 100; \$60 per 1,000.
 10,000 Latham and Victoria Rhubarb, \$50 per 100; \$50 per
 1,000.
 20,000 Anders Quince Stocks, \$15 per 1,000.
 30,000 Isabella, Catawba and Clinton Grape Vines, 1 year,
 \$30 per 1,000.
 15,000 Isabella, Catawba and Clinton Grape Vines, 3 years,
 \$50 per 1,000.

20,000 Norway Spruce, 18 inches, 50 per 1000.

WATER PIPE.

THE CHEAPEST & MOST DURABLE IN USE.

supply the demand for this Pipe, but have recently made the
arrangements for the manufacture on a more extended
scale, and hope hereafter to be able to fill all orders
promptly.

This Pipe is made of Pine Timber, in sections eight feet
long. It is easily laid down, not liable to get out of order,
and is especially valuable, in the most durable of any kind of
Pipe in use.

We can produce any amount of evidence of its durability,
capacity, strength and superiority over any other.

The price of the Pipe commensurate for farm purposes,
is such as to permit of its being used for all purposes.

Our Manufactory is at Tongayanda, Erie Co. but orders

Written for Moore's Rural New-Yorker.
TO FORGET—TO REMEMBER.

BY J. M. BENDER.

To forget that we've lived,
To forget that we've loved,
That our hearts have been grieved,
Our sorrows been moved;
That faulty regrets
Like a king on the earth,
That troubles and pains
Are the offspring of birth;
That hearts are untruthful,
That passions are wild,
That lessons are useful,
But when reconciled
To time, joy and sense,
And present delight,
The heart driving hence
The question of right—
That honor lies covered
By clouds of deceit,
Where sun-rays are smothered,
Though never so fleet—
That justice is coward,
Its voice ever still,
Its action untoward
At policy's will—
That truth crawls on earth,
Like a vile, hated thing,
Well known for its worth,
Well feared for its sting!
To forget that each light
Bears a dark spot within,
And that each falling night
Is a seal to our sin,
Were a joy in the heart
Drawn from gladness' deep well,
That would bid care depart,
And happiness dwell;
But yet if with dross
We lose bright flakes of snow,
Our gain is all loss,
To forget is but woe.

To remember the good
That drops in our way,
The blessings that flowed
Wherever we stray,
The sunlight whose kiss
Fills our weak, trembling frame,
With an ecstatic bliss,
With a pure holy flame,
The soft, dreamy night,
With the stars and the moon
That shed down their light
Like a gentle perfume;
The earth and the sky,
And the forest and grove,
That draw the heart nigh
To the Great Heart of Love—
And the friends that through near,
Sweet time to employ,
In sharing each tear
In doubling each joy;
And the broad, arching pile
When lit up by the sun,
So like to the smile
Of the Infinite One;
Oh, to realize the joy
We've had from our birth,
And how slight the alloy
Of nature and earth!
How fair every flower,
How green every sod,
How sweet every hour,
How blessed by our God!

Watertown, N. Y., 1899.

Written for Moore's Rural New-Yorker.
HOWARD STREET.

BY NETTIE.

The long walk down town from Madison street, where Mrs. JEFFERSON lived, could be very much shortened by passing through a dirty alley, designated "Howard Street." Mrs. JEFFERSON seldom availed herself of the advantage this "across way" offered; but one day, being in great haste, she said to herself, "I think I will venture to go through that filthy lane."

Accordingly she drew down her face to its greatest possible length, and with a frown on her brow, set her pretty gaitered foot on the dirty walk. Passing along, bemoaning the necessity which subjected her to the annoyance of such miserable spectacles and offensive odors, she approached a group of boys amusing themselves with pop-guns. Half a dozen voices shouted "Pop goes the weasel!" and the potato from the guns of the accurate marksmen came in contact with Mrs. JEFFERSON's nose. Darker grew the frown on her brow, and darker still as she received unmistakable evidences that the next aim was taken at her back. An expression of disgust mingled with Mrs. JEFFERSON's frown as she discovered a dirty little child smiling at her through a cobweb-curtained window. The baby's sister saw the look on her face, and treated her to a splash from a mud-puddle by the door.

"You nasty thing!" said Mrs. J., but she was answered by another splash, and hurried on.

Some boys were making miniature locomotives of mud on the walk. They did not observe the lady's approach until her fretful voice inquired, "Can I pass?"

"Yes! just as quick as we get this infamy done," said one.

"Let her go by, BILL," only don't tip the cars over with your hoops," said another. The boys considered this a very witty remark, and they went forth long and boisterous shouts, which were anything but musical.

all improved by contact with the dirt. The faces of "those horrid children" seemed to haunt her, too.

She went home by the "furthest way round," resolved, whatever her haste might be, never again to try to save time by passing through Howard street. Just behind her tripped along her little neighbor, Mrs. BALDWIN.

"Rather uninviting," she said to herself, as her happy face looked down the dingy alley, "but I'll try and see how many smiles I can get from the dirty little folks."

With a grateful feeling in her heart that God had drawn her lines for her in pleasant places, she reached the pop-gun marksmen, who had just taken such successful aim at Mrs. JEFFERSON. "Now for my smiles," thought Mrs. BALDWIN, and she greeted the boys with such a frank and genial look that she won pleasant answering smiles from all of them but one. He was so busy getting his pop-gun into shooting order, that he did not see her face until the other boys exclaimed, "Hold on! Tom! Don't shoot that lady."

Tom looked up with an expression which said, "I will if I have a mind to," but the lady gave him such a merry smile, that he drew back a little, and Mrs. BALDWIN heard him say,

"Well, I'd rather not shoot her, I reckon!"

The dirty baby was still peeping through the cobwebs. He caught a glimpse of the sunshiny face, and instantly commenced such a crowing and capering that the lady had to stop and look at him, and said, aloud,

"What a dear baby you are." Baby's sister saw the admiring look and heard the praise bestowed, and she hurried to the door, broom in hand, not this time to improvise a shower from the mud-puddle, but she said,

"The walk is so dirty for your nice dress I want to brush it off for you."

The little engine-makers were engrossed with their mud toys, and hesitated about leaving their play long enough to let the lady pass, but she said, pleasantly,

"These are very nice locomotives, boys; I'll try and not come in collision with them."

The boys made way for her right quickly, and from the lips of more than one of them, came a

"Beg pardon, madam."

Every little child was ready to give back smile for smile, and it was with a face perfectly radiant with happiness that she greeted her friends as she passed down Main street. Mrs. BALDWIN told her husband all about her walk and her adventure, and he, (silly fellow,) kissed her and said, "Bless your dear heart, wife! You are a perfect little sunbeam. Who, besides you, could find anything but wretchedness in Howard street?"

Mrs. JEFFERSON thought she would never go near the dirty alley again, but on talking with some of the ladies of a benevolent association about the degradation of its inhabitants, she consented, after considerable urging, to go as a missionary to the "poor miserable creatures."

She supplied herself with a bundle of tracts, and taking care to wear clothing which would suffer least injury from dirt, she sallied forth on her mission.

"Dear! dear! me!" she said, as she entered a wretched domicile,—"I should think you would infect the whole city with fevers and cholera! Don't you know it is shamefully wicked for you to be so dirty? Are you a friend of the Savior?" she added, in a solemn tone.

"I don't want to be, if you are," was the reply.

"Here are some tracts I would like to have you read, if you can."

The woman snatched the tracts from her hand, tore them in pieces, and threw them into her visitor's face.

Shaking the dust from her feet, Mrs. JEFFERSON passed from one dwelling to another, making similar remarks, and meeting with a similar reception.

"Here comes that cross woman who looked so ugly at baby," said baby's sister and champion, and she slammed the door in Mrs. JEFFERSON's face.

"I should think you would be sick, and I should think your husband would drink," said Mrs. J. to a pale, feeble-looking woman. "I am not surprised at it, at all. You oughtn't to live in this miserable way." She did her duty distributing her tracts, but she had the satisfaction of seeing the most of them follow her into the street, and the rest were consigned to the flames.

"Those creatures are hopelessly depraved," said Mrs. JEFFERSON. "There's no use in trying to do anything for Howard street."

Mrs. BALDWIN could not help feeling an interest in the children who responded so readily to her kind looks, and so, without telling even Mr. BALDWIN what she proposed to do, she set out to make some calls among them. She thought she would call first where the baby lived, for she felt quite sure of a kind reception there. 'Twas a right joyful welcome they gave her, for baby's sister exclaimed, "Oh! here is the pleasant lady who stopped to look at Patsy the other day! Oh! she's coming right in here!"

"It's too dirty a place for the like of ye," said Patsy's mother.

"Never mind," said our sunshiny Mrs. BALDWIN, "I felt like dropping in, and thought I would take the liberty."

"Bless ye for it! but I am ashamed to have a rale lady see my house. Things didn't use to go so wild me! No, indade!" and the poor woman poured her life's history into the stranger's ear.

Tears filled the listener's loving eyes, and she replied,—"I think I can understand your feelings, my good woman. A poor, weary body must require rest after she has been out over a wash-tub all the day—but this smart little girl who swept the walk so nicely for me the other day, could make a capital housekeeper, I am sure. Won't you try it, my little girl? Won't you find a place for everything, and scrub everything up clean, and keep the house nice and tidy? Try! so when I call again I can say, 'How nice you look here?' Wash your dear little baby-brother's face, and brush his hair and have his clothing clean, and I shall love to tend and kiss him, for he is a beautiful baby, I think."

Mrs. BALDWIN called upon every family in Howard street that afternoon. None treated her rudely, and many opened their hearts to her as the baby's mother had done. They promised to follow the

kind advice she offered, while her tears fell with theirs, and the kind look and encouraging words left sunbeams in the cheerless homes after she had gone.

In two or three weeks Mrs. BALDWIN called again. Baby's sister bounded to meet her, exclaiming with delight, "The sweet lady has come at last! she's come at last!"

The "sweet lady" could hardly believe it was the same place where she called before. The cobwebs had been brushed down. The old broom, instead of doing service in the mud-puddle, had swept and scrubbed the floor. Everything was in order. A few weeds and common flowers formed a bouquet for the table, and the crowing, capering baby was perfectly bewitching in his wholesome cleanliness.

"Well done! my brave little girl! I hope you will keep on."

"Keep on? Indade, and I will keep on, ma'am! Father says he won't stay away nights as long as everything is so nice and pleasant here—and mother says she can rest a great deal better when she comes home, and her face looks so happy, too! O! aint it nice to be clean?"

Some had failed to carry out their plans of reform, but others had succeeded and testified to the delights of a neat, orderly home. The indolent and discouraged housekeepers were roused by the good example of their neighbors, and one by one they followed suit until at length the little heaven had leavened the whole lump.

After two or three such friendly visits, Mrs. BALDWIN took some tracts with her. They were not only kindly received, but different families met together to hear them read,—not so much for the good they might get as for the kind lady's sake. The tracts produced good effects, however, and from time to time there were added to the various city churches from the inhabitants of Howard street, of such as shall be saved. * * *

It was two years ago that Mrs. B. made her first call in the dirty alley, and now the walk which shortened the way down town is lined with neat cottages, with flowers in the yards and vines curtaining the windows,—the homes of sober, contented, working men and women. Mrs. JEFFERSON wonders, with many others, what can have wrought such happy changes. Mrs. BALDWIN has never blazoned her successful work abroad, but she thanks God that He made her the humble instrument of beginning the good work in Howard street.

SALMAGUNDI.

To love, is everything; love is God.—Leon Goetzian.

Our powers owe much of their energy to our hopes.—Johnson.

Slight small injuries and they will become none.—Fuller.

Love is precisely to the moral nature what the sun is to the earth.—Balzac.

It is strange how soon, when a great man dies, his place is filled.—Longfellow.

Life is a sleep, love is a dream; and you have lived, if you have loved.—Alfred de Musset.

He that calls a man ungrateful sums up all the evil that a man can be guilty of.—Swift.

Pleasure and pain spring not so much from the nature of things as from our manner of considering them.—Bovee.

"A man is, in general, better pleased," says Dr. Johnson, "when he has a good dinner upon the table, than when his wife talks Greek."

A man feels relieved and gay when he has put his heart into his work and done his best; but what he has said or done otherwise shall give him no peace.

Places an inferior character in contact with the finest circumstances, and from wanting affinities with them, he will still remain, from no fault of his own, insensible to their attractions.

In literature and in love, we generally begin in bad taste. By experience and observation, we become sensible to the charms of the simple and unaffected, both in belles and belles lettres.

True love is a natural sacrament; and if ever a young man thanks God for having saved what is noble and manly in his soul, it is when he thinks of offering it to the woman he loves.—Mrs. Stowe.

Titus VESPASIAN never dismissed any petitioner with a tear in his eye, or with a heavy heart; and shall we think that the God of compassions will always dismiss the petitioners of heaven with tears in their eyes? Surely no.

EVERYBODY sits in judgment on a dirty sin; but clean it, dress it, and polish it, and there are ten thousand people who think it not so sinful after all. It is ragged iniquity that is sinful; burnished iniquity is not so wicked as men think.—H. W. Beecher.

TEACH your child as lovingly to accept different forms of religion among men as their different languages, wherein there is still but one human mind expressed. Every genius has most power in his own tongue, and every heart in its own religion.—Jean Paul Richter.

Men who concentrate themselves all upon one point may be sharp, acute, pungent—they may have spear-like force of character, but they are never broad and round, never of full-proportioned manhood; which can only be obtained by the carrying forward of the whole of a man in an even-breasted march.

A WOMAN must be very insensible who is not moved to come upon a higher plane of being herself, by seeing how undoubtedly she is inspersed in the heart of a good and noble man. A good man's faith in you, fair lady, if you ever have it, will make you better and nobler, even before you know it.—Mrs. Stowe.

For once that secrecy is formally imposed upon you, it is implied a hundred times by the concurrent circumstances. All that your friend says to you, as to his friend, is entrusted to you only. Much of what man tells you in the hour of affliction, in sudden anger, or in any outpouring of his heart, should be sacred. In his craving for sympathy, he has spoken to you as to his own soul.—Fruits of Leisure.

LOVE—ITS PURITY AND POWER.

How bright and beautiful is love in its hour of purity and innocence—how mysteriously does it etherealize every feeling and concentrate every wild and bewildered impulse of the heart. Love, holy and mysterious love—it is the garland spring of life—the dream of the heart—the poetry of nature. Its song is heard in the rude hut of the poor as well as the gorgeous palace of the rich—its flames embellish the solitude of the forest, and the thronged haunts of busy life, and its light imparts a brilliancy to every heart, no matter what may be its condition.

Love—pure, holy and devoted love—can never change. Friends may forsake us—the riches of this world may soar away, but the heart that loves will cling closer as louder roars the storm, and amid the wreck of the tempest it will serve as a "beacon" to light us on to hope and happiness.

Love is the mystic and unseen spell that soothes the wild and rugged tendencies of human nature—that lingers about the sanctity of the fireside and unites in closer union the affections of society, and the soul that loves truly will love forever. Not like the waves of the ocean, nor traced in sand, is the image impressed upon a loving heart. No, no—but it will burn on, undimmed by its lustre amid the quick rush of winds, and the warning of the tempest cloud—and when our fate seems dark and dreary, then will love seek shelter in her own hallowed temple; and offer up as a sacrifice her vows and her affections.

ABOUT LIFE.—If it is well for a man to live at all, he should endeavor to avoid all those influences which detract from the beauty and harmony of human existence. In other words, he should "make the most of life," and not allow himself to be distracted, annoyed, or confounded by anything. He should fully possess himself, being at peace with his own soul, and having a great good will for all mankind. Life, then, will have a beautiful significance to him; its current will be deep and flow gently on,—in all the beauties of the world reflected.

ALGEBRAICAL PROBLEM.

A criminal having escaped from prison, traveled some hours before his escape was known. As soon as his escape was discovered, the police started in pursuit of him; and, after travelling 82 miles, met an expressman going one mile an hour slower than themselves, who met the criminal 12 miles back. The police pursued 24 miles further, and met a stage going one mile faster than themselves, which met the criminal 10 miles back. They continued their pursuit, and captured the criminal just 12 hours and 54 minutes after meeting the stage. Now, taking it for granted that neither the criminal nor the police altered their speed from their starting till the capture took place, how many miles had the criminal traveled when his escape was discovered; at what rate per hour did he travel, and what was the hourly speed of the police?
Franklin, Venango Co., Penn., 1899. ARTEMAS MARTIN.

Wit and Humor.

SATISFACTORY—OR OUGHT TO BE.

It appears that in a certain town in Wisconsin, a proposition was made to invite Brown, of the Wisconsin Chief, to deliver a temperance address. Some objections were made, three of which we subjoin, with the editor's plea of guilty to them all:

"Brown is mercenary—will not go to talk temperance without pay."

Guilty! We have a large sum invested in gratuitous reform labor, and now retire on the income. Our bank account of "good wishes and votes of thanks" show several millions in our favor, and we are above the necessity of lecturing and footing our own bills. We are now speculating—putting potatoes in the ground and enjoying the increase.

"He is rich, and lives in a palace at the Oaks."

All right. We are one of the nabobs. Like the fellow who would have four chip-mucks when he killed the one he was after, and three more, so we shall have some land when we get it. Our palace is principally pine, 22x23, one story, and most sumptuously furnished. It is neither plastered, papered or painted inside—such furnishing is too plebeian. We use stove-pipe for chimney, and our parlor for hall, reception-room, dining-room, kitchen, library, sanctum, wash-room, place to spank the children, etc., etc. Our Brussels ingrain is made of old coat-skirts, shirt-tails, dilapidated pants, and other things too numerous to mention. Our furniture is common cherry, and our chairs are bottomed with cat-tail flags. Our spoons are mostly pewter—silver being rather common. Our chateaus personal run up to the handsome figure of several millions.

One wife, value not to be computed.
Three young 'uns, ditto.
Three pigs..... \$2 75
Twelve hens, and more hatching (not paid or price known.)

One cat and four kittens..... 5 00
Two cows, and a calf in prospect..... 50 00
Two jack knives..... 2 50
One-quarter acre strawberries..... 6,000 00

The above, with little matters, divers and sundry, give figures with spasms when the total is enumerated. We dare not go into details for fear of robbery. If Bro. — expects a man of such means to go and talk temperance, he will be disappointed. We are growing more and more mercenary every day. We shall add three more pigs to our sty, and push the setting hens to their utmost. And if our farrow cow should add another calf to our horned stock, we shall be above lecturing entirely.

"He struts about the farm and plays the lord in broadcloth."

A fact. Our home rig was once broadcloth, though badly ventilated now. Rents range from the knee upwards. Our hat is straw, and now in its fourth summer's wear. Our shoes and kids came with us into the world. And when we walk among the Lawtons, Catavissas, Houghtons' Seedlings, the spacious strawberry patches, and look upon two apples and a half a dozen pears, one quart of currants at least, several gooseberries and as many raspberries, we do feel like a lord, and above the benevolent business of lecturing and paying our own expenses for a vote of thanks.

A TENDER REPROOF.—A little boy had one day done wrong, and was sent, after maternal correction, to ask in secret the forgiveness of his Heavenly Father. His offence had been passion. Anxious to hear what he would say, his mother followed to the door of his room. In lisping accents she heard him ask to be made better, never to be angry again, and then, with childlike simplicity, he added, "Lord, make me's temper better, too."

SCOTTISH KINGS.—An Irish clergyman having gone to visit the portraits of the Scottish kings in Holyrood House, observed one of the monarchs of a very youthful appearance, while his son was depicted with a long beard, and wore the traits of extreme old age. "Sancta Maria!" exclaimed the good Hibernian, "is it possible that this gentleman was an old man when his father was born?"

POSTINGS.—Of an unpopular painter it was said his only good traits were his portraits.
An otanibus horse has about an equal experience of wheel and woe.

Can a Miss be said to play the piano in a masterly manner?

If General Tom Thumb finds a fitting wife, the public will enjoy the pomological exhibition of a new variety of "Dwarf Pear."—New York Evening Post.

MOORE'S RURAL NEW-YORKER,

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER
CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it so assiduously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal, rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

For Terms and other particulars, see last page.

INQUIRIES AND NOTES.

Potatoes—Names and Varieties.

I would like a little information respecting Potatoes. I raised about eighteen acres of that crop a year ago, and nearly that amount for a few years previous, but am still ignorant of that variety known and designated in New York market as White Mercer. Will you, or some one, answer the following:—1st. Are the White Mercers of New York city and our White Meshanock the same; or are the White Mercer and our Mexican the same potato; or are the Mexican and the Lady Finger the same? Our White Meshanock here is an early potato for common field culture, the same as Mexican; the tops nearly resemble them, a trifle more bushy, darker colored, and yield a little better, sometimes. It has the red or colored streak inside. Aside from that the potato is of white meat, and mealy, fleshy and palatable. When boiled the common way it is clouded inside, instead of pure white. Our Blue Meshanock is blue all over—color inside the same as White Meshanock, only more dark; grow larger and later when they have a chance to, and being a late potato are good in the spring. The Black Meshanock has the same color inside, but nearly a jet black outside; as to being mealy and early, it is partly between the "White" and the "Blue." I would like a description of the White Mercer; also of the White Meshanock, (and a correct mode of spelling it); also a description of the Blue Meshanock, and also of the Mexican, and you will greatly oblige an old patron and earnest seeker after truth.—K., County Line P. O., Ntag. Co., N. Y., 1859.

We never feel more embarrassed than when called upon to describe and name varieties of potatoes. There is scarcely one but has half a dozen different names, and the same name is applied to different sorts in different localities. Every one, almost, seems to think he is authorized to give a new name to a potato already cultivated and named, or to give the name of an old sort to a new one. This makes great confusion. The Mercer, or Nishenock, or Meshanock, if we understand its history, was grown from seed nearly fifty years ago, in Mercer county, Pennsylvania, on Big Nishenock Creek, by John GILKEY, who called it the Nishenock Royal Potato. From this place it was carried to the neighborhood of Philadelphia, where it was grown extensively, and called the Mercer, because originating in Mercer county. From Philadelphia they were sent over the country under this name; while those sent out from Mercer county, where they originated, continued to be called Nishenocks, for a while, but became corrupted into Neshanocks and Meshanocks, while some persons started them with new names, as Chennago, Boone Potato, &c. Seedlings have been raised from the old Mercer, like the parent in most respects, but darker, and those have been called Blue Mercers, Purple Mercers, &c., and the true Mercers have been called by some, particularly by buyers, the White Mercer, to distinguish them from these darker sorts. They have of late become so mixed, that it is hardly possible to obtain or even to distinguish the original sort. They are lighter colored than all others, having less of the purple color. This, however, cannot be regarded as a true test, for they grow darker when grown for a series of years on heavy land, and continue to bleach out until nearly white on light land.

About ten years since a gentleman of this county raised a potato, from seed, resembling the Mercer in appearance, but entirely white, which he named the White Mercer. It produced well, was fine to

look at, not dry enough for a good table potato, and grew vigorously until frost. Indeed, no one has been able to tell how long it would grow, if it could be accommodated with a season suited to its wants. On account of these bad traits it was discarded by the producer, but having fallen into the hands of potato growers in this section, after a few years it made its appearance in our markets in abundance, and enjoyed a very brief popularity. One season, and only one, it was eagerly sought by buyers for shipment to New York. When in that city, in the spring of 1857, we found some dealers with this sort, which they were selling under its true name, while others were selling the original Mercer as the White Mercer, to distinguish them from the Purple or Blue Mercer. In the market reports now, however, the Mercer, Meshanock, or White Mercer, are the same.

The Mexican is a much better potato than the White Mercer, as will be perceived by our description. It is rather small, smooth, white, long, small, slender tops, and is unsurpassed by any sort for baking, but yields rather poorly, and is very liable to rot. The Ladies' Finger is entirely different; more slender, and deeper eyes.

Corn Stook Jack.

I wish to inquire through the RURAL if any one of your readers has ever used a Corn Stook Jack, such as is imperfectly described in the Country Gentleman? If they have, will they be good enough to forward a plain description of it for the RURAL? It is described as a stake set in the ground, with holes bored through it for diagonal arms, against which the corn is leaned. How is the stake got out of the ground when the stook is bound snugly around it?—INQUIRER.

PERHAPS some of our readers can give the description desired, but we think there is no better corn horse than the one we figured and described two years since. It has been used by hundreds, and is declared by many to save one-third the time annually employed in cutting up and stooking corn. In its construction is used a pole of about 12 feet in length, being 4 inches in diameter at the large end, in which is placed two legs, wide enough apart at the bottom to be admitted between the rows of corn, and in length according to the height of the corn, say three or four feet, while the other end rests on the ground. About three feet back of the legs is a 1½ inch hole, through which is placed a rod four or five feet long, that is easily admitted and removed, and is horizontal when the horse is standing, as shown in the engraving:

The horse is placed in the centre of the number of rows desired to be cut, the corn is placed in the four corners around the rod, the shock is then tied, the horizontal rod removed, and the horse drawn ahead. The rod is then replaced, when it is ready for forming another shock.

Preparing Tobacco for Market.

I wish to inquire the manner of curing and preparing tobacco for market. If some one of the readers of the RURAL will give me the above information, I shall be much obliged.—Wm. O. S., Sheridan, N. Y.

ON this subject perhaps some of our Southern readers, or those of experience in the north, where tobacco is extensively grown, will give better directions than we are able to do. Having, however, investigated the subject somewhat, and observed the practice of the largest growers here, we give the result of our observations. Curing tobacco requires great care. As soon as gathered it must be hung on poles in a tobacco house or shed, the butts being fastened to the poles and the points hanging downwards. The plants are fastened to the poles with twine, about six inches apart, and the poles about one foot apart. It will be necessary to have a circulation of air through the building, but when the wind is high, unless the building is closed, the leaves will be injured. As soon as sufficiently cured, it must be taken down and the leaves stripped from the stalks. It will generally be in this state about the first of December. If, on a dry day, the leaf stalk will break from near the butt, it is sufficiently cured to take down and strip. The tobacco grower, while stripping, sorts into different grades, the largest, soundest and best colored leaves being put in the first class, and the narrow, torn and light colored leaves make the second class. Some growers make three grades. There is a good deal of difference in the value, the price ranging from five to twelve cents a pound. After the leaves are assorted, they are made into "hands," by taking a large

handful, with the butts even, and binding a leaf around, so as to hold them together. These "hands" are then packed away in a stack, with the butts and the points of the leaves overlapping each other, and in this way the leaves will be kept soft and pliable, and the butts be more thoroughly cured. Tobacco should not be handled when it is dry and harsh, and all handling is better done on a damp day.

The last and most important operation is sweating. This operation is thus performed: Boxes are made about two feet four inches by three feet six inches. Into these boxes the "hands" of tobacco are placed, lengthwise of the box, the butts at the end. In this way the box is filled. A heavy "follower" of two-inch plank just made to fit the inside of the box is then pressed upon it with a lever or screw. The top or "follower" is then removed, and more tobacco put in and pressed, and so on until the case is full of pressed tobacco, and these cases will generally contain from three to four hundred pounds. After the box is full the "follower" is removed, and the cover nailed on, and the cases packed away in a dry, close building, where they must remain during the next summer, until fall, when the tobacco is fit for market.—When packed for sweating, the tobacco should be soft and pliable without being wet or sticky. Any that appears too damp may be packed at the top or sides of the box, or dried.

Feeding Bees.

I wish to inquire through your valuable paper the best method of feeding and preserving a feeble swarm of bees through the winter.—A SUBSCRIBER, Saybrook, Aeth. Co., Ohio, 1859.

THE better way is to unite two feeble swarms, for it is difficult to winter very weak colonies, even when sufficient food is supplied. They consume proportionally much more food than strong swarms, and then often perish before spring, from their inability to maintain sufficient heat, on account of the smallness of their numbers. Feeding is somewhat difficult in the common hive. LANGSTROTH says "improvised stocks, if in common hives, may be fed by inverting the hives and pouring a teacupful of honey among the combs in which the bees are clustered. This does no harm, and they will lick each other clean, with as much satisfaction as a little child sucks its fingers while feasting upon sugar candy." The operation may be repeated at intervals, as fast as the bees store it away. With hives that have surplus honey boxes, feeding is easy, as a feeder can be made in the form of one of these boxes, and put in its place. On one side of it an apartment should be divided off for holding the honey. Short, clean straw may be placed upon the honey, upon which the bees can stand, and will sink as the honey is consumed. Some apiarists recommend sugar candy (rock candy) for feeding bees, which they will readily consume if placed within their reach. Syrup made from sugar is also good, so is West India honey, to which a little water should be added, then boiled and skimmed. A feeble colony should be exposed to changes of temperature as little as possible; therefore place the hive in a dry cellar, or some sheltered place.

CATTLE—CHARACTERISTIC OF BREEDS.

WE have presented RURAL readers with portraits of representative animals from the Alderney, Ayrshire and West Highland Breeds of Cattle, and now give the form and features of one of that class known as the Holderness—which, according to YOGATT, almost exclusively occupy the London dairies. The old Yorkshire cow was a great favorite in the London market, as regards milking qualities,—but when she began to fall off at the pail, she was sold as quickly as possible. It required a long period to get much flesh upon her, and when the expense of getting her in condition was calculated, it was always found cheaper to dispose of her for what she would bring, and the price seldom exceeded twenty-five dollars. Although yielding more milk, for the food consumed, than any other breed, the deficiency in the fattening properties was a serious drawback upon their value, and the more intelligent of the breeders set about seeking out a remedy. Cautiously adopting the principle of selection,—by finding a Short-horn bull whose progeny were generally milkers, and crossing some of the Yorkbaires with him,—they produced a breed possessing much of the grazing properties of the sire, and retaining, almost undiminished, the excellencies of the dam for the pail. The two qualities of fattening and milking were united perfectly; not at the same time, but succeeding each other at the periods when it suits the convenience of the dairyman. Now-a-days, instead of being anxious to sell out the very instant the lactical flow diminishes, the dairyman, as soon as they become dry, puts them

A HOLDERNESS COW.

upon their feed, and they fatten almost as rapidly as the best of the high-bred Short-horns.

In his "Treatise upon Cattle," YOGATT furnishes a full description of the essential points in a cow that is good for the pail as long as wanted, and then may be quickly and cheaply brought into marketable condition, and we are not aware of any matter that will "pay better" for publishing, or more fully reward the American breeder for study. Hence we give it, as follows:—"She should have a long and rather small head; a large-headed cow will seldom fatten or yield much milk. The eye should be bright, yet peculiarly placid and quiet in expression; the chops thin, and the horns small. The neck should not be so thin as common opinion has given to the milch cow. It may be thin towards the head; but it must soon begin to thicken, and especially when it approaches the shoulder. The dewlap should be small; the breast, if not so wide as in some that have an unusual disposition to fatten, yet very far from being narrow, and it should project before the legs; the chine, to a certain degree fleshy, and even inclining to fullness; the girth behind the shoulder should be deeper than it is usually found in the Short-horn; the ribs should spread out wide, so as to give as round a form as possible to the carcass, and each should project further than the preceding one to the very loins, giving—if after all the milch cow must be a little wider below than above,—as much breadth as can possibly be afforded to the more valuable parts. She should be well formed across the hips and on the rump, and with greater length there than the milker generally possesses, or if a little too short, not heavy. If she stands a little long on the legs, it must not be too long. The thighs somewhat thin, with a slight tendency to crookedness in the hock, or being sickle-hammed behind: the tail thick at the upper part, but tapering below; and she should have a mellow hide, and little coarse hair. Common opinion has given to her large milk-veins; and although the milk-vein has nothing to do with the udder, but conveys the blood from the fore part of the chest and sides to the inguinal vein, yet a large milk-vein certainly indicates a strongly developed vascular system—one favorable to secretion generally, and to that of the milk among the rest.

The last essential in a milch cow is the udder, rather large in proportion to the size of the animal, but not too large. It must be sufficiently capacious to contain the proper quantity of milk, but not too bulky, lest it should thicken and become loaded with fat. The skin of the udder should be thin, and free from lumps in every part of it. The teats should be of moderate size; at equal distances from the end, where they should run to a kind of point. When they are too large near the udder, they permit the milk to flow down too freely from the bag, and lodge in them; and when they are too broad at the extremity, the orifice is often so large that the cow cannot retain her milk after the bag begins to be full and heavy. The udder should be of nearly equal size before and behind, or, if there by any difference, it should be broader and fuller before than behind."

The English Encyclopædia, in speaking of the Holderness stock, says:—"They are large, fine-boned, possess great aptitude to fatten; their beef is fine; they have both size, strength and speed for labor, and their shoulders are well posited for the draught. Being beautifully variegated in color, marbled, spotted, speckled, red and white, they make excellent 'park stock'; and in one, perhaps the most important respect, great milking, they stand unrivaled; the cows giving from 24 to 36 quarts of rich milk per day."

In a trial upon the farm of the Earl of Chester-

field, of seven cows, consisting of three celebrated varieties, with crosses upon them, the Holderness cow giving 29 quarts of milk, produced 38½ ounces of butter per day, being 6 ounces more than was produced by any other breed.

HOW TO GET THROUGH THE WINTER.

I HAVE observed when people wished to be particularly impressive they commenced, "There is a tide in the affairs of men." I beg leave very respectfully to suggest this same idea as a fit introduction to a diatribe on fodder.

"Fodder is scarce in Western New York," is an axiom which nobody, since the 4th of June last, has any particular doubts about;—in ordinary discourse it is assumed (not as a "glittering generality" but) as a pregnant self-evident truth. That it is all for the best, men of my theology would feel bound to assume, so far as it originated in causes above human control;—uninterrupted plenty and prosperity beget indolence and waste. Heaven could not hold blessings enough to satisfy a people exempt from all reverses.

If "the calamity," so called, above referred to, shall teach us how to make the most of everything, it will be worth more than a year of plenty!

The other day I called upon a friend to whom I had previously sold a load of rye straw, and observed that his horse was luxuriating in a bed of that material. There it lay, unpicked over by horse or cow, mixed with chaff and heads, perhaps not too well threshed, to be sent smoking to the dung heap the following morning. Then and there I entered my emphatic protest! The next day another friend applied for "three loads of buckwheat straw for bedding." I scowled at him worse than common, and demanded if he did not know that buckwheat straw was good to eat. He apologized as any scamp ought to, and promised to go to the woods some dry day and rake up leaves and deposit them in the barn or under a shed, and use them for his winter bedding.

I forget whether it was my excellent friend "P," or some one else, who seemed to forget that cattle (at least some cattle) have teeth, for he recommended that all fodder should be cut before it was fed. Nature's own provisions deserve considerable respect. I think health and economy admit of feeding both hay and straw just as they grew; the process of chewing excites the glands, and is every way normal and healthy. I propose to feed hay and straw in capacious box mangers, kept clear of refuse material, and the fodder so low down that the animal can't root it out. Whatever is not eaten, if not musty or worthless, may be cut fine, wet, and sprinkled with meal, so that every particle of hay and straw shall be consumed—not one pound for bedding, not one ounce for waste! I do not undervalue bedding; every animal should have a warm, soft material to rest and sleep upon.

The more comfortable an animal is, the more quiescent, and the less food is required to support the system; but the leaves of our forests, the coarse grass and flags of our marshes, and the rakings of our yards, should amply supply this great necessity.

Whoever does not provide a warm place for his stock this winter, is incorrigibly perverse. No "tide in his affairs" can lead him "to fortune," or to any good thing. Whoever does not provide good feeding places, or through inattention is wasteful of fodder, hardens his heart under the most signal reproofs and warnings, and will not profit either by prosperity or adversity—both useful in their way.

Our fall frosts have done damage to our corn

fodder and corn scarcely less serious than the damage to corn and grass in June; there is, therefore, nothing left to us but economy the most rigid and calculation the most exact. We have no margin—no room for waste. Nothing short of the whole will suffice. Until lately I have been inclined to think we should have ample stores of cheap grain to fall back upon; but the frosts that whitened our corn fodder, rendering it almost worthless in many cases, found corn in a very immature state, and left it so. Frosts, the drouth, the grasshoppers, &c., have seriously impaired the grain crops in various parts of the Union. If we could believe our commercial press, there hasn't been a grain crop within the last fifty years which did not "vastly exceed all previous ones." "My bred-der," said the negro preacher, "blessed be dem what don't 'spect nothin', for they ain't goin' to be disappointed." Some, I fear, will be disappointed—they expect too much.

The remedy for short fodder generally resorted to in these parts, is to sell off the stock. Do this by all means, and now, if you can't winter them, and do it well; but it is a serious alternative—you sell cheap to buy dear—you cripple yourselves for the coming summer to get along for the present. Those numerous droves of twelve dollar cows that, like some other public-spirited citizens are traveling the road "towards Auburn," will be missed from the dairies of Western New York; those calves, yearlings, and two year olds, that are sent prematurely adrift like a poor, poverty-stricken child seeking a home, will leave the herbage uncropped in many a fertile vale and many a green hill-side. The scarcity of stock the coming season, if it shall lead to additional plowing and cropping, will be seriously felt for long years to come.

Winter all the stock you can, by every profitable and available means, but do not trust to any "good time coming" in which to buy cheap hay or cheap grain. A hard winter is among the contingencies that may happen, and any calculation about wintering stock had better be made in view of present prices, taking good care to make the supply sure without delay.

Unfortunately, some potatoes have been frozen in the hill, and some apples in the orchard, to say nothing of "some pumpkins." These will be fed promptly to the stock to avoid further loss. Every cabbage leaf, turnip, beet and kohi rabi top will be carefully picked up, kept clean and fed by those who wish to make the most of everything. Cows can be kept in milk by such means, and other stock put in good condition for winter. Keep an even hand in feeding, especially roots, apples, &c.; a large mess to-day, and none to-morrow, may be little better than none at all.

My friends, the millers, will endorse the sentiment that grain should be ground before feeding it, and I am clearly of opinion that coarse grain should be used on such hay and straw as would not be eaten up clean without being sprinkled with meal. In some cases it will do to boil grain for hogs, horses, &c., and save grinding.

Mr. LYMAN BRAINARD, a well known farmer of Wyoming Co., says that the loss on our grass crop is the most serious loss that we have been subjected to in many years, and that corn fodder has depreciated one-half in consequence of frost; so we are on "short commons," and no mistake.

I may remark that some discreet persons think that animals can be "wintered in the pork and beef barrels" cheaper than in any other way—a little grain fed to steers and heifers may make them passable beef, and so of other cattle. I will only add that care and economy is a duty binding on those who have plenty, as much as upon those who are short.—H. T. B.

"SORGHUM, WHERE IS IT?"

DEAR RURAL:—Some of your correspondents, I observe, have some doubts about the success of the Sorghum. They should come to Iowa just now, and they would speedily have those doubts dispelled. I am quite well satisfied, from my own observation, that the new Sugar Cane is destined to be an institution in the North-West. Our farmers here in Henry county have very generally planted some, say from a half an acre to four or six acres, and are now busily engaged in making sirup. Sugar Mills, wood and iron, have been erected in every neighborhood of three or four farms, and are succeeding beyond expectation in making a very fair article of sirup, taking into account the imperfect machinery and want of experience. I consider the experiment of Sorghum here abundantly satisfactory—and so it is with all our people, so far as I have heard any expression of opinion. You can set Iowa down as one of the sugar-growing States of the Union. There will be thousands of gallons of sirup made in this county this fall, and next year the quantity will be multiplied many times. It is selling here at about forty cents per gallon, and is considered a valuable crop at half that price.

The size and height of the canes here would evidently astonish your correspondent, who notices having seen, as a thing extraordinary, a cane ten feet high. I saw one a few days ago which measured seventeen feet, and have heard of some still taller. I know I have seen acres growing which would average fourteen or fifteen feet high. With all our imperfection of machinery and inexperience, two hundred gallons per acre is considered, by actual experiment, but a moderate yield.

Last night we had our first frost, which, in consequence of the dryness of our atmosphere at this time, did but little injury to the cane, or any other crops not yet fully ripened, of which there are but few. The Corn having very generally matured, is, in this part of Iowa, a most bountiful crop. A neighbor told me yesterday that he this year cultivated eighty acres of corn, which would average sixty bushels to the acre, and his, I know, is not, by any means, an isolated case. W. BIRD.

Eds. RURAL NEW-YORKER:—Being not only a subscriber to your paper, but a reader, I noticed in No. 83, present volume, the inquiry, by "W. B. P.," "Sorghum—where is it?" If this cannot be answered by your *York State Men*, I, a former resident of Old Monroe, and a farmer there,

and now, but recently metamorphosed into a regular "Hawk-eye," and a resident of Eddyville, Iowa—although a little south of W. B. P.'s latitude—can answer it. If Sorghum cannot be found in New York, I imagine it has all emigrated to the rich soil and congenial climate of Iowa. Today I had business which called me in the country, and within a distance of ten miles I saw sixteen mills, all grinding or crushing the veritable Sorghum, for which W. B. P. inquires. I am positive, for I not only smelled, felt and tasted, but I brought home a gallon, which I find to be superior to the best New Orleans sirup, and costing only fifty cents a gallon here, at retail. One man told me he made thirty gallons from a quarter of an acre. So much for so much.

Corn, the staple commodity here, is being harvested, and will be a large crop, except some late fields that the frost has injured. G. W. Eddyville, Iowa, Oct. 20, 1859.

"WHAT KILLED THE BEES?"

MESSES. EDS.:—The above question was asked by a reader of the RURAL NEW-YORKER, and it has been answered by at least two of the savans among the Bee-keepers. As a humble reader of your paper, and one that has had some experience in bee-keeping, I would also give my opinion, although at this late date.

From my experience and observation I consider the sole cause to be an accumulation of frost from the breath, or warmth, of the bees during long-continued cold weather; and, to make the result more effectual or destructive to the bees, sudden changes in the weather, first, causing the frost to melt and wet comb and bees, and then cold, so that the bees become chilled and consequently die, soon becoming a putrid mass, sending forth a very disagreeable stench, and if, as may be sometimes the case, but a part of the swarm is thus deprived of life, the effluvia from the dead will destroy the balance. I might be more particular in describing the cause, but consider that enough has been said on that point, and will now proceed to give a remedy, whereby the evil effects may be entirely done away with; or, rather, may say that bees may be wintered safely and free from the above baneful influences. And here, let me say, I have no ax to grind, and no particular kind of hive to recommend, whereby myself or others are to reap a reward.

It is a law of nature that heat rises, and as there is both breath and heat within a hive containing bees, it will be collected in the upper part of the hive and almost a solid mass of ice will be the result in long-continued cold weather. Now, this may be entirely obviated by having suitable vent at the top of the hive for said vapor to pass off.—In order to fully illustrate my idea, I will give the dimensions of the hives that I have used for the last two years, without losing a single swarm when there was honey enough to feed them through the winter, and a sufficient quantity of bees to keep up animal heat. The interior of the hive is, from front to back, eleven inches; from side to side sixteen inches; and thirteen inches high. Entrance at the bottom, by cutting from the longest side deep enough to admit the bees to enter for some eight inches. The top of the hive has two square holes, each three inches, over which is put two caps, of such size as may be desired, which, when filled, are removed and their places supplied with others. Their being empty during winter gives ample vent for all the vapor that is so destructive in forming frost. I do not contend for a hive of just this shape, yet I consider a tall hive objectionable, on the ground that bees usually collect near the bottom, and vapor arising from them would become frost if it had to travel far before it had a chance to escape. Again, bees are less liable to fill caps with honey when put upon a tall hive—at least, such has been my experience.

I consider it of importance, in two particulars, to have the passages from the main hive to the caps near the front of the hive. First, it is more convenient for the bees as they enter the hive to pass up; and, secondly, it will more readily let the vapor escape, being directly over the mass of the bees. I have, like the reader, who asked the question at the head of this article, lost many swarms from the cause above stated in past years, without knowing how to avoid it, but by accident was led to, as I verily believe, a sure remedy.—On examination I found that hives with an opening at the top, by boards warping, &c., would winter when tight hives would die by their sides. I would recommend to those that keep bees to give their hives ample vent at the top, covering the aperture in some manner to keep out the rain and snow, yet leaving a free circulation of air.

North Plains, Mich., 1859. HIRSH BROWN.

WINTERING BEES.

Eds. RURAL NEW-YORKER:—There is a great diversity of opinions here and in Europe as to the best method of wintering bees. While some advocate upward ventilation, others oppose it.—Again some are for a special deposit, while others are for leaving them in the open air without protection. After trying many experiments I concluded to return to nature's instinctive law, which governs the bees for preparing for winter. They have been known to flourish so far north that mercury would congeal, in the coldest days in winter in hollow trees with suitable thickness. They located themselves above the place of entrance, leaving a hollow place for the vapor to pass upwards, leaving them warm and dry, without upward ventilation. These are Nature's Hives, which are warm and free from dampness in winter, with ample room for brood comb and for storing their surplus honey. I am opposed to upward ventilation in the open air. Instinct teaches the bees to make their hives and boxes tight with bee glue, to prevent the escape of their natural warmth. To winter bees you must give them that assistance which their nature requires, which in winter is warmth and dryness. I think the following plan to be the best that has come to my knowledge for wintering in the open air.

By the first of November, if not before, place the empty surplus honey boxes over colonies, in hives that have a chamber, so that the hole in the

hive and box will meet. If the hives have no holes through the top, bore two or more inch holes through the top so that they will come near the sides of the hive. Make a box one inch smaller each way than the hive, and seven inches deep. Make the boxes tight by stopping up all cracks and corners, with melted wax—made by taking three parts of rosin, one of bees-wax, and a half pound of tallow, and place the boxes on the top of the hive, so that vapor arising from the bees may pass off freely into them. If no holes are made for winter passage, make one or two over the summer passage, by boring two 1/2 inch holes, one inch from the bottom, fitting the hive close to the bottom board. Take long straw and place it upright and close to the bottom board, and make a thatch at least four inches thick, and bind tight with large wool twine. Bore the straw over the top of the hive or box, and make it secure with twine. Cut the straw from the winter passage so that the bees can have free egress and ingress.—Place the bees where they will be protected from the east and west winds, and facing the south-east; and let the thatching remain until the apple trees blossom. Clean out all filth early in the Spring that has accumulated during winter on the bottom-board. If feeding becomes necessary in the Spring, loosen the straw from the top so as to get at the boxes, and give the bees the necessary food. Then tie as before. If you have a healthy stock in the fall, if well cared for in keeping them warm and dry in the open air, you will have one in the Spring that will be able to defend themselves against the bee miller, and give large percentage of profit to the owner. LANGSTON'S hive is admirably well calculated in the form of the chamber to carry off the surplus vapor in the winter. I consider that a hive made with two thicknesses of inch boards, with enough vacancy between them, is the best that has come to my knowledge. Hives that are covered with straw are not affected by the sun in winter or spring, at which time bees often fly out and are lost in the snow.

Honrietta, N. Y., 1859. E. KIRBY.

RURAL NOTES FROM MISSOURI.

CORN, FROST, FRUIT, NEXT WHEAT CROP, ETC.

DEAR RURAL:—If you find my correspondence worth printing, it will not derive its value from any particular uniformity of style or subject. The prominent feature of your paper is, I know, agricultural; but you find room, I see, for a deal of literary and miscellaneous matter besides. Liking the plan, I shall conform to it, and give you an assortment, from which yourself and readers may select as each may find agreeable. Corn, frost, tobacco, apples, and next year's wheat, shall be texts whereon to base these present remarks.

Missouri will probably have more corn this year than ever before, and at least as much pork. Indications of frost in early October gave rise to some uneasiness, for fear some of the late corn, (which was a large share of this year's crop), should be injured. Fortunately it escaped, and more than one new crib will be needed ere spring. By the way, I wish you would talk to your Southern and Western subscribers about the way they waste corn in making pork. Most of them do, and all of them might, save a little old corn, with which to begin feeding in September, or even in August, instead of putting it off till October. I did not intend to say in the preceding sentence that most of them begin feeding in August or September with old corn, but that most of them save a little old corn with which they might feed them. Its advantages would be manifold. First—a porker weighing 200 pounds, not only brings more money, but more in proportion, than one of 200 or less. Packers will give from one-fourth to half a cent per pound more for the large than for the small hogs. Second—the same amount of corn will make from 20 to 30 per cent. more pork, fed in warm weather than it will in cold. Those who have tried the experiment will bear me out in saying, a bushel of old corn fed in August or early in September, is worth a bushel and a peck of the same corn in colder weather, and perhaps worth two bushels of new corn, fed in the latter part of November or December. At least 25 per cent. more of food is required to maintain the animal heat in cold weather, and that must be supplied before any increase of flesh can be generated. Third—a hog with plenty of fat under his hide, feels the cold weather less when it comes, and will continue to gain flesh and weight on an allowance that would little more than keep a poor or average stock hog in growing order. These conclusions are based both on experience and Physiology, and the scientific truths of Physiology govern the growth of hogs as well as other folk! But, bless my soul! I have wandered all the way from corn and frost to Physiology!

The tobacco is a good crop—is gathered, and generally cured or curing. Apples have yielded fairly, at least in this part of the State, and are bringing the snug little price of \$3 per barrel for good winter varieties. Iowa and Minnesota furnish the demand. The people up there have been too busy speculating in "promising city locations" to plant apple trees, and now the times are too tight to buy the trees. That same state of things has kept farm improvements back far too much all over the West; but men have learned a lesson that will last them—at least till times get better. People are finding out that the old foggy farmers, who kept out of debt and speculation, and put the cash they got for crops into improvements on their land, instead of buying more, about the crisis unhurt, while the operators in "town plots" and swamp lands, have been on the list of "lame ducks" ever since. The West will never be independent of fluctuations till more of her young men take to raising corn, mules and molasses, leaving speculators and speculations to themselves. "In all labor there is profit," said Solomon, and "for all manner of produce there is a cash market," says GUNNYBAGS.

Next year's wheat promises well now. More has been sown this fall than for four years past, and with a good winter, we can bread the world from next July till Christmas, any how. Winter killing is the great source of uncertainty in wheat raising here,—more owing to broad-cast sowing than any other human cause. Those who drill their wheat lose least of all from climate, those who plow it in

are the next most successful; and those who harrow it unluckiest of all. Drill seeding might be altogether practised on prairie land, and it is most needed there. It would not surprise me if drilling and plowing became the universal modes in a few years, as the farmers are fast learning their superiority for such a climate as this, where we have some very cold weather in the winter, with very little snow, and none that remains on the ground for any length of time. More, perhaps, again. ALLEGANY WILL.

Rural Spirit of the Press.

Points of Cows.

A. L. FISS, a well-known dairyman of Herkimer Co., N. Y., gives in the *Little Falls Record*, some good remarks on the points of cows. He very properly considers strength of constitution and capacity to eat what is offered her at all seasons of the year, as of the first importance. He rightly observes, also, that the indications of such a constitution are a thick, mellow skin, with soft hair, a bright, full eye, broad loin and hips, deep body, and straight back. "Cheese dairymen [and city milkmen] usually select cows that yield the largest amount of milk, because they depend more upon the quantity of cheese than its quality, and milk is known to make a good yield of cheese that would make but little butter, and poor at that.—But I am not in favor of the rule of selecting cows that yield the most milk per day or season, in arriving at a proper standard of excellence for the best. * * * The quality of milk a cow will give, is indicated by hair and skin, and a yellow color of the skin inside of the ears and other parts not thickly covered with hair. I have never known a cow, with soft, fur-like hair and mellow skin, appearing yellow and gummy at the roots of the hair when parted with the hands, that was not a good butter cow, and when fattened, would mix tallow well with flesh. Having been accustomed to fatten my cows that failed for dairy purposes, by age or otherwise, for many years, and being on the lookout for causes of known results, I have observed that those known to give good milk, made most thrift in tallow when fed to fatten.—Hence, the conclusion, that cows that handle well in what the butchers call tallow joints, may be judged to give rich milk, the quantity to be judged by a plainly marked design of nature in her physical structure. Instead of heavy head, horns, neck, and shoulders, and comparatively light hind quarters, which is characteristic of the opposite sex, she should show an opposite design, by a feminine countenance, light head, neck, and shoulders, widening backward from her chest to the loin and hind-quarters, where the most strength is required."

Care of Horses.

A CORRESPONDENT of the *Michigan Farmer*, writing upon this subject, says:—"I have been laboring and studying for very many years to promote the usefulness of the horse in agriculture, by an improvement in the harness, and now I discover that there should also be an improvement in the training and treatment of the horse in order to be successful."

First, I think it a wrong idea to fat up colts for premiums, as many are in the habit of doing.—It spoils them for life. To make good, durable horses a blanket ought never to be put on them till they begin to work. Give them a yard by themselves with a good shed and plenty to eat and drink, at their liberty. Halter break them when one year old. Have a stronger halter to tie them with, for if they break it once, they will try harder next time, and will never forget it. Use the whip sparingly. Give them light loads to begin with, if you do not want balky horses. Heavy loading, and drawing too far up hill before stopping, has made many a balky horse, and the whip will not cure them. A better way is to confine the horse to the spot where he balks and keep him there till he is pretty well starved; I think this will help him."

Pasture Lands.

Or all the land composing a farm, says the *Maine Farmer*, the pasture needs manure the most, for it is from that the stock must draw their principal support. If dry and sandy, spread on muck and leached ashes, and old, half rotten straw, late in the fall. The snow will prevent its evaporating, and the winter rains will wash it into the earth.—Carry out all the manure that has been made during the summer and fall, and spread it so that it will become incorporated with the surface earth during the winter. Apply bone dust, and all other substances that can form bone earth. If the pastures have been exhausted by wool-growing, renovate with plaster, thus restoring the sulphur which had been drawn from the earth; for in every one hundred pounds of wool there are five pounds of sulphur. But on no account allow it to be said that any part of your farm is "an old and worn-out pasture." That is equivalent to acknowledging that you are a lazy, shiftless fellow, incapable of appreciating the blessings of heaven—and dishonest in refusing to pay the rent required by God for the use of His land.

A Quick Cure for Founder.

A WRITER in the *Cotton Planter and Soil*, gives the following recipe for the cure of founder in the horse:—"Clean out the frog of the foot; let it be well cleansed by scraping off the dirt. Raise the foot so as to be level—pour spirits of turpentine, a sufficient quantity, so as not to run over the hoof; then set the turpentine on fire, and let it be entirely consumed. If the above does not cure a foundered horse, as soon as the operation is over, then your readers may doubt all further recipes from—VANITAS."

Black Tongue.

A CORRESPONDENT of the *Southern Cultivator* gives the following remedy for the black tongue:—"Have a swab of soft cloth made and attached to a handle two feet long; dip this in spirits of turpentine, and wipe out the mouth of the animal so affected two or three times, if necessary, and they will be over it in a few days. This I know to be a fact, for I tried it on my cattle last year, and did not lose one, when others had been trying salt, copperas, and other things recommended, and lost a great many."

Agricultural Miscellany.

DEATH OF DAVID THOMAS.—It becomes our painful duty to announce that another ardent and justly-distinguished friend and promoter of Rural Improvement has closed his earthly labors. DAVID THOMAS departed this life at his residence in Union Springs, Cayuga Co., N. Y., 11th mo., 5th, "full of years and of honors." In announcing his decease the *Auburn Advertiser* remarks:—"A long life, devoted to scientific pursuits and to all the high and Christian obligations of society, is closed, leaving a memory that his friends will most gratefully cherish. His unpretending and modest character has, to some extent, for many years, isolated him from active and busy pursuits. A sound judgment and eminent attainments as a Civil Engineer, early attracted the attention of De Witt Clinton, when the great work of the Erie Canal was undertaken, and from whom he received, unsolicited, an appointment as Chief Engineer. The Western Division of the Erie and the Cayuga and Seneca Canals, were constructed under his supervision. When these works were completed, he was regarded as one of the ablest of the great men who had devoted their energies to the accomplishment of so great an enterprise. Subsequent to that period, he devoted himself to Agricultural and Scientific studies and pursuits, and to him the farmers and fruit growers of the United States are largely indebted for his numerous and instructive writings. His eminence as a writer on Pomology, as a Botanist, and his varied acquirements, received the attention of numerous cultivated minds in Europe, and he was complimented by being made an honorary member of many of their literary societies."

GOVERNOR TOWN FAIR.—The Gouverneur (St. Lawrence Co.) Town Ag Society, organized last present year, held a very successful Fair a few weeks since. The entries numbered 449, and the receipts were \$508. This is a noble beginning. We learn the Sandy Creek (Oswego Co.) Town Fair was also highly creditable to all interested, the exhibition being unusually large and fine, and the receipts over \$500. So far as ascertained the Town and Union Fairs in all parts of the State have this year proved remarkably successful, and we know that those it has been our good fortune to attend have exceeded many County Fairs of former years. We hope Town Societies and Farmers' Clubs will largely increase in numbers during the ensuing year, throughout the whole country. Every such society or club, (or both combined,) properly conducted, must prove beneficial to members and community, and need not detract from the interest or success of county associations.

FARMERS' CLUBS AND TOWN AG SOCIETIES.—As the season for organizing, and holding the annual meetings, of these associations is at hand, we have a request to prefer. We wish to know, and advise our readers, of the progress and success of all societies designed to enhance the interests of Ruralists—whether State, County, Town or District—and therefore desire reports containing such facts as exhibit their condition and influence. Officers of societies in operation will specially oblige us by furnishing synopsis of the year's results, with lists of officers, &c. We are also desirous of receiving the initial proceedings of new clubs and societies as fast as organized. If those of our readers particularly interested will bear this request in mind, and act in accordance therewith, we shall be enabled to impart much interesting and timely information.

HAMILTON CO. AG. SOCIETY.—A large and enthusiastic meeting of delegates from various parts of Hamilton county, recently assembled at Lake Pleasant, and formed an Agricultural Society, electing the following officers: President—HON. RICHARD PECK of Wells. Vice-Presidents—HAMILTON WHEELER, Morehouse; EDWARD ANABLE, Hope. Secretary—JOS. W. FISH, Lake Pleasant. Treasurer—ISAAC MORRISON, Wells; and an Executive Committee of two from each town in the county.

HON. WILLIAM JARVIS, distinguished as a sheep-raiser and wool-grower, died at Weatherfield, Vt., 21st Oct., of palsy, aged 59. Mr. J. was formerly American Consul at Cuzco, and acquired a large fortune by importing the celebrated Merino sheep into this country. He was a native of Boston, but had long resided in Weatherfield, where he owned a large and superior farm, and greatly benefited that section of country by the introduction of new modes of agriculture and more valuable breeds of stock.

CORN-HUSKING.—Our friend E. N. THOMAS, Esq., of Rose, N. Y., writes:—"The corn-huskers have commenced operations, and various amounts have been husked. The best day's work done that has been reported is by JAMES BARNES. In nine hours he husked out of the stock 58 1/2 bushels, and bound up the stalks. This was done on the 1st inst. Others have husked about 40 bushels. The corn is not so good this year, and makes a great difference in the husking."

IS IT LIFE-LIKE!—A New York city paper (which claims to illustrate life truthfully and of course consistently) not long since ignored tobacco culture, and allowed a correspondent to "pitch into" the RURAL NEW-YORKER for answering an honest inquiry on the subject, but now illustrates, describes and commends a new cigar-making machine! We note the fact, suppressing comments.

A MINE OF EMERY.—The Prairie Farmer notices the discovery of a mine of emery, of the best quality, near Belvidere, Illinois. Couldn't our contemporary find an Emery mine of extra quality, nearer home—even to the P. F. establishment? The witness is not obliged to answer, if he shall thereby criminate himself!

A TIMELY SUGGESTION.—By giving the matter proper and timely attention, clubs of twenty to fifty subscribers for the next volume of the *Rural* may be formed in hundreds of localities. It is only necessary for the real friends of the cause to act in season—now, before the country is flooded with the long-bow bills and Munichian canvassers of trashy papers. Present subscribers will not need coaxing to renew, while many others, in every place where the *Rural* is known, will no doubt accept the first invitation to become subscribers.

MR. G. W. LANCASTER, of Luzerne Co., Pa., writes:—"I feel some pleasure in contemplating the fact that I have increased the circulation of your much valued paper in this locality. My object in writing this note is to get specimen copies for distribution. If convenient please send me one dozen of last week's number, or such as may be convenient, and I will put them into hands that will read them and do up to subscribe now, or the first of January next. Out of some twenty subscribers that I obtained last spring, they will not one fall off; they are all well suited. I am anxious to secure the bound volumes for the three years last past, or up to the time my subscription commenced. Will you please say to me how many subscribers I must send you to secure the above, that is, if such a thing can be done? I think with a little trouble I could get a club of fifty." [The price of the three volumes, bound, is \$3, but we will furnish them to any person procuring seventy-five subscribers. We have only a few copies of the vols. for 1856 and '57.]

TRANSPLANTING LARGE TREES.

PLANTERS in this country are beginning to realize the advantage of applying moisture to the trunks and limbs of newly transplanted trees. Formerly it was thought that deluging the roots with moisture was all that could be done to save a tree suffering and dying from injuries received in removal. Then, through the teachings of practical horticulturists by example, and through Horticultural and Agricultural Journals, the importance of close pruning, to prevent too great a drain upon the mutilated roots, began to be admitted, and generally to be practiced by those who made any pretense to good cultivation. But, in case of large trees, or those that had been badly taken up, or had suffered from bad packing, or delay in transportation, it was found that the moisture would pass off through the pores of the bark, which would shrivel, and the tree languish and die, in spite of pruning and the water applied to the roots. Then it was found that trees all shriveled up, apparently dead, were reanimated by being buried in the earth for a few days, the bark gradually absorbing moisture, swelling, and becoming apparently healthy, and in good condition for planting. This led to the sprinkling of the trunk and branches, instead of giving all the water to the roots, and finally, to what is better, the covering of the trunks of choice trees with damp moss, or some other material that will retain the moisture. This we recommend to every one who transplants a large tree which he is particularly anxious to save.

In this country we do very little at planting large trees, the expense being too great; yet, as we have traveled through the country, and observed the magnificent specimens of native trees, growing in the fields and in the scattering woods, we have thought that the time was not far distant when men would be tempted to transfer a few of these specimens of the grand and the beautiful to their own grounds. In Europe the transplanting of nearly full grown trees is no strange work. Some time since we noticed that large trees were transplanted to the Boulevards in Paris. A correspondent of the *London Cottage Gardener* thus describes the effects of the past warm summer, and the means taken to preserve the trees from death.

"The hot weather which has lasted so long this year has been very injurious to the newly-formed gardens, and in particular to the large trees that were planted on the Boulevards in the winter. It has been necessary to place screens, or blinds of stout bunting, on the south side of all the large Conifers in the Champs Elysees, and keep them well syringed and watered night and morning. But, tho' they have been treated with the greatest care, it is probable that some of them will have to be removed.

The greater number of the large trees have been treated somewhat differently, owing, of course, to their great size. Their trunks have been thickly covered with moss up to their lower branches; the moss is enveloped with strong bunting tied all round, and surmounted with a sort of funnel in zinc, so as to lead the rain down into the moss, and preserve as much humidity as possible to the trunks when there is no rain. The branches are freely watered in the morning by means of a hose attached to the nearest water-pipe; and in Paris there are water-pipes in almost every street at convenient distances. These pipes are opened every morning, and fresh water continues to run in the gutters for two or three hours, carrying off all noxious matter to the main sewers.

The engraving is a sketch showing the trunk of a large tree enveloped in moss and bunting, and a funnel at the top. Several of the large Chestnuts planted round the Bourse in the spring of last year, have suffered severely; and though every care has been taken to keep them well watered, it seems scarcely possible for some of them to recover."

OKONDAKA, OR SWAN'S ORANGE PEAR.—I am surprised to see that there has been a proposition made to throw out the *Swan's Orange Pear*, as unworthy of cultivation. Accompanying this I send you specimens of ours. The tree is a vigorous grower, and a free bearer, and we think them a very superior pear for their season. The only fault we find with them is their size; they grow so large that the fall winds blow them off before they are ripe, and we lose a great many of them in that way.—Mrs. A. E. PARKER, Pleasant Farm, Plymouth, Mich., 1859.

With the above we received a box of the finest pears of this variety we have ever seen or tasted. They were large, fair, juicy, sweet and fine-flavored. This variety is rather variable, but grows to perfection with our correspondent.

A COMPANY has recently been formed in Mobile, Ala., for the purpose of fostering the culture of the grape. During the few months of their existence as a company, they have purchased eighty acres of land, twenty of which have been planted with the Catawba grape. The vines are growing in a most flourishing manner.

Inquiries and Answers.

EUROPEAN NURSERY.—I wish to obtain a list of the European Nurseries—some of the best to do business with. Please publish the names of a few of the best.—J. W. D., Bedford, Cayahoga Co., O., 1859.

BELOW we give a list of the leading nurserymen in England, and also on the Continent. For these we are indebted to the *Annual Register of Rural Affairs*:

ENGLAND.

J. Backhouse & Son, York—extensive—largest and best nursery in that city.

G. Baker, Witleham, near Bagehot, Surrey—American plants a specialty.

Chandler & Sons, Wandsworth Road, Surrey—extensive ranges of glass—collection of camellias unsurpassed in England.

J. & J. Cranstone, King's Acre, Herefordshire—extensive roses.

G. Cunningham & Son, Liverpool—a large general nursery.

J. Cuthill, Camberwell, Surrey—small fruits and superior vegetables, &c.

F. & J. Dickson & Sons, Manchester—forest trees, evergreens, &c.

Fisher, Holmes & Co., Sheffield and Handsworth, Yorkshire.

Garraway, Myers & Co., Bristol—a celebrated and extensive establishment, in the green-house and outdoor departments.

R. Glendinning, Turnham Green, near London—rare green-house plants.

J. Griffin, Bath—the largest nursery near this city.

H. Groom, Clapham Rise, Surrey—bulbs.

J. A. Henderson & Co., Edgware Road, Middlesex—new and rare plants—a neat and extensive establishment.

E. G. Henderson, St. John's Wood, Middlesex—new plants, doing a large wholesale business.

W. Holland, Brompton, Middlesex—extensive in fruit trees.

G. Jackson, Woking, Surrey—American plants, &c.

Jackson & Son, Kingston, Surrey—green-house plants, &c.

H. Lane & Son, Great Beekhamstead, Herts.—extensive in roses.

J. & C. Lee, Hammersmith, near London—an old and celebrated plant nursery of great extent and richness.

H. Low & Co., Clapton, Middlesex—very extensive in glass and green-house plants.

Lacombe, Pince & Co., Exeter, Devon—a large general nursery.

Osborn & Sons, Fulham, Middlesex—rare and fine trees, &c.

A. Paul & Son, Chesham, Herts.—famed for its roses, hollyhocks, conifers, &c.

T. Rivers, Sawbridgeworth, Herts.—70 acres—the most extensive cultivator of fruit trees in England—a vast collection of roses, &c.

Rollison & Son, Tooting, Surrey—vast ranges of glass, with orchids, heaths, &c., in great perfection.

J. Salter, Hammersmith, Middlesex—florist.

W. Skirving, Liverpool—a great nursery, with vast collections of evergreens.

G. Standish, Bagehot, Surrey—celebrated for rhododendrons, &c.

O. Turner, Blough, Bucks—a general establishment, and the most extensive in England in florist collections, as dahlias, hollyhocks, pansies, carnations, tulips, &c.

J. Veitch & Son, Exeter, Devon; J. Veitch, Jr., Chelsea, Middlesex, the greatest collections of new and rare plants in Europe.

J. Waterer, Bagehot, Surrey—American plants and a general nursery.

Waterer & Godfrey, Knapp Hill, Woking, Surrey—general and extensive—peat plants a specialty.

FRANCE, BELGIUM, HOLLAND, &C.

Andre Le Roy, Angers, France—a general and very extensive nursery.

D. Deuvels, Orleans, France—a general nursery.

Jamin & Durand, Paris—fruit.

E. Verdier & Son, Paris—roses, peonies, &c.

Thibout & Ketter, Paris—plants.

H. Van Houtte, Ghent, Belgium—plants.

Ad. Papeleu, Wetteren, Belgium—hardy trees.

A. Verschaffelt, Ghent, Belgium—plants.

J. De Jonghe, Brussels, Belgium—fruit trees.

J. Linden, Brussels, Belgium—rare plants, a great collection.

A. Mieliez, Lille—new sorts of chrysanthemums and other flowers from seeds.

Ernst & Von Spreckelsen, (successors to J. Booth & Co.) Hamburg, Germany.

Krelage & Son, Haarlem, Holland—bulbs.

De Lange & Son, " " "

F. Van Velsen, Jr., " " "

E. C. Van Eden & Co., " " "

A STRING OF QUESTIONS.

1st. Is the Egg Plant a native of this country? Can it be cooked in any other manner than fried in batter? Is it considered a healthy food?

2d. If peach buds inserted this fall should fail to grow, or be winter-killed, can the stocks be whip-grafted the coming spring?

3d. What is the size of an ordinary Hubbard Squash when grown? When are they ripe? How cooked, &c.?

4th. Have you ever seen or tried the Mexican Cucumber (gourd)? Is it good for anything?

5th. What is the best method of keeping sweet potatoes over winter?

6th. I occasionally hear something about "cold frames," and keeping certain plants over winter, in order to have them early in the spring; how is a cold frame made, and what plants can be kept over?

Answers to the above questions by the editor, or some of his numerous correspondents, will greatly oblige Wanda, Ill., 1859. A. SUNSHINE.

1. The Egg-Plant is a native of Africa. It may be fried in batter, butter, or with a beef-steak. Never heard those who like it complain of its unhealthiness, but those who dislike it think it is hardly fit for pigs to eat.

2. Grafting the peach is seldom successful, and don't pay.

3d. The Hubbard Squash grows from five or six to twelve or fifteen pounds in weight. They should be gathered before frost, or they will not keep. They may be boiled, but are best baked in the shell, first cutting them into quarters or halves and taking out the inside.

4. Don't know anything of the Mexican Cucumber, which it seems, by the inquiry, is a gourd. It is a shame to call any gourd a cucumber. It makes confusion, and people learn to call every large cucumber a gourd.

5. A correspondent a few weeks since stated that the best way to preserve sweet potatoes was to place rather small tubers in a box, mixed with a little earth, nail up the box, leaving openings for a little ventilation, then bury the box in a dry bank, out of the reach of frost, and where the temperature would be cool and uniform.

6. A cold frame is simply a hot-bed frame, or a frame similar to it, in which is placed plants not quite hardy, plants of Lettuce, or Cabbage, for early spring planting, &c. It is covered with glass or boards, and on these is placed mats, or leaves, or straw, to keep off the extreme frost. In fine weather these must be removed, and air given. The cold frame is generally used in the spring for forwarding annual flowers, and other plants for transplanting to the open ground. What is called a pit by gardeners, is sometimes named a cold frame by amateurs. This is a pit dug in the ground, the top being covered with a frame and glass, with some material for protection from frost in severe weather. The pit, if well prepared, will not freeze, and Verbenas, Geraniums, and many tender plants may be kept in it during the winter. The pit should receive a good airing every thawing day.

APPLES FOR NAMES.—I have taken the liberty to send you five specimens of fruit, and should like to have you name them, and give the names to the public in your paper.—L. J. Ontario, N. Y., 1859.

Tax numbers were not securely attached to the apples, and some of them became detached before we gave the fruit an examination; in replacing them we may have made some changes. No. 1. The largest red apple, looking somewhat like the Baldwin, a coarse fall apple of not much value. Name not known. No. 2. The largest yellow, is the Fall Jenneting. No. 3. A small yellow apple, coarse and poor; probably natural fruit. No. 4. The smallest red, Winesap. No. 5. A fine specimen of the Spitzenburg.

LIMBER TWIG.—A friend at the West sent us a conical red apple, over-ripe, which was supposed to be the Limber Twig. The Twig is a winter fruit and a good keeper. It has, also, less red, the skin being a greenish yellow, shaded and striped with crimson, and sprinkled with light dots.

NEW PLANT PROTECTOR.

C. G. PAGE, of Washington, D. C., furnishes the *Gardener's Monthly* with a drawing and description of a *Plant Protector* which he has invented, and which he states is of great value, as the most tender and the most difficult plants to manage may be transplanted with success, even in dry weather, by the aid of this protector. It consists of a double earthenware pot, open in the centre, and clearly shown in the figure annexed, by a vertical middle section through the pot.

The angular space A is to hold water, and the central opening B to admit the plant. The gradual percolation of water through the porous earthenware moistens the earth about the plant, and the evaporation from the surface of the pot, keeps the air cool and moist, especially within the space B, while the pot is generally a sufficient shade from the sun. Mr. P., we believe, has secured a patent on his invention.

HEDGE GROWING.

EDS. RURAL NEW-YORKER.—Seeing an article in your paper of the 29th of October, headed "*Experience in Hedge Growing*," that was somewhat novel, I thought I would reply in like manner. The writer, like too many others, has been misled by the accounts concocted in the South, and with only the slight alteration of the name of the person selling and his residence, as though the plant had been thoroughly tried here. In this way too many were duped by the agents selling plants. I can sympathize with Mr. Rice, as I have often done with many that have been duped. It is truly disheartening to nurture 60 rods of hedge for six years, and then have to grub it up—particularly mortifying is it when in neighboring towns hedges from the so-called "*English Hawthorn*" have been planted, and in four years formed such a barrier that few would be hardy enough to force a passage through. As Mr. Rice is so near a resident, if he will call on me I will give all the information he may wish, and I think I am capable, having some experience, and by close observation of half a century of the habits of the plant.

To satisfy those who may be less privileged, by distance, than Mr. Rice, and who may wish to know somewhat of the *White Hawthorn*, I will state I have a great variety of hedge plants, but can recommend none as well as I can the *Thorn*. It is perfectly hardy, of beautiful appearance, bears trimming well, retains its foliage late in the season, often into December. When untrimmed it blossoms finely, and the fruit is very ornamental, and this year is highly valued. I had on a bush that had berries this season seeds worth \$12 as they are selling here. That your readers may judge of the call for this unperfected plant, I will merely state that my son has 80 bushels of seed for sowing, and others are nearly as well supplied. Does this look like a lack of character as to its utility for the uses it is intended? The cause of the change of sentiment in regard to this plant is the difference in management. Few, very few, foreigners know how to manage or even plant a Hawthorn hedge. I have employed a large number, but never met with more than two that gave satisfactory proof that they knew anything about it.

Mr. Rice's inquiry as to whether a single or double row was best—I have often given my opinion on this question, and for the benefit of all can do so again. To plant in two rows, you cannot have the rows nearer than ten inches apart, some say twelve is better. Well, the plants cannot be nearer together in a row than six or eight inches, so they will stand thus * * * *; now in a single row the plants would be as close as four

inches, thus * * * *. The two rows, you will see, give a free, unobstructed passage diagonally. Then the space between the rows makes a beautiful rendezvous for the poultry, hogs, &c.—what a delightful and agreeable job to collect eggs from such a place daily, perhaps oftener, and Biddy is fully as likely to select such a place to deposit her eggs as any where. Now, the plants four inches apart in the first place, form a sort of palisade, that with proper management would obstruct most poultry in a short time; besides, where two rows are so near, the middle gets hollow, as the plants will bear no overshadowing—it is a great lover of freedom, and the difference in a constantly trimmed hedge, and one only occasionally, is truly astonishing. W. M. BRADCHAMP. Skaneateles, N. Y., 1859.

THE NEW GRAPES.

SOME time since we were informed by letter from SAMUEL MILLER, of Calmdale, Pa., that he had shipped a box of grapes to Bissell & Salter, which he wished us to examine, and would have sent us a box but for sickness in his family. We are not slow in availing ourselves of every opportunity to see a new fruit or flower, and we embraced this with pleasure. Among the collection was seven seedlings, raised by Edw. S. Rogers, of Salem, Mass., numbered, but not named. Some of them were too far gone to taste, and most of them too much so to form a very confident opinion of their quality. This, however, it is never safe to do from tasting two or three berries. Our notes made at the time, are as follows, and we give them only for what they are worth:

No. 1—much larger than Catawba, same color, thick, pulpy, sweet and good flavored. No. 4—black; berries as large as Black Hamburg, thick skin, tough pulp, sweet, and a little musky. No. 5—about as large as Isabella, color of To Kalon; too far gone. No. 15—round berry, large, color of Catawba, musky, about like Northern Muscadine. No. 19—berry as large as Black Hamburg, black, tough pulp, sweet, and of good flavor. No. 30—larger than Catawba, oval, amber color, tender pulp, and good flavor. No. 34—very large berry, round, tough pulp, skin thick, very sour.

In addition to these, there were more than a dozen other varieties, and among them Union Village, Cassady, Kingessing, Perkins, &c., the latter of which was much inferior to what we supposed it to be from the descriptions given of it in various quarters. The next season will be an important one, for many of the new grapes will then be in fruiting, and we shall be able to judge of their merits.

DEATH OF THOMAS NUTTALL.—This eminent botanist died in September last, at his residence near Liverpool, England, at the age (we believe) of 78. Mr. NUTTALL rendered great service to American botany; being most eminently an enthusiast of the science. He came to this country the year Michaux left it, and, traversing Upper California and Oregon, completed the great work on trees of the former laborers, Michaux, father and son, and his additions are now embodied in the same set of five volumes. Mr. Nuttall was originally a printer; during his residence among us he lived in a most economical manner from necessity. A relative bequeathed him a good place and garden in England on condition that he should reside upon it six months of each year. Here he employed himself in botanical pursuits, principally in hybridizing the Himalayan Rhododendrons, and to his zeal the great dealers were much indebted. In his tastes Mr. NUTTALL was simple and inexpensive; he has left a name which will last as long as flowers are loved.—*Horticulturist*.

PERSIMMONS.—One of the first of my Virginian experiences was with the new sensation of eating a persimmon. By its frequent mention in negro songs, this fruit has become classic, and I was as interested in tasting it as the traveler in Italy with his first pluck at a ripe fig. It resembles a small apple, as seen hanging upon the leafless twig, though the tree grows taller and with more spready branches than an apple tree. There were plenty of them in the fields as we drove past the corn plantations in the open country, and our friend, the conductor, kindly jumped over the rail fence and brought me a handful. What this fruit can especially be intended for by Nature I am a little embarrassed to understand,—possibly to close the gate after enough has entered,—for, of all the contractile agents, this seems to me the most pucker-y and unrealizing. The mouth and lips are drawn so obstinately together by eating a persimmon, that it would be difficult to follow it, even with "a drink."—N. P. Willis.

MASSACHUSETTS HORTICULTURAL SOCIETY.—At the Annual Meeting of the Massachusetts Horticultural Society, held Oct. 1st, the following officers were elected:

President—JOSEPH BABCOCK.
Vice-Presidents—E. S. Eard, Eben. Wight, J. F. C. Hyde, W. C. Strong.
Treasurer—William B. Austin.
Cor. Secretary—Eben. Wight.
Rec. Secretary—F. Lyman Winship.
Professor of Botany and Vegetable Physiology—Prof. ASA GRAY.
Prof. of Zoology—J. W. P. Jenks.
Prof. of Horticultural Chemistry—E. N. Horsford.

DEATH OF PROFESSOR HENFREY.—We regret also to record the death of Professor HENFREY, a Fellow of the Royal and Linnean Societies, Professor of Botany in King's College, etc. He died on the 7th of September. Prof. HENFREY has long been known as an excellent histologist and sound vegetable physiologist.

DEATH OF DAVID THOMAS.—The venerable DAVID THOMAS, father of JOHN J. THOMAS, so long and so well known to the Horticulturists of this and other lands, died at his residence in Union Springs, on the 5th of the present month. A notice of his decease, and a brief tribute to his memory will be found in another column.

HOW TO MAKE BEER FROM MALT.

EDS. RURAL NEW-YORKER.—W. D. R., of Lewis Co., N. Y., asks some of your readers to tell him how to make beer from malt. I would say, at the start, to make good Malt Beer is no Small Beer affair; and I am afraid I shall make my article too long in attempting the task of describing the process. In making malt beer it will be found a very different process to that of making the different kinds of small beer usually made throughout the country. I presume Mr. R. wishes to make beer for family use only, and I think that a good keeping article cannot well be got up in summer. I will give my practice in the premises, and would recommend Mr. R., or any one else, to brew spring and fall,—about the last of October and about the first of March.

My utensils consist of a mash tub and a fermenting tub, each large enough to hold all I want to brew, and two kettles,—one kettle is sufficient if you have it large, as the kettle should hold considerably more than you wish to make. The kettles ought to be set in a furnace. A hole should be bored about one, or one and one-half inches above the bottom of the tub, a plug inserted, and a bunch of hay, well tied around, placed against the hole on the inside of the tub,—the hay answers as a strainer for the malt. Put the boiling water into the tub, reducing the temperature to 180 degrees, then pour in the malt, stirring it so as to get it thoroughly wet; cover with something to keep in the steam; let the water remain on the malt about three hours, and then draw off, having a second boiling of water ready to put on the malt. The second water should go on boiling hot, and should remain on about same length of time. Put the first water drawn from the malt into your kettle, and to every bushel of malt used put about three-fourths of a pound of good hops, boiling them together two hours; strain the hops from the beer; set it to cool; put the same hops to the second water, boiling same as before, straining hops out through a wire sieve, or anything that will remove them. The first and second boiling may be put together, or kept apart, at your pleasure. As soon as your beer has cooled down to 65 or 70 degrees, put in about one pint of good yeast, from a brewery, to every 40 gallons. Mix it well with a bucketful of the beer, and then put it in your tub, straining it well together. It will work some 48 hours. The yeast may be skimmed off after it has come freely to the top—twenty to twenty-five hours after it has been set to work,—and may be skimmed off every five or six hours after till it ceases fermenting, which you may know by the yeast beginning to settle down. It should now be skimmed and put into your barrels, the bungs being left out to allow the working process to be finished, which may last as long as it did in the tub. The barrels should be filled up with beer every few hours, to allow the yeast to work out at the bung hole. When it ceases to work it should be bunged up tight, and may be tapped for use any time.

Here I would remark, that there is no fixed quantity of hops to be used to the bushel; after you have made once you may use more or less to suit your taste. I make about eight gallons of beer to the bushel of malt; but you will find that, with what the malt will absorb, and the boiling will reduce, you will have to put on from 14 to 16 gallons of water to make the eight gallons of beer. The malt must be ground for brewing. Quarter-barrels are the best for putting beer in for family use, as in that case you do not have a large quantity on tap at one time. It will be obvious to any one, that if you have a large barrel tapped, drawing out only a little every day,—as will be the case with a private family,—it will inevitably get flat before it is used up. I have a good, dry cellar, and have no trouble keeping my beer good to the very last of every keg, and very seldom bottle any; but if your cellar is not a very good one, you may bottle the last part of your barrel with good effect. The cellar should be kept as near the same temperature, winter and summer, as possible; by shutting out the cold in winter and the hot air in summer, as changes from hot to cold are injurious. I could have said a good deal more on the subject, but I am afraid I have already made my article too long. W. W.

Springfield, Ill., Oct., 1859.

WILMINGTON CAKES.—One cup of butter; 1 do. cream; 5 eggs; 3 cups sugar; 4 do. flour; 1 teaspoon cream tartar; 1 do. saleratus,—almonds may be added.

1, 2, 3, 4 CAKE.—One cup of butter; 2 of sugar; 3 of flour; 4 eggs.

HOT TEA-CAKE.—Three pints of flour; 1 pint of milk; 3/4 lb. butter; 2 teaspoons of soda and 3 of cream tartar—the cream tartar to be mixed through the flour, and the soda to be dissolved in the milk.—ECONOMY, Salem Co., N. J., 1859.

TREATMENT OF DIARRHŒA.—Eat nothing but common rice parched like coffee, and then boiled, and taken with a little salt and butter. Drink little or no liquid of any kind. Bite of ice may be eaten and swallowed at will. Every step in diarrhœa, every spoonful of liquid, only aggravates the disease. If locomotion is compulsory, the misfortune of the necessity may be lessened by having a stout piece of woollen flannel bound tightly around the abdomen, so as to be doubled in front, and kept well in its place. In the practice of many years, we have never failed to notice a gratifying result to follow these observances.—Dr. W. W. Hall.

COCOA-NUT CAKES.—To two grated nuts, an equal weight of white powdered sugar; the whites of three eggs, well beaten. Make them the size of a half dollar—bake on buttered tins.—Mrs. E. J. W., East Elba, Genesee Co., N. Y., 1859.

FOR THE MOTHER'S SAKE.

[A YOUNG MAN, who had left his home in Maine, ruddy and vigorous, was seized with the yellow fever in New Orleans; and, though nursed with devoted care by friendly strangers, he died. When the coffin was being closed, "Stop," said an aged woman who was present; "let me kiss him for his mother!"]

"Let me kiss him for his mother!
Ere ye lay him with the dead
Far away from home, another
Sure may kiss him in her stead.
How that mother's lips would kiss him
Till her heart should nearly break!
How in days to come she'll miss him!
Let me kiss him for her sake."

"Let me kiss him for his mother!
Let me kiss the wandering boy;
It may be there is no other
Left behind to give her joy.
When the news of woe, the morrow,
Burns her bosom like a coal,
She may feel this kiss of sorrow
Fall as balm upon her soul."

"Let me kiss him for his mother!
Hecce, ye, who by his side,
Wait on him as a brother
Till the Northern stranger died,—
Heeding not the foul infection,
Breathing in the fever-breath,—
Let me, of my own election,
Give the mother's kiss in death."

"Let me kiss him for his mother!
Loving thought and loving deed!
Seek, nor fear, nor sigh to smother,
Gentle matrons, while ye read.
Thank the God who made you human,
Gave ye pitying tears to shed;
Honor ye the Christian woman
Bending o'er another's dead."

Written for Moore's Rural New-Yorker.

THE TWO NESTS.

ROBERT ROVER rushed into his mother's presence one afternoon, his bright eyes sparkling with delight, and shouted,—"as only little boys can,"—"Look here, mother, see what I've found; a bird's nest,—a real, live bird's nest!" (Robert had found discarded nests before, in the current bushes, so he called this a live one, in contradistinction to them.)

"Well, mercy on me, child, you need not scream loud enough to make one deaf about it; and see there," she continued in a tone of vexation, "you have tracked clear across the floor with your dirty, wet feet. You just be off with yourself, and see that you don't break those nasty eggs on your clothes; if you do, you will be sorry for it."

Robert, somewhat abashed by this "sally," retreated out doors with his prize, which he carefully placed in an old box his father had given him to keep his playthings in. There was a curious medley of things in it—balls, tops, marbles, sticks, twine, a button "buzz," and countless other things very precious to the eyes of little boys. But Robert thought, (and rightly, too,) that there was nothing there so beautiful as that little, round nest, with those four pale blue eggs in it, so he viewed it o'er and o'er, with a confused notion in his head that little boys should never "holer;" never have wet feet, and never soil their clothes with broken birds' eggs, but without one thought of the cruel wrong he had thoughtlessly done in taking that pretty nest from the bush where the cunning architects had with such delicate skill woven it. Ah! who can tell what far-extending waves of desolation may circle from that one childish act of wrong, which that mother, "careful in many things," has suffered to pass unrebuked.

Turn we now to another home. Across that floor there were marks of little feet leading to an outer door, where stood a little "barefoot boy, with cheek of tan," holding a nest in his hand—his rosy face all aglow with excitement. "See here, ma," he cried, "what I found in the hazel bushes; one, two, three little birdies."

The mother turned with a smile at the call of her darling, but the moment she saw what he held, her countenance fell. "Why, WILLIE, how could you take that away from the old birds; how sad they will feel when they come home by-and-by, and find their nest and little birdies all gone."

"It was so pretty," said the child in a subdued voice, "but I am sorry I took it if it was naughty."

"It was very wrong, although perhaps you did not think how sad the old birds would feel. See," she continued, "there is the mother bird now; she has missed her darlings, and how distressed she is."

WILLIE's little lips quivered, and the tears sprang to his eyes, and handing the nest to his mother, he cried, "Put it back, ma. I don't want it any more."

"Can you show me where you found it?"

"Yes, I know the very bush."

"Then come, and we will try and restore it." Taking the nest in one hand, and her little one's chubby fingers in the other, she walked slowly away, talking in a low, sweet tone to him, striving to plant the priceless germ of kindness to all—and especially to all weak and unprotected things—in his little heart; and the nest was soon resting in the same bush whence those eager little fingers had torn it.

The lesson that noble mother thus instilled was never forgotten. The terror of the bereaved robin, the gentle reproach from his mother's lips, and the triumphant song which the parent bird poured forth that evening, as he found his treasures all restored, combined to make an unfading impression on his tender mind. Impulses were checked thus early, which might otherwise have led to much evil in after years; and kindly feelings were aroused and stimulated which have never ceased to grow and strengthen in his heart, and which to-day form the crowning grace of his noble, manly character.

One whose name is a household word, has thus truthfully and beautifully written in regard to the training of the "man child":—"To-day he is at your feet; to-day you can make him laugh; you can make him cry; you can persuade, coax, and turn him at your pleasure; you can make his eyes fill and his bosom swell, with recitals of good and noble deeds; in short, you can mould him if you will take the trouble. But look ahead some years, when that little voice shall ring in deep bass tones, when that small form shall have a man's weight and tramp; when a rough beard shall cover that little round chin, and the willful strength of manhood fill out that little form. Then you would give worlds for the key to his heart, but if you lose it now he is little, you may search for it carefully some day, with tears, and never find it."

MAUD MILLER.

Henrietta, N. Y., 1859.

CHILDREN'S JOYS AND SORROWS.

I CAN endure a melancholy man, but not a melancholy child; the former, in whatever slough he may sink, can raise his eyes either to the kingdom of reason or of hope; but the little child is entirely absorbed and weighed down by one black poison-drop of the present. Think of a child led to the scaffold; think of Cupid in a Dutch coffin; or watch a butterfly, after its four wings have been torn off, creeping like a worm, and you will feel what I mean. But wherefore? The first has been already given; the child, like the beast, only knows present, though shortest sorrow; one which has no past and no future; one such as the sick man receives from without,—the dreamer from himself into his æsthetic brain; finally, one with the consciousness not of guilt, but of innocence.

Certainly, all the sorrows of children are but shortest nights, as their joys are but hottest days; and, indeed, both so much so, that in the latter, often clouded and starless time of life, the matured man only longingly remembers his old childhood's pleasures, while he seems altogether to have forgotten his childhood's grief. This weak remembrance is strangely contrasted with the opposing one in dreams and fevers, in this respect, that in the two last it is always the cruel sorrows of childhood—and the fever, its distorting glass—both draw forth from dark corners the fears of defenceless childhood, which press and cut with iron fangs into the prostrate soul. The fair scenes of dreams mostly play on an after stage, whereas the frightful ones choose for theirs the cradle and the nursery. Moreover, in fever, the ice-hands of the fear of ghosts, the striking one of the teachers and parents, and every claw with which fate has pressed the young heart, stretch themselves out to catch the wandering man.

Parents, consider then, that every childhood's Rupert—the name given in Germany to the fictitious being employed to frighten children into obedience—even though it has lain chained for years, yet breaks loose and gains mastery over the man so soon as it finds him on a sick-bed. The first fright is more dangerous the sooner it happens; as the man grows older, he is less and less easily frightened; the little cradle or bed-canopy of the child is more easily quite darkened than the starry heaven of the man.

HOUSEHOLD CARES.

Mrs. KIRKLAND has very truly said that woman is never really and healthily happy, without household cares. But to perform housework is too frequently considered degrading. Even where the mother, in obedience to the traditions of her youth, condescends to labor occasionally, the daughters are frequently brought up in perfect idleness, taking no bodily exercise, except that of walking in fine weather, or riding in cushioned carriages, or dancing at a party. Those, in short, who can afford servants, cannot demean themselves, as they think, by domestic labors. The result is, too frequently, that ladies of this class lose what little health they started in life with, becoming feeble in just about the proportion as they become fashionable. In the neglect of household cares, American ladies stand alone. A German lady, no matter how elevated her rank, never forgets that domestic labors conduce to health of body and mind alike. An English lady, whatever may be her position in society, does not neglect the affairs of her household, and, even though she has a housekeeper, devotes a portion of time to this, her true and happiest sphere. A contrary course to this results in a lassitude of mind often as fatal to health as the neglect of bodily exercise. The wife who leaves her household cares to her domestics, generally pays the penalty which has been affixed to idleness since the foundation of the world, and either withers away from sheer ennui, or is driven into all sorts of fashionable follies to find employment for her mind. If household cares were more generally attended to by ladies of the family, there would be comparatively little backbiting, gossiping, enviousness, and other kindred sins; and women in good society would be much happier, and much more truly loveable.—*Springfield Republican*.

GOOD NATURE.—Good nature is a gem which shines brightly wherever it is found. It cheers the darkness of misfortune, and warms the heart that is callous and cold. In social life who has not seen and felt its influences? Don't let little matters ruffle you. Nobody gains anything by being cross and crabbed. If a friend has injured you—if the world goes hard—if you want employment, and can't get your honest dues—or fire has consumed, or water swallowed up the fruits of many years hard toil—or your faults are magnified, or enemies have traduced, or friends deceived, never mind; don't get mad with anybody; don't abuse the world or any creature; keep good nature, and our word for it, all will come right. Soft south winds and the gentle sun are not more effectual in clothing the earth with verdure and sweet flowers of spring, than is good nature in adorning the heart of men and women with blossoms of kindness, happiness and affection—those flowers the fragrance of which ascend to heaven.

Only he who has nothing to hope from a woman is truly sincere in her praise.—*Catalini*.

THE AUTUMN TIME.

BY ANNIE AYE.

ANOTHER Autumn Time
Is creeping slowly on. The mellow haze
That, like a halo, crowns the far, blue hills;
The lights and shadows that alternate fit
Along the plain,—like fitful passions
Of the human heart,—the gorgeously
Of nature's liveries, borrowing the hues
Of sunset and of gold, wherewith to deck
Her funeral robes—like added bloom
Upon consumption's cheek—all Nature's
Brilliant page speaks but of fleeting bloom
And slow decay.

It seemeth but as yesterday
Since Lady Elm, whose tasseled branches
Sweep my window all, was radiant
With the glory of her vernal pride;
And yet, e'en now, as the light zephyr stirs
Her leaves, one and another flutters
And are gone—like summer friends.

I love the Autumn Time.

There is a calm, sweet stillness on the air
That falleth like a balm upon my spirit,
Soothing to peace the wild delirium
Of life's fevered dream. And when
The gorgeous eventide has come, painting the west
In the inimitable dyes of Heaven;
Outrivaling far the painter's
Daintiest fancy,—and I sit me down
And gaze until the burning gates
Of sunset seem ajar, and I can see
The fluttering plumes of the white-robed ones
Waiting to guide us from a world
Of fleeting beauty, to a clime
Of never-fading bloom.

Oh, happy those to whom

No Autumn of the Heart shall come. Who ne'er
Shall see the green leaves of their hope, and joy,
And earthly trust—aye, and the tender buds
Of fondest love, that joyously put forth
In youth's sweet spring, droop, and decay,
And wither from our sight, while we,
In deepest agony, besought the Giver
Of all Good but for one bud, one blossom
Of our love to cheer life's rugged steeps,
But sought in vain! We saw them fade and fall
At last, unmindful of our bitter tears.
Oh, this is agony. And yet our Father
Doeth all things well. Failing to win us
To his arms by gentle words of love,
And loving kindness, strewn thick along
Our wayward path, He sends the blight upon
Our fairest blossoms; then we, peradventure,
Seeing the emptiness of all our earthly joys,
The frailty of those hopes where we had placed
Our fondest trust, may turn unto those joys
That have no end—unto that hope that, like
An anchor to the soul, reaches to that
Within the vale,—and from the idols
Our love has set up, unto that love
Which is unchanged, unchangeable,
Which lends a willing ear unto
Our weary-laden hearts, and so shall give us rest.

When the last bloom

Of our life shall fade, and we shall put
Our robes immortal on, O, we shall see
The withered blossoms of our earthly love
Blooming afresh beneath the shadow
Of the Tree of Life, whose leaves are for the healing
Of the nations. Where no blighting storms shall mar
Their verdure, and no Autumn Time o'er bring
The sere and yellow leaf. Transplanted
To that genial clime—close by the still waters
Of life's pure river,—with the fadeless bloom
Of an eternal spring, shall they
Be crowned forever.
Syracuse, N. Y., 1859.

THE BEAUTIFUL.

ALL objects, natural, spiritual, or divine, possess beauty, either in themselves, or in their effects on the mind of man, when rightly received and considered. Happy is the individual whose mind is so constructed he can discern beauty in all that God hath created—who can discover beneath a plain or homely exterior, the inner beauties of the mind and heart—whose soul is keenly alive to all the pleasing associations by which he may be surrounded,—and can see through the misty veil of doubt and disappointment, gleamings of brightness and loveliness.

We may see beauty in every blade of grass we tread beneath our feet—in every flower that blooms and fills the air with fragrance—in the dewy wings of the butterfly that flutters and rejoices in the summer sunlight—in the gay-plumaged warblers of the grove, and in their merry songs. We may love to listen to the sound of the summer rain, as it patters on the old home roof—to the gentle whisperings of the summer breeze—and to the quiet murmurings of the little brook, flowing on to meet the mighty river. Even these are pleasing sights and sounds to one who loves to "commune with Nature, and listen to her gentle teachings." Who could gaze in aught save "awe-struck wonder" and admiration, upon the awful majesty of Niagara's cataract whose waters rush on, amid the roar and thunder of their fall, with irresistible force, bearing all that come within their power to swift and sure destruction. Beauty, how terrible, how sublime! There is beauty on the broad, expanded bosom of the deep blue sea, and far down, among the myriads that inhabit the secret recesses of ocean's depths, where human eye hath never seen, nor human ear ever heard, even there does the beautiful abide. There is beauty, Oh, how fearful, in the lightning's vivid flash—in the thunder's awful roar, in the storm, and the whirlwind; for God is there in majesty and might. O, the calm beauty of the "bow of promise," when it arches the sky at even—of the clouds—of the pale orb of night—of the twinkling stars that "sang together for joy." And thou, O Sun—great dispenser of light and heat—thou too, art beautiful,—too dazzlingly beautiful, for mortal vision. How much of beauty in his light, and in

his shadows deep. To the lover of nature all these things are a source of admiration and happiness, for they reflect back upon the soul the image of the first Great Author. God is seen in all His works.

There is beauty in the trusting confidence of the bride, standing beside the manly form of him to whose keeping she is about to confide her happiness—her destiny—her all. There is beauty—less of earth than heaven,—in the innocent countenance of the prattling babe, and as it sleeps, angels whisper in its willing ear. Perhaps already, the Death Angel has lain his icy finger on the "polished brow," and taken the "rose-tint from cheek and lip;" but still there beams a holy beauty, which Death cannot destroy. There is beauty in the heart-trusting grief of the bereaved and weeping mother bending over the pale, cold form of her loved one, and imprinting the last fond kiss on its pure white brow; for with the eye of Faith she sees her babe among the angel band—she saw it pass softly over the "cold stream," and encircled in the loving arms of Him who said "suffer little children to come unto me."

Who can gaze, without seeing beauty one might well regard with envy, upon the white-haired man of three-score years and ten, whose calm, tranquil face, and beaming eye, betokens a well-spent life, and a looking forward to the realization of a glorious hope of blissful immortality beyond the grave, when the Heavenly Messenger shall whisper the joyful words:—"Well done, thou good and faithful servant, come up higher."

There is a beauty, which all may see, stamped in letters of living light, on the undying page of the Book of Life. What loveliness is in its requirements, its promises, and its rewards.—There is beauty, how sublimely holy, in the undying love which characterized Him, who, when nailed to the shameful cross, cried, in pleading tones, "Father forgive them, they know not what they do." Such is beauty all divine. Sin, which mars all earthly grace here, had lost its power. All other beauty fades and perishes with time, but the loveliness of the soul, the divine and immortal part of our natures, fades not, nor dies not, but lives on through the endless ages of eternity. May we all attain the comeliness which will grant us a passport to the Land of the Beautiful which lies beyond this vale of tears; where naught can enter to mar its perfection—where all is love, peace, joy and happiness forever.

"There is a glorious land on high,
Far above the starry sky;
All things there are fair and bright,
Land of Beauty—Land of Light."

Pavilion, N. Y., 1859.

A. M. Benson.

MIDDLE LIFE.

It is perhaps not without some shade of sadness that one comes to rank himself in middle life. Slowly it dawns upon him, reluctantly he admits it. It is no sense of growing old that teaches him, no flagging of the powers of the spirits, not even the taunt of that opprobrious epithet now-a-days flippantly flung at middle life—for the "fogy" is not the old, but the middle-aged man; but one finds that, with the fuller flesh, and firmer muscle, and stronger tread, and truer poise of his faculties,—while yet his sympathies are all young and fresh, while yet he waits to follow where the older and wiser lead,—the world waits and looks to him,—pushes him forward where he hesitates, until he discovers, that no longer looked upon as young, he must take his place in the toiling and exposed van, and hew the way in which other steps shall tread.

The character of middle life is the character of the man. It is that by which he is known, that by which he makes his mark, that by which he does his good or evil; it is the character he carries with him into age, and into the dread presence of his Maker. Middle life makes for us what God himself could not give. The bright visions of youth are past. Sorrows, disappointments, griefs, have overtaken us, and we are made to see how solemn and how real a thing it is to live; how vain, and weak, and ignorant is the unsupported soul of man. Amid trials and toils, the attendant witnesses of a Father's discipline and oversight, amid defeats which each day testify to our insufficient principle, our advancing years lead us. Shall all this pass us as the breeze passes the wheatfield, leaving it standing and smiling as before? Shall we not have gained some steadiness, some stateliness of character, some other reverence than ourselves, some other dependence? Shall the old frivolity still cleave in us—the garb of childhood on the frame of man—the old love and pursuit of pleasure—the old, often vanquished, self-confidence? Shall we be growing into years with all the frippery of childhood lingering about our hearts, our manners, our hopes, our attainments? Not so, middle life is for better things; for the casting off of the childish and unworthy, for the putting on of the whole man—even of the man after Christ. Saddest of all sad sights is it to see the probation of a human soul wearing towards its noon, while no deepening tinge to character proclaims the ripening within, while all things say how closely and wilfully it clings to its grosser delights. Old age is not of necessity beautiful. All do not know the secret of the art of growing old gracefully. It is an art which middle life works at and perfects. The secret lies back there. Serene and waiting, and beloved age is the result of honorable and virtuous middle life; and age, querulous, exacting, burdensome to itself and others, is the product of selfish, frivolous middle life.—*Selected*.

ENDURE HARDSHIP.—As the gladiator trained the body, so must we train the mind to self-sacrifice, "to endure all things," to meet and overcome difficulty and danger. We must take the rough and thorny roads, as well as the smooth and pleasant; and a portion at least of our daily duty must be hard and disagreeable; for the mind cannot be kept strong and healthy in perpetual sunshine only, and the most dangerous of all states is that of constantly recurring pleasure, ease, and prosperity. Most persons will find difficulties and hardships enough without seeking them; let them not repine, but take them as a part of that educational discipline necessary to fit the mind to arrive at its highest good.—*Selected*.

MY HOME.

Not here, where angry billows roll
In ceaseless tumult o'er the soul,
Crushing each warm desire;
Not here my home of bliss shall be,
But to that far eternity

My highest hopes aspire.

Not here, where all is lone and drear,
Where every smile but makes a tear,
That fain would flow;
Where every joy that gladdens the heart
Must e'en of sorrow bear a part,
And one more pang bestow;

But there, where flowers are blooming ever,
Far, far beyond the flowing river,
My happy home shall be;
There angel forms my joys shall share,
And their glad music fill the air
With ceaseless melody.

Then cease thy musing, thou fond heart,
Bear well and nobly now thy part,
Nor heave one bitter sigh;
Each rolling wave of this bleak sphere,
But bears thee nearer—still more near—
Thy home on high.

South Danby, N. Y., 1859.

Written for Moore's Rural New-Yorker.

FORGIVENESS OF SIN THROUGH CHRIST.

In this idea of the Divine forgiveness of sin, we have the sublimest exhibition of God's tender love and compassion to man. Our ideas of law in the abstract are not of the remission of punishment, but rather an impartial rendering unto every man what is his due, whether it be good, or whether it be evil. And when we reflect that this justice is so far tempered by mercy, that the guilt of the sins of the whole world has been expiated by the sacrifice of Jesus Christ, and we are restored to the favor and loving kindness of an offended God, through his intercession and righteousness, we are lost in wonder and admiration, that God should be thus mindful of us, worms of the dust as we are, and less than the least of all His mercies—that He should provide so broad and ample a plan of salvation that none—no, not one—need finally be lost. The mercies of our God ought truly to be melting mercies, in that He has manifested so great a compassion, and forbearance, and long-suffering unto us.

Wilson, N. Y., 1859.

CHRISTIAN ENTHUSIASM.

ENTHUSIASM takes fire, and zeal stretches every nerve, at each thrilling mention of that central figure—the Cross; or those dear scenes, so vivid to the sense—Calvary and the Garden. It was never the utterance of smooth abstraction that wrought with drastic energy on the dead in trespasses and sins; brought three thousand converts into the Church by a single sermon at Pentecost; fascinated the young Florentine artists, and drew them away from their models and galleries to catch the pictures that were unrolled in the sentences of Savonarola, the author of the *Triumphus Crucis*; moved back an audience of French noblesse in a perceptible bodily recoil from the Cathedral altar, when the fingers of MASSILON's imagination opened the covers of the blazing pit; cast down thousands of sturdy English yeomanry upon their knees to pray, when WESLEY ordered the visible array of heaven and earth into the service of his oratory; bore the gracious blessing of BUNYAN's enchanting dream on its world-wide errand of holy delight—a charming evangel; made the stout-hearted New England Puritans, at Northampton, clutch the railings of their pews, when EDWARDS told them of the "due time," as if their feet were that instant veritably sliding; and extorted from a brave but sensual soldier the confession, that he would rather storm the Bridge of Lodi than hear a chapter of the Epistles to the Corinthians.—*Rev. S. D. Huntington*.

THEY SHALL OBTAIN MERCY.—If you find a man disposed to complain of the coldness of the world, be sure you will find that he has never brought any thing into the world to warm it, but is a personal lump of ice set in the midst of it. If you find a man who complains that the world is all base and hollow, tap him, and he will probably sound base and hollow. And so, in the other way, a kind man will probably find kindness everywhere about him. The merciful man, as a general thing, will obtain mercy. He who has always had a kind excuse for others, who has looked at the brightest side of the case; who he has rendered his pardon and his help whenever he could, who has never brought his fellow-man into any strait by reason of not helping him, will find that the mercy which he has bestowed flows back upon him in a full and spontaneous spring. He will make a merciful world by the mercy he himself shows.

READING THE BIBLE.—I don't suppose a man would sin unpardonably if he did not read the Bible any for a whole day. I don't believe God sits watching every man, and saying "There! he has not read the Bible for twenty-four hours! Put that down against him!" And we ought not to read the Bible for fear of any such accounting.—We carry in the Bible God's sweetest messages of cheer to us. If there is anything noble and delicate and tender anywhere, it is found in the Bible. And ought we so to defile such messages as these by a perfunctory reading of them? We should carry them as we carry letters from our dearest friends, and read them whenever the mood calls us to do so; read them again and again, and if we found that we had forgot a sentence or a word, go back and read it over again, and so get them by heart.—*Becher*.

Genuine religion is matter of feeling, rather than matter of opinion.—*Bovee*.

DIFFIDENCE OF OUR ABILITIES.

By endeavoring to display our abilities, we discover a spirit of self-love, which is the ruling passion of man. From it spring emulation, envy, deceit, and, in fact, nearly all the evil propensities of our nature; wherefore one of the two great commandments, "Love thy neighbor as thyself." While we consider self-love as the main-spring of action, we must regard emulation as the immediate cause of a want of diffidence. Not this principle under the control of virtue, inciting to vigorous exertion, but merely the exercise of that baser desire to excel in the opinion of others—the desire to promote self above those around us. Since self-love is attended with so much that is debasing to the mind, surely it is wisdom not to discover its presence in the heart.

Again, if we often make a voluntary exhibition of our abilities, they will soon be undervalued. Even the greatest blessings, when constantly enjoyed without the effort of obtaining them, cease to be prized from their very commonness. So, if we distribute largely of the fruit of our genius or talent, men soon regard such gifts as rightfully theirs, and not theirs by solicitation. Thus our abilities cease to be of use to us, as far as we employ them for the benefit of others. Diffidence of ability must even impart grace and dignity to the character, demanding the esteem and regard of the observer. He who refrains from attracting attention by displaying his abilities, is not influenced by mean or subordinate motives. Let him who would be respected, oblige others to make his acquaintance to judge of his merits. Let the soul be indeed a mine of wealth, urging the explorer on to discover richer and richer treasures.

Pittsford, N. Y., 1859. JAMES E. H.

THE GOOD NEWSPAPER A TEACHER.

This newspaper is the great teacher of our day, furnishing no small fund of information to those to be denominated self-made men in after years. Thousands of our little, obscure boys, in the school-room, the street, and domestic circle, are storing away a great variety of facts and events of vast importance, which will aid them in reaching an eminence of distinction when they shall launch on the stage of public life. These faithful chroniclers are conveying to them intelligence which the accumulated volumes of years cannot furnish. They are stimulating a taste for reading, where a whole library of books would pass unnoticed and unknown. They are creating a thirst for knowledge and wisdom, while the armies of vice, idleness and corruption would be multiplied without them, and our mighty armor of safety destroyed.

Once let this grand source of occupation, physical and mental, be suspended, a multitude of unemployed would run riot in the streets,—the haunts of crime would occupy the place of industry and morality, and discord become the order of the day. Thankful should we be that this powerful bulwark of safety, this potent instrument of good, the newspaper, is adapted alike to the means of the rich and the poor. No man, woman, or child in the land need do without it. Nay, none can afford to lose its advantages. It is the only equalizer of society. It aims to defend the laborer, point out his rights, and the honest road to renown. It is his friend, and warns him against a multitude of imposters striving to profit by his ignorance and credulity. It shows the wealthy the superiority of mind over money, and argues the importance of intellectual endowments, and the folly of costly household ornaments. To the statesman and sage it is a companion and co-worker, communicating much that was previously unknown, and making much with which we are already acquainted practical. The newspaper controls, in no small degree, the sentiments of a people, and should be a welcome visitor in every true American home.

McDonough, Del. Co., N. Y., 1859. D. D. H.

HOW SHALL I BEGIN?

This is always an important question with those about to commence their first term of school. They have engaged the school, and received their certificate of qualification. The next labor is that of beginning. They know not how they shall enter the school, what shall be said to the scholars, and how the school shall be organized. Allow us to make a few suggestions.

1. The teacher should be self-possessed. This will ensure freedom on the part of the scholar as well as teacher. If the latter is confused, the work of organization must be retarded, and often may be unfavorably completed. Pupils will give information of their standing with indistinctness, and be wrongly classified. Ease will tend to a more thorough organization—to a full knowledge of the wants of each pupil.

2. The speech need not be long, yet something should be said. It is always expected, and always proper. It tends to the result of which we have already spoken. Assure the members of the school that you have engaged to act as their instructor with a strong desire to be of good service to them in the prosecution of their various studies—that you will exert every energy of mind and body for their good, be ever ready to assist, where assistance can be safely given, and that diligence, obedience and care must mark their course.

A few words of cheer should first greet the learner. Don't be afraid of a smile as you first address your scholars. If ever, make yourself and your pupils happy the very first half day. We have known teachers to boast that they had not smiled in their school during the entire term. Away with such an unnatural mode of governing a school. Does not the little child need

a smile? Yes, as much it needs the sin and light of heaven.

3. It is very important that the school be well organized, and at an early day. This will be effected by learning as far as possible the advancement which has been made by each, their previous studies and classification. The scholars may be requested, for the first day of the term, to take a place in the same classes as during the last session of the school. This will enable the new teacher to witness the proficiency which each has already attained, and will also suggest the changes which may be demanded. The first day will require the exercise of good judgment and nice discrimination.

In government, some would say, begin as you mean to govern the entire term. This may be well, with its qualifications. We would not, by any means, have the teacher allow a disregard of all proper order the first day, nor would we have him make a special effort to impress his pupils with an unmistakable assurance of awful sternness. Such is not the right way. The teacher should enter upon his duties with a cheerful countenance, and with such discreetness and caution that the scholars may be possessed with the idea of kindness and efficiency. The commencement should be made with the earnest effort to obtain the love and esteem of the learner, and then any change in arrangement or mode of government which the interests of the school shall require may be accomplished.—Maine Teacher.

The Reviewer.

HISTORICAL VINDICATIONS: A Discourse on the Providence and Uses of Baptist History, delivered before the Backus Historical Society, at Newton, Mass., June 23, 1857. Reprinted before the American Baptist Historical Society, at New York, May 14, 1859. With appendices, containing Historical Notes and Confessions of Faith. By Sewall S. Curtis, Professor of Rhetoric and History in the University of Rochester. [12mo. pp. 224.] Boston: Gould & Lincoln.

Like every thing attempted by its accomplished author, the contents of this volume are admirable. In fact, statement and detail, the truths of Baptist History are amply vindicated, the Discourse and its Appendices comprising a most valuable contribution to the religious literature of the country. In noticing the work a Boston contemporary truthfully remarks that "the very prominent part the Baptists have had in the religious and political history of the modern world, renders every work that throws light upon and illustrates their career worthy of the attention of all seekers after truth. Such a work is Prof. Curtis's *Historical Vindications*, which must win the esteem of all readers, so well has it been executed. Originally prepared for delivery at the Anniversary of the Newton Theological Institution, and subsequently repeated before learned and pious societies, it was proper that it should be placed before the world at large for general perusal. It will find many readers outside of the numerous and enlightened denomination for whom it was particularly prepared, as it contains much that belongs to the common history of mankind. The author has proved himself to be liberal, learned and able, and will have the respect and confidence of all intelligent inquirers." For sale by ADAMS & DADNEY.

NEW ELEMENTARY ALGEBRA: Containing the Rudiments of the Science. For Schools and Academies. By H. N. ROBINSON, LL. D., author of a Full Course of Mathematics. [12mo. pp. 312.] New York: Wilson & Philney.

An experienced teacher, who knows whereof he speaks from careful examination, assures us that this work is worthy the special attention of every member of his profession. It is a simple, clear and practical treatise. The Introductory Chapter is especially adapted to lead the pupil, by easy and progressive steps, from the study of Arithmetic to the study of Mental and Written Algebra. The style and arrangement of the work are superior, while its examples are numerous and practical. The subjects of Fractions, Progressions and the Roots are admirably discussed. The *New* demonstration of the Binomial Theorem cannot fail to be admired. We cordially commend the work to all practical teachers, in the confident belief that it is just such a text-book as will be approved and used by those who give it an examination. Books furnished for examination or introduction on application to the Agent, D. W. FISK, Rochester, N. Y.

SERMONS, Preached and Revised by the Rev. C. H. SPRUEN. [12mo. pp. 450.] Boston: Gould & Lincoln.

The announcement of another volume of select discourses by Mr. Spruon will attract attention,—particularly when it is known (as stated in the publisher's notice) that the sermons are given "precisely as they came from the hand of the author himself, with the revisions marked by his own pen, and without a passage or a word being omitted or added." Of the discourses we need only remark that they are characterized by the same glowing fervor, earnestness of feeling and vigorous style of those formerly published, and which have rendered their author, while comparatively young, the most popular pulpit orator living. For sale by STEEL, AVERY & Co.

THE ATLANTIC MONTHLY.—The November number of this admirable magazine bears the imprint of the new proprietors, TICKNOR & FIELDS, of Boston, one of the most reputable and extensive publishing firms in the country. The friends of the Atlantic will rejoice that their favorite has passed into capable hands. We quote the announcement of the new proprietors:

"In assuming the control of the *Atlantic Monthly*, Messrs. TICKNOR & FIELDS would say to its readers, that the Magazine will be conducted upon the same general plan as heretofore. It will be their aim, that, under its new management, the Magazine shall not fall short of its present high standard of excellence; and they would bespeak a continuance of the liberal patronage which has hitherto been accorded to it, and which is the best proof of the public appreciation of its merits."

—The November issue fully sustains the "high standard of excellence" hitherto attained. [We will furnish both the *Atlantic* and the *Rural* for \$4, as heretofore.

Books Received.

GOLD FOIL.—Hammered from Popular Proverbs. By TIMOTHY TITCOMB, author of "Letters to the Young." [16mo. pp. 388.] New York: Charles Scribner. Rochester: STEEL, AVERY & Co.

A Good Friend, and other Tales. By CHAS. READE, author of "Love me Little, Love me Long," "Peg Woffington," "Christie Johnston," &c. With Illustrations. [18mo. pp. 341.] New York: Harper & Bros.

EDITH, the Backwoods Girl. By Mrs. L. C. TOWELL, author of "Queer Bonanza," "The Lady," &c. [16mo. pp. 345.] New York: Ohas. Scribner.

We are also in receipt of the November Magazines—*Harvard Monthly*, *The Knickerbocker*, *Godey's Lady's Book*, *Blackwood's*, *All the Year Round*, &c.—several of which are worthy of extended notice.

A NEW PIANO.

That long-sought desideratum, a good and cheap Piano-Forte, has at last been furnished by the manufacturers of the instrument represented in the accompanying illustration. Unless we greatly mistake the wants and disposition (in expending money for musical instruments) of a large class of people, the New School and Cottage Piano recently announced by Messrs. BOARDMAN, GRAY & Co., will soon become popular, as it places piano music within the means of many who have hitherto been debarred from its enjoyment. We copy what the *Musical World* and *Godey's Lady's Book*—both good authorities on matters pertaining to music and musical instruments—say relative to the New Piano-Forte, as follows:

There is certainly an age of progress, and in no one thing has there been more progressive improvement than in the manufacture of the piano-forte. So many articles have been written descriptive of this instrument, since its introduction into musical circles, that it is hardly necessary here, to repeat these descriptions. Suffice it to say, that from its origin to the present time constant changes have been made in its construction, and a vast amount of time and money have been expended in the various experiments which mechanical ingenuity has suggested, so that we now have the piano-forte as nearly perfect as it is possible to make it, so far as quality and volume of tone are concerned. There undoubtedly will be, as there have been, various alterations in the method of construction, but these alterations are not always found to be improvements.

We have been particularly struck with this progressive idea of manufacturing, in examining a piano for schools and seminaries, made by Boardman, Gray & Co., of Albany, at the extremely low price of one hundred and twenty-five dollars, coupled with another of similar style for cottages and small apartments, for one hundred and fifty dollars. These instruments are exceedingly attractive in appearance, of excellent quality in tone, and no doubt equal in thoroughness of construction to the higher priced pianos of these manufacturers, who are so widely known as first-class makers. We see no reason why the School and Cottage Pianos should not become universally popular, especially in the primary departments of education, where the price has prevented the purchase of a more costly instrument, and in private families where they can be made to subserve all musical purposes in the nursery and smaller rooms, into which the Grand or Square Grand cannot be introduced for want of space. The following article from *Godey's Lady's Book*, we copy for the benefit of our readers who may need a more minute description:

"In our May number we mentioned that Messrs. Boardman, Gray & Co., of Albany, New York, were about making a piano at a low price, especially adapted to the wants of schools, &c. Now it gives us much pleasure to announce that they have the article fully perfected, and it proves all they promised as a musical instrument, and at the price also, 'at less than half the amount usually paid,' &c.

"The piano is of six octaves, being the upper six octaves of an A scale seven octave, and therefore any music can be performed on it that can be on a seven octave, except the lower bass notes, which are not strictly essential. Combining their improved new scales, they obtain all the musical capacity necessary and great power in a small space, the piano being only five and a half feet long, and two and a half feet wide. The cases are finished with all large round corners, back and front the same; have their new and latest great improvement, the insulated iron rim and frame cast in one piece, forming the upper part of the case, making them very durable, as well as ornamental; and they will remain in tune and order for a great length of time, fully equal to their large and elegant instruments, which are renowned for this important principle, thus combining all the improvements in pianos, and simplifying them. They are enabled to offer these instruments, finished in handsome cases for school purposes, securely boxed for transportation, at one hundred and twenty-five dollars. They make the same musical instrument, finished in rosewood cases, highly polished, suitable for the cottage, small parlor or sitting-room, forming an elegant piece of furniture, at one hundred and fifty dollars. These pianos are all the makers represent them, and are fully warranted as to prove and to give satisfaction; and their names as makers are sufficient that they will fulfill all promises. They will furnish circulars, giving full descriptions and particulars of these as well as their large pianos, on application.

"Messrs. Boardman, Gray & Co. have thus met one of the greatest wants of the age, and should have the especial thanks, countenance and support of all who love music, and believe in its influence and refining power, especially with the young. In furnishing Seminaries, Schools, &c., with pianos that are really good and durable, at less than half the usual price paid, it gives them the power to extend the study of music to a larger number and at less rates; and then more of our children can afford to study music, when they can obtain good and elegant pianos at comparatively so small an outlay. In our cities there are hundreds of families who want a piano that will take but little room, and yet have the musical requisites, for the sitting-room or nursery, for their children to practice on, instead of their being confined to the piano in the parlor, &c.; and then, again, there are tens of thousands of families throughout our country, in moderate circumstances, who do not feel able to make an outlay of \$300 or \$400, that can now, for \$150, have all the advantages of a superior piano-forte to enliven their homes, and elevate and refine the character and minds of their children. Such is the enterprise of these eminent piano-forte manufacturers, always looking to the wants of the people, and always furnishing an article fully to

A NEW SCHOOL AND COTTAGE PIANO FORTE.

be depended on; so we advise all who want good piano-fortes to send on their orders to them in Albany, New York."

INSECTS AS SEEN IN THE MICROSCOPE.

The wings of insects are very interesting objects, both to look at unassisted, and with the microscope. The wings of the house-fly are found to be covered with minute, stiff, short hairs; the black net-work of lines that we see in them are elastic horny tubes, over which the membrane is stretched like the silk of an umbrella over its ribs. Bees have a very curious mode of strengthening their flight, in the shape of hooks and corresponding doublings on the edges of their wings, so that when they are flying these are kept expanded by even extra aids to the elastic ribs and tightened membrane. Who would have thought of a bee booking and eyeing himself out in that manner? All sorts of theories have held ground, successively, respecting the feet of flies. First, they were suckers, and they walked by means of exhaustion and atmospheric pressure; then they were grappling irons, and they hooked themselves to microscopic inequalities by means of invisible hooks; then they were glue-pots and exuded a natural gum, which gummed the insect at every step; now we believe they are assumed to be all three; claws, or spines, to hook; pads, or cushions, to preserve them from abrasion—these pads were the original suckers; hairlets as sucking disk that exude a certain moisture—all these hypotheses are found to be true, as always happens in cases when truth unrolls itself in sections.

The scales on the wings of insects are a world in themselves. The little bristle tail which leaves a thick dust on your finger, though touched never so lightly, leaves in that dust a mass of metallic scales of all shapes. Oval, heart-shaped, round, elliptical, long and narrow, shovel-shaped, they lie under the microscope like a collection of fairy toys, all made out of gems. The sugar-louse has oval or shovel-shaped scales, set on to a stalk and arranged like a fan; the five-plume moth of the summer meadows has them willow-leaved in shape, sometimes singly pointed, but generally notched with two, three, or four notches; the six-spot burnet-moth has them lustrous but opaque; the blue butterfly, shaped like a battledore; the buff-tipped moth has large scales like a fan; the magnificent Emperor has them triangular; while some have them fringed, some pear-shaped, and others corrugated, but all over-lapping each other, or tiled. The diamond beetle is the most splendid fellow of the lot. He has a row of precious stones in his flat transparent scales that irradiate the whole field with their gleaming glory. These precious stones are set on to broad bands of black velvet, velvet and jewels alternating in stripes in the most regal and enchanting manner. Few objects are so beautiful as the scales of the diamond beetle, with their royal richness and burning glory.

AUTOGRAPHS OF MILTON AND HIS WIFE.

At the great sale in London, a few months ago, the autographs of Milton and his wife were sold to Messrs. Pennington, of Philadelphia, for a fellow townsman of theirs, who has one of the best collections in this country. The sum paid was £215. The first runs as follows:

April 26, 1669.
Read then of Samuel Simmonds five pounds being the second five pounds to be paid mentioned in the Covenant. I say read by me. John Milton.
Witness Edmund dipton.

"Paradise Lost," published in 1687, was sold by Milton to Simmonds, a bookseller, for five pounds, with a promise of five pounds more (\$25) when 1,300 copies should have been sold of each edition of 1,300 copies respectively. Milton died in November, 1674, and his widow, who long survived him, gave a receipt for eight pounds more, dated December 21, 1680, which was one of the two documents purchased for Philadelphia, which is a receipt in full, as follows:

"I do hereby acknowledge to have received of Samuel Symonds Citizen and Stationer of London the sum of Eight pounds which is in full payment for all my right, title or interest, which I have, or ever had in the copy of a Poem entitled *Paradise Lost*, in twelve Books in 8vo. By John Milton, Gent: my late husband. Witness my hand this 21st day of December 1680. Elisabeth Milton.
Witness William Yapp.
Ann Yapp.

BORAX SOAP.—Those who have tried it, highly recommend the plan of adding borax to hard soap for washing clothes, as it aids in extracting dirt, and so saves labor. Take about half or three-quarters of an ounce of borax and one quart of water to each pound of soap. First dissolve the borax, then add the soap, cut in thin slices, and keep the mixture hot until the soap is dissolved, which may take two or three hours. The mixture is not to be heated up to the boiling point, and it will sometimes answer to set it upon a hot stove at night, and let it remain till morning. When it is cool, it will be a homogeneous mass, which is to be used as you would soft soap upon dirty linen, and that should always be applied the evening before washing, soaking the articles in cold water until ready for the washing machine.—Selected.

The Young Ruralist.

HURRAH FOR THE CITY.

EDS. RURAL NEW-YORKER:—I see you give young folks interested in agriculture a column in your sheet, and some of them have got the language to give light to their thoughts, and that is just what I am lacking. I sometimes wonder if the youth's father's don't write those nice paragraphs for them. But let me inform you of my circumstances. I am a young man, 17 years of age, and am so situated that I can act entirely as I choose. I had the good luck to be born poor as a church mouse, and like all other poor people, have to work late and early for a mere existence. Now I don't like this way of living, and getting nothing ahead but my growth, and how am I to remedy it? Now I will tell you what I am bound to do, and that pretty quick. I am determined to turn my back to waving fields of grain, and go to the city to seek my fortune. Certainly I can get my existence there just as well as if they had apple borers, Hessian flies, potato rot, &c., &c.

Reader, what kind of a fist do you suppose I would make in a counting-room? Would it not be delightful to count that pile of money? To add that column of figures, and scratch away at the books?—Or, would you advise me to stay in the country and work all my life, and in about two years more I would know nothing but work? You can puff all you please about a boy that works hard all day getting time to study. I have tried the experiment, and when night comes all I want to see is a bed. Besides, it is injurious to the eyes to study nights. But enough of this. "Hurrah for St. Louis," and a thousand a year in a counting-room. Methinks I hear some old farmer say, "better work on a farm for one hundred and forty."

Dorsey, Ill., 1859. YOUNG AMERICA.

That is all very nice—a thousand dollars a year in a counting-room. But, how many young men are walking about the streets of St. Louis, Chicago, and other great cities of our Union, with melancholy faces and despairing hearts, almost begging for situations, at salaries that will barely keep them from starvation. Thousand dollar salaries are scarce, and such situations don't go begging, nor are they kept open, waiting for country boys. We would just like to place one of these seekers after employment in the cities—with the last dollar changed, the last week's board unpaid and a terrible forbidding of a dun, which takes away the appetite, and makes existence a misery—by the side of the afflicted, grumbling country boy, and present them to a jury of twelve intelligent men to decide which was the happiest mode of life. One look at their faces would suffice to decide the question, unless, indeed, "Young America" has spoiled his by whining and grumbling. As a general rule, a youth that does not study any when engaged in farming, would not be likely to study much under any circumstances. Those weak eyes of "Young America" would be sorely tried before he had been in a counting-room six months, that is, if he was good for anything, so as to be trusted at posting books, writing letters, &c. A counting-room is a sorry place for a boy who is afraid of his eyes. There is not much fun either, in counting other people's money; it is a great deal better to count a little of our own.

Our advice would be, if you cannot be content on a farm, learn a trade. You can get employment at many trades and have your evenings for study. You can then learn book-keeping, and get a great amount of useful information, that, with good principles, will make you a respectable and valuable man by the time you are twenty-one years of age. And with a good trade, if you are master of it, you are certain of an independent and respectable living. A young man who at twenty-one has a good constitution, a good trade, a fair share of valuable information, and good morals, although not a dollar in his pocket, is a credit to himself and his friends, and in a fair way for usefulness and honor.

BOYS, HELP YOUR MOTHER.

"It looks bad to see three or four large, robust boys sitting around the kitchen stove toasting their shins, cracking nuts and eating apples, while their mother, a slender, feeble woman, logs in wood from the shed, wets her feet going thro' the snow for water, and stands in the damp, chilly cellar cutting the meat for breakfast." It isn't right, boys, and when you get to be men, and your imagination wanders back to the old homestead, that pale face and fragile form, long since mouldering in the grave, will haunt your memory, and cause bitter regrets at your careless neglect. You will think of her, as day after day she moved about in the well remembered rooms, unconqueringly performing all the harassing toil of the household, sacrificing herself, and wearing out her life for you. Think of it, and think how much you can do to lighten her burdens.

A mother's work is never finished. It is one unceasing, monotonous, ever recurring round of toil. Her duties begin first in the morning, and as she must perform the last stroke at night, and as she lays her head upon the pillow, it is with the thought that the same treadmill of labor is to be begun at dawn. The calls upon "Mother" are endless,—here a coat to mend, a book to cover, a stocking to darn. Tommy has cut his finger, and "Mother" must bind it up with a rag. Father has got a cold, and none but her can make the hoarse-brood tea. After all have retired at night, she carefully goes about to see that the fires are all safe—to lock the smoke-house door—shut up the old cat and kittens, and see that the "hired-girl" has the potatoes washed, the buckwheat batter prepared, and the coffee ground for an early breakfast.

Boys, think of these things, and keep the wood boxes well filled, and don't let your mother pull that heavy well-sweep. Knock the mud and snow off from your boots when you go into the house,—don't leave your cap, and comforter, and books lying around promiscuously; and, instead of stopping to play on your way from school, hurry home and do that heavy churning. Do all this, and much more, cheerfully, and it will make home sweeter, and gladden the household circle with many sunny spots.

Belmont, Ala., 1859. ANAD.

MOORE'S RURAL NEW-YORKER

NEWS DEPARTMENT.

ROCHESTER, N. Y., NOVEMBER 12, 1859.

DOMESTIC NEWS.

Matters at Washington.

The special correspondent of the N. Y. Times says that Mr. McLane, on the 8th inst., left Washington en route for Mexico. His instructions are very full, including the subject of transit protection, and looking to the possibility of a general reciprocity treaty with regard to American protection of the transit. He is instructed to insist on that, but to limit the operation of the treaty to some definite period.

At the last session of the Senate a resolution was passed, requesting the President to cause the heads of the Departments to submit estimates for the expenses of the Government for the next Congress, exclusive of the public debt and interest thereon, provided the same can be done without injury to the public service. Estimates are in course of preparation and in accordance with the spirit of the resolutions, and with a view to strict economy, but it is not at all probable that the expenditures will be restricted to such a narrow limit.

Reliable advices state that the government of Nicaragua has every disposition to make with us a satisfactory transit arrangement, and that the only obstacle to this is the Belly contract, which, however, has already failed in some particulars.

The dispatches from Consul Black to the State Department show that Ormond Chase was most atrociously murdered in Mexico, by officers belonging to the Church party. All that was in the President's power to do, will be or has been done in view of that crime. If more than this is necessary to protect the lives and property of American citizens in that country, Congress must provide further means. There is no doubt that the President will prominently present this subject in his annual message. The friends of the Constitutional Government think it is highly essential that Senor Leda should immediately return to Vera Cruz, in order to exert his influence towards the consummation of the pending treaty.

Official information from Mexico to the 2d ult., says that the Juarez government is waiting for the return of Minister McLane, to renew treaty negotiations. As this gentleman commenced them at Vera Cruz, it was considered that it would be disrespectful for him to transfer the proceedings to Washington.

The Treasury receipts for the past week are \$1,809,000. Drafts paid amounted to \$1,072,000. Amount subject to draft, \$4,845,000. On hand last week \$358,000.

Personal and Political.

Hon. JAMES C. JONES, of Tennessee, is dead. He has long been prominent in politics, was Governor of that State, and for the last six years represented it in the United States Senate.

It is said that Ex-President Martin Van Buren is engaged on an important and elaborate work, which shall embrace a political history of the country down to the close of his administration. It is to be hoped that the Ex-President will be spared to complete his undertaking, begun in the evening of life, and amid the retirement which is so favorable to its accomplishment.

At Easton, Pa., on Monday week, the Right Rev. Andrew Benade, the oldest Bishop of the Moravian church in America, and nearly 90 years of age, died. He was much respected for his intelligence and good qualities.

The Legislature of Georgia met on the 2d inst. Legrand Gerry was chosen President of the Senate, and Isaiah Irving Speaker of the House. The message was sent in; it is quite lengthy, and confined to State affairs.

A DISPATCH to the Philadelphia Express says that the Pennsylvania Opposition State Committee have agreed to call a State Convention to elect delegates to a National Opposition Convention of the whole Union.

A SPECIAL dispatch to the St. Louis Republican gives the official vote at the recent election in Kansas as follows:—For the Constitution, 10,419; against the Constitution, 5,580. For the Homestead Law, 8,755; against it, 4,772.

The returns of the recent election in Maryland are very meagre, and seem to favor the Democracy. In Baltimore dreadful scenes were to be witnessed at the polls, firearms were freely used, and quite a number were killed. In a majority of the wards the rioters took possession of everything, carrying all matters to suit themselves. The following members of Congress are elected:—Harris, Davis, Webster, Americans; Stewart, Kunke, Hughes, Democrats. The State Legislature stands as follows:—House—25 Americans, 49 Democrats.—Senate—8 Americans, 13 Democrats. One district to be heard from.

News Paragraphs.

The death of Frederick F. Smith, Esq., "the first white male child" born in Erie county, Ohio, is announced as having taken place at Sandusky, a few days since, at the age of fifty years.

A STATE CONVENTION of sportsmen will be held in the village of Geneva, this State, on Tuesday, the 15th inst., for the purpose of discussing and devising means for united action throughout the State for a revision of the present inefficient game and fish laws.

OVER 300 men are now employed in getting out timber in the Virginia mountains near Rowlesburg, on the Cheat river, which is to be used for gun-carriages by the British Government. The contractor has orders which it will take two years to fill. The Cheat river oak is said to be the best yet imported into England.

The fourth span of the Mississippi bridge at Clinton, Iowa, was finished on Saturday week. This completes the entire work between Little Rock Island and Willow Island. The masonry is nearly done—the sixth and last pier being far advanced towards completion.

An American traveler in Europe, in describing the German railways, says that "smoking is all but universal in railway carriages. In some of them, in fact, I have seen this queerly illustrated by a small compartment of the car devoted to those who did not like tobacco smoke—quite the reverse of our system of smoking cars."

A discovery of great importance has just been made by the State Geologist in Texas. It is no less than the discovery of vast bodies of iron ore, as well as tertiary coal or lignite, beds of limestone, pipe-clay, fire-rock and hydraulic limestone, in the region of country immediately south of Harrison county.

In 1858 more than one million two hundred thousand barrels of flour were received in Boston, or about four thousand barrels each business day. The year ending September 1, 1859, the receipts were 1,077,720 barrels. From Boston this article is distributed all over the Eastern New England States and British Provinces. Western Massachusetts, a portion of Maine, and the large seaports of Massachusetts, import their own flour to a considerable extent.

The 1st of October, 1859, occupies an important place in the meteorological history of San Francisco; its night was the first sultry one known to the oldest inhabitant. Never before had a night passed without blankets being necessary for a comfortable sleep.

While repairing the break in the Croton water pipes in New York, it was discovered that the pipes, all the way from Croton lake to the city, have been a swimming pond for the fish. Numbers of white and yellow bass were found, and as fast as found were roasted by the laborers at the great resin fires kept up during Friday night, and eaten with avidity. One of the fish thus caught was nine inches in length.

A SWARM OF BEES LET LOOSE IN A DEPOT.—A few days ago a man from Illinois passed through Cleveland, on the railroad, with one hundred and ten cases of bees, on the way to California. While the boxes were being conveyed from the Toledo to the C. and T. train, one of them fell off the truck and burst open, and in an instant the air was filled with the buzzing insects. The depot being crowded with passengers, quite a commotion was excited by the pointed attentions of the bees.

CHANGE OF FASHION.—We take the following notice from the Philadelphia U. S. Gazette of Aug. 9th, 1837:—"Matthias, the Prophet," visited the Northern parts of this country last week, and on Friday, preached in Manchester, Va. He was decently clad, but from the fact of wearing his beard, both on his chin and upper lip, he presented a most singular and uncouth appearance.

FROM SANTA FE.—The Westport correspondent of the St. Louis Republican, says that four Santa Fe mails are now due at Independence, and that serious apprehensions are felt for the safety of both out-going and in-coming parties. The same correspondent also states, on the authority of the mail carrier between Council Grove and Fort Riley, that nineteen returning Pike's Peak emigrants, have been murdered by the Indians on the

plains since the killing of the Chief of the Kears, at the former place about two months ago.

BUSINESS PROSPECTS IN THE WEST.—The Cincinnati Gazette says:—The demand for money continues active, but chiefly from the country, which is a favorable sign, indicating that business in produce throughout the interior has become very active, and that country collections will consequently very soon improve. Throughout Illinois and Indiana, the desire to sell corn at 20 cents to 25 cents per bushel, is general and strong, and at Lafayette, Indiana, Monday, we understand, the supply of corn brought in by wagons, exceeded anything before known, and the price declined five cents per bushel. This abundant supply of corn will lead to an abundant supply of pork and beef, and will place the West in a position to liquidate its indebtedness, which cannot be large, and put financial matters in an easy position within sixty days. Wessay the indebtedness of the West is not large, which will be apparent when it is considered that ever since 1857, business men have been engaged collecting up old accounts, and contracting their business, rather than extending it, so that no undue expansion can exist in the Western States just now; and consequently, no collapse need be feared. This, to our mind, is the common sense view, and in fact the true nature of the case, and it will take but comparatively little to place business matters in a most comfortable position, and the business community in very easy circumstances.

NATURALIZED CHINAMAN.—One of the immigrants from the Celestial Empire, has become a full fledged American citizen. He declared his intentions in 1853, and having now perfected his papers, stands on his reserved rights, which white men in California respect without contest.

THE CRANBERRY CROP.—The Barnstable (Mass.) Patriot, says:—The cranberry crop has not been overabundant this year, but there has been a middling yield, and the berries have ripened finely. The higher lands and richer soil seem to have produced best. The amount gathered in this town is not far from a thousand bushels, and they will sell for about \$4 a bushel. In Brewster, Albert P. Clark raised 265 barrels, sold at \$18 1/2¢ per barrel—amounting to \$3,475; Mrs. Lurana Winslow, 214 barrels, on three acres; Nathan Winslow, 53, on one acre; and many others have from 15 to 20 barrels. Our readers can judge for themselves of the great profit growing out of the culture of the cranberry in Barnstable county.

BROWN CONVICTED.—The leader of the Harper's Ferry insurrectionists has been convicted, and sentenced to be hung on Friday, the 2d day of December next. GUNN, the negro, was convicted of inciting negroes to insurrection and murder in the first degree. The charge of treason was abandoned in his case, he not being a citizen.

A GOOD DENTIST.—The root of an aching or diseased tooth may not be the root of all evil, but it is the cause of abundant pain and tribulation. Sufferers from aching, diseased or lost instruments of mastication, are confidently referred to the card of Dr. E. F. Wilson, a practical and scientific Dentist of rare success, who performs operations which are often painful and annoying, in a satisfactory manner, giving little pain or trouble to the recipients of his delicate manipulations. Mr. W. is a true progressive, taking the lead in adopting new inventions and real improvements in the dental art. We know whereof we affirm, and therefore take pleasure in saying thus much without the knowledge or solicitation of the party commended.

FOREIGN NEWS.

GREAT BRITAIN.—The London Times, in speaking of Commodore Tatnall's dispatch, relative to the operations at the mouth of the Peiho, editorially eulogizes it, and says if any defence were needed for the acts of the British Minister and Admiral in those distant regions, it would be found in the dispatch which it has had the pleasure of printing.

The departure of the Great Eastern for America had been postponed sine die, and would probably not take place this year.

The strike of the London builders continued, and there were indications that it was beginning to tell seriously against the men who refused to resume work. The dividend was diminishing, and a resolution was adopted to appeal to the public for support. Recent returns show excessive mortality among the wives and families of the operatives in the building trade, and there was fear that scores of innocent persons and young children were perishing from sheer want.

The weather in England had been unusually severe for the season. Heavy frosts prevailed, and a considerable quantity of snow had fallen.

Parliament is further prorogued to Dec. 10th.

The policy of England, in taking a part in the Congress, is being canvassed by the press, and generally the arguments are against it. The London Times and Herald are both averse to England joining any European Congress on Italian affairs.

The London Post, Lord Palmerston's organ, asserts that it was an idle trifling with the influence of England and the hopes of Italy, to expect any English statesmen, at all worthy of the name, would hazard his own reputation and the national honor entrusted to his care, by entering a Congress, of which the basis may be an execution of the Zurich treaty. The journal, in another editorial, regards the Italian complications as very serious, and the position of Napoleon as extremely embarrassing. He has undertaken the special protection of the Papal Government, and also of Italian liberty—an opposition warfare. It is almost certain that the Romagna will be attacked by the Papal troops. It is also certain that at the first menace of armed intervention in the Duchies, the troops of Garibaldi will sweep before them every vestige of Papal rule. Under these circumstances the intervention of Austria will be anticipated. What part France will then play, and what extension will the Roman question then assume? The Post concludes by saying that English statesmen will make efforts to avert the dangers which threaten Europe.

The Chronicle says that Messrs. Beardmore & Robinson, electricians, visited Valencia this

week, and set on foot a series of experiments on the Atlantic cable. Encouragement as to the success of the undertaking, both as regards the resuscitation of the old and the laying of the new was in the ascendant. These gentlemen found room in the state of the cable to disseminate new courage among its friends.

FRANCE.—A Zurich telegram of the 18th, says the principal points of the treaty of peace between France and Austria, signed by the Plenipotentiaries and ratified by the two Governments, are as follows:—Austria gives up Lombardy, except Mantua and Peschiera, and as far as the frontier line fixed by a special commission to France, who transfers it to Piedmont. Pensions acquired in Lombardy are to be paid by the new Government. Piedmont is to pay Austria 40,000,000 florins, and be responsible for three fifths of the debt of Monte Lombard—Venetia making a debtful transfer to Sardinia, 250,000,000. The two Powers will unite their efforts in order that reform in the administration should be carried out by the Pope. The return of the Dukes of Tuscany, Modena and Parma, are expressly reserved to the two Emperors, who will assist with all their power in a formation of a Confederation of all the States of Italy and Venetia, under Austrian rule. Ratifications were to be exchanged at Zurich within fifteen days.

The projected Chinese expedition had been discussed in the Council of Ministers. It was proposed to dispatch 15,000 men, but nothing definite was arrived at. The troops would not leave before the end of the year.

Accounts from Cochinchina say that the French forces were so worn out by fatigue and disease, that they were preparing to abandon Touraine, and return to China. The only point which the Admiral will not abandon is Segon, where extensive fortifications had been raised, and a strong garrison will be left.

ITALY.—Marshal Vaillant is reported to have written to Napoleon, suggesting the occupation of the Duchies by French troops, to prevent civil war from breaking out.

The Neapolitan army, the Roman portion, was increasing. It was rumored that troops had landed at Ancona.

Considerable excitement prevailed in Piedmont on the condition of the Zurich treaty.

The King of Sardinia, on receiving a deputation from the municipality of Genoa, reiterated his intention to defend the cause of Italian independence to the utmost of his power. He expressed the hope that the wishes of Italy would be granted.

The Common Council of Milan had voted 100,000f. toward Garibaldi's subscription for the purchase of muskets.

It is expected that the effective strength of the new Sardinian army will be 100,000, exclusive of the rifle corps and military marine. In addition there will be throughout the kingdom, about 800,000 National Guards.

COMMERCIAL.—Breadstuffs—Breadstuffs depressed, the improvement noted at beginning of the week being all lost. Flour 22-6d@27s; Red Wheat 9-5d@9-6d; White do. 8-9d@11s. Yellow Corn 6-5d@6-6d; White do. 6-5d@6-6d. Potatoes—Very little doing in beef. Sales of pork steady. Lard steady—54@60s. Bacon dull. Tallow unchanged.

Clippings from Foreign Journals.

The oldest pensioner at the Chelsea Hospital, England, is in his 105th year. Excepting that he is unable to feed himself, his powers and faculties are remarkable; his sight, hearing, memory, etc., are good, and he is able to walk without the aid of a stick.

The Rajah of Coor, who has lived in Oriental magnificence, near London, of late years, is dead. He leaves a daughter to inherit his millions, who has been the object of the especial care of her Majesty, and been educated and brought up with English ideas, and in the Protestant faith.

SCHAMLY, who, at the head of his Caucasian mountaineers, has so long baffled and annoyed the Russians, is a prisoner for life. He was presented to the Emperor last month, and has been assigned by him a residence and an income in an inland town, where he will enjoy every liberty except that of leaving the place.

In a speech delivered at Aberdeen, Scotland, a few days since, Lord John Russell entered at large upon sundry political questions. In speaking of Italy he took occasion to declare that England would never, under his auspices, enter into the contest if the rights of the people of Italy to govern themselves, without the interference of foreign coercion, were recognized. At the same time he declared his firm belief that neither Austria nor France would use any compulsion with the people of Central Italy.

The London Times says that agents of the French, Austrian and Sardinian governments have been soliciting tenders from the leading English iron founders for a very large number of rifled cannon. The Paris correspondent of the London Herald says nothing is heard on every side but preparations for war. Not a single man in the French army has yet been sent home on renewable furlough, and only those entitled to discharge in December next have obtained it. Not a single ship has been dismantled, and active measures of defence are progressing at the ports. The correspondent gives a similar picture of operations in Austria and Sardinia.

A PAPER read before the British Scientific Association on "Underground Temperature," stated that, with the thermometer sunk to the depth of three feet, the greatest cold was experienced in February, while at six feet deep the greatest cold was in March; at twenty feet deep the greatest cold was in April, and at twenty-four feet deep the greatest cold was in July.

LORD BROUGHAM, though eighty-one years of age, has just undergone an amount of work in a single week which would have severely taxed the energies of a man in middle life. His address at the meeting of the Social Science Association on the 11th ult., was a marvel of length and ability; on the night of the 12th he took part in the anniversary proceedings of the Bradford Mechanics' Institute; on the 13th he paid Sheffield a visit, and delivered speeches marked by his wonted fire and vigor; and the same night he was one of the speakers at a working-men's meeting at Bradford.

The News Condenser.

- Fillibuster Walker is living in obscurity in New Orleans.
- The Walker Fillibusters have been acquitted in New Orleans.
- The United States forces at San Juan Island number about 500 men.
- An eel three feet and six inches long was found in a hydrant in Boston last week.
- The International and Colonial Banks of Canada suspended payment last week.
- Garibaldi has issued an address to his troops warning them that a battle is at hand.
- At the last State Fair of California, a cabbage was exhibited that weighed 58 pounds.
- Salt springs have been discovered in the coal fields of Southern Illinois, in Marion Co.
- Secretary Floyd, it is said, will succeed Hon. J. Y. Mason, (deceased) as Minister to France.
- The corn crop in the Ohio and Selola bottoms, says the Portsmouth Tribune, is very heavy.
- Ossawatimie Brown was a soldier in the war of 1812, and fought at the battle of Pittsburgh.
- A well preserved colossal bronze bust of Cicero has been recently discovered near Pompeii.
- In Hamburg, out of 2,848 cases of cholera this summer, 1,193 have died and 1,149 have recovered.
- Wild ducks abound in the Saragobanus now, and the sportsmen bag large numbers of them daily.
- All the prisoners in the La Crosse, Miss., jail, including a German murderer, recently escaped.
- Providence, R. I., contains 62,000 inhabitants, of whom 82,000 are Americans and 20,000 foreigners.
- They charged one dollar for an admission ticket to a single lecture by Bayard Taylor in San Francisco.
- Hon. Francis P. Blair, of Missouri, a few days since emancipated four slaves in the St. Louis court.
- Some of the Chicago merchants are agitating the establishment of a clearing house for grain in that city.
- There is as much difference between a statesman and a politician as there is between a pillar and a post.
- At Lavaca, Texas, it is stated that a line of pack-sails will shortly commence running from that port to Hamburg.
- The Tennessee Legislature has before it a proposition to expel all free negroes from the State after January 1st, 1862.
- There was a general white frost in South Carolina on the 22d ult., and in the middle and upper country there was ice.
- It is estimated that two-thirds of the population of the United States have at least two initial letters to their names.
- Frost and ice were noticed near New Orleans on Sunday week, and also in various parts of Mississippi and Alabama.
- The Free Masons of San Francisco have purchased a lot of land for \$92,000, and will erect a building worth \$100,000 on it.
- There are five starch manufactories in Stowe, Vt., each of which uses from 17,000 to 20,000 bushels of potatoes a year.
- A company of Zouaves has been formed in New Orleans, their commander having served in one of the corps in the Crimea.
- The N. Y. Times numbers fifty-three actual suicides within the last six weeks, with twenty more unsuccessful attempts.
- Agents from Tuscany are understood to have been in London and Paris trying to raise one or two millions, but without success.
- The French Courrier de l'Etat Unis states that the original of the Pilgrims' Progress has been discovered in England.
- The Ex-Royal Family of France—the Duke and Duchess D'Aumale, the Count de Paris and the Prince de Conde, are in Ireland.
- Rev. J. W. Grier, the oldest Chaplain in the Navy, has resigned. He is from Pennsylvania, and entered the service 85 years ago.
- The Museum of the late Hugh Miller has been purchased by the city of Edinburgh for the sum of one thousand pounds sterling.
- Horace Vernet, the famous French painter, is engaged upon a large historical painting of Napoleon surrounded by his Marshals.
- A farmer in Dearborn Co., Ind., produced proof that ten acres of his corn averaged one hundred and seventy-five bushels per acre.
- In England no less than 80,000 tons of iron are required every year for the necessary repairs of the tracks on the different roads.
- A deaf and dumb man in Connecticut, who married a deaf and dumb woman, have had five children, all of whom hear and speak.
- The manufacturing of salt from the brine of the springs discovered at Grand Rapids, Mich., has commenced. It is of good quality.
- Two "cattle drovers" were arrested in Columbus, O., Monday week. They had 51 head, all of which they had stolen at different points.
- It is expected that, by the middle of January, telegraphic communication will have been established between London and Calcutta.
- A steamboat to run upon the ice between Poughkeepsie and Albany during the winter, is among the novelties talked of in New York.
- The Georgia State Railroad has paid into the State Treasury, for the year ending September, the sum of \$402,000 over and above expenses.
- Omahuses, the first in Syria, have been run at Boyrot. Crowds of natives stood gazing at them for hours with wonder and admiration.
- The taxes in Austria which were imposed last May, and which were to continue only during the war, are to be prolonged to November, 1860.
- Arkansas contains 825,385 inhabitants; of these 60,385 are slaves. The increase of taxable property for the last six years has been 138 per cent.
- The Bel. American states that there are in the city of N. Y. about 200,000 smokers, each using two cigars daily, making 400,000 cigars every day.
- A rich vein of gas has been discovered at Mansfield, O. Soon after being opened it caught fire, and has been burning brilliantly ever since.
- The Michigan Normal School at Ypsilanti, with two libraries, furniture and laboratory, were burned Saturday week. Loss \$25,000, insured \$10,000.
- Andrew Jackson commenced life as a school master in South Carolina. With the money gained by that employment, he began the study of the law.
- In Philadelphia, according to the directory, there are 595 Smiths, 419 Browns, 386 Johnsons, 304 Joneses, 269 Williamses, 255 Wilsons, and 178 Davises.
- It is a proverb in Jeff. Co., N. Y., that snow always falls at Sackett's Harbor 15th Oct., and an old gentleman wins money annually on a bet to that effect.

BE BRAVE OF HEART.

BY HENSON BELL.

Be brave of heart, ye men of toil,
Bear up 'neath Labor's load awhile,
And sow, and reap, and turn the soil,
And make the fertile prairie smile.
The barren waste that's now o'erspread
With thorny shrubs and jointed cane
With golden grain will wave instead,
And Plenty bloom where Want now reigns.

Be brave of heart! let anvil ring,
And forge breathe their fire and smoke,
Sweat at thy task and proudly swing
The hammer with a steady stroke;
Mould out the steel in graceful shapes,
And forge the iron with heat and song—
What though thy life is filled with cares,
Thy heart is brave, thy hands are strong.

Be brave of heart! with wood and stone
Rear temples to the clouded sky,
Make rivers toll and engines groan,
While wheels revolve and shuttles fly,—
Let Progress take a higher flight,
For steam, the giant, is our slave,
With it we scale the mountain's height,
And ride the ocean's crested wave.

Be brave of heart, and scorn the fools
Who fling their taunts at those who toil,
They are vain fashion's servile tools,
The barren fig trees of our soil,—
Although they boast of ease and wealth,
Of glittering gold and fertile lands,
Their heritage is not thy health,
Nor yet thy rough and honest hands.

Be brave of heart! the captive bound,
With all earth's wrong'd look up to thee;
The Roman with his chaplets crown'd
Was not more noble, nor as free;
Then toll at forge, and loom, and plow,
And Fortune, from her ample store,
With Honor's wreath will bind thy brow,
And bid thee go and want no more.

Written for Moore's Rural New-Yorker.
UPS AND DOWNS.

BY EMILY C. HUNTINGTON.

THE SMITHS were going up in the world; nobody disputed that, and this I take to be conclusive proof, since there is nothing that people are so loth to admit as that their fellows, who have stood upon the same social platform, are rising in the scale above them. The SMITHS then were going up, not slowly and gradually, but all at once, and, as often happens to people in such circumstances, they were a little giddy with the sudden elevation.

It was hard to tell when the SMITHS first came to Newton; one thing was certain, three generations of them had lived and died in the old red house by the cross-roads. Of these families, SMITH, the first, was a cobbler, and managed to make a tolerable living by repairing the boots and shoes of the farmers round about. SMITH second, eldest son of SMITH the first, inherited the old red house, but, disdaining the paternal trade, converted the cobbler's shop into a corner grocery, stocked it moderately, and drove a steady trade in sugar, flour, tobacco, and cheap whiskey, until, from the natural wear and tear of life, and the effects of hard drinking, he was gathered to his fathers, and left his earthly possessions, with his good name, to his son ANDREW SMITH, called ANDY "for short."

ANDREW, like a dutiful son, stepped quietly into the honorable position his father had vacated, and, as soon as decency would allow, married BETTY GREEN, old farmer GREEN's daughter, a most substantial maiden, who had been brought up to work all day in the field in haying or harvest, barefooted, like "Sweet MAUD MILLER," and then milk the cows at night, like those milk-maids poets say such pretty things about. Farmer GREEN hadn't any boys, but, as he very justly remarked, "BETTY was equal to six boys any day." Certainly, there was enough of her to furnish material for a half dozen city dandies.

The wedding was quite a merry affair in its way, after which ANDY and his bride took a trip to the neighboring city in a one-horse wagon, with a bag of oats under the seat, to save expense for horse-keeping, and, returning in a day or so, settled down in the old red house by the cross-roads. The bride brought as her dowry, a feather bed, a pair of blankets, and several blue and white woolen "kiverlids" woven by her own fair hands. As might have been anticipated from so auspicious a beginning, the married life of the SMITHS moved off smoothly enough for some twelve or fifteen years. Olive branches grew up in abundance about them, and with neither poverty nor riches they might have lived and died contented with their lot, but for an unlooked-for event.

Somewhere, down east, Mrs. BETTY had a wealthy relative, as all heroines have, who was good-natured enough to die and leave all her property to her "dear niece, BETTY SMITH, formerly BETTY GREEN." When the attorney's letter was received, formally announcing the fact to the heir at law, the whole family was thrown into the greatest excitement. Every one was immediately clothed in the deepest and blackest of mourning, for the dear Aunt whom they had never seen, and whom they had long regarded as a sort of mythical personage. The effect of this change of costume was rather odd, particularly upon Mrs. SMITH, whose round, red face shone out like a full blown peony from its black surroundings; but she was evidently delighted with herself, and who had a right to call her taste in question?

Time would fail me to tell all the things that the SMITHS found it necessary to do. Of course they could not think of living in the little old red house any longer; so ANDY put up a board on the premises with "FOLLE SALL," written on it, in great black letters. In spite of sundry jokes by the wags of the village about "ANDY SMITH's fore-

sail," a purchaser was found in due time, who was to take possession as soon as the SMITHS could find another place that suited them.

Mrs. BETTY contended strongly for building a grand house, "with little fences round the windows, and a balcony on top," but her husband dwelt upon the long time they should have to remain in the old house if they waited to build, and so won her over to his plan, of buying the great staring red brick on the hill, that was originally built for a factory boarding house, and abandoned because there was not any factory started. After fitting this up with what they called "modern ingre-jences," the SMITHS took up their abode in it, and immediately installed themselves as the aristocracy of Newton. Henceforth Mrs. BETTY became ELIZABETH, her eldest daughter was no more MOLLY, but MARIE, and SMITH, junior, who was christened ANDREW, in loving remembrance of both father and grandfather, wrote his name upon all occasions. A. JACKSON SMITH. These two eldest hopefuls were placed for a year in a boarding school, where the boy learned to smoke cigars, play whist and get up astonishing neckties, while his sister read cheap novels, and spent a great part of her time in eating chalk and starch, and taking enormous doses of vinegar, in the vain hope of becoming pale and elegant, after the style of the willowy heroines that so charmed her fancy. They came home perfectly accomplished, as their delighted mother was assured; indeed, as she afterwards told a confidential friend, her daughter was pronounced a "regular deficient in her studies."

It was really pitiful to see ANDY SMITH wandering about town, in a painful state of uncertainty as to what propriety required of him. He had an evident hankering for the corner grocery, and gazed at it wistfully in passing, as if he really longed to stand behind the counter again, but he seldom entered. He would examine the sleeve of his new coat, stroking it admiringly, as if astonished at its quality, while the coat itself wore almost as viable a look of wonder, and struck every one as being hung up in the wrong place. As months wore on, poor ANDY grew more and more uncomfortable. A man placed suddenly upon a high tower may amuse himself for a while with the novelty of his position, and the extent of the scenery, but when these tire a little and he begins to look down, and calculate the distance to the ground, and think that a single false step might send him there, he is very apt, especially if his head be weak, to forget everything else in the fear of falling. It was very much so with ANDY, and yet he would not have admitted that he was not the happiest man in the world.

One summer, just as the hot season began to come on, Mrs. SMITH and "MARIE," after a great deal of consultation, and numerous cabinet conferences, announced to the paternal head that it was necessary, for the health and respectability of the family, to take a trip to some watering place, and Saratoga was suggested as the most desirable. No objections being raised, they immediately entered upon a course of preparation. Mrs. SMITH was in favor of taking all the children, but MARIE talked so convincingly of the vulgarity of large families, that it was finally settled that only the three eldest should go—A. JACKSON, MARIE, and NANCY.

This last daughter deserves a special mention, as she was, par excellence, the genius of the family. Plain and outspoken, even to a fault, she stubbornly resisted every attempt to reduce her to any thing but her simple, natural self. She would not be Nannie, or Nancie, or anything else but NANCY; that was her name, and she liked it. She entered heartily into all manner of fun and frolic, and it was a matter of perpetual regret to her that she was not allowed to go barefooted, and play in the barn.

After innumerable trips to the city for dry goods, and consulting of milliners and mantua-makers, the party were equipped to their satisfaction, and ready for the jaunt. The baggage, at the suggestion of A. JACKSON, had been simply marked "Smith," as the most aristocratic way, and altho' the young gentleman contended strongly for a different spelling, his papa for once was inflexible; "his name wasn't SMITHS, no how, and 'twas forgery to put other folks' names on to things; he knew a chap sent to State Prison for it."

Mrs. SMITH had never traveled by railroad in her life, and consequently was in a state of nervous trepidation lest she should do something out of the proper course. The driver who conveyed them to the city, deposited them bag and baggage at the depot. Mr. SMITH with the children entered the sitting-room, and Mrs. S. was about following when a man stepped up, and laying his hand upon the trunk, asked, "Where is this going me'am?" "To Saratoga," was the hesitating answer, as she eyed the man sharply.

"All right; here Pat, take this over; here are you checks me'am."

Mrs. SMITH took no notice of the checks, but as soon as the Irishman took up her trunks, and commenced trundling them toward the freight platform, she rushed after him exclaiming,

"See here, Mister, you need not try to play any of your city tricks on me. We're goin' to ride in the locomotion, and them trunks is goin' with us, and you needn't think we shall let you carry 'em to Saratoga on that wheelbarrow."

In her indignation she raised her voice until it reached MARIE in the setting-room.

"Gracious! what is ma doing," she exclaimed, starting for the door, followed by her brother.

The tableau was complete—Mrs. SMITH, red and angry, the amused railroad official, the perplexed paddy, scratching his head and looking from one to the other—but A. JACKSON very quickly spoiled the picture by respectfully requesting his mother "not to make a fool of herself," which suggestion, followed up by some indignant ejaculation of MARIE's, had the effect to bring her into the room, where she sat vigorously fanning herself with a newspaper until the train arrived. Having made one blunder Mrs. SMITH quietly subsided and gave up the whole care of the baggage to her son.

Just at dusk they reached the city of A., where they were to spend the night. All but SMITH junior were completely bewildered by the crowd of importunate hackmen that clamored in every key; that young gentleman, however, was gifted with

an unlimited amount of cool impudence—not a bad traveling companion where brains are lacking—and accordingly undertook the escort of the party, which, truth to tell, he carried bravely through, establishing them in a spacious carriage, and landing them triumphantly in a first class hotel.

After considerable parleying and some confusion they found themselves in possession of a suite of rooms—a parlor and two bed-rooms, for, as Mrs. SMITH declared, "the gals can have one room, we can have the other, and ANDREW JACKSON can sleep on that big sofa."

"Will you have your trunks sent up," asked the grinning waiter.

"Yes, the largest one."

"What name, sir?"

"Smith," very emphatically.

In a few moments a porter brought in a big black trunk, landed it in one corner and retreated. Mrs. SMITH sat panting in a large rocking chair, her spouse stretched at full length on a sofa; NANCY looked from one window and laughed at some comical scene; A. JACKSON, with his hands stuck in a consequential manner in his breeches' pockets, promenade the room and whistled; while MARIE commenced preparations for appearing at the supper table. "Where are the keys, brother," she asked. The young gentleman carelessly tossed her a bunch, and continued his promenade.

"Can't you tell me which one belongs to this trunk," she asked impatiently, after trying several. "Keep on till you find it, if you have not got sense enough to tell," was the gracious answer.

After a good deal of trouble she succeeded in forcing one of the keys in, and opening the trunk.

"Gracious! ma," she exclaimed, "here is pa's blacking brushes right on top of everything," and the offending articles were tossed across the room. She tossed over the contents a moment more, throwing various masculine habiliments to the right and left in a very summary manner. "I declare," said she finally, "I can't find a thing. My pink barege is n't here, and right where I put it is a pair of great dirty boots. I think it is a shame for pa to act so."

Mr. SMITH being roused from his nap by the storm of indignation, feebly declared that he had put a thing into that trunk, which brought Mrs. SMITH to the rescue.

"Sakes alive, Moll, them isn't your pa's clothes none of 'em; nor that isn't our trunk neither, tho' it is most exactly like it."

The whole family were in the greatest consternation, when all at once there came a thundering knock at the door.

While this scene had been transpiring in their room, one equally strange had been enacted in a room close by, occupied by a sturdy bachelor of forty, who likewise rejoiced in the name of SMITH. Having ordered his trunk brought up, he had divested himself of dusty coat and boots, and was very energetically exploring the depths of the washbowl, when the porter appeared with his load.

"Put it down there," came in smothered tones from behind the towel, and the porter obeyed. Somewhat refreshed by his ablutions, the nice old bachelor applied his key to his trunk, with a pleasant recollection of clean linen; said a few rough words when it didn't come open very easily, threw up the top with a jerk, pounced upon something white, and shook out—no shirt at all, but something very elaborately ruffled and trimmed that fairly made his hair stand up with astonishment.

"Thunder!—women's fixin's in my trunk, I'd sooner have black snakes in it. I do believe," he added, slowly turning over the things curiously, "I do believe this is somebody else's trunk. Bah! laces and ribbons and all sorts of flagee nonsense. Curis, though; I should like to know how the critters get these things on—hanged if I can guess. I'll bet now," he exclaimed, starting up, "some tarnal woman is musing my trunk over and grinning at the things."

A vigorous jerk at the bell brought a waiter to the door.

"Are there any other SMITHS here, waiter?" Waiter didn't know; he would find out; and soon returned with the information that there was a family of that name in the rooms close by. Utterly forgetful of coat and boots, he strode to the door pointed out, and startled the occupants by a knock which convinced them that the police were on their track.

"I beg your pardon, ladies, he began, in great confusion—when, seeing his trunk open and his clothes scattered about, he bolted into the room, gathered up the garments with one vigorous sweep, seized the trunk and marched out again, calling, as he entered his own door, "Here, waiter, come and take this confounded female trunk out of my premises."

There was no chance for a word of explanation on either side—both parties seemed satisfied with regaining their property unharmed. MARIE was soon arrayed in her dear, pink barege, whose multitude of flounces seemed to have used up so much of the material as to leave nothing for sleeves, and very little for waist. Mrs. SMITH's delicate complexion was set off by a fanciful head-dress of blue and white, but NANCY insisted upon wearing her traveling dress, and could not be induced to change it. "What is the use of taking so much trouble," she asked, "for people that you never expect to see again? I am sure I don't care what they think of me, and if I did, they will like me just as well in this dress as any."

At the table they attracted sufficient attention to satisfy even MARIE, who giggled and simpered in a most remarkable manner upon discovering that she had for a near neighbor the nice old bachelor SMITH. That gentleman, after giving the whole family a sweeping inspection, and nearly annihilating MARIE by a scowl from under his bushy eyebrows, threw a half nod at NANCY's good-natured face, and then devoted his whole attention to his supper.

In due time the party went on their way—reached Saratoga in safety, where MARIE made a tremendous sensation by wearing her ball dresses at the table, and dishing desperately with a foreign nobleman, who turned out to be one of the coachmen at the next hotel. A. JACKSON was initiated by a distinguished young friend of his into the

mysteries of a gambling saloon, from which he issued quite late at night, minus his money and watch, and with no very distinct ideas of his own, except that the streets were very crooked and the lamp-posts blowing about oddly enough, and it vaguely occurred to him that something must be drunk. NANCY found some girls of her own age who had come to Saratoga as nurses to somebody's children, and insisting that they were "the nicest kind of girls," made them her constant companions, and probably enjoyed herself more than any other member of the family.

After a few weeks spent in this way, they were all glad to return to Newton, and for the rest of the season they were the "traveled monkeys" of the place. "Our tower to Saratoga" was an inexhaustible theme for Mrs. SMITH, upon which she held forth at sewing societies, and on all possible occasions.

Two or three years passed, and brought with them no great changes to the SMITHS. The paternal head of the family subsided more and more into a nonentity, and was only seen creeping timidly about town with his hands clasped under the skirts of his coat, or leaning over his fence of a sunny day, consoling himself with his pipe. Mrs. SMITH's red face changed gradually to a mahogany brown, and her shrill voice acquired a higher key, while MARIE grew as pale and languid as she ever aspired to become. A. JACKSON was emphatically a "fast young man," and the wise ones shook their heads prophetically as he dashed by them; but NANCY, in spite of incessant scolding from her mother, and ridicule from MARIE, bid fair to prove a valuable member of society, from the force of her own good sense.

So they stood at the end of three years, but from that time signs of retrenchment began to show themselves. Parties began to grow rare; summer excursions were rarer, and after a while the last servant was dismissed, because, as Mrs. SMITH very wisely said, the girls needed more exercise, for they were getting to have "nerves, and neurology, and she didn't know what all." By and by they discovered that the house was too large for them, it was so much trouble to take care of it, and a part was rented to another family, while the SMITHS modestly retired into the second story.

Then Mrs. SMITH got to having the "nerves," and could not possibly bear the care and confusion of her two youngest boys, who were accordingly apprenticed to trades in the city, and, just to keep her out of mischief, SUSAN, the youngest daughter, was allowed to learn mantua-making in the village. It would do her no hurt, her mother remarked, and she had heard it was very genteel to fit one's own dresses.

The SMITHS were going down, everybody said so, but the SMITHS themselves resolutely shut their eyes to the fact, and fancied, because their own heads were in the bush, all their neighbors were in the same condition.

One day a portly man, with a pocket full of papers, arrived in Newton, knocked at the red house on the hill, and had a brief conference with the united head of the family. Before night it was generally known that somebody, who held a mortgage on the estate of the SMITHS, had foreclosed it, and the property was offered for sale.

Oddly enough, the old red house by the cross-roads was just then vacant, and the tattered remains of our aristocracy was fain to move thither. It was not too much to venture that there were red eyes and tearful faces behind the thick veils of the female SMITHS, but ANDY was fairly triumphant. He whistled as he trundled boxes and bundles from one house to the other on his wheelbarrow, and he actually chuckled with delight as he brought out from a dusty corner of the little shop, the old painted sign that had swung over the heads of his customers so long—"ANDREW SMITH, GROCER."

At this present day, a little old man in rusty black smiles patronizingly upon the country folks who frequent his shop, and draws a sigh of quiet relief whenever he chances to pass the big red house on the hill. His wife, once more Mrs. BETTY, keeps her small house quite tidy, and manages now and then to do an extra washing or ironing, by way of giving a neighbor a lift in a busy time, but she cannot forget her former glory, and still dwells upon it whenever she can find a listener. SUSAN is our village milliner, and really has a natural tact for flowers and ribbons, and occasionally goes out to dressmaking just to see what the news is about town. NANCY, after much opposition, married a very respectable farmer, and takes premiums at county fairs for unimpeachable butter. A. JACKSON has disappeared from the stage of our observation, but there is a theory among some of the old ladies that he was gradually transformed into a monkey. MARIE still languishes, reads highly wrought novels, copies sentimental verses, and is waiting impatiently for the arrival of the hero who is to raise her to the station in which nature intended her to shine.

Our town of Newton is not peculiar in anything, least of all in its inhabitants. There are SMITHS upon a larger or smaller scale in every little hamlet of the country, and people who have watched their ups and downs will recognize the truthfulness of my picture.

Do you want a moral from all this? Then supply it to suit yourself. I have read over all that I have written, and do not see any in particular, unless it be given in the words of quaint old JOHN BONYAN:

"He that is down, need fear no fall;
He that is low, no pride."

INDUSTRY.—Toil is the price of sleep and appetite, of health and enjoyment. The very necessity which overcomes our natural sloth is a blessing. The world does not contain a briar or thorn, that divine mercy could have spared. We are happier with the sterility which we can overcome by industry, than we could be with the most spontaneous and unbounded profusion. The body and mind are improved by the toil that fatigues them; that toil is a thousand times rewarded by the pleasure it bestows. Its enjoyments are peculiar; no wealth can purchase them, no insolence touch them. They only flow from the exertions which they repay.—Selected.

RIDDLE.

TAKE a cardinal virtue most blended with art,
What is near the left breast, a delicate part,
The qualification least famed among bees,
What Orpheus played on to animate trees,
What contained all the living within a small space,
With the fate that is entailed upon all Adam's race,
The bird that the Romans displayed on their arms,
With what moves the fastest, and as it moves warms,
What some fair ones use when their beauty declines,
With a fruit much in use and gathered from vines,
The name that is most common for water congealed,
With the letter that is first unto children revealed.
Now take the initial of each mentioned thing,
And to your view it correctly will bring
A large, modern city, of fame and renown,
An elegant, regular, beautiful town.
Honeyoe Falls, N. Y., 1859. J. O. JA.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

RURAL, LITERARY AND FAMILY NEWSPAPER

CONDUCTED BY D. D. T. MOORE;
With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it so carefully advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal, rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

For Terms and other particulars, see last page.

VALUE OF STRAW FOR FODDER.

At least one autumn out of every four we hear sad complaints of scarcity of fodder, and of the anxiety of farmers as to how they can manage to get through the winter without suffering to their cattle and loss to themselves. Almost every farmer keeps as much stock, as, with his system of culture, he can furnish with feed in a fair season. When the hay crop fails, as it has done the present year, great difficulty is experienced in providing for the deficiency. Cornstalks is the first and generally the most available substitute, but these are sometimes injured by early frosts, and when these two evils come upon the same season, the prospect for many is gloomy indeed. This is the case the present year—the cornstalks being injured, over a large district, to at least one-half their value, while the hay crop is deficient almost to the same extent. Did our farmers grow from half an acre to three or four acres of roots—carrots, turnips, mangels, parsnips, or kohlrabi—we would not be so entirely dependent upon either hay or cornstalks for fodder, and a short crop of either, or both, would not leave us in such straitened circumstances. It is not our design, however, to discuss this subject, which was well done by “H. T. B.” in our last issue, our purpose being to bring to the notice of readers the value of straw for fodder, and the opinions recently promulgated on this subject by both practical and scientific men.

During the discussion at the late Fair of this State, a gentleman of Erie stated that he had found straw cut and steamed, and mixed with a handful of meal to give it a relish, of more value in keeping stock than the same weight of Timothy hay. This idea of steamed straw being more valuable than good Timothy hay was rather startling, and we do not think one in a score of those present was prepared to endorse, or willing to believe such a statement without further proof. Mr. Meach, however, the celebrated English farmer and experimenter, advances the same opinion, and urges its trial upon the attention of farmers, declaring it to be “a vital question for agriculture.” He considers that the present low estimate placed on straw, arises from the fact that farmers do not understand how to feed it, and unless properly prepared it is not available as food. In all cases straw should be cut and steamed, and in this condition he thinks it is as good as the same weight in hay. In proof of this he gives the result of some experiments he has made. In feeding ten Short-horn bullocks, about thirty months old, he gave a steamed mixture of 216 gallons of cut straw, 6 of rape cake, 8 of malt combs and 6 of bran—moistened with 20 gallons of hot water per day. He also fed 300 pounds of mangel wurtzel; the whole cost, not including the straw and labor, is about one dollar per week. The animals are in a fattening and growing condition, and advancing remuneratively. After feeding they lie down contented, free from restlessness. He further says:—“The whole question may be said to hinge upon the condition in which the food is administered. It must be moist and warm. Were I to give my bullocks the same quantity of cut straw in a dry state, they would not eat one-half of it; and, besides, they would be restless and dissatisfied. This I know from experience.”

Now, we will ascertain how far these statements of practical men are sustained by the composition

of straw as shown by analyses. The following table we take from the *Cyclopedia of Agriculture*:

Average composition of wheat straw.		Alf. dry.	Dried at 212° F.
100 parts of wheat straw contain:			
Nitrogenized substances, (muscle producing subs.)	1.45		2.05
Substances free (soluble in from nitrogen polish)	26.34		35.08
Insoluble	41.23		35.07
Mineral substances.	4.59		6.02
Water	26.00		...
	100.00		100.00

Thus, it will be seen that 100 pounds of wheat straw contain over 69 pounds of muscle, heat and fat producing matter, and 26 pounds of the remaining 30 are water.

Dr. LYON PLAYFAIR, the Chemist of the English Royal Agricultural Society, gives the following table of the relative value of wheat straw, hay, and several other kinds of food:

Composition of the principal articles used as food.		Dry Organic Matter, or Real Food.	The Portions Subtracted as useless are
		Water.	Ashes.
100 lbs. of Wheatstraw, contain:	79	21	...
100 lbs. of Linseed cake.	75	17	...
“ Press	80	16	...
“ Beans	83	14	...
“ Ordinary hay.	76	16	...
“ Barley meal	83	15	...
“ Oatmeal	80	15	...
“ Bran	81	14	...
“ Oats	79	18	...
“ Potatoes	27	73	...
“ Red beet.	10	90	...
“ Turnips	10	90	...
“ Swedes	14	86	...
“ White carrots.	13	87	...
“ Mangel wurtzel.	10	90	...

By this it will be seen that 100 pounds of wheat straw contain more real food than 100 pounds of hay, nearly as much as 100 pounds of bran, and precisely the same as 100 pounds of oats. We do not suppose that the experience of many of our readers will agree with this scientific estimate of the value of wheat straw, and we doubt if careful experiment would prove it so in practice. But, reducing the estimate one-half, and then 100 pounds of straw is equal in value to 50 pounds of oats, or 50 pounds of wheat bran, for which many farmers willingly pay the cash, while they waste tons of straw in yards and stables. But, who is prepared to say that this estimate will not prove correct in practice? Who has cut and steamed, or scalded straw, and fed it with a little corn or oat meal, or bran, and made even an attempt to ascertain its value? Many, we have no doubt, have felt compelled to sell a portion of their stock on account of the scarcity of food, and to put the remainder on short allowance, which all know to be a most unprofitable practice, while they had straw enough, if prepared in a manner suitable for stock to eat, to keep all in a thriving condition.

In nearly all the English estimates of the value of the wheat crop, which we have seen, the straw is reckoned at \$10 per ton. This may be considered a high estimate, with our present notions and experience, but the gentleman of Erie County, to whom we above referred, informed us that he considered wheat straw worth that price, and that by its use, in the last two years, he had saved in feeding over \$500. This is the experience of an American farmer. We hope our readers will not only take care of their straw, this season, but institute such experiments as will enable them to form a reliable estimate of its true value for food.

HORACE GREELEY AT THE WYOMING FAIR.

In reading the discussions at the State Fair in a late RURAL, I am reminded of my intention to review Mr. HORACE GREELEY's address at the Wyoming Co. Fair. It was his first public appearance after his celebrated visit to Salt Lake, the “salted claims,” and the salt border of our Western domain. We should expect him to be well seasoned, as indeed he was, with facts and illustrations; but I apprehend that neither the matter nor the manner of his agricultural addresses explains the “immense sensation” which his announcement as a speaker on such occasions creates. The early part of the day was dreary, yet the mere chance of hearing “GREELEY” set all the plebeian, and some of the better vehicles of the county in motion at an early hour. No body much expected he would be there, which prevented many from coming, as it was not known that he had returned from his western trip. He arrived, however, in New York the day previous, and came on at once to fill an appointment made months before, without stopping to salute his New York friends—emphatic testimony that promises are binding on lecturers!

He announced Water as the subject of his discourse, treating it agriculturally and not in the light of the “Maine Law.” While he did not exactly endorse the complaint of the crusty Yankee who thought water, “take one year with another, did about as much hurt as good,” he showed

great leanings to that side of the question in his advocacy of extreme measures for draining it out of the land. His arguments and illustrations under this head the public are acquainted with.

I cheerfully concede, nay, I insist, that every farmer should have a garden, an orchard and a corn field made dry by ditching, if needs be, but I protest against the wholesale advocacy of draining which of late forms the staple of most of our agricultural addresses and essays. Mr. GREELEY stated the annual fall of rain at from three to five feet; he had witnessed great damage from the washing away of the banks of streams and the best part of the soil from the hill-sides. “No man,” said he, “can afford to let his fertilizers go off in the rivers, and you must guard against this sapping out of the life-blood of the land. Plow deep and your soil will not wash. I plowed my steep hill-sides in Westchester Co., so deep that nothing had washed off from them. The first step in good agriculture is deep plowing. Two thousand years ago men took a sharp stick and tried to plow with it by jabbing it into the ground.—Within this century iron plows have been introduced. Six inches depth of plowing may do for England with her moist atmosphere, but eighteen inches is none too much for our climate. In Belgium they plow deeper than in any other country, and with decided advantage. Keep plowing deeper till you get deep enough, if you have to go twenty-four inches. The soil would then defy all drouth. This is the cheapest way of getting more land. It is better than ever so many acres in a new country. There will be less distance to send the children to school. Our farmers act as though they owned only six inches deep, instead of to the centre of the earth.” * * * “American implements are better than all others.—We know how to make the least possible amount of weight in an implement and yet give it all needful strength.

“I went to see a farm in California which had been plowed three times, on which corn was raised without a hoe ever having been put to it. Every other crop was grown in the same way, without any weeding. We haven't yet begun to see what virtue there is in plow-handles.

“In the way of fertilizers, snow plowed under in April is good for the soil. Drain this land on which we stand four feet, and plow three feet and you would get more and better crops than if cultivated in the usual way.” [Mr. GREELEY stated that he had three miles of defective tile drain on his farm; he now understood what to avoid in the way of draining.] “Get the best fertilizers—Gypsum is among the best. All fertilizers are resistant to drouth. Old leached ashes are cheap, if one bushel of corn will buy two bushels of ashes. Salt is also good. These fertilizers are thrown away upon swamp land. Raise corn and roots to use in case of a short crop of grass. To make it pay to raise corn, you must get near sixty bushels to the acre. Small farms are better than large ones.

“Begin early to teach agriculture to your children; the first school book should be a work on agriculture. Now, our children grow up and run away because they are not interested in the subject which they should make the object of their lives' study.”

Mr. GREELEY closed with the following very timely advice to young men:—“Having recently passed over a great extent of wild land at the west, I say to you:—Get your land soon and keep it. There is not so much untaken land as many suppose. Don't range and wander over the whole face of the earth. Choose your location where you will, and stick to it—make it a permanent home. Get a good, cheerful, and virtuous wife, and lead a steady, useful life. Don't be a filibuster, roving over the land, but an industrious American Citizen.”

These were the main points in Mr. GREELEY's address. I understood him to recommend top-dressing of grass land as a substitute for plowing. This may do on some soils, but I think the occasional turning under of turf is one of the most successful and cheap methods of enriching land. I am much in favor of deep plowing, but am not as confident as Mr. GREELEY was that it would in all cases prevent the soil of side-hills from washing away, unless, forsooth, we should plow (which I did not exactly understand Mr. GREELEY to recommend,) some of our hard-pan three rods instead of “three feet” [deep. The theory of “washing” I suppose to be this:—When the soil fills with water, or is very compact, so that it will no longer absorb what falls, if the surface is inclined the water runs off, taking the lighter portions of the soil with it. Underdraining and deep plowing enables the water to pass down instead of running off on the surface, and, though greatly serviceable, are not always quite effectual. I know some men that would like to swap “two bushels of leached ashes for one of corn.”

A few words upon Mr. GREELEY, himself, may be excused. “The philosopher of the Tribune” is one of the problems of the age. The secret of his power over the masses is worth finding out.—Many people have been as negligent of dress, as audacious in their opinions, as profound, and as peculiar, without being able to perform the greatest of human achievements, that of holding a large audience in breathless attention during the delivery of a long discourse in a prosy manner, on a prosy subject, unenlivened with wit, unseasoned with humor, unaided by new facts, theories, or assumptions. He brought his popularity with him.

A lecturer on miscellaneous subjects, a leader in a great party, the head of a prominent press, he must necessarily be an object of interest and a man of influence; but when it is recollected that his “million readers” are the ardent, the active, the speculative, the inquiring, the hopeful, the proselyting, the agitating classes, it is seen that their leader is doing more to control the destiny of the world than any man living. Has he attained to this position by the force of talent?—men of equal ability are not uncommon. Did he turn up by accident, like TAYLOR or POLK?—every inch of his progress was in the face of difficulties. He is laborious, husband his strength, and applies it with a purpose—a good beginning always. He is a philosopher, studies cause and effect, and has a wide range of vision. He is sorry for the poor seamstress—sympathy and talent hard at work, in power always; but it rained when Wyoming county disgorged her thousands to “hear Greeley,” so the solution isn't arrived at yet. Mr. GREELEY listens to projectors in art, mechanics, philanthropy, social science, religion, and politics;—this makes him friends, but if he can't go all lengths, or if he does, enemies also! This is a gain, however, in a race for notoriety, valueless in itself, but capable of being turned to good account;—three enemies will sometimes do more for a man's celebrity than five friends. Still, Mr. GREELEY's is not accounted for. His great mental and moral peculiarity seems to be this: while he has the enthusiasm, the heroism, the intensity, the mental and moral activity and power, which comes from looking at things in the light of first principles, (rather than conventional usage,) he also possesses what is very seldom found in combination, a worldly expediency that makes him “fight and run away, that he may live to fight another day.”

The history of “reforms and isms” will show that Mr. GREELEY in no one of the “agitations” has been the originator or even the most prominent actor; but while his coadjutors have staked all upon the result, and retired from the contest crowned with laurels or overwhelmed by disaster and defeat, he, active as ever, still fulminates his anathemas from the Tribune against the enemies of “free speech and free labor.” Like Tammany Hall, he selects the issues he would like to try. He feels the popular pulse as scientifically as Dr. WEBB or Dr. CROSWELL in the palmist days of their practice. He treads on dangerous ground.

“Practical” politics is a dirty pool, and if Mr. GREELEY can dabble there without getting muddy, he is “the first of his line”—probably the last. Some of his friends think they see in his reprimands of GEORGE SMITH, who is always ready to “die in the cause,” evidence that the politician is getting the better of the reformer; certain it is that whoever undervalues “uncompromising and impracticable” adherence to convictions, knows not what material the world's teachers and martyrs are made of. Whatever Mr. GREELEY's future may be—whether, in the war of moral elements, his enthusiasm shall lead him to a sublimity of self-sacrifice that will quicken the heroism of distant centuries, or his adroitness make him the dispenser of the city sweepings, he is a historical character, at once exerting a marked influence upon philosophy and fact.

I have appended this criticism to matter designed for the Agricultural department of the RURAL NEW-YORKER, and to forestall objections will add that as Mr. GREELEY has been called an “ass” it is meet that I should here examine his “points” to see whether the classification is just.—H. T. B.

WHERE MEN ARE RAISED.—The “Rural Districts” not only feed the nation, but produce nine-tenths of the most useful, enterprising and successful men of the country. In his address at the recent Mich. State Fair, Gov. BATES pertinently asked and truthfully answered a question on this point, as follows:—“Whence come the recuperating vitality, intellect and learning, that in each generation give new life to the quick-moving, restless and prosperous town and city population? Do lawyers, divines, doctors, merchants, mechanics, editors, philosophers and poets reproduce themselves? Never! It is from the farm that society reproduces itself; it is from the original sources of population and power, the cultivators of the soil, that advancing, recuperative, christian civilization seeks and finds new agents who work out her newer and nobler destinies.”

EXPERIENCE IN BUILDING.

MR. MOORE:—Having just completed a farm house which suits the presiding genius of my household, and is thought to be commodious and comfortable by others, I have thought it might be a benefit to some of your readers who may contemplate building if I should relate my experience. And here I cannot but think what a fine medium your beautiful paper is for the interchange of thought. How low the commission, how trifling the expense for such a fund of experimental knowledge fresh from the business of every-day life!

“May building take you,” was the wish of a man to his worst enemy. No greater calamity, he thought, could overtake him. “Fools build houses and wise men live in them.” Well, building took me, and with the above anathema fresh in my mind, I determined that I would build for myself alone. As my means were limited, the point was, to take time enough in order to modify the expense as much as possible by my own labor. I therefore determined to be three years in building, and that I should have the workmen at such times as were most convenient for myself and man to assist them with the least injury to my business as a farmer and teacher. Between the close of school in the spring and the commencement of farm work, I drew the stone and other material for the foundation, and also considerable of the lumber. After spring work, I moved into a temporary abode, pulled the old house down, and erected the cellar and walls ready for the sills. These I covered till after haying, when the carpenters came. When they arrived, myself and man, (a Yankee, handy with tools,) labored with them, doing the coarse work, such as scoring, shingling, sheeting, planing, &c. When the house was finished outside and two rooms ready for lathing, I turned the carpenters adrift, performed the lathing, had them plastered, moved in and closed up for the winter. In spring, after my school was out, I employed a first rate joiner, and working with him I completed the lower part of my house before spring work commenced,—having the plastering and painting done when I could most conveniently assist during the season. The past spring I worked with a joiner and got the upper part of my house ready for lathing, which myself and man performed wet days during the summer, and this fall the mason and painter, with my assistance, have finished the house.

It is now just three years and a half since I took the first step in building. The expense throughout has been greatly modified by my own labor. My house is thirty-six feet long and twenty-six feet wide—such a proportion dividing up to the best advantage—giving large front rooms and good sizable bed-rooms in rear. In front there is a sitting-room and parlor of equal size. Between them the entry and stairs to chamber. In a house of this proportion the stairs are not winding but straight, the latter being not only the cheapest but the most scriptural. In rear of parlor is the parlor bed-room. Next to that a small clothes press, then a large family bed-room, with the work-room adjoining. The work-room contains a sink on one side, shelves on two sides, with drawers and cupboards underneath for spices, bread, &c., besides recesses for flour and meal barrels. In addition there is in the sitting-room a large cupboard for dishes, extending back to the stairs, with door same size as the others in the room. In rear of work-room is the wood-shed, which is floored, so that a portion is used for the stove in summer, besides a corner for unusual kitchen work during the year. Just out of the wood-shed is the water, which is brought to, but not in the house in pipe,—so there is but a step to both wood and water. With the exception of the wood-shed all is under one roof. There are no outside works of any kind,—no porticos or piazzas. All is plain and paid for. The last is not the least important ornament about a house to my mind—for internal satisfaction is better than outside show. My first design was to have a piazza in front, (for I am not insensible to that which pleases the eye,) and the carpenter teased me hard, of course, and I should have had it but for a story I read of one boy boasting to his companions that his father's house had a cupola; “and,” said he, “we are to have a mortgage on it, too, for I heard him telling so last night.” My house fronts the road, so that ourselves and visitors can see who is passing, and we can be found without half a day's search by strangers or others.

The upper part of the house divides to as good advantage as that below. There are four large sleeping apartments above, besides a recess, a clothes press, and a large and comfortable room which I have appropriated to myself for a study. The house is nine feet between floors, and is built in the most substantial manner. The outside is sheathed and clapboarded, and within lathed and plastered between the studs, so that there are four

thicknesses, which render it impervious to frost.—It is with pleasure I look back upon the severe exertions of three years, for the house has been built without pecuniary distress, or trespassing in the least upon my regular business. I feel grateful to Providence for the blessings of health, and that He gave me the wisdom to profit by the kindly suggestions and experience of those older than myself. The chief value of a paper, to my mind, is that we get through its columns the aggregate experience of men in every condition of life. It is this wish to contribute my mite, rather than any ambition to display my building capacity, which prompts this article. If any who contemplate building shall in the least be benefited by my experience, I shall feel that I am fully compensated. To young men just commencing life, I would say, build for yourselves. Take time. Rome was not built in a day—neither should a house be.

Cambridge Valley, N. Y., 1859.

POTATOES: SHALLOW OR DEEP PLANTING?

EDS. RURAL NEW-YORKER:—Some of us have fallen into a habit of planting potatoes very near the top of the ground. The recent freezing weather coming, when perhaps the bulk of the potato crop was yet ungathered, and taking hold with damaging effect of such exposed specimens as it could reach, presents, in itself, a very plain and convincing argument against the policy of providing a root so sensitive to frost with only a light covering of earth. It is true that frosts of the severity of those we have experienced this October are quite the exception at this season of the year, yet there is always danger that either from bad weather or the press of other business, or both, the potato harvest will remain unfinished till hard frosts have actually come; and so, a portion, at least, of the crop be secured in an injured condition. Many persons believe that if left in the ground and untouched by frost, potatoes continue growing till late in the fall, long after the tops are dead; and with such, of course, considerations of profit will unite with other reasons to put off the gathering of this root till the latest practicable season, or until the occurrence of a sharp freeze gives warning that the case admits of no further delays.

When a loss, plainly traceable to any particular mode of culture occurs, it is natural for the losers, contemplating the calamity, to think of other objections to which that method or system is open, besides the one arising out of the cause of their present ill luck, and also to consider the advantages belonging to a different plan of cultivation. Without knowing what superiority the advocates of shallow planting claim for that practice, let us state what appear to us some of the objections that may reasonably be made to it, and that go to recommend an opposite management.

Potatoes growing but little way under ground, though they have the benefit of a greater number of showers, during an ordinary summer, than deeper-planted ones, are yet sure to suffer much more severely from continued dry weather, such as we always expect at intervals through the growing season. The question is, whether the moisture at the depth below the surface at which potatoes used to be planted is not sufficient to make them so independent of rains as to overbalance the advantage of more frequent wettings from moderate showers, with the attendant drawback of exposure to intense heat.

An effect of shallow planting is plainly visible in the inferior quality of potatoes. When the seed has but a thin covering of earth, it is very common for the growing tubers to push above ground; and, on cooking these specimens, the exposed part shows a greenish look accompanied by a bitter taste, both greenness and bitterness supposed to be caused by sun-burn. The inclination to bitterness of flavor is seen also in the better covered roots; they lack the sweetness of taste belonging to those growing deep in the ground.

Judging from not very extensive observation, I should say that shallow planting is not favorable to a large yield of potatoes. Certainly, there is a great difference in the habits of the growth of potatoes planted near the surface, from those buried deeper. The latter will be found lying close together in a heap, like eggs in a nest; the former are scattered about, many of them further from the center of the hill than one unacquainted with their power of roving would think of looking for them. Whether this rambling habit of growth causes a portion of the roots to be overlooked in gathering, or whether the practice of growing potatoes with very little dirt over them is unfavorable to their attaining their greatest size, both which suppositions I suspect are true, I am ready to believe that more and better potatoes are obtained from the same varieties by deep than by shallow planting.

South Litchfield, N. Y., 1859.

REMARKS.—Some varieties of potatoes it is almost impossible to keep below the surface, if they are planted ever so deep, while others will not show themselves above ground if they are merely covered with earth. Some varieties, too, ramble over a large territory, making digging slow and tedious, while in others the tubers lay close together, "like eggs in a nest." This depends more upon the habit of the potato than upon the manner of planting. All extensive potato growers know this, and a rambling habit is always considered an objection to any variety.

POTATO EXPERIMENTS.

EDS. RURAL NEW-YORKER:—When gathering potatoes—Prince Alberts and Dovers—in the autumn of 1858 there was among the former a small one of such perfect shape that I was induced to preserve it for no other reason. It would puzzle a skillful artist to turn out a more symmetrical form. Early in the spring of the current year, April, it was weighed and planted. The weight was twenty-eight grains. The manure applied was a small quantity of guano and crushed bones, a bucket of suds from the weekly washing, being thrown over the vines three times during the season. The haulm did not show signs of decay till the first of October, when they were taken up. The result was twelve potatoes, suitable for the

table, weighing three and a half pounds, also, eleven potatoes weighing one pound, too small for other purposes than to feed the pigs. The haulm, or vines, was large, bushy and full five feet long, weighing four pounds; in its vigorous state with leaves expanded, the weight could not have been less than half as much more, say six pounds. Here were ten pounds of vegetable product from twenty-eight grains—a pound avoirdupois contains seven thousand grains—exactly two thousand five hundred for one. A Dover potato still smaller than the above, planted at the same time and cultivated in precisely the same manner, produced six potatoes all sufficiently large for the table, weighing two pounds.

Perhaps we here have a couple of hints that may be useful in domestic economy; first, that the Dover is, relatively, as I think it will be found by experience, actually, the best potato. Second, that potatoes, if we would have the full value of our money when we buy them, should be sold by weight, not measure. There is another inference which I think can be drawn from this experiment and that is, that the nourishment, whatever it is, that forms and perfects the plants, is drawn—not from the soil, but the atmosphere.

You have sometimes combated the notion which persons entertain, that potatoes may mix in the hill—a doctrine taught by Cobbett in his Book on Gardening. Cobbett was undoubtedly an industrious man, but a very unreliable person to follow, either in morals, politics, or physics;—as far as principle went, he was very shallow in all of them. Some time since I saw in some paper, a statement that the *Northern Peach Blossom* was produced by binding tightly together the halves of two separate and very different varieties of potatoes. In this I had no faith. Last Spring I bound together Dover and Davis Seedlings, Mercers and Prince Alberts—and in both cases the two first grew distinct as if planted separately, rods apart. In the case of the Mercers and Prince Alberts, I was, however, very much disappointed. The former were numerous, but all were very badly diseased; of the latter there was but a single tuber, which, though sound, was shriveled to one-third or one-fourth the size of the parent, and was covered with small scales, not unlike a fish; the epidermis, (if a potato has such an organ) was cracked, and the corners rolled up in a manner quite novel to me. It would seem that the two varieties are not compatible with each other—that, somehow, the influence of the Mercer upon the Prince Albert was deleterious, and prevented its proper development. Whenever I have cultivated these two varieties properly, I have never failed of a satisfactory crop, though I consider the Prince Albert not a desirable potato for the table. Perhaps an inquiry may be suggested by the above fact—whether the reason for deterioration of crops, both as regards quality and quantity, may not be found in the fact that the soil is impure?

Norwich, Conn., 1859.

O. W.

APPLYING MANURE TO GRASS LANDS.

EDS. RURAL NEW-YORKER:—I was much interested by the evening discussions at the State Fair, as reported in the *Rural*, and for one, wish they might be continued through your pages. I am a farmer, and I hope not too old to learn, and know of no more reliable source of information than the opinions of practical farmers, based on their experience.

I would like to know how to apply manure so as to get the most lasting benefit on grass lands.—Will some of my brother farmers please give us their opinion through the *Rural*? My method has been to manure sward in the spring with fresh stable manure, and plow under to the depth of six or seven inches and plant or sow. At the next plowing, plow eight or ten inches deep, thus leaving the rotted sod and manure a little below the surface. Sow grain of some kind and stock down with a mixture of clover and timothy, about half a bushel to the acre. Soil is sandy loam, with very retentive subsoil. By this method I get good grass for four or five years, after which I repeat. This certainly increases the fertility of the soil, but perhaps not as rapidly as a better way. The better way is what I am looking for.—O. D. HILL, Jefferson Co., N. Y., 1859.

SMUT IN WHEAT—EXPERIMENT.

EDS. RURAL NEW-YORKER:—I am a farmer, and reside in a neighborhood where large quantities of spring wheat are raised, which is frequently so affected with smut as to deteriorate its value; consequently the question frequently arises, what is the cause, and the preventive of smut wheat? In order to answer that question, I tried the following experiment, which is only one of many that I am or have been engaged in:

I prepared the plots of ground exactly alike, and sowed them the same time. No. 1 was sowed with smut wheat, entirely. No. 2, with wheat that had been bruised; (having read that that was the cause of smut wheat.) It included all conditions of bruised wheat, from a ground kernel to a perfect one. No. 3 was sowed with wheat that had been rolled in smut until the kernels were all black with it. The kind of wheat used was Canada Club. The result was, that the smut wheat (No. 1.) did not grow. No. 2 produced few stalks; but no smut. No. 3 produced one-half smut wheat.

South Onondaga, N. Y., Nov. 1859.

Large Yield of Carrots.

A CORRESPONDENT of the *New England Farmer*, writing from South Danvers, says:—"Mr. B. H., one of the most successful cultivators in this town, informed me that he had gathered six tons of as handsome carrots as he ever saw from 37 square rods of land. This would be about one ton to six square rods, or 27 tons to an acre. The price of carrots at this time is \$3 per ton, consequently the produce of an acre would amount to 8 times 27, or \$216 per acre. Considering that carrots are not an exhausting crop, I look upon this as good doings. Few crops yield so well this season—cold as it has been."

THE LATE DAVID THOMAS.

DAVID THOMAS died at Union Springs, Cayuga Co., Nov. 5th, at the ripe age of 84 years, a member of the Society of Orthodox Friends. He came from Pennsylvania to the early settlement of Scipio, Cayuga Co., N. Y., and being a civil engineer, he was employed more as a surveyor than in the labors of his farm; yet such was his passion for Horticulture, Pomology and Floriculture—being an accomplished botanist—that his domain at Greatfield, two miles east of Aurora, was soon celebrated for its fine fruits and beautiful flowers. He was one of the first contributors to the *Agricultural Press* of the State, and the young *Genesee Farmer* was often graced and enlivened by articles, on the proper culture of fruits and flowers, from his practical pen.

Dr. WITT CLINTON, who, in pursuing his canal policy, was always sure to find out the best men in every county, to aid him in his great work, soon made the acquaintance of DAVID THOMAS, when he immediately appointed him Chief Engineer of the Western Division of the Erie, and the Cayuga and Seneca Canals. The writer of this notice afterwards heard Gov. CLINTON say that THOMAS only lacked impudence to pass for a much greater man than a certain Professor he then named. But with his habitual modesty, and polite deference to the opinions of others, no man was more firm and decided when he knew he was right; and to this trait in his character the great city of Buffalo is somewhat indebted for its present commercial position. When THOMAS was surveying the Canal and harbor location at Black Rock, and Buffalo creek, Gen. PATRICK B. PONTREAU beset him with all his great tact and influence to make the harbor at Black Rock instead of at Buffalo creek. But, not being able to convince THOMAS, he commenced a newspaper war against him, criticising his engineering severely. THOMAS, in his final reply to these attacks, says:—"I now submit the question to the elements, and if Buffalo harbor becomes a failure, I shall then, but not till then, confess my error." But he lived to see the fruition of his labors. Buffalo Creek is now a great Lake Harbor, crowded with steam and sail vessels of the largest class, while Black Rock harbor is little more than an adjunct to canal navigation.

THOMAS, while Canal Engineer, built a new house on his farm with an observatory on top overlooking the broadest expanse of the Cayuga; here on shelves were numerous Geological specimens he had himself collected. His ornamental and fruit trees were now increased, his flower garden extended, and its beautiful specimens greatly augmented. But as age and infirmity crept on, he became more and more dependent on costly mercenary help, and rather than see his beautiful flowers run wild, and his fruit trees a prey to insects, he sold the beautiful domain and retired to a comfortable cottage near the sparkling lake waters at Union Springs. Here, as his physical infirmities increased, his mind and memory partially gave way; yet Providence dealt kindly with him, for he might often be seen on a genial summer's day among the flowers of his now narrow border, or the evergreens in his door-yard, enjoying their fragrance and beauty; a comfort kindly vouchsafed to compensate us for the privations and infirmities of age.

S. W.

Inquiries and Answers.

BEST TREATISE ON DISEASES OF DOMESTIC ANIMALS.—Will you please inform me through your valuable paper, what is the best work on the management, disease, and treatment of domestic animals, where it can be obtained, and price?—A SUBSCRIBER, Coventry, N. Y., 1859.

We are not aware of any single work that would cover the field spread out by "Subscriber." Writers have generally made a specialty of some one department—each, if we may so speak, having his peculiar hobby. The *Modern Horse Doctor*, by Dr. DADD; "Youatt on the Horse," by Wm. YOUATT, and "Hints to Horse-Keepers," by HENRY WILLIAM HERBERT, are all worthy of a prominent position in the farmer's library. The price of the first named is \$1.00; of the others \$1.25. "Youatt on Cattle," (\$1.25,) and "The American Cattle Doctor," (\$1.00,) by Dr. DADD, treat more particularly of horned stock. The "American Shepherd," (\$1.00,) by L. A. MONRELL, and "The Shepherd's Own Book," (\$1.25,) by YOUATT, SKINNER, and RANDALL, treat of the history, management, and diseases of Sheep. "Subscriber," can procure any of these volumes by application to C. M. SAXTON, BARKER & Co., New York, or at the office of the *Rural New-Yorker*.

FILLIBUSTERING AMONG THE BEES.—Will any of the readers or correspondents of the *Rural New-Yorker* be kind enough to inform me and the public how to prevent bees robbing their neighbors' colonies, and what effect (if any,) will it have upon the victors? Some persons allege that even the conquerors will not prosper in their ill-gotten gains, often quarreling among themselves over the spoils. One query further. While speaking of bees, is it a rare or common occurrence for bees to swarm as late as the 25th of September? This swarm did no work, or attempted so to do, as far as I could discover, remaining in the hive where they were put, until they all perished in about one week, the queen being the last survivor.—H. B. H., North Rush, N. Y., 1859.

BEES are most disposed to rob early in the spring, before the flowers are open, and the weak swarms are the sufferers, though where the bee-keeper attempts to feed his bees by placing sweets outside of the hive at any season, it invites the notice of the bees of neighboring colonies, and an attack on the hive is apt to follow. The effect of this is not only disastrous to those that are robbed, but demoralizing to the robbers, as after having once had a taste of stolen sweets, they do not cheerfully return to the habits of honest industry. The only preventives against robbing is to keep the colonies strong, able to defend themselves, and not to tempt the robbers by exposing the honey or sweets of any kind around the hive. Very late swarms are never profitable, seldom worth wintering over. In some cases two or more late swarms may be united, and make a good colony. From your description we should judge that the colony left the old hive disheartened, from the ravages of the bee-moth, or some other cause.

Rural Spirit of the Press.

Importance of Shelter for Stock.

THE *Country Gentleman* calls attention to an error of not unfrequent occurrence among farmers, in the early stages of fattening, which should be avoided by all who care for the reputation of judicious farmers or the profits of economical ones. It is the practice of allowing creatures to depend mainly on pasturing after the last of September or the first of October, and to sleep out in the fields after that time of the year. Both of these practices, except in years uncommonly warm in autumn, tend to rob cattle of fat and to lower their condition. The nutritive qualities of grass are materially lessened after frosts, and when an animal suffers from cold, as most usually be the case in sleeping in the open field in October, Nature has provided a partial relief by consuming portions of the fat, which the animal may have already stored, in the creation of additional supplies of heat. In a word, it seems forgotten by some, that, without something additional to grass after frosts, and without shelter in chilly nights, cattle will lose in condition and quantity of fat; and that this is the opposite of economy, as it is much easier to keep on fat than to put it on. True economy and judicious management require early stabling during nights, and something in addition to grass after frost.

To Make Good Butter.

AUNT RHODA, in the *New England Farmer*, says:—"Skim the milk as soon as it sours, and before it thickens, if possible; stir the cream faithfully, especially when new is added. Set the jar in a cool place; if the cellar is not cold and sweet, set it in the spring or hang it in the well—any way to keep it cool. After the last cream is added before churning, then 'go a visiting' if you please, as cream should not be churned the day it is taken off. At night fall, fill the churn with cold water, and start the churning at early dawn, and my word for it, you will soon find a solid mass of golden-colored butter, free from white specks, and when properly salted and packed, fit for anybody's table. After the buttermilk starts pour in cold water, a little at a time, turning the crank slowly and carefully back and forth; this prevents the butter from closing too rapidly, does not break the grains, and gives every particle of the cream a chance to form into butter."

Cutting Feed.

THE *New Jersey Farmer* illustrates the economy of cutting feed for cattle in a few words: "If a farmer has no fodder to be disposed of, except due, 'merchandise hay,' there will be little need of cutting it. But most persons have corn stalks, hay and straw a little damaged, which, if fed out unprepared, would be much wasted. Now a careful farmer would run this through a straw-cutter, then mix with a little meal and moisture, and it will be a vastly more palatable dish, little or none will be wasted, and what is eaten will be well digested. Our good housewives hash up odds and ends of meat, to save them, and to make them more acceptable to their families,—why should not the same principle of economy rule in the farmer's barn?"

Agricultural Miscellany.

OUR MARKET REPORTS.—A friend who is familiar with the subject, and a close observer of the reports in several agricultural and other prominent journals, speaks in very complimentary terms of the accuracy and quantity of Market Reports given in the *Rural*, avowing that they are far superior to those of its immediate contemporaries. He thinks we ought to tell our readers of this superiority—especially as other agricultural journals (including monthlies whose reports are, necessarily, almost useless,) make considerable ado in *Prospectuses*, &c., about their market intelligence, yet give little of value,—but we have no disposition to boast in the premises. It is sufficient for us to know that many of our readers appreciate this important feature of the *Rural*, as frequent letters attest, and have no doubt that all discriminating persons will come to a proper conclusion, without any laudatory remarks on our part, either in the paper, bills or prospectuses.

THE "PROFESSOR" OF TERRA-CULTURE.—We have lately received several letters from Western Pa., speaking in no very complimentary terms of the operations of this charlatan, and telling us how he "pitched into" the *Rural New-Yorker* and its Editor. We beg our friends to give themselves no uneasiness on our account. The "Professor," as we have proved, is the father of lies, and all we ask of him is that he will not speak well of us! As to publishing the articles against him and his theory, we consider it unnecessary after what we have given in this and former volumes. And, beside, we observe that the *Pittsburgh* papers and their correspondents, (especially Gen. KEOLEY,) are after the "Professor" with a sharp stick—have indeed driven him from the State, for we learn that he has just appeared in Connecticut. We commend him to the kind and critical attention of our friends of *The Homestead*. A letter just received from an intelligent correspondent says:—"Votly, Comstock has more lives than a cat! He is certainly entitled to the merit (?) of being able to live and thrive longer on humbug than even BARNUM himself. Even the astute N. Y. *Evening Post* publishes a puff from one of his dupes." *Vivela Humbug!*

UNITED STATES AG. SOCIETY.—The N. Y. Tribune of the 13th, says:—"The Secretary of this Society is in the city for the purpose of meeting members of the Executive Committee to settle the contested awards at the late Chicago Fair. The annual business meeting will be held, as usual, at Washington, in January, and we earnestly hope that the report of the Treasurer will show how the \$180,000 received from the public since 1855, has been disposed of. We wish to see how far the Society has been aided by local officials in the several cities, and who of the regular officers have, while pretending philanthropy, managed to be well paid for their services. If we do not greatly mistake the auguries, a thorough reform will result from the next annual meeting."

ANOTHER AGRICULTURAL PROFESSORSHIP ENDOWED.—A Southern paper states that Hon. OLIVER J. MORAN, of Carroll parish, La., has presented to Bishop POLK, of Louisiana, the sum of forty thousand dollars, as the foundation of a professorship of Agricultural Chemistry in the "University of the South." This donation makes up the entire amount of 5,000,000, required by the charter to establish the proposed University.

TO ADVERTISERS.—Bright.—A recent letter talks to us in this wise:—"Please send enclosed \$5 to pay for the advertisement enclosed. I wish for two insertions, and more if it pays for it. If not enough to pay for two, write me the balance due, and I will send it. It [the \$5] would pay for three [insertions] in the C. G., but you charge higher."—Yes, Sir, we do "charge higher," and for the very cogent reason that the circulation of the *Rural New-Yorker* is full ten times that of the C. G. [Still, the C. G. has a good circulation, and charges fair rates for advertising, though much "higher" than the *Rural* in proportion to circulation.] And we hereby request all who consider our charges extravagant to send their orders to other papers for we ask no patronage, as such—wish no one to advertise in or take the *Rural* without a reasonable prospect of obtaining value received for the investment. Above all, we beg to be spared the addition of insult to injury—as, for example, when a party sends us half the amount of our rates, (we do not now refer to above case), and asks a publication on such terms because "other papers" charge no more! Such favors are usually returned without the least "premonitory reluctance"—for we have no special desire to deal with people who would, judging from their actions, expect to ride one hundred miles per railroad on paying the fare for ten miles.

During the past week the publisher of a popular magazine wrote us inquiring what it would cost to insert a certain advertisement in the *Rural* one time, and what for two—remarking that he thought he had paid us too much heretofore, "compared with other papers." [This same publisher charges from \$50 to \$100 per page for advertising, while others charge from \$10 to \$20.] Our answer was that one insertion would cost 25 cents a line, be the same more or less, and two just double that, provided it was inserted before Jan. 1st, 1860, after which date we should probably materially increase our rates, as they were far too low "compared with other papers." We hope the response was satisfactory. Within the same time (past week) we refused an offer to advertise, at our own price, to the amount of \$1,200—the advertisement being unobjectionable, (not a patent medicine or humbug,)—because we do not wish to give any one announcement, weekly, for so long a period as desired (six months), and for the additional reason that our space is so limited that we are often obliged to defer new advertisements, (as we are, by the way, this week.)

—Though the heading of this article indicates briefly, we are constrained to add another fact. Some years ago we published in the *Rural* (for Mr. E. M. BRADLEY of Ontario county,) a brief advertisement of choice stock, charging therefor \$4. Mr. B afterwards informed us that he realized a profit of full one thousand dollars from said advertisement—and, moreover, that the person whose note we quote above purchased some of the animals and subsequently obtained first premium on same at the N. Y. State Fair! And here we rest.

CALIFORNIA STATE FAIR.—The California Farmer of Sept. 23d, (lately received,) says the Fair of the Pacific State was a noble triumph—"a triumph of mind, of genius, and taste." The Fair was held at Sacramento, continuing some ten days, (Sept. 18, 23,) and, according to our authority, was successful in every respect—exhibition, attendance and receipts. It gave evidence that "in every department of labor, California can boast the very best workmen—equal to any in the world. In agriculture there was the proof. The grain-fields had hundreds of noble examples from the brave tillers of the soil." "The orchardist and gardener may well be proud of this Fair, for the world never saw prouder specimens of pomology." "The vegetable kingdom could well claim this show as a triumph, for it never was equaled. Where on the face of the earth did man ever see vegetables of every kind so enormously large as those on the tables in the lower hall of the Fair? Where did any one ever see them before so thickly grown as to require a bridge over them so as to gather them!"—&c., &c. The sentences we segregate are hardly fair specimens of the style in which our respected contemporary—with the aid of poetry, admiration points, italics, &c.—shows how far California is ahead of "all the world and the rest of mankind," and then coolly adds, "In our next the details will commence." We are prepared for the worst, Colonel; but pray tell us, in the details, how they constructed that bridge. We can't get the "hang of it"—and only ask for information, without any design of infringing the patent. Meantime, we sincerely rejoice in the great success of the Ruralists of the Golden State.

ENCOURAGING DOMESTIC INDUSTRY.—A Western paper says:—"At the recent Mechanics' Fair at Battle Creek, Mich., C. S. GRAY, a public-spirited citizen of that thriving town, offered a premium for the best specimen of spinning done by any young lady. Four young ladies appeared to contest for the prize. The awards were as follows:—To Miss Brown, of Emmet, the first premium of \$5, for best quality; Miss Newbre, a pair of fine Congress gaiters, as second premium; and each of the others a pair of kid slippers. In presenting the premiums he made a brief and good-sensical speech, concluding as follows:—"And now, ladies, in conclusion let me say that next spring, when the wool clip comes off, claim enough to make at least three good suits of clothes; and the one that will present a father and two brothers here, next fall, in a full suit of her own manufacture, if the institution does not give her a gold watch, worth at least twenty-five dollars, I will give her fifteen dollars in cash."

HORSE CENSUS.—The following curious account is given in Appleton's Cyclopaedia, of the number of horses in the various parts of the world:—"The general estimate has been eight to ten horses in Europe for every hundred inhabitants. Denmark has forty-five horses to every hundred inhabitants, which is more than any other European country. Great Britain and Ireland have 2,300,000 horses; France 8,000,000; Austria Empire, exclusive of Italy, 5,000,000; Russia 3,500,000. The United States have 5,000,000, which is more than any European country; the horses of the whole world are estimated at 57,420,000."

DOMESTIC PIGEONS, which, according to the present use made of them, are about as profitable as rats, may be turned to valuable purposes. They increase very rapidly when their propagation is fostered. They are larger and sweeter than the wild pigeon, and by a proper care of their almost extinct race, they may be a very abundant, desirable and profitable game. Look to this subject, you that wish to increase the wealth of your poultry yards. So says an exchange.

FISH GUANO.—In a lecture at Montreal, Prof. HUNT expressed the opinion that from 100,000 to 150,000 tons of artificial manure might be manufactured annually from the waste of the Canadian fisheries; and this equal to Peruvian guano. The French were aware of the importance of this manure, and were now manufacturing it on a large scale in the Straits of Joli-Ile.

SPICY AND INSTRUCTIVE.—The letters written by Brother BRADDON, of the *Prairie Farmer*, during his recent visit among old friends in Northern New York. To maintain this rash assertion, we purpose to give, ere long, some segregations therefrom.

MATERIAL FOR HEDGING.

Our readers will have noticed in our last two issues articles condemning the *Osgae Orange*, as too tender for a Hedge Plant, and recommending the *English Hawthorn*. To-day we give the experience of another hedge grower. Perhaps we have not yet discovered the plant that in centuries to come will line our roads and divide our fields with living walls of green; and we may never obtain a plant that will succeed in all sections of our wide-extended country, with its diversity of soil and climate. In many sections the *Osgae Orange* is hardy, and, in fact, we have only just begun to learn that it is not hardy everywhere. In the summer of 1886, during a brief sojourn at the West, we formed very favorable opinions in regard to the hardiness of this plant, as did every one else. The previous winter was one of extraordinary severity; apple trees a foot in diameter, and ten or fifteen years planted, were killed to the ground—whole orchards were destroyed—while the *Osgae Orange* hedges in the immediate vicinity, and sometimes actually surrounding these orchards, were uninjured, except at the tender extremities of the branches, and in many cases, in fact, almost all cases, the hedges seemed as safe and vigorous as though kept over winter in a green-house.

With these facts, it will not seem strange that the *Osgae Orange* should be proclaimed as hardy; nor will it answer to charge, as one correspondent has almost done, that these opinions have been promulgated only by interested parties, and for selfish ends. We have almost concluded from the observation of the past two or three years, that it is not the severity of the weather, but sudden and extreme changes, and perhaps bright, sunny, winter days, that causes the *Osgae Orange* to suffer. After all, we have not seen an *Osgae Orange* hedge injured beyond recovery, by winter, while we have seen scores ruined by bad treatment.

Very much rejoiced would we be to know that the *English Hawthorn*,—the *Quickest* of the farmer, and the sweet *May-Flower* of the merry children,—with its beautiful green, glossy foliage, its fragrant flowers, its bright-red winter berries, its dense, living wall, could be grown as well in this country as in England, but for this we cannot hope. The *Hawthorn* seems perfectly at home in the moist climate of England, flourishes in any spot where it has a chance to take root, makes perfect hedges, as secure against man or beast as a stone wall, and beautiful ornamental trees, to be found on every lawn.

BRANCH OF THE HAWTHORN.

In this country the *Thorn* makes a beautiful small tree, and is somewhat planted, but not as extensively as its merit deserves. The *White*, *Double White*, *Pink Flowering*, *Scarlet* and *Double Red* varieties, are valuable small trees, which we recommend to every one planting shrubs or trees. But, we have little hopes that it will succeed as a hedge, over a large extent of country. The borer attacks the plants and destroys many, and the *Aphis* injures the leaves, stops the growth, and by a little after midsummer a Hawthorn hedge is a sorry sight indeed. Still, we know of some that do well. One, growing in the village of Pittsford, in this county, is equal in vigor and beauty to anything that could be found in England. On a cold, clay soil, we think the Hawthorn succeeds the best.

The *Osgae Orange*, we are led to believe, by pretty extensive observation, suffers more from neglect and bad treatment, from want of pruning, neglect of culture, crowding near fences, &c., than from the effects of winter. The *Honey Locust* has been tried, to some extent, and we know of some, who after years of trial, are prepared to say that it is better adapted for a farm fence than any other plant in our possession. It must be remembered, however, by every hedge grower, that after a hedge is planted in a well prepared soil, the work is only just commenced. It should be given plenty of room, not crowded by fences, the soil several feet on each side should be kept clean and mellow, and the plants must be kept cut back, so as to secure a good, thick bottom, for without this, every attempt to grow a hedge will be a failure.

FINE CHRYSANTHEMUM PLANTS.—A few days since we made a call at the conservatory of CHAS. W. SHELLEY, nurseryman of this city, to see his *Chrysanthemum* plants, having learned from some of our practical gardeners, who are always on the look out for nice things, that he had some of the finest ever grown in this part of the country. We found them all that they had been represented; indeed, we never saw better show-plants anywhere. They are grown upon a single stem for four or five inches, when they throw out vigorous branches, forming beautiful round plants, some two or three feet in height and six or more in circumference, covered with a shower of flowers, through which the modest foliage occasionally looks out. The *Chrysanthemum* is just the plant for flowering in the parlor in early winter. Mr. S. has just completed a new range of houses 200 feet in length.

CLUSTER AND LEAF OF THE DELAWARE GRAPE.

During the past few years there has been a good deal of discussion in regard to the origin and history of the *Delaware Grape*. Some have contended that it is a foreign variety; indeed, that was at first the general opinion, and many Germans now contend that they have seen it in their native land. For some time it was supposed to be the *Traminer*, but from this it is quite distinct, though bearing some resemblance. It is not unlikely that there is in Germany a grape bearing even a still more striking likeness to the *Delaware*. The opinion for some years has become quite general, and every year more so, that it is a native, and it has been almost proved that it originated in a garden in New Jersey, some thirty years ago. Mr. MEEHAN, editor of the *Gardener's Journal*, contends that it is a true native, and thinks he has seen and tasted it growing in the woods while making botanical excursions. Below, we give an article from Mr. M. on this interesting subject. No one, we think, will regret to see evidence that this delicious grape is a native of the American forest.

"While making some botanical trips on the upper portion of the Delaware some years back, we recollect a casual notice of a grape which we have often thought had a strong resemblance to what later years had taught us to call the *Delaware*; and throughout the discussions on the native and foreign origin of this variety, we have often wished we could call to mind the exact spot, or that our duties would admit of another few weeks' trip in this romantic region. However, we have done the next best thing. We have tried to put others on the track; but though we have got the grape from near a score of localities, on close investigation we cannot assure ourselves with confidence that they are entirely wild. One thing, however, is remarkable,—none of the grapes are exactly the same. Some have the bunches loose, some compact, some shouldered, some with short bunches, and some above the average length; but yet in every essential quality they are *Delaware*, and nothing but *Delaware*. From one bunch we selected a portion and sent them to Mr. Garber for a name. Mr. Garber replies, 'Judging from the berries alone, they are the *Delaware*, and nothing else.'

Those sent to Mr. Garber we got from Quakertown, Bucks county, and in reply to our inquiries, our correspondent says:

"The grape sent you is called in this neighborhood the *Ruff Grape*, as it is supposed to have been originally brought from New Jersey by a party of that name."

At our recent Horticultural Exhibition we presented four bunches, all from different localities, and selected for their varied forms, to our regular Fruit Committee 'for name,' without explaining any of the circumstances. They were pronounced 'Delaware.'

In our own mind, we have no more doubt about the *Delaware* being a native grape,—both pomologically and botanically,—than we have about our own existence; and, did not true courtesy demand otherwise, would alter the old couplet, which says that,

"When Bishop Berkeley says there is no matter, It is no matter what the Bishop says."

into a pomological construction. However, if any one will take a few bunches of *Delaware*, and confine them for a few days in a close box, and then suddenly open the cover in the vicinity of his nasal organ, it will be saluted with that peculiar odor which may be classed with the *Mus-cat* or *Pole-cat* order, according to the peculiar tastes or prejudices of the owner; but which is universally suggestive of an American origin.

With regard to its leafy characters, our friend, John Sherwood, at Bristol, Pa., will show any visitor a *Delaware* grafted on a *Black Hamburg* in his grape house, the which amongst the hundreds of foreign vines, if any hundred of our farm laborers do not at once pronounce it a 'Fox' grape, we will hold our tongue for evermore."

The variations in the bunches we have noticed, point to different seedling origins,—just as we

have amongst us many varieties of the *Isabella*. We have traveled on foot over nearly every square mile in the State of Delaware, and in the woods and swamps of that State, many forms of *Isabella* are frequent,—the main difference only being that they are not quite as good as the cultivated. We have very little hesitation to infer from the above personal histories and our own observations on wild grapes, that the *Delaware*'s home is on the hills and head-waters of the Delaware river, and that if the woods and wilds of those localities were searched, many similar varieties would be found, all referable to the same form, which might indeed result in its being considered a distinct species."

The engraving above was taken from a bunch on exhibition at the last meeting of the Fruit Growers' Society of Western New York, and we think from specimens sent us by CHAS. DOWNING.

The editor of the *Horticulturist* says, "at the late exhibition of the Pennsylvania Horticultural Society specimens of *Delaware* grapes found in three different localities, in a wild state, were exhibited." If this is so, it settles the question, but our understanding of the matter is, that these specimens were not found wild, but were taken from old vines growing in gardens in different sections, and of course planted long before the *Delaware* grape received its present name, or became known to pomologists. Mr. M. B. RATHBUN, of Ohio, states that some years ago he saw this grape on exhibition at Pittsburgh, where it was called *Lady's Choice*, named so because first picked by the owners lady friends.

MORE EXPERIENCE IN HEDGE-GROWING.

MESSEURS. EDITORS:—Your correspondent, Wm. B. RICE, in the *RURAL* of the 29th of October, in giving his experience in the rearing of *Osgae Oranges* for Hedges, and also making inquiry in regard to the cultivation of *English Hawthorn*, for the same purpose, justly remarks that a "mite of practical knowledge, though often dearly bought, is of more worth than a volume of theorizing." The remark is true, and willing to save him and others the trouble, expense and disappointment consequent upon the attempt of building fences in that way, I will give also my experience. Some eight or nine years since, I purchased the *Quickest* and planted out between one hundred and fifty and two hundred rods of *English Hawthorn* Hedge. I took much pains in preparing the ground, setting out the plants, and cultivating them for three or four years, keeping them free from grass and weeds. They grew well and made fine promise for a fence, and it was observed by an English tenant that they flourished as well as any that he ever saw in Old England, and when trimmed and in full foliage were beautiful indeed. But my hopes and expectations were doomed to disappointment. Soon after the hedge was deemed sufficient for a fence and the protection removed, it began in some places to show symptoms of decay. Upon examination I found the bushes deeply girdled, or eaten entirely off, at or near the surface by a worm or grub, perhaps the same that infests the apple and locust tree; so, while I have sought by much labor and expense to have a neat, useful and ornamental live fence along the highway, about the door-yard and orchard, I have an unseemly apology for a fence, dead by feet, and almost by rods, inviting hungry and unruly street cows and land-shark swine to commit depredations.

I can assure Mr. Rice that I am as fully prepared to condemn the cultivation of the *English Hawthorn* for hedges in this locality, as he is to pronounce that of the *Osgae Orange* a hoax in this latitude. As to the latter, I planted out about seventy rods three or four years ago, and they did well until I found last spring they had been pretty badly scorched by frost. I trimmed them, and they have grown pretty well this summer, although they do not look as healthy as formerly. Time will determine their failure or success. I am prepared for either.

S. G. GAGE.

Benton Centre, N. Y., Nov., 1890.

Inquiries and Answers.

PRAIRIE FLOWERS.—Inclosed is a section of the flower of a wild prairie bulb, and also a leaf. The bulb in its construction is something after the order of the *Hyacinth* in form, but grows nearer the surface. It has no scales like the lily, but seems entire. It sends up from five to eight racemes of flowers, like the section inclosed, varying in length from one and a half to three feet, and is a very striking object in a flower bed. If you can give us the botanical name, it will lay us under many obligations.—G. G. C. & Co., Mayville, Ky., 1889.

The specimen is *Liatris scariosa* (Mr. Gay Feather,) a well known plant over the West. Root bulbous, but the plant is wholly distinct from the bulbous plants, and has no family or even class relation to them.

MAKING A GRAPE BORDER.—Being a subscriber to the *RURAL*, I would like to ask a question or two for my own benefit and perhaps many others. I have just built a house, and having quite a quantity of waste lime, such as the masons waste in laying brick and plastering, composed of lime, sand, hair, pieces of brick and some shavings, I would like to know if that would be good to put into my grape border. I thought I would take that, add leaves, horse manure and soil for my border, but then I thought I would ask you first, for I might be wrong, as I am just beginning to make a home for myself and family. Will the Northern Muscadine Grape need protection here in this climate, (about 40 degrees)?—R. P. R., Quincy, Ill., 1890.

OLD PLASTER and refuse lime is good for a border—so is the hair. The shavings would help lighten it if the soil was rather heavy, and be of advantage. The bricks you might use at the bottom in making good drainage. Well-mix the leaves, and there is nothing better, with the horse manure, plaster and soil, and you will have a good border. The Northern Muscadine is represented as being extremely hardy. It has never suffered by the winter here.

SEWING MACHINE AWARDS, BY THE AMERICAN INSTITUTE, NEW YORK.

SEWING MACHINES, considered in their social, industrial, and physiological bearings upon society, are second in importance to no material agent of the day. Economizing nine-tenths of the time required for sewing by hand; eliminating most of the evils of needlework; enlarging the sphere of woman's employment by creating new and profitable branches of industry; relieving the house-keeper of her most grievous burden, the Sewing Machine ranks with the fabled deities as benefactors of humanity.

The Committee of the American Institute, N. Y., appointed at the late exhibition at Palace Garden, to examine Sewing Machines, have made a long, elaborate, and able report, of much interest to the public. Although the utility of this invention is established beyond all question, yet, for the various purposes of its application, ignorance exists as to the particular patent best for a specific purpose. Committees heretofore have not discriminated and classified sufficiently. This report is free from these faults. The Machines are arranged according to the stitch made, and the purpose to which the machine is to be applied, in four classes, 1st, 2d, 3rd, and 4th; a classification indicating the general order of merit and importance:

CLASS 1st, includes the Shuttle, or Lock Stitch Machines for family use, and for manufacturers in the same range of purpose and material. The Committee has assigned this class the highest rank, on account of the "elasticity, permanence, beauty, and general desirableness of the stitching when done," and the wide range of its application. At the head of this class they place the WHEELER & WILSON Machine, and award it the highest premium. This has been the uniform award for this Machine throughout the country for several years, and we think no disinterested person will dispute its justice and propriety.

CLASS 2d, includes the Shuttle, or Lock Stitch Machine, for heavy manufacturing purposes. At the head of this class the Committee place First & Frost's Machines.

CLASS 3rd, includes the Double Chain Stitch Machines. The GROVER & BAKER Machine is placed at the head of this class. The Committee objects to the stitch made by this Machine, inasmuch as it consumes more thread than any other stitch, and leaves a ridge projecting from one side of the seam. This, in the Committee's opinion, must usually impair the durability of the seam, and often the beauty of the garments or other articles so stitched, though some of the Machines making this stitch can be used very successfully for embroidering purposes.

CLASS 4th, includes the Single Thread Tambour or Chain Stitch Machines. The tendency of this stitch to ravel, the Committee considers an objection so serious that they refuse to recommend the Machines making it for any premium.

The public is much indebted to this Committee for the able discharge of their duty, in rendering clear a subject that interest has so much darkened.

BUCKEYE CAKE.—One pound of flour; 1 lb. sugar; 1 teaspoon butter; 6 eggs; 1 cup milk; 2 teaspoons cream tartar, mixed through the flour; 1 teaspoon soda, dissolved in the milk.

SHREWSBURY CAKE.—One pound of flour; 1/2 lb. butter; 1/2 lb. sugar; 5 eggs; 1 teaspoon soda, dissolved in water; spice with lemon; bake three quarters of an hour.—ECONOMY, Salem Co., N. J.

REMEDY FOR THE FLESH.—Take a pint of common soap, and mix it in air-slaked lime till it is of consistency of glazier's putty. Make a leather thimble, and fill it with this composition, and insert the finger therein, and change the composition once in twenty minutes, and the cure is certain.

SPALDING'S PREPARED GLUE!

SPALDING'S PREPARED GLUE!

SPALDING'S PREPARED GLUE!

SAVE THE PIECES!

ECONOMY! DISPATCH!

IT'S A STRIKE IN TIME SAVES NINE!

As accidents will happen, even in well-regulated families, it is very desirable to have some cheap and convenient way for repairing Furniture, Toys, Crockery, &c.

SPALDING'S PREPARED GLUE

meets all such emergencies, and no household can afford to be without it. It is always ready and up to the sticking point. There is no longer any necessity for liming chairs, splintered corners, bedsteads, and broken cradles. It is just the crack for cases, shells, and other ornamental work, and is used with perfect success in all cases. This is a valuable preparation, and is used cold, being chemically held in solution, and it cures all the various qualities of the best cabinet makers' glue. It may be used in the place of ordinary linings, being vastly more adhesive.

"USEFUL IN EVERY HOUSE."

N. B.—A Brush accompanies each bottle. Price, 25 cents.

Wholesale Depot, No. 30 Platt St., New York.

Address HENRY C. SPALDING & CO.,

Box No. 3,600, New York.

Put up for Dealers in cases containing four, eight, and twelve dozen—a beautiful Lithograph Show-card accompanying each package.

A single bottle of SPALDING'S PREPARED GLUE will save ten times its cost annually to every household. Sold by all prominent Stationers, Druggists, Hardware, and Furniture Dealers, Grocers, and Fancy Stores. Country merchants should make a note of SPALDING'S PREPARED GLUE, when making up their list. It will stand any climate.

SPALDING'S PREPARED GLUE!

Written for Moore's Rural New-Yorker. DIRGE FOR THE DEPARTED.

BY HERBON BELL.

THE sunlight struggles, pale and dim,
Through fleecy clouds that wrap the sky;
I miss the song-bird's morning hymn,
For winter's night,

And they have sought a warmer clime
Where flowers still bloom 'mid tangled fern,
But soon, when comes the warm spring-time,
They will return,—

When April skies are bright above,
When sparkling fountains dance and play,
Their songs will echo in each grove
And meadow gay,

But she, who had the power to send
Such joy from out her ample store,
And with my own sad nature blend,
Will come no more.

Beneath yon elms, that to the skies
Their long and leafless branches wave,
Swayed by November's wind, she lies
"Low in her grave."

The cold winds, o'er the wooded height,
Sigh like the far-heard ocean's surge,
And chant, through all the dreary night,
A mournful dirge.

My heart is crushed,—it could not bear
The blow,—she was my only friend,—
Oh, why should I, so young and fair,
So early end?

When twilight with the southern breeze
The golden hours of day prolong,
Then she would gently seek to please
With sweetest song.

Her happy voice, when she was glad,
Would echo through my throbbing heart,
And then, at times, so low and sad,
That tears would start.

Oh, lonely hours I yet shall see—
Oh, bitter tears I yet shall weep,
Ere I shall sink, dear M.—like thee,
In Death's calm sleep.

But firmly to one hope I cling,
The sweetest to us mortals given,
It is that I'll yet hear her sing
With choirs in Heaven.

Fayette, Mo., 1859.

Written for Moore's Rural New-Yorker. FADED FLOWERS.

It was on a pleasant day, not long since, that, looking over an old box which I had not seen in some time, I discovered a cluster of faded flowers. I was about examining them more closely, when I heard a gentle rap at the door. On opening it, whom should I see but dear aunt PATIENCE. Aunt PATIENCE is a widow lady, about sixty years of age. She lives with a maiden daughter, in a little vine-covered cottage a few miles from us, and, though she enjoys good health, she but seldom visits us, on account of the distance. She keeps her eyes open; and by this means has become quite a wise woman. There is not one among her acquaintances for whom she has not a kind word; and her pleasant yet dignified face always seems to bring peace with it. The little children leave their sports and run to meet her, crying, "Aunt PATIENCE is coming;" and the quiet housekeepers smile a satisfied smile, as they place the rocking chair for her by the open window. Always "patient and loving," we think she is rightly named.

"I am glad you have come," said I, taking her bonnet and shawl, and putting them carefully away. Aunt PATIENCE smiled; then, taking her knitting, commenced her work.

"Always at work, aunt," said I.

"Don't you know that
'SATAN finds some mischief still,
For idle hands do to mislead?'"

Ab! you must never be idle, ALICE. But what have you there?"

"'Tis a withered nosegay, aunt, FANNIE gave it to me—and you know FANNIE is dead now," said I, softly, as the memory of that dear friend came over me.

"Yes, yes, ALICE, I know it full well. She was a faded flower on earth, but her pure spirit blooms in Heaven."

"Yes, aunt, and when she gave them to me she said, 'Think of me often, ALICE.' I do very often, aunt. This little bud she wore in her hair the last evening I saw her—I begged it to put with other flowers that she had just given me. They retain their fragrance, if not their color," said I, as I carefully laid them away.

"ALICE, dear, on that never-to-be-forgotten day on which FANNIE died, did not the Angel of Death beg that sweet bud to place with others which he had that day gathered? The jewel,—her soul,—was taken away, and theasket only remained. So with your flowers, ALICE,—the life of them has departed,—the faded flowers only remain. The sweet fragrance which they even yet give is like the good deeds, kind words, and pleasant smiles which FANNIE herself has given, which, though past, are not forgotten. That sweet bud is a fit emblem of herself, thus early transplanted to the bright land where is no parting, and where the righteous shine forth as the sun in the kingdom of their Father."

"Ah," said I, "you have found the true secret of happiness. You hope to meet FANNIE in that better land. Is it not so, dear aunt?"

"Yes, ALICE. 'The Lord is my shepherd, I shall not want,' even in the hour of death." After a few moments' pause, aunt resumed:

"Do you know of any other faded flowers?"

"I think not, aunt."

"There are very many faded flowers, ALICE,—more than is sometimes supposed. How many flowers that once grew in human gardens are faded. They lie cold, and alone,—they sleep the dreamless sleep,—their bright eyes are closed, never to be opened here,—their merry, laughing

voices, that once sounded in joyous glee through their happy homes, are hushed, and the little dimpled hands lie folded over bosoms that are never to know more of pain or care. How many of these are in the old church-yard,—how many faded in years gone by, and whose graves are forgotten,—how many lie in the depths of the sea,—how many whose last resting places will never be known till the earth and sea shall give up their dead. Another faded flower, ALICE, is the aged, respected mother, cared for and loved with the pure affections of a child's heart. Mother toiled against poverty to give her children an education and to clothe them, and shall they refuse to provide for her wants, and to increase her comfort by every means in their power? What if the infirmities of age rest heavily upon her? They will never leave her,—never turn her upon the cold charities of the world alone. 'Honor thy father and thy mother,'—how often in childhood have they heard it from her venerable lips, and now they obey the command cheerfully. May you, ALICE, ever remember to love and cherish this faded flower."

Aunt PATIENCE continued:—"The wife, worn down with care and watchfulness, is another faded flower. Care has taken the rose-tint from her cheek and the once bright and beaming expression from her eye. The hilarity of youth is gone,—the step is slow. Husbands need not remind them of it,—it is enough that it is so. We know, ourselves, that 'we do fade as a leaf.' Let them lessen our cares; let them take more of the responsibility of the family upon themselves, and they will not be so ready to perceive the inroads of decay; or, perceiving, and knowing the cause, will wisely refrain from the reminders in which some husbands are inclined, either unwittingly or heartlessly, to indulge. Many a wife toils on alone, as far as the interest or care taken by the husband is concerned, and then, added to all their trouble, is the taunt, 'How you have faded.' By-the-by, ALICE, I find that husbands are very apt to see 'faded flowers' in the persons of their weary wives on their return from an evening's pastime amid the young and gay. I saw Mrs. S., and Mrs. H., last Sabbath, at church. They wore a look of care, and I thought, ALICE, perhaps their husbands had seen 'faded flowers' on their return from the last party."

Aunt's conversation was suddenly broken off by a rap at the door, which proved to be a call upon her to visit the sick, and thus ended her descriptions of 'faded flowers.' Very sorry was I that we were interrupted,—for I was being educated, and wished to learn more. Dear me, I did not know before that there were such flowers as aunt has last described,—my idea was that husbands and wives faded together.

Canandaigua, N. Y., 1859.

MARRIAGE OF IDA FAIRFIELD.

It doubtless will interest the many attached and widely scattered personal friends of MARY S. BASSETT, and the more numerous readers of the chaste and beautiful poetical productions of her pen, full of high-toned moral and religious sentiment, which have so frequently appeared in the RURAL NEW-YORKER and in some of the magazines to which she has contributed, over the signature of "IDA FAIRFIELD," to learn that she was married on the evening of Sept. 8th, at the residence of her mother, in Independence, Allegany Co., N. Y., to WM. L. CLARKE, Esq., of Rhode Island, the Rev. JARED KENON, officiating. The invitations to the wedding were confined, with few exceptions, to relatives of the family, as it was intended to be as private as the circumstances would admit, as the bride had lost a venerated father, and a much-loved brother and sister, within the last eighteen months,—yet, the company was large as the family connections are numerous. Miss BASSETT is a grand niece of the late Gen. EUSTACE ROOT of this State, and a niece of JOSEPH SHEFFIELD, Esq., of New Haven, one of the Railroad Kings. Her uncles, GEORGE ST. JOHN of New York, and THOS. ST. JOHN of Mobile, gentlemen of fortune, were present, and among the most liberal contributors of the numerous articles of massive and beautifully and elaborately wrought silver plate, and other bountiful and well-merited gifts of friendship and affection, which adorned a side table in one of the parlors—the admiration of all, and the envy, perhaps, of some of the less fortunate among the fair guests.

The company was an interesting one, much of it from abroad. The mother, an intelligent matron, exhibiting the dignity and grace of the olden time, of New England birth and education, yet an early settler of this Switzerland of New York, presided, surrounded by four married daughters, and two daughters-in-law, all matrons of dignity, the most of them returning to the home of their childhood from a distance, to be present at the marriage of a cherished sister. Fairy fingers and fairer lips, dispensed sweet music, inspiring and imparting an interest to a scene, made elegant, by the presence of more than one of those birds of Paradise whom Heaven had destined to wander here upon earth for the benefit and happiness of man, among them, the fair bride, exhibiting an unpretending and charming native simplicity, and the fairy bridesmaids, one of them a young sister, in their appropriate and beautiful adornments, around whom the graces, or mountain fairies, might have danced a cotillon. The evening, with music and feasting, the meeting of friends and congratulations, passed off cheerfully away. The next morning, however, tearful eyes told of the parting of many, never to meet again upon so joyous an occasion.

The bride, after a few parting visits, will leave the quiet home of her nativity among the Allegany hills—just before they rise into those lofty mountain ranges, and stretch away to the sunny South—to seek a new one at Ashaway, Rhode Island, the residence of her fortunate husband, where she will doubtless meet a generous welcome. May the best of Heaven's blessings and the happiest fortunes attend that gifted and devoted child of the mountains, who aims to accomplish a noble mission, in a humble and quiet way, by doing good.

Wellsville, N. Y., Sept. 10, 1859.

NOTE.—The above was received during our absence, and mislaid. In giving it publicly, we fear the parties named may consider the sketch too personal, yet the bride is a favorite with so many of our readers that we venture to "assume the responsibility." The song described must have been a trying one to its apparently faithful delineator—a bachelor ex-M. C., who has long delayed becoming one of the principals on "so joyous an occasion." We hope our friend will soon correct the single defect in his character.

Written for Moore's Rural New-Yorker. INDIAN SUMMER.

BY CLARA F. YAWGER.

WHEN the smiling summer's ended,
And the golden harvest past,
Cold, gray clouds, by storms attended,
All the azure overcast;
When the "sunny days" are over,
And the "melancholy" come,—
When each little wild-wood rover
Has secured its winter home,—
And the birds have all forsaken
Every forest, grove and bower,
Where, when'er a bough is shaken,
Fast it sheds a yellow shower,—
When the flowers have all departed,
And the chill winds sob and moan,
Till we're sad and weary-hearted
Listening to their dirge-like tone,—
Then, how welcome the appearing
Of the Indian Summer fair,
With its golden light, so cheering,
And its mild and mellow air.

Over mount and river stealing,
Making hills and hearth-stones bright,
With a soft, blue veil concealing
Half the faded landscape's blight.
Oh, its sweet and dreamy sadness,
And its happy peaceful sigh,
Like a smile of holy gladness
In the dying Christian's eye.
Gently whispering winds across us,
Summer seems returned again,
With a few, sweet days to bless us,
Ere stern Winter's cruel reign.

November, 1859.

Written for Moore's Rural New-Yorker. CULTIVATE THE BEAUTIFUL—No. 1.

TRUTH! this world is beautiful! It is no new thought, but it came to me this morning with such freshness and force that I strove in vain to repress its utterance. It seemed, indeed, as though it were borne to me on every ray of the sunlight streaming in at my window, and irradiating not external things simply, but my inner soul rejoiced and reveled in its beams. God made the sunlight beautiful, and the earth it shines upon. Beautiful in every phase, and form, and combination,—beautiful in its external workings,—beautiful when, unfolded and explained, we trace the chain of causes, linked in one whole, necessary to produce the various phenomena of nature, until we are lost in admiration for their Great Architect,—beautiful, even in its mystery.

It is well at times for the human soul to feel its own littleness—to shrink into itself—to compare the finite with the Infinite, the mortal with the Immortal. Go forth on an autumnal morning, when nature sleeps, and the earth is strewn with dry leaves,—emblems of our decay,—and you still feel the force of this assertion. Does not the sunlight shining on them come to us as does that glorious ray of hope which emanates from Heaven as we stand beside the ashes of a departed friend—these shall rise again? Each particle shall be endowed with life,—shall drink the sunlight and the dew, and nature shall rejoice. Nor is Earth less beautiful when shrouded in white,—emblem of purity. We recall the promise of seed-time and harvest, and are strengthened patiently to await its coming. We could hardly greet the spring-time with so cordial a welcome were it not for the winter—or the summer, were it not for the spring-time. The very change is both rest and recreation.

These frames of ours, protected with such care, are formed of atoms old as is Creation's self. They are but the form, the dress which the spirit takes; the mere machines to work its ends,—to carve its imagery! They are not ourselves! Yet even these are beautiful. See the blood coursing and recurring without our will, painting the passions in the face, and strengthening us for our life-work. The nerves,—those little monitors, miniature telegraphs, messengers of joy and woe,—are they not beautiful? What wonder that the ancient poet said, "Man, know thyself." The human frame is a mimic world. What sparks of thought has not art borrowed from its workings.

Pardon this digression; but are we not too prone to bury ourselves in the cares and perplexities which our own human passions have woven—to become soured by disappointments and failures in our own futile and imperfect schemes, becoming mere plodders, toiling because we must, and shutting out the joyousness, the light and the beauty which are ready to greet us at every turn of our pathway if we but woo them? Do we not sometimes carry this spirit into the family circle and the school-room? The world reflects back to us the image of our soul. If the picture is dark, rest assured that there is something wrong. We never adequately prize a privilege until it has been denied us; thus we grow callous and indifferent to daily blessings, simply because they are common. A healthy body is the first of Heaven's blessings; a healthy mind the second; and yet, with both of these, how often we render ourselves miserable.

There is virtue, love, kindness, gratitude and charity in the world if we but seek for them. Just as naturally as each seed sown in the soil draws therefrom that nutriment necessary to perfect its growth,—each different in its kind,—so do human beings draw around them spirits congenial to their natures. Mind acts upon mind with a reflex influence, and we cannot divest ourselves of it. We leave our impressions upon persons and things with whom we are associated, and just so certainly will they make their impressions upon us. The company we keep, is as true an index to our mind as though our every thought were written. Smile amid a group of children, and a dozen smiles will greet you in turn. Speak a cheerful word, and a dozen cheerful voices will respond. There is an emanation from your spirit which will warm or chill theirs just as naturally as a heated body will

impart warmth to the atmosphere around it, or a cold one frigidity. Go cheerfully to your work; teach them as though you loved to teach, and they will love to learn. Words are the signs of thought, but are not always necessary to its interpretation. An expression of the countenance, a glance, a motion, the movement of a muscle, involuntary though it may be, is sometimes more potent than words. There are passions and emotions which words lack power to paint, yet intuitively a child comprehends them. The lips may speak words soft or stern to clothe a thought, yet the soul will shine through them. No person need hope to excel in any vocation which he does not love. That only can be well done which is entered into with heart and mind in the work. Awaken the curiosity of a child and lead him on from truth to truth, and the labor of instructing becomes a pleasant pastime. A love of knowledge once awakened, it will burn on like a heavenly fire, brighter and purer.

Lockport, N. Y., 1859.

CELEBRATED AUTHORS.

DR. JOHNSON preferred conversation to books, and owned that he had hardly read a single book through, declaring that the perpetual task of reading was as bad as slavery in the mine, or labor at the oar.

Byron was an exceedingly rapid writer and composer. He produced the whole of the "Bride of Abydos" in a single night; and it is said without even mending his pen. The pen is now preserved in the British Museum.

Pope never could compose well without first declaiming for some time at the top of his voice, and thus rousing his nervous system to the fullest activity. He says, "the things I have written quickest have always pleased me best."

A friend once said to Moore, the poet, that his verses must slip off his tongue as if by magic. "Why, sir," replied Moore, "that line cost me hours, days and weeks of attrition before it would come."

It cost Lord Lyttleton twenty years to write the "Life and History of Henry II."—Gibbon was twelve years in completing his "Decline and Fall of the Roman Empire;"—and Adam Smith occupied ten years in producing his "Wealth of Nations."

Calvin studied in his bed. Every morning, at five or six o'clock, he had book, manuscript and paper brought to him there, and he worked on for hours together. If he had occasion to go out, on his return he undressed and went to bed again, there to resume his studies.

Bacon could only compose in a small study; he fancied that a contracted room helped him to condense his thoughts, and always invested the ceremony of writing with solemnity. He knelt down, before composing his great works, and prayed for light from Heaven.

Balzac, the finest writer in French prose, who gives vast majesty and harmony to his periods, has been known to bestow a week upon a single page of composition, and was never satisfied with the first production of his thoughts.

Martin Luther's literary labors were enormous; during an interval of less than thirty years, he published seven hundred and fifteen volumes; some were pamphlets, but the most were large and elaborate treatises. He was very fond of his dog, which was ever by his side.

"The Comforts of Human Life," by R. Heron, were written in a prison, under the most distressing circumstances. "The Miseries of Human Life," by Beraford, were, on the contrary, composed in a drawing-room, where the author was surrounded by every luxury.

Steele wrote excellently on temperance, when he was sober. Sallust, who declaimed so eloquently against the licentiousness of the age, was himself an habitual debauchee. Johnson's essay on politeness is admirable, but he was himself a perfect boor. Young's gloomy verses give one the blues, but he was a brisk, lively man.

We find the depressed and melancholy Cowper, who passed so many days of religious despondency and doubt, devoting the hours of night to the production of the mirth-provoking story of "John Gilpin."

All the friends of Sterne knew him to be a most selfish man; yet, as a writer, he excelled in pathos and charity. At one time beating his wife, at another, wasting his sympathies over a dead donkey. So Seneca wrote in praise of poverty, on a table formed of solid gold, with millions let out at usury.

It is a remarkable fact that the mass of poetry which gave Burns his principal fame, burst from him in a very short space of time, not exceeding fifteen months. It was a sudden, impetuous flow, which seemed soon to exhaust itself.—*Flag of Our Union.*

MONEX.—The desire to be rich is not evil in itself. It is nonsense for a man to stand up and disclaim the desire for wealth, and urge upon itself the idea that he should be poor. Money is neither an evil or a good of itself; it has not a moral character. It is simply an agent, and whether it be good or evil depends upon the manner in which it is used. It is like a sword. Whether a sword be in the hands of a Benedict Arnold, bathed in his country's blood, or in the hands of a Washington, wielded for justice and liberty, it is a sword only, and has not a character. Whether it be an instrument for good or evil depends upon the character of him who holds the hilt, and not the sword itself. So it is with money. It is an agent; it is a gigantic motive power, that thunders around the world. If the devil stands engineer, it thunders on, freighted with untold mischief, scattering oppression and cruelty and wrong. But if it is guided by the spirit of love and truth, it is like the sun, shedding light and summer upon the world. It is an angel of mercy and love, when directed by the Spirit of Christ.—*Becher.*

MEN'S lives should be like the days, more beautiful in the evening; or, like the season, aglow with promise, and the autumn rich with golden sheaves, where good words and deeds have ripened on the field.

THE SUNSET ISLE.

WHEN the sun is setting golden,
Setting crimson in the west,
Staining all the sky around him,
Purple, ruby, amethyst;
When his glories burn so brightly,
Ere he vanishes from sight,
That the forest stands transfused
In the splendor of the light.

Then I seek, with hurried footsteps,
Once again the river's side,
Gazing, with an eager longing,
Far across its glassy tide,
Where its waters, like a crescent,
Curving far into the land,
Seem to meet the blue above them,
Hiding all the further strand.

Rising slowly from its bosom,
Gleaming rosy through the mist,
Lies a tree-embowered island,
Which the parting sun has kissed;
Gracful forms are flitting lightly
'Neath the ever-waving trees;
Liquid tones of sweetest music
Flutter to me on the breeze.

And they call to me in accents
I have heard in days of yore,
Ere they sought the spirit mansions,
Ere they pressed the spirit shore;
And I still my pulse's throbbing,
Leat I lose some precious word;
And I chide the murm'ring waters,
By a passing zephyr stirred.

And they beckon to me fondly,
Beckon each with shining hand;
But the foot of living mortal
May not press that mystic strand.
When the crimson deepens purple,
And the purple turns to gray,
Then the white mist gathers thickly,
And the island fades away.

Never eyes but mine have seen it,
Never ears but mine have heard
Those soft tones whose liquid music
Living memories have stirred.
And my heart has been kept tender,
Softened by the holy smile
Of the angel ones at evening
Gathered on the Sunset Isle.

[Burlington (Vt.) Free Press.

Written for Moore's Rural New-Yorker. IMMORTALITY.

THE heavens and the earth are the works of Omnipotence, and they are worthy of God. Thou, too, O! man, art the work of his hand, and shalt thou be unworthy? Was not the earth made for man, and not man for the earth? If the former, then man is the superior, and earth is made subservient to his wants, and if the earth, in all its beauty, its glory, its exalted grandeur, is a mere footstool for the creature man, how superior must he be. How near must he approach to Deity, and what brings him nearer than immortality? Are all the wonderful powers of his mind to be wasted in one short life, and then sink into insignificance, the creature of a day, like the feeble insect of a summer's sun? If so, what object hast thou in life? "Let us eat, drink, and be merry, for tomorrow we die?" Is this poor life so full of sorrow, disappointment, and blighted hopes,—to-day, fraught with bliss and brightest prospects, tomorrow filled with crushed and bleeding hearts,—is life like this, the whole of our existence? No, we know it is not so. Often as we have gazed on the glories of departing day, have we longed for purity of heart, and freedom from sin—longed for a time when we should bask in the sunshine of eternal peace. Those feelings and sensations of the soul, struggling in vain for utterance through the coarser fabric of human nature, are proofs of immortality. I know and thank God that there is a time when I shall put off this mortal part,—that my existence is not temporal, but eternal,—my soul shall rise on wings of immortality, and soar unrestrained through the regions of thought, to fathom eternity. Yes, man thou art immortal. Thou hast been created "only a little lower than the angels, and crowned with glory and honor."

Pifadur, N. Y., 1859.

JANE E. HIGBY.

GOING HOME.—"Going home!" Is it so, bereaved Christian? Then let us comfort one another with these words. We may weep beside the graves which are hallowed to the memory of the departed, but the sunshine of heaven shall illumine our tears, and bring a rainbow of promise over our hearts. True, our friends cannot return to us—but oh, blessed thought! we shall go to them; nay, we are already going to them. We have set out on the journey which is to bring us where they now dwell; and ere long we shall be clasped in their embrace, and gladdened by their concern. Eagerly they await our arrival, for the joy is incomplete without us; and as we think of the glad meeting which will restore us to each other, and banish in a moment the pain of past separation, the distance between us seems to lessen, and we say to ourselves,—"Patience, sad heart; bear up a little longer; we shall be at home presently."—*Life's Morning.*

IN SEARCH OF A PASTOR.—A Congregationalist pastor, in Connecticut, made a hard hit at certain tendencies, in more than one Christian denomination, in saying that "when a pulpit was vacant now-a-days, the church generally appointed a committee to go and make inquiry of some Theological Professor, or of some other eminent divine, for a suitable candidate. The first question about him usually was, Is he a popular man? The second, Is he a good speaker? Third, Is he social and easy in his manner? Fourth, Is he a man of decided talents? Fifth, Can he live on a small salary? And then, as the committee was about taking leave, with hat in hand, and one foot over the door sill, it is sometimes added—'he's a man of piety, we suppose.'"

The Reviewer.

GOLD-FOLI.—Hammered from Popular Proverbs. By THOMAS TITCOMB, author of "Letters to the Young" (16mo., pp. 338.) New York: Charles Scribner, 100 West Street, New York.

OVER the *nom de plume* of THOMAS TITCOMB, Dr. J. G. HOLLAND, of the Springfield Republican, has heretofore attained high rank and usefulness in the field of Literature—especially in his able, instructive and popular "Letters to Young Men"—and "Gold-Foli" confirms his reputation as a writer of rare ability and originality of thought and expression. "Gold-Foli" is a household book of the right stamp and tendency, and will continue to impart moral and instructive lessons long after the great mass of temporarily popular works of the day shall be forgotten. Rich in entertainment and instruction, and exhibiting the best fruits of culture, observation and experience, it is in thought and finish a work of sterling merit—its earnest and genial style, sound philosophy and high moral tone appealing successfully to the head and heart of the appreciative and intelligent reader. This is strong language, we admit, but "Gold-Foli" is not a common book, and merits unusual commendation. It is issued in the best style of the enterprising publisher whose imprint it bears.

—To sustain the opinion above expressed in regard to "Gold-Foli" we append a few extracts from its pages, though it is difficult to segregate paragraphs from chapters and subjects which we should be glad to copy entire:

Exordium Remarks.

A few months ago, the pen that traces these lines commenced a series of letters to the young. The letters accumulated, and grew into a book; and this book, with honest aims and modest pretensions, has a place to-day in many thousands of homes, while it has been read by hundreds of thousands of men and women in every part of the country. More and better than this, it has become an inspiring, moving and directing power in a great aggregate of young life. I say this with that kind of gladness and gratitude which admits of little pride. I say it because it has been said to me—revealed to me in letters brimming with thankfulness and overflowing with friendliness; expressed to me in silent pressures of the hand—pressures so full of meaning that I involuntarily looked at my palm to see if a jewel had not been left in it; uttered to me by eyes full of interest and pleasure; told to me in plain and homely words in the presence of tears that came unbidden, like so many angels sliding silently out of heaven, to vouch for their honesty. To say that all this makes me happy, would not be to say all that I feel. I account the honor of occupying a pure place in the popular heart—of being welcomed in God's name into the affectionate confidence of those for whom life has high meanings and high issues—of being recognized as among the beneficent forces of society—the greatest honor to be worked for and won under the stars. So much for that which is past, and that which is.

And now, I would have the old love renewed. I would come to the hearts to which the letters have given me access with another gift—with food for appetites quickened and natures craving further inspiration. I would bring new thoughts to be incorporated into individual and social life, which shall strengthen their vital processes, and add to their growth. I would continue and perpetuate the communion of my own with the popular heart. To do this successfully, I know that I must draw directly upon the world's experience, and upon the results of my own individual thinking, feeling, living. I know that no truth can be uttered by a soul that has not realized it in some way with hope to be heard. Perceptive wisdom that has not been vivified by life has in itself no efficacy for life.

Trust.

EVERYTHING good in a man thrives best when properly recognized. Men do about what we expect of them. If a man with whom I have business relations perceives that I expect him to cheat me if he can, he will commonly do it. If, on the contrary, he sees that I place implicit faith in his honor—that I trust him—everything good in the man springs into life, and demands that that trust be honored. The sordid elements of his character may possibly triumph, but they will triumph by a struggle which will weaken them. If I am unwilling to trust my son or my daughter out of my sight, I may reasonably expect to plant and nourish in them precisely those qualities which would make it dangerous for them to be out of my sight. If I refuse to trust the word of an honest man, I may reasonably expect that with me, at least, he will break faith at the earliest opportunity. If I place all men and women at arm's length, in the fear that one of them will be treacherous to me, I place myself beyond the reach of good treatment at their hands—beyond the reach of their sympathies and their good will—in short, I insult them, and voluntarily institute an antagonism which naturally breeds mischief in them toward me. So I advocate the policy of universal faith, as an essential condition of universal faithfulness—of universal trust as a pre-requisite for universal trustworthiness. The world does not half comprehend the principle of overcoming evil with good, but clings to the infernal policy of overcoming evil with evil. I know of no power in the world but good, with which to overcome evil; and when I see on every side exhibitions of a lack of personal honor, I know that I can foster the honor that remains in no way except by recognizing it and calling it into development by direct practical appeal.

Labor.

HUMANITY is constitutionally lazy. I have yet to see the first child take naturally to steady work, or the first young man look forward with no desire to an age of ease. There are multitudes of men who love work, but they have learned to love it, and have learned that they are made truly happier by it. We are all looking forward to some golden hour when we may "retire from business," read the newspapers at leisure, drive a pair of steady bay horses, walk to the post-office with a well-fed belly and a gold-headed cane, and be free. I do not believe that any man ever became thoroughly industrious, save under the impulse of motives outside of the attractions of labor. We labor, because it is necessary for us to labor for sustenance, or to achieve an object of ambition, or because idleness is felt to be a greater evil than labor. The

number of potatoes unearthed in the world "for the fun of it," would not feed a flock of sheep. In fact, I believe that God made us lazy for a purpose. He did not intend that we should have anything but air and water costless. If labor were a pleasure, we should have really to pay for nothing, and, as a consequence, we should prize nothing that we have. All values have their basis in cost, and labor is the first cost of everything on which we set a price. But labor has a higher end than this, and I will try to reveal it.

Patience.

If there be one attribute of the Deity that astonishes me more than another, it is the attribute of patience. The Great Soul that sits on the throne of the universe is not, never was, and never will be, in a hurry. In the realm of nature, everything has been wrought out in the august consciousness of infinite leisure; and I bless God for that geology which gives me a key to the patience in which the creative process was effected. Man has but a brief history. A line of nineteen old men, centenarians, would, if they were to join hands, clasp the hand of Christ; and the sixtieth of such a line would tell us that his name is Adam, and that he does not know who his mother was. Yet this wonderful earth, unquestionably constructed with reference to the accommodation of our race, was begun so long ago that none but fools undertake to reckon its age by the measurement of years. Ah! what baths of fire and floods of water; what earthquakes, eruptions, upheavals and storms; what rise and fall of vegetable and animal dispensations; what melting and moulding and combining of elements, have been patiently gone through with, to fit up this dwelling place of man! When I look back upon the misty surface of the dimly retiring ages—the smoking track over which the train of creative change has swept—it fades until the sky of the past entirely shuts down upon the vision; and I only know that far beyond that point—infinity far—that train commenced its progress, and that, even then, God only opened his hand to give light to a thought that He had held imprisoned from eternity!

Youth.

Our life's ideal is always filled with the blood and breath of youth. Our finest conceptions of human beauty evermore embrace youth as their prime element. Strength, enthusiasm, hope, purity, love,—all these, when combined and embodied in their most attractive forms, rise in our imaginations as youthful attributes. So true is this, that in looking forward to the day when the dust of those who have gone before us to the land of spirits shall rise, and assume the forms they are to wear in the celestial city, there springs up always a vision of their youth. We expect to meet the tottering father whose eyes we closed, and whose wasted and feeble limbs we composed, as young, and fresh, and strong as when he bore us to the baptismal font. There are to be no thin, silvery curls upon the brow of the mother, but in some sweet way, all the hallowed graces of maternity and the unfathomable tenderness of a soul disciplined by sorrow are to be associated—interfused—with the beauty and the youth of the bride. Immortality—twin-sister of Eternity—is always young, and brings no thought of age and decay. An angel with a wrinkle? A cherub with a feeble or a weary wing? We cannot imagine such beings. Heaven and everlasting youth are inseparable thoughts.

What we Love.

WHERE the treasure is, there will the heart be also—the heart with all its manifestations of love, devotion, charity, and honor. I know of no good reason why the earth should differ essentially from heaven—why men may not so identify themselves with their highest treasures here that they will partake of the home feeling of those who walk in white upon the banks of the river of life—why they may not feel with relation to God and that which is most precious to Him—His children, His realm, His heaven—as they do toward their earthly father, the paternal mansion, and the brothers and sisters that cluster there.

An Aspiration.

GIVE us an age of gallant, chivalrous Christianity—of men who maintain the honor of their Father's house. Give us an age that shall enlist the respect of all who respect earnestness and honor. Give us an age that shall appreciate that which is fighting for, and will not crawl before the inferior and infernal powers that make war upon the throne. Give us an age in which Christians will fight for and stand by one another, and not fight against one another. Give us an age in which Christian manhood shall assert itself as the highest earthly thing and the noblest earthly estate. Give us an age that, instead of whining and groaning under the truth, shall rejoice in the truth. Give us an age which, lifted into identity with its highest possessions, shall be made by those possessions patient, pure, heroic, and honorable. Give us the blessed thousand years!

SANDERS' ANALYSIS OF ENGLISH WORDS.—Designed for the Higher Classes in Schools and Academies. By CHAS. W. SANDERS, A. M., author of "A Series of School Readers," "Speller, Reader, and Analysis," "Elementary Chart" (16mo., pp. 240.) New York: Iverson & Plimney.

THIS Analysis is similar in plan to "The Young Analyser" and "The Analytical Manual," works presented to the public by JAMES N. McELLIOTT, LL. D., and the design is to teach the analysis of those derivative and compound words in our language which have been taken from the Greek and Latin. Section first is devoted to an explanation of derivative and compound words. Then follow rules for spelling, explanations of the prefixes, observations and exercises illustrating their use; derivatives made opposite in meaning by means of prefixes; derivatives formed by means of prefixes; explanations of the suffixes, with observations and exercises illustrating their use; radicals and derivatives defining each other; radicals and derivatives opposite in meaning; radicals combined with a variety of suffixes; compound words and miscellaneous derivatives and compounds—the whole presented in a simple and comprehensive form. For sale by ADAMS & DABNEY.

It is worthy of notice, that, while second thoughts are best in matters of judgment, first thoughts are always to be preferred in matters that relate to morality.—Rush.

SCENES IN AND ABOUT JERUSALEM.

WOMAN WITH WATER-SKIN—TURKISH SOLDIER—ARAB SPINNING.

THE present year we have given several illustrations showing the present manners and customs in Palestine, illustrative of the Holy Scriptures. With one more number we shall close the series. The engraving above shows the dress and general appearance of the Turkish soldier, the primitive style of Spinning, still common among the Arabs, and the Water Skins, or Bottles, to which allusion is so frequently made in the Bible.

Mrs. JOHNSON says, "the use of these still prevails extensively throughout the East, and although earthen jugs are also used, the former are greatly preferred, and much more common. They are made of the skin of a goat or a sheep, and are so slightly mutilated by preparation for use, that they retain almost the exact shape of the animal from which they were made. They are hung on the back of a donkey, or more frequently a woman, and, having been filled with water, thousands are carried daily to the city. Abraham provided Hagar with a bottle of water on sending her to the desert; but, properly rendered, might it not be water-skin? They are sometimes regularly tanned into leather. This was no doubt the material of the wine-bottles of the Gibeonites spies, who 'did work wilily, and went and made as if they had been ambassadors, and took old sacks upon their asses, and wine-bottles old and rent, bound up.' These bottles, from constant use, become rent, and when mended and patched give full proof of good service and ancient date. Hence, to put new wine in these old bottles would be utterly folly, for the process of fermentation would cause them to 'break through,' which would not be the case while new and flexible.

"Our camping ground being very near the well that supplies the village with water, I often met the village maidens there, who repaired thither to

fill their jugs. Their usual time for drawing water is just before nightfall, and the office is always performed by the women, as in the days of the Patriarchs; for we read that Eleazar, whom Abraham had sent to obtain a wife for Isaac, made his camels to kneel down without the city by a well of water at the time of the evening, even the time that women go out to draw water. And Rebekah, the very maiden whom he sought, 'came out with her pitcher upon her shoulder, and she went down to the well and filled her pitcher and came up.' How often have I called upon fancy to imagine the retreating form of a Fellah, with a vessel on her head or shoulder, and decorated with bracelets and ear-rings, to be the veritable Rebekah of old!

"A stone trough is generally placed near the well, from which cattle are watered, and around it a flock of goats or sheep is usually gathered, as in the days of Jacob, who beheld a well in the field, and 'three flocks of sheep lying by it.' And in another particular they agree with the wells of the days of the Patriarchs, in having the mouth covered with a large stone of great weight, requiring the strength of two men sometimes to move it. The usual method of drawing water is with a jug or leathern bucket, let down by a rope tied to its mouth; and when the well has been long in use, deep incisions are made by the rope in the topmost lying stones. This method was no doubt referred to by the woman at the Well of Samaria, when she said, 'The well is deep, and I have nothing to draw with.' It is also seen from Gen. XXXI 8, that the present manner of covering the well is the same as that which made it necessary for Rachel to require the greater strength of Jacob to roll the stone away, when she came to water the flocks of her father."—*Hadjis in Syria.*

Written for Moore's Rural New-Yorker.
WEYER'S CAVE.—NO. III.

DESCENDING a flight of steps, we enter Washington Hall, the largest and most regular apartment in the cave. We turn aside, however, at the entrance, to visit the Theatre, a room in which the walls are thought to resemble a stage, pit and gallery. A small room at the side is called the Green Room. Returning to the Hall our attention is called to the beautiful masses of spar and crystals which stud the roof and walls, and to the formations which are scattered about in every variety of grouping. A group of three stalagmites standing not far from the entrance has been called the Crucifixion. About the centre of the Hall rises a statue seven feet in height, and covered with elaborately-wrought drapery. It is difficult to conceive a more perfect imitation of art,—under the imperfect light of the candles, the creamy hue of the stone, the flowing folds of the drapery, the regular features, all contribute to the illusion, and it is almost impossible not to believe that it has received the finishing touches of the sculptor's chisel,—this is Washington's Statue.

At your right rise two immense masses of rock, one of which is named the Rock of Gibraltar, and in the narrow passage between them—the Strait of Gibraltar—a tapering formation is denominated, without much regard to geography, the Pyramids of Egypt. Pompey's Pillar, Cleopatra's Needle, Julius Caesar and Mark Antony are found at the further end of the Hall. This apartment is of uniform breadth and height, and perfectly straight from one end to the other. Its length is 257 feet.

Adjoining this Hall is Lady Washington's Room. Here, an oval sheet of stalactite, about three feet in diameter, resembles, in shape and position, an old-fashioned toilet mirror. It leans from the wall about a foot at the top, and touching it at the bottom, forms the best "angle of reflection" for the toilet. Near the mirror is the toilet table, hung with folds of snowy drapery. A little room in the side wall is called the kitchen.

Jackson's Room, named in honor of the President, contains nothing particularly noticeable. At the entrance of the Diamond Room is a large rock, some distance from the floor, covered with clear and perfect crystals. It is called the Diamond Bank, and as the guide, by means of a long pole, passes his lantern over it, ten thousand jewels flash back its rays with dazzling brilliancy. It is sometimes called the Fire-flies, a name more descriptive of its appearance, but no words can give any idea of its glittering beauty.

Next in the main path is the Church. Here is the Organ, composed of a number of perpendicular stalactites, varying in size, and giving out musical tones, when struck, corresponding to the

scale of notes. The Vestry and the Choir are on opposite sides of the room, and almost between them patriotism has assigned a pew to LA FAYETTE. Above the Choir rises a spiral column of snowy whiteness, called the Steeple. It is forty feet in height and exquisitely beautiful. The resemblance, however, is not very striking. It rather resembles an old-fashioned back-comb, of enormous size and elaborate workmanship, over which is thrown in careless folds a heavily-wrought white veil.

A high and inaccessible rock, called Mont Blanc, guards the entrance to the Garden of Eden. Here, in a recess, we find Adam and Eve's Bed-chamber, and near by, numerous stalactites depending from the roof meet the stalagmites below, and form the curious figure known as the Banian Tree.

We now enter the Dining Room, a long aisle ninety feet in height, furnished with a dining table and other dining conveniences. Just beyond this room is a ledge of rock from twenty to forty feet in height, which may be easily surmounted, and from which an excellent view may be obtained. It is called the Giant's Causeway. Upon its edge are several stalagmites, "so grouped as to suggest the idea of sentinels watching in silent patience through the everlasting night." The guide informs us that these are NAPOLEON and his soldiers crossing the Alps. A rough and narrow passage, called the Wilderness, brings us to Jefferson's Room. Here are curiosities in abundance.

The Half Moon is an oval stalactite of the purest white, resembling the rising or setting moon, and shown off to advantage by being placed against a wall of dull brown. A couple of statue-like stalagmites standing near, bear the names of Minerva and her Shield, and Niobe in tears. 'The Ladies' Toilet and the Gentlemen's Toilet are at the further extremity of the room. On the other side is a beautiful recess called the Gothic Temple. Here is a spring of fine water, at which the company stop to drink.

BERTHA MORTIMER.

Newark, N. Y., 1859.

A GREAT aim in family discipline should be to provide for each of the juveniles some line of pursuit which will give them a sense of their usefulness and necessity to the household. This feeling properly instilled into their minds will make them members of society valuable to others and happy in themselves. The Creator, who makes nothing in vain, does not in vain send human beings into the world if only they would find their places and fill them. Idle men and women are the bane of any community. They are not simply clogs upon society, but become, sooner or later, the causes of its crime and poverty, its folly and extravagance. In plain old English, every family motto should read:—"Be somebody; do something; bear your own load."—*Philadelphia American.*

THE FAIRS.

THE "Faire" for another year are over. Both Old and Young America have made another annual bestowment of their tin upon i-tin-erant showmen and peddlers, as also upon the numerous proprietors of eatables and (sad to say, in too many cases,) of drinkables, candy boys and all the other various money-taking enterprises with which people are constantly beset at such places of gathering. I said money-taking: any doubts in that quarter might speedily be dissipated by considering the empty state of many previously well-filled purses, some of whose owners, after having spent the day and their money in gratifying their appetites, instead of observing fine cattle and sheep, return home in the firm belief that Fairs are a humbug; that is, all but the pulling at the purse strings! But these evils (if we may so call them,) are but the necessary attendants upon the "Fair," and due submission must be exercised, or rather one must be proof against them in order to fully carry out the original design of Fairs, viz., the display of products of industry for the notice and observation of the public.

Fairs (or Agricultural Exhibitions, as has been shown to be the proper term,) would now-a-days seem to have become a popular institution; a not unnatural conclusion when we consider their number and the crowds that throng to them. They are the center of attraction to the youth in general and the Farmer's Boys in particular, with which latter class it may be considered the chief holiday; and such being the case, they of course should be allowed to attend; and they generally are, but there are left about the country some farmers, relics of antiquity, who refuse to let their sons or their families attend the Fairs from an unfounded prejudice thereto. They class them with mowers and reapers, and new-fangled and worthless notions. Such men are brethren to the man who didn't take the papers, and who still supposed JOHN TYLER to be President. Of course it cannot be expected that the boys will profit very largely by the various improvements exhibited, though the more observing ones will do so. Yet, such a day of pleasure is necessary, as a change from the unceasing labor of the farm; and if they do spend a little money and appear to have derived no substantial benefit, it will be found in the end that good will result.

Livonia, N. Y., 1859.

CELESTY, KOHL-RABI, PEARS, &c.

I HAVE got into trouble, and do not know any one as able as you to help me out. I should like to know the best time to transplant asparagus and rhubarb—if in the fall, is it too late? How large should celery be before you begin to earth up? I have a few, but think they are small. If they are too small, could I keep them over winter, and then set them out and they be good? Do they obtain cauliflower seed the same way as cabbage? What time should I sow kohlrabi. I have quite a number of small cauliflowers, eight inches to two feet high—what can I do with them? My large ones are three or four feet high. Where can apple seed be obtained, and what price? Please give a list of six or twelve of the best varieties of pears for the Central part of Illinois, and the best preparation for rich, black prairie loam. By answering these questions you will confer a great favor on one friend and subscriber, and perhaps many.

Princetonville, Peoria Co., Ill. YOUNG RURALIST.

ASPARAGUS may be transplanted, and bedforded either in the autumn or spring, and Rhubarb the same, though we would prefer the fall for either, when convenient. Celery may be earthed up a little, sufficient to keep the leaves erect after they begin to grow after transplanting, and have made a few inches of growth. The main earthing up for blanching should not be done until the latter part of September or the beginning of October. Celery plants kept over the winter are worthless. Cauliflower seed is obtained just like cabbage seed. Plants that have not headed may be placed in the cellar before heavy frost, the roots in a little earth, and many of them will grow good heads. Kohlrabi seed should be sown early in a nice bed, like cabbage seed, and transplanted to the field or garden when about six inches in height. The Apple Melon seed, we judge, can now be obtained of most of the seedsmen at moderate prices. Prairie soil, as a general thing, needs draining, and if a little clay could be added all the better. Plant in a high and dry location. Among the hardest pears for the West, are Flemish Beauty, Buffum, Columbia, Dix, Winter Nellis, Fulton, Lawrence, Osband's Summer, Oswego Bourne, Stevens' Genesee, and Onondaga.

PIE PLANT, PROPAGATING SCIONS, &c.

I AM a reader of the RURAL NEW-YORKER, and am anxious for a little information through its columns. If you will please answer the following inquiries, you will confer a great favor upon a young farmer:

- 1st. What is the best way to propagate rhubarb or pie plant?
- 2d. Can it be propagated successfully from seed?
- 3d. Will the kind produced from the seed be the same as that which produced the seed?
- 4th. Can scions and cuttings be preserved properly in moss, if kept in a cellar?
- 5th. Onondaga, N. Y., 1859.

A. M. W.
1st, 2d, 3d. Take up the large plants and divide the roots, leaving only one crown to each part, which will grow a new and strong plant in one season, and may soon be divided again. Rhubarb can be easily grown from seed. Sow it in a deep, mellow bed, and keep the ground clean, after the plants come up. After making one summer's growth they may be transplanted. A plant raised from seed may not be like the parent plant in hardly any respect, or it may be very close in its likeness. In raising a hundred plants from seed you would have, most likely, a great variety as to appearance and quality—some worthless, some fair, and some very good. 4th. Scions may be kept in a cellar in dry sand. They should be kept as cool as possible without freezing, so as not to start the buds, and as dry as possible, so that they will not mildew or rot, without causing the bark to shrivel.

MOORE'S RURAL NEW-YORKER FOR 1860.

EXTRA INDUCEMENTS
TO AGENTS AND ALL WHO FORM CLUBS EARLY.

In addition to the free copies offered according to our terms, we will give to each of the ONE HUNDRED PERSONS sending the first list of THIRTY or more Yearly Subscribers to the RURAL after this date (remitting payment at our club rate—\$1.25 per copy), a bound volume of the RURAL for either 1858 or 1859, price \$3.—or \$2 in Ag. Books, post-paid.

To each of the ONE HUNDRED PERSONS sending the first list of TEN or FIFTEEN Yearly Subscribers as above, remitting payment according to our terms, we will give either another extra copy of the RURAL, or \$1.50 in Ag. Books, post-paid, or a Cross of the Washington Medalion Pens, post-paid, as preferred.

Still More Liberal!—In addition to any extra copies or Gratuities to which persons may be entitled from the above offers, we will give an unbound but perfect Copy of the Tenth Volume of the RURAL (for 1859) to EVERY ONE who remits (precious to Christmas Day, 1859), either \$5 for 8 copies, \$10 for 15, \$15 for 20, \$20 for 25, or \$25 for 30 copies. Finally, in addition to what is above offered, we will give to each of the TWENTY PERSONS remitting payment for the first list of SEVENTY-FIVE or more Yearly Subscribers after this date, a Copy of WEBSTER'S UNABRIDGED DICTIONARY—New Pictorial Edition, containing 1,500 Illustrations.—[Oron Quarta—1,700 pages.]

For New Club Terms, &c., see last page.

ROCHESTER, N. Y., NOVEMBER 19, 1859.

NOTICE AND REQUEST.

HAVING concluded to mail the Eleventh Volume of the RURAL NEW-YORKER by a new Patent Machine Process, it becomes important to receive a great portion of the list of Subscribers for 1860 at the earliest possible moment. To secure this result,—and also as an inducement for the friends of the RURAL to make early efforts to INCREASE its circulation,—we offer above (and in a circular mailed to Local Club Agents, &c.) some extra inducements for clubbing. The new system of mailing by printing is regarded as a vast improvement in both accuracy and speed, and we trust every Club Agent, or person disposed to act as such, will aid us in successfully inaugurating it by sending in lists as early and fast as convenient. And if our friends generally will renew their subscriptions at an early day, they will greatly facilitate the accomplishment of our object. It will require considerable time, labor and expense to adopt the new system, but when once in operation we think every subscriber will regard the change as a decided manifestation of "Progress and Improvement."

DOMESTIC NEWS.

Matters at Washington.

RELIABLE information just received from Utah, states that Judges Sinclair and Cradlebaugh are on their way to Washington. Mr. Hartnett, Secretary of the Territory, arrived on the 9th inst. It appears that there continues to be frequent murders and assassinations, but no arrests, as the Mormons systematically obstruct the course of justice. The opinion prevails among all the Gentiles, that the courts will be useless unless Government changes its policy. General Johnston is so governed by his instructions that he cannot afford the necessary protection. The continuance of the army at Camp Floyd only serves to add to the prosperity of the Mormons by means of the large sums of money spent in the Territory for supplies. The N. Y. Times Washington correspondent says, Secretary Floyd has just completed his estimates for the ensuing fiscal year. They are less by \$1,500,000 than those of last year, and half a million less than the appropriation for the actual year.

The N. Y. Tribune's Washington correspondent says, the Post-Master General will ask about \$10,000,000 for mail service the next fiscal year,—the increase being made necessary by the overland and other routes established before he entered upon the duties of his office.

While the Cabinet were in session on the 8th inst., the President received a dispatch showing the pressing necessity for military assistance at Brownsville. The Secretary of War within half an hour thereafter, issued instructions to Capt. Pickett, commanding the artillery company at Baton Rouge, to place his men in readiness for a march, while at the same time the Quartermaster at New Orleans was telegraphed to make arrangements for transporting the troops to Point Isabel, towards which place they are now probably on their way. J. B. Thomas, the special delegate from Brownsville, had an interview with the Secretary of War, and fully explained to him the alarming condition of the frontier of the Rio Grande.

The receipts into the Treasury last week were \$991,000. A reduction from the amount on hand in the previous week of nearly \$125,000. Amount subject to draft \$4,141,000.

Personal and Political.

JOHN MITCHELL, who is now in Paris, has commenced a series of letters in a Dublin paper, called the Irishman (similar in its politics and designs to the Nation), in which his object is to suggest to the Irish peasantry that France will soon be at war with England in the Mediterranean, and that the opportunity will then have arrived for inducing the Emperor Napoleon to invade Ireland.

DEAR to the past week the telegraph conveyed the melancholy intelligence of the insanity of Gerrit Smith, and his removal to the Insane Asylum. A person writing from Utica to the Albany Argus says:—"Gerrit Smith was brought to our Asylum yesterday, and is quite deranged,

intellectually and morally; and he is also feeble physically. He refused to take an anodyne, alleging that they only wanted to put him to sleep for the purpose of boxing him up and taking him to Virginia. When informed that he must take it, voluntarily or by compulsion, he opened the door and screamed (into the hall) I protest!—He then took it."

The case is a melancholy one, and it is only with emotions of deep regret that we can chronicle the obscuration of an intellect so brilliant yet of such uncertain light.

The Republican majority on joint ballot in the Ohio Legislature is 27.

NEW JERSEY.—Returns from New Jersey indicate the election of Olden, Republican candidate for Governor, by about 2,000 majority. Senate—12 Democrats, 8 Opposition and 1 American elected. House—29 Democrats, 23 Opposition and 8 Americans chosen.

MASSACHUSETTS.—Returns from nearly the whole State give Banks Rep., majority of upwards of 9,000 in the whole vote. His plurality over Butler, Dem., is upwards of 23,000. Senate stands 34 Rep., 4 Dem., 2 doubtful. House 132 Rep., 50 Dem., and 4 Opposition. The entire Republican State ticket is elected.

MISSISSIPPI.—A special dispatch to the Charleston Courier from New Orleans, states that the Mississippi Legislature organized on Tuesday, by electing Mr. Drane President of the Senate, and Mr. Campbell Speaker of the House. The Governor's inauguration will take place on the 21st.

WISCONSIN.—The returns from Wisconsin are yet incomplete. The Milwaukee Sentinel of the 10th says that those already received confirm the opinion that the entire Republican State ticket is elected by a handsome majority, and that the Republicans are in the ascendant in the State Legislature.

LOUISIANA.—The Democratic State Ticket is reported to be elected. Slidell, Democrat, and Bouigny, American, are elected to Congress. In New Orleans the American ticket was triumphant by about 2,500 majority. Nineteen out of the twenty-three city Representatives, and all three of the Senators, are Americans.

NEW YORK.—The election in this State passed off very quietly. The vote was exceedingly light. That portion of the Republican ticket which received the endorsement of the American Convention, was chosen by a large majority—25,000 is the amount claimed—while the remaining portion is still in doubt. The Republicans claim the entire ticket—figuring a small majority upon those who received only strict party support. The position this morning (Monday), is:

Leavenworth, Republican..... 46,541
Jones, Dem. and Amer..... 44,817

Leavenworth over Jones..... 1,724

The Senate, (on reported majorities,) stands as follows:

Republicans..... 23
Democrats..... 9

Taking a like basis for the Assembly, the result is thus reported:

Republicans..... 55
Democrats..... 34

To hear from..... 6

The Justices of the Supreme Court chosen are: William H. Leonard, W. W. Scrugham, Rufus W. Peckham, Democrats; Augustus Boeckes, Le Roy Morgan, John M. Parker, Addison T. Knox, Martin Grover, Republicans. Democrats, 8; Republicans, 5. It is thought that the Official Canvass will be necessary to settle the political complexion of a portion of the State ticket.

KANSAS.—Parrot's majority for delegate from Kansas, will probably reach 3,000. The Republicans have a majority in both branches of the Legislature.

News Paragraphs.

A LATE Utah City paper mentions the arrival of a company of European Saints who came in fifty-six wagons, and numbered about four hundred souls, mostly from Scandinavia. There were six deaths and three births on their journey of three months through the country.

THE California Annual Conference of the M. E. Church, at their session in September, passed resolutions requesting the next General Conference to provide for the residence of a Bishop on the Pacific coast.

A STUDENT in the University of Virginia, writing from that institution, states that "no vestige of the marble slab that designated the last resting place of the author of the Declaration of Independence," remains to mark the spot. The visitors to his tomb, by chipping off fragments, have completely demolished it, and by piecemeal carried it away. An uncouth granite pedestal, greatly disfigured, alone remains to mark his grave.

AN anonymous advertisement appears in the Richmond Whig, offering \$10,000 for the delivery of Joshua R. Giddings in that city, or \$5,000 for his head.

A LETTER was lately sent from Paris to New York and a reply received back in Paris in three weeks, four days and nine hours. The Vanderbilt out and the Persia back were the mediums of transmission.

It is stated that the New York snuff manufacturers employ hundreds of juveniles whose sole business consists in collecting old stubs of cigars, which are ground into snuff, and sold to customers.

ACCORDING to a late census taken in Georgia, by the State authorities, its population is about 1,050,000. In 1850 it had 905,000. Increase in nine years, about 150,000.

It is stated as a curious fact in regard to persons who are killed by an explosion of steam, that in some cases, a few moments after the accident they are apparently unharmed and are able to walk about and converse. Where not begrimed by the smoke and ashes, the peculiar bright, soft whiteness of the face, hands, or breast, however, tells us at once that the skin, though unbroken, has in fact been boiled by the steam, and they soon sink from the result of their injuries. One man on the Great Eastern, when assistance was proffered, said quietly, "I am all right. Others are worse than I; go after them," while at the moment, though walking about, the flesh of his thighs was burnt in deep holes, and he was the very first to die.

In New Jersey the other day a young couple while courting by the fire fell asleep. While asleep the young lady's dress took fire. As soon as they awoke, the young man made every exertion to extinguish the fire, but without success. The young girl rushed out of the door enveloped in a sheet of flame, which continued to burn until her clothing was all consumed. She lived only a few hours afterwards. The young man will probably be crippled in the hands for life.

The disappointment concerning the Great Eastern's visit has been a great injury to Portland, says the Argus. Much has been expended in various ways in anticipation of her presence and the crowd it would draw, which will be a partial or total loss. It has also had the effect to delay and embarrass business transactions.

The Clerk of the Cincinnati Probate Court the other day issued a marriage license for the union of a man of sixty with a buxom damsel of sixteen. The old man, a rickety old chap, said the disparity in their years was more than counterbalanced by what he called the "unusual amount of affection" that existed between them.

SOME of the Iowa papers find fault with the Governor's proclamation for a day of thanksgiving, because in it is the assertion that the State has been blessed with a plentiful harvest this year, whereas, they say, every one knows that there was but half a crop!

R. L. DAVENPORT, son of Lewis Davenport, of Holyoke, Mass., suddenly disappeared from Westfield about three years ago, and nothing was known of his whereabouts. A letter has just been received by his father, announcing his death at Kurrachee in the Scinde, India. It seems he joined an artillery company of the English army in India, and survived the late war to die a natural death.

THE REQUISITION FOR GERRIT SMITH.—During the past week the telegraph has several times announced, upon "undoubted authority," that Gov. Wise had made a demand upon Governor Morgan for the delivering of Gerrit Smith to Virginia. A dispatch from Richmond, Va., on the 12th inst., states, "on the highest authority," that no requisition has been made by Gov. Wise on Gov. Morgan, of New York, for Gerrit Smith."

THANKSGIVING.—We find, by gathering the proclamations together, says the Rochester Democrat, that the good old Yankee observance of Thanksgiving is to be honored this year in seventeen States on the same day. The following are the States that it will observe the day on the 24th inst.—New York, North Carolina, Alabama, South Carolina, Connecticut, New Hampshire, Maine, Massachusetts, Rhode Island, Kentucky, Pennsylvania, Indiana, Michigan, Minnesota, Maryland, Ohio, and Kansas. Mrs. Sarah Jane Hale, a well known literary lady, has been actively interested in procuring the assent of the Governors of the different States to the appointment of a uniform day of Thanksgiving. She proposes that the last Thursday of November, shall be made the regular day of National Thanksgiving, and she has procured the assent of the Governors of some of the above named States to that arrangement.

THE INSURRECTIONISTS.—Cook, Coppie, Green and Copeland have been found guilty. Copeland and Green are negroes, and the jury, under the "Dred Scott decision," did "not find them guilty of treason, as they are not citizens, but of inciting the slaves to insurrection, and murder in the first degree." When the prisoners were brought out for sentence, the negroes Copeland and Green declined to say anything. Cook and Coppie both addressed the Court, denying that they had any knowledge of Brown's intentions to seize the Ferry, until the Sunday previous. They were called on to take the oath of obedience to their commander. They expected to be punished, but did not think they would be hung.

The negroes are to be hung on the morning of the 16th, and the whites on the afternoon of the same day.

FROM CALIFORNIA.—The steamship Atlantic from Aspinwall, the 20th ult., with 344 passengers and \$1,669,107 in treasure, arrived at New York on the 10th inst., with California news. Gen. Scott arrived at San Francisco on the 17th, and received a flattering ovation from the people. He left the next day for San Juan. The Saranac had arrived at Aspinwall and San Juan del Norte, with news that Rummels had really obtained a contract with Nicaragua for opening the transit route. The contract is for \$50,000. No passenger tax to be paid, the government receiving \$15,000 per annum. The Harbor of the San Juan was fast filling up.

MEXICO.—The New Orleans Picayune speaking of Americans in that ill-fated Republic, says:—"We have seen our limited numbers robbed of their property, and thinned by imprisonments, banishments and assassinations, without exciting any positive action at Washington. We have witnessed the gradually increasing hatred and cowardly animosity against us until an apparent climax has been reached in the brutal assassination, and hanging afterwards, of one of our number, Mr. Chase, (as you doubtless already have intelligence,) to whom fame accords nothing but an unblemished name."

FROM TEXAS.—We have advices from Brownsville, to the 24th ult. Cardinas and his band still continue their depredations, threatening the inhabitants with fire and sword. On the 20th inst., thirty men entered and fired one round, when they were dispersed by artillery and fled. On the 24th, twenty men, with cannon and howitzers, marched against Cardinas, and drove the guard from his house. Subsequently they were surprised in an ambuscade, and lost a cannon and howitzer, and finally were entirely defeated, with four men wounded and one killed. Cardinas lost two men, killed. Cardinas sent a letter demanding of the citizens of Brownsville that they should surrender the Sheriff and others, to save the city from destruction. A general panic prevailed at Brownsville. The city was barricaded and trenches dug for defence. An attack was hourly expected. It was reported that after sacking Brownsville, Cardinas would attack Brazos. The Mayor of Brownsville appeals to New Orleans for 100 men, as their own citizens are worn out, and the rangers had not arrived from Mexico. Sixty felons released from the prison at Victoria had joined the Guerilla band, and were devastating the country.

FOREIGN NEWS.

GRAT BRITAIN.—The following is taken from the Liverpool Daily Post of the 27th Oct.:—"The public will learn this morning, with overwhelming grief, that the splendid vessel, the Royal Charter, was totally lost yesterday in Muffa Bay, near Bangor. The melancholy intelligence was brief, but only too true—out of the 465 persons on board, only ten were saved. The Royal Charter had about half a million of gold when the disaster took place. The telegraph had ceased to work, and so destructive had been the storm along the coast yesterday, that the Chester and Birkenhead Railway had been destroyed in many places. At Penmanaw, 20 of the dead bodies had been washed ashore. The bay in which the catastrophe occurred, is two or three miles to the eastward of Puffin Island, in Anglesea, and six or seven miles to the northwest of Beaumaris. It has a shallow, sandy beach for several miles, with promontories at each end of the bay. The country around is wild, and few houses are to be seen."

Another heavy gale had been experienced on the English coast, but no disasters to American shipping had yet been reported.

The widow of Sir Robert Peel is dead.

FRANCE.—A letter purporting to have been written by Napoleon to the King of Sardinia, dated October 20th, has found its way into print. There was some doubt of its authenticity, but it was generally regarded as genuine. The Paris correspondent of the London Times, who started the letter, guarantees its authenticity.

The Emperor writes to the King to settle with him the course which ought to be followed for the future. The circumstances, he says, are grave, and it is requisite to lay aside idle allusions. He says that the question is not now, whether he has done well or ill at Villa Franca, but rather to obtain from the treaty the results most favorable for the pacification of Italy, and the repose of Europe. It is necessary to conclude a treaty that shall secure in the best manner possible the independence of Italy—which should satisfy Piedmont, and yet should not wound the Catholic sentiment of the rights of sovereigns, in whom the Pope felt an interest. The Emperor gives in detail his views as to the mode in which his object may be best accomplished, and adds,—it is the real interest of your Majesty to second me in the development of the plan, in order to obtain from it the best results; for your Majesty cannot forget that I am bound by treaty, and I cannot, in the Congress about to open, withdraw myself from my engagement. The part of France is placed before hand. The plan itself is already known. The Emperor demands that the Dutchess of Parma shall be called to Modena. Parma is to be united to Piedmont, and Tuscany augmented, perhaps, by a portion of territory, is to be restored to the Grand Duke Ferdinand, and a system of moderate liberty shall be adopted in all the States of Italian confederation, with the Pope as Honorary President. This increase of his moral influence, would enable him to make concessions in conformity with the legitimate wishes of the population.

The letter attracted much attention, and some English journals see in it good reasons why England should refuse to join the Congress.

The French government has given orders for 100 gun boats, 25 of which are to be completed with the utmost despatch.

The Minister of War has placed materials of war at the disposal of the Spanish Government, and has declared that the Emperor shall support the military operations of Spain in a war against Morocco in a similar way to those made to Piedmont during the late war.

ITALY.—The Times Ministerial asserts that the Sardinian Cabinet has not adhered to the diplomatic arrangements by which Italy has been disposed of at Lurich, and in case of Romagna being attacked Piedmont will take the field to assist them.

According to advices from Sicily the insurrection there had not ceased. Reinforcements of troops are being dispatched. Numerous arrests were made.

The Pope, according to several journals, has accepted the several principles of reform that has been suggested, but desires to be himself the judge of the time they shall be applied, and herein is the difficulty.

Napoleon had written a letter to the King of Sardinia, urging him to carry out the Villa Franca agreement. In the letter he says that France demands that the Duke be recalled to Modena; that Parma be united to Piedmont, and that Tuscany, with an augmentation of her territory, be restored to the reign of the Grand Duke, and that the projected confederation on the basis of moderate reforms be carried out.

SPAIN.—The Spanish Government have chartered all the steam packets which run between its ports and Marseilles, for the conveyance of the expedition against Morocco.

The Queen offered to contribute part of her civil list, and to sell her jewels towards defraying the expenses of the war.

Marching orders have been given to the troops which are to join the expeditionary army against Morocco. Marshal O'Donnell will start at the end of the week.

FROM MEXICO.—The steamship Tennessee, from Vera Cruz on the 8th inst., arrived at New Orleans on the 11th. The Liberal expedition against Tehuacan, Orizaba and Cordova proved a disastrous failure. Gen. Mejia retreated without firing a gun, losing 600 men, who were taken prisoners; also 1,000 muskets and 12 cannon, which Gen. Minion captured without killing a man. Gen. Marquez had pronounced for Santa Anna, after seizing a condotta with \$2,500,000 in specie, which he undertook to escort to Tepic. He appropriated \$600,000 to himself, and detained the rest at Guanajuato. The British and French Ministers had energetically protested against this conduct. Gen. Miramon, against the wishes of his Cabinet, with only four aids, had left the Capital, ostensibly to collect troops and pursue Marquez as a traitor, but it was feared that he was really leagued with him. The Liberals were greatly encouraged thereby. Gen. Degollado had defeated Alford, capturing his artillery, and entering Guanajuato with 5,000 men. Gen. Wool, at Legatos, and Gen. Degollado were pushing on to attack him.

The News Condenser.

- They had a delightful fall of snow at Quebec on the 5th inst.
- The cost of living in our cities has increased 10 per cent in 10 years.
- Letters from Paris state that the old Prince Jerome Bonaparte is dying.

- One hundred different patents have been issued in France for as many different styles of that favorite garment, "crinoline."
- The Massachusetts Legislature has passed an act providing for the establishment of a nautical branch of the State Reform School.
- The Choctaw nation numbers about 18,000. They have diminished since they left Alabama. They still hold their lands in common.
- A new mineral spring has been excavated at Saratoga. The spring was struck at a depth of 47 feet, issuing from two fissures in the rock.
- Rosa Bonheur, the renowned female artist, shortly intends visiting America, with a view of studying the life of our prairies and backwoods.
- During August, 89,885 ounces of gold were deposited in the San Francisco mint; 86,020 ounces of silver were purchased; \$969,000 coined.
- Prof. Lowe commenced inflating his balloon at Reservoir Square, New York, on the 1st, and expects to start for Europe in a fortnight.
- The male births in Europe surpass the female 4,000,000 every year, but are balanced by the greater number of accidents to males.
- In Mobile, Ala., the other day, a fisherman pulled up a half pint bottle. A crab had got into it and grown so large that he could not get out.
- The persons who killed Fret's daughter in Italy, confess that they did it in order to avenge her father to the spot and then kill him.
- Mr. Joseph Cline died in Freeport, Ill., last week, from the bite of a cat. He was bit in the finger, and in four days died, in the most intense agony.
- Seven ships of the English Channel fleet were under orders to prepare for sea immediately, the destination of which is said to be Vancouver's Island.
- A racoon entered a church in Princeton, Ill., during service, and created much stir among the congregation. He was captured and "taken out of meeting."
- The clause in the Kansas Constitution excepting the homestead from attachment for debt was separately submitted to the people, and adopted by a large maj.

РАСС.

THE DYING YEAR.

From the old woods, dim and lonely,
Comes a moan;
There the winds are sighing only,
"Summer's gone!"
All the bright and sunny hours,
And the green and leafy bowers,
With the Summer's latest flowers,
Are faded now;
And the brow
Of the waning year
Has been twined with dying leaves;
And the gathering of the sheaves
Tells us Autumn's here.

Now the winds go loudly moaning
Through the vale;
And the forest trees are groaning
Mournful tales
Of decay that swiftly gather,
Of the coming wintry weather,
Of the snow that, like a feather,
Soon will fall;
And the call
Of Death is sighing
Over all the rippling streams;
And the Summer's lingering gleams
Are sadly dying.

'Tis the waning, waning twilight
Of the year
That hovers now, all strangely bright,
Round us here;
And soon the year will pass away,
Like the light of an autumn day,
Adown old Winter's dim highway
To its tomb;
And the gloom
Of the Silent Land
Will rest on the bright years down;
And the winds of Time will moan
O'er the dreamless band!

OUR THANKSGIVING.

BY CAROLINE A. HOWARD.

THANKSGIVING in the country, at grandmother's! Isn't it splendid? Ours was, though I dare say it did not differ so very much from hundreds of others. I hope it did not for the sake of the many who I should be glad to know were so fortunate. I shall not linger over a description of the bountiful supply of good things with which the pantry was filled. No wonder that little Jon asked Aunt CLARISSA if she locked the pantry door "to keep the goodies from breaking out."

As you have all had Thanksgivings of your own many a time, you can imagine, while I tell you something of the place and the people where and with whom we spent ours.

The house in which my grandmother lived, and still lives, thank Heaven, is a substantial country residence about twenty miles from a large city. It is not a farm-house, for my grandfather was the village doctor, and in that capacity he managed to build upon a foundation bequeathed to him by his father, a pretty substantial fortune for those days.

My grandmother is very youthful in appearance, and is not so old but she can sympathize with young folks and share in their enjoyment. She was very young when she married my grandfather, a sedate, but excellent middle-aged gentleman—a widower with three children. She felt like a child among them, but after she had a child of her own, and she never had but one—she settled down into the nicest little housekeeper and the most devoted wife and mother. People said she didn't marry the doctor for love; no lively young girl ever fell in love with a sober, quiet man, old enough to be her father. Some sagely hinted of an early disappointment, but grandmother let them talk and took no heed. Her husband and his children loved her dearly; she had everything that heart could wish, and was always cheerful and loving herself.

So you see she was not my *real* grandma, only my grandfather's second wife, but her step-children regarded her as a mother, and we would not have thought her less than a grandmother to us for anything in the world. Aunt CLARISSA was her only child, and being the youngest and the last one married, had always lived at home. Little Jon, his sister Kate, grandmother's namesake, and a yearling baby, made up Aunt CLARISSA's jewels.

Some of the guests arrived the night before the great anticipated day.—Uncle HORACE and wife, with seven cousins, of both sexes, from twelve to twenty years of age. My father and mother, two brothers and a sister, nearly filled the house by ten o'clock on Thursday morning. Uncle Jon's family had not come, but we were expecting them in the next train from the city. It had begun to snow very fast, but we felt so sure that that would make no difference, that a party of us set out for the station to meet them. Aunt JANE and Cousin HELEN were on hand promptly, but no Uncle JON. He had been detained by urgent and unexpected business, and would drive out, if possible, in time for dinner. So we consoled ourselves as well as we were able. Uncle JON, though a lawyer, was by no means "as grave as a judge," and was the prime favorite with all his nephews and nieces. He had married a beautiful and wealthy woman, on whom our unsophisticated minds had looked in childhood as the embodiment of our ideas of a lady of rank, such as we found in story-books. Of late, however, the grandeur of the model had seemed somewhat diminished. Cousin HELEN, their only child, united in herself the warm heart of her father with the beauty and stateliness of her mother. Her naturally fine talents had been cultivated until she was truly an accomplished young lady.

The dinner passed all attempt at description. Of course it was the finest to which we ever sat down, but we ate it without Uncle JON, to whom,

as being the oldest son, had always been conceded the honor of presiding.

By two o'clock so much snow had fallen that the fences began to disappear, and little Jon said he should think there was going to be a thanksgiving dinner out doors, they were laying such a big, white cover.

Our young gentlemen were amusing themselves in reading and exploring the premises, while "we girls" betook ourselves to grandmother's room, where we were shortly joined by the dear old lady herself, who could never let us be long out of her sight.

"Why, girls, how still you all are to-day! Are you dull because it is so stormy? or has dinner made you sleepy? Come down and let's have some music. HELEN will play, and you can all sing."

But Cousin HELEN ignored that plan, and the next suggestion was that grandmother should tell us a story.

"A story? About what? Shall it be a love story?"

The majority of us were young ladies in our teens, or a trifle over, so the vote for the love story was nearly unanimous. We wheeled grandmother's cushioned chair to the open fire and arranged ourselves around in attitudes convenient for listening, some preferring to sit upon the hearth-rug. With an affectionate smile grandmother said:

"KITTY CLOVER was a wild little thing, pretty and smart, like many a one who has lived and flourished long since her day. Of course she had plenty of beaux, and some said she was a bit of a flirt, though they must have been the envious ones, for with all her faults, KITTY had a kind heart."

"Though her plump and well-rounded little figure, in a neatly-fitting dress, combined with her fair complexion and blue eyes to form a quite attractive picture, KITTY possessed some more solid attractions, which doubtless had their full weight with her rustic vassals. Farmer CLOVER was well to do in the world, his acres were broad, his barns were large, and his good, old, honest heart was larger. KITTY was the only child which was left to bless his fireside, the others slept beneath the green grass, or the fading leaves, or the deep snows on the hill-sides, and his dear and faithful wife was an invalid who never went beyond the home which KITTY's active industry and youthful spirits made so comfortable."

"KITTY's knowledge of the world was not limited to the retired village which contained her home. Before her mother required so much of her attention she had been away to boarding-school, and with her ready intelligence she soon made herself one of the most accomplished girls in her native town, and 'a capital match for somebody,' so the gossips said."

"I suppose HEATH BELL agreed with them, and with the self-satisfaction which often accompanies youthful ardor, he considered himself to be that somebody, and bestowed his attentions accordingly."

"I suppose you would have said she did not like him, for she never gave him any encouragement, that anybody could see, and never seemed so happy as when teasing or tantalizing his grave lordship. He was one of those quiet, conscientious young men, who, to use KITTY's expression, 'appeared to mark their lives by rule and compass.' There was some fun in teasing him, she said, he took it so seriously. But with all her coquetry, and the little quarrels which they had from time to time, his visits still continued, and the neighbors prophesied a wedding at farmer CLOVER's. KITTY knew their thoughts, but with a knowing shake of her head and a mischievous twinkle in her eyes, she said to herself—'Not so fast my good friends—I'm not caught yet!'"

"Now, HEATH BELL had a cousin, one CANTERBURY BELL, a spruce and handsome youth, who kept the village drug store. He was somewhat older than HEATH, and had the advantage of him in personal attractions and address, and as he seemed equally sensible of Miss KITTY's charms, he was considered by all but herself, a dangerous rival. In her secret heart she considered him a shallow coxcomb, and would have remained an old maid—much as she dreaded such a fate—sooner than have married him. But she encouraged his acquaintance, partly because it amused her to see the annoyance of sundry maidens who were so foolish as to admire him, and partly because it was 'good fun' to play him off against HEATH; for, being his cousin, he could not resent it, though liking it none the better on that account."

"HEATH was of rather a jealous temperament, and found plenty of food for it in the variety and quantity of attentions which KITTY constantly received. There was young IVY GREEN, who protested in teasing tones that he would die for 'Mith KITTY if she thaid the word'; and NARCISSE WHITE, whose father kept a green-house, used to send her choice bouquets, and then call to see if she received them. JOHN QUILL, BURR DOCK and others, shared her smiles, and poor HEATH seldom called without finding one or more of them present."

"There was a spelling-school—you've heard of such things, I dare say—every week in the school-house about half a mile from KITTY's. She had been unusually gracious to HEATH for some time, and on his leaving her the night before the spelling-school, she accompanied him to the door, taking care to close the parlor door behind her. Encouraged by her manner, his parting was more than usually impressive, and he begged the favor of her company the following evening. She excused herself on plea of her mother's ill-health, but really to dampen his hopes, which she could see were rapidly rising."

"The next evening was fair and moonlit, and as KITTY lighted the candles, she half wished that she had told HEATH that she would go to the spelling-school. She had scarcely thought so when a chaise drove into the yard, and Mr. CANTERBURY BELL bowed himself in. In the most affable manner he greeted her father and mother, and asked the privilege of taking Miss KITTY to spelling-school. Neither father nor mother knew of her refusal to go with HEATH, and urged her to accept, telling her she must not stay at home all the time. The idea entered her little wicked brain that it would be such a good joke to see HEATH's surprise when she should come in with his cousin, so she went."

"With an airy motion, and a smile and nod for everybody, she entered the school-house, but all the while she was glancing hurriedly around to see if HEATH was there. By-the-way, girls, when you see a young girl more than usually talkative and mirthful in a company where there is one whom she has wronged or quarreled with, rely upon it he is never absent from her thoughts. But HEATH wasn't there that night, and KITTY being vexed thereat, grew silent and short, and on reaching home dismissed Mr. BELL number two quite unceremoniously, for which he retaliated by telling HEATH next day that he waited on her to the spelling-school, and found her company most agreeable."

"So HEATH stayed away, and she only saw him at church, when he didn't appear to see her at all."

"It was very hard, and in private KITTY shed some bitter tears, though if she had seen him the next instant, she would not have made the slightest advance toward a reconciliation. Proud, perverse little heart! She made all sorts of excuses for her own conduct; his was unjustifiable. To add to her chagrin, POLLY ANTHUS, an officious and very intimate friend, as she called herself, was so kind as to tell her that report said that HEATH BELL was waiting on MARY GOLD, a gay, giddy girl, whom KITTY detested. POLLY said he had been seen to go there as much as twice a week, of late."

"After POLLY had gone, KITTY had a good cry all to herself. Then she grew angry. She knew HEATH could not hear MARY GOLD, he had said so a hundred times. If he went there it was in the hope of making her jealous. However, she wasn't sure he did go, but he would see that she could do without him, easily."

"MARY GOLD lived within sight of farmer CLOVER's, and one Sunday evening as KITTY sat by the parlor window, thinking how lonely the Sunday evenings seemed now, she was startled by the sight of HEATH BELL. He had paused, and was intently gazing at her. She blushed crimson, and her heart beat quickly, for she thought at first that he was coming in; but no, he passed, and running to another window, she saw him enter Mr. GOLD's house a few moments after. That night she lay tossing on her lonely pillow, and when her worn and unrefreshed appearance was remarked next morning, she said she could not sleep because the moonlight in her room kept her awake."

"There was to be a grand cherry party on the 4th of July that year, and KITTY had looked forward to it for a long time. Now she no longer cared to go, but thinking that HEATH would probably wait upon MARY GOLD, she determined to do so, if only to show him how little she cared. Her devoted CANTERBURY was the first to offer his escort, and she accepted him solely because she thought him the most disagreeable admirer in her train."

"Here, again, she had miscalculated, for though HEATH was there, he bestowed his attentions upon LILY VALE, the sweet and modest daughter of their clergyman. He noticed KITTY's presence only by a formal bow in reply to her nonchalant salutation, and as they parted, KITTY could not help comparing herself to the gentle LILY, and felt humbled."

"Throughout that unhappy day KITTY kept hoping that something would occur to bring them together, and that HEATH would make some advance; but they seemed fated not to meet. Only once, as she stood near a large tree, a little apart from her companions, she turned suddenly and saw HEATH leaning against the tree on the other side. He had not observed her, and hastily obeying her first impulse, she moved away. In after years she often recurred to that moment, and thought, 'Ah, how much better for us both would it have been, had I silenced my proud heart, and going to him, inquired in what I had offended!'"

"Such reflections were generally put to flight, when she considered that they had never been engaged, and except so far as they understood each other, there was nothing binding in their relations. Connected by a link so slender as to be almost invisible, now that it was to be severed, each suffered a severe pang, while gradually the breach was widening, though both were too proud to offer to lessen it until they could be certain of the wishes of the other."

"The summer waned, and with it the roses on KITTY's cheeks. People remarked her paleness, but she was well, 'perfectly well,' she said, and her eyes beamed as brightly, her voice was as gentle and sweet as ever, while her laugh among her young companions was more gay, though less frequent than before. In her own quiet home, with no curious eyes upon her, her mother saw that her step grew less elastic, and that when spoken to, she started sometimes as if recalled from some far land of dreams."

"Now I am not going to tell you how she pined away like a wilted bud, and died at length of a broken heart. I leave such things to the romancers, for I have to deal with a woman of flesh and blood. I think SHAKESPEARE spoke almost as truly of them as of men, when he said

'Men have died from time to time,
And worms have eaten them—
But not for love.'

I'm not sure that's quite it. I haven't read SHAKESPEARE much lately, but when I was a girl I didn't want any better reading, except my Bible.

"Dear me, children! It grows late, and I must cut my story short."

"One day towards the last of October, when KITTY was feeling more than usually depressed, and under the influence of the general decay around her, she penned a little note and sent it to HEATH BELL. This is what she wrote:

"I know that in some way I have offended you. I fear that I have been to blame in not making this acknowledgment sooner. I do not make it now in any hope of repairing a broken friendship—I suppose it is too late for that. I only ask you to forgive me if I have been unkind to you, and remember me hereafter as one who sincerely esteems you."

"She sent it immediately, otherwise she would not have received it, for scarcely had it gone ere she reproached herself for her weakness. Perhaps you think, yourselves, that it was not a very maidenly act, but may be you would have done the same. We can't say till we're tried. As she

said, she had no hope that he would ever return; she wrote to ease her conscience, which had for a long time been ill at ease.

"Two days from the date of the note it was answered thus:

"I have nothing to forgive in you, though had you said, two months ago, as much as you have now, we might both have been spared much pain. There is much in my own conduct which I never can forgive. With regard to the change in my feelings toward you, I have nothing to say, I can say nothing. KITTY, I shall (God willing,) be married on the approaching Thanksgiving day, to LILY VALE, whom you know, and I am sure must love."

"That was a sorrowful Thanksgiving at Farmer CLOVER's, for KITTY lay sick with a fever. The doctor thought it had been brought on by weakness, and too frequent exposure and exertion in attending the religious meetings, in which KITTY had of late felt a deep interest. So great had been her eagerness to attend them, that her parents could not deny her the privilege."

"When she recovered her health she seldom exhibited that exuberance of spirits once so natural to her, but there was a gentle womanliness about her, that was quite as pleasing. As she united with the church soon after, most of her friends ascribed her altered manners to that cause, and they were right in some degree."

"The change in her prepared them somewhat for the event which shortly took place—namely, her marriage to a person very different from any of her former lovers, though some shook their heads very gravely when they beheld the husband elect, in PERRY WINKLE, Esq., a man old enough to be her father."

"Why, grandmother! That is too bad! You don't think KITTY loved him, do you?"

"I don't pretend to say," replied grandmother, sagely. "Such things are not impossible, when, as in KITTY's case, the gentleman did not look so old, and was good, and kind, and in all respects trustworthy. I rather think KITTY *did* love him, but for all that I do not advise you girls to follow her example, even should you lose a youthful lover like HEATH BELL."

As she pronounced the last words, I stole a hasty glance at Cousin HELEN, and noticed that her large, dark eyes, apparently fixed on vacancy, were shining with crystal drops.

There is a wee bit of romance about this Cousin HELEN of ours. There always is, you know, about stately, handsome cousins.

Her father had a ward, young ROBERT FIELDING, a fine, manly fellow, whom we all loved, and thought (to ourselves) was an excellent match for HELEN. As Uncle JON lived at quite a distance, we did not have a chance to observe matters very closely, but just as we had made up our minds that everything was in good train for the desired consummation, off went ROBERT very suddenly to New York, and had not been seen by us since, while HELEN was statelier than ever when we saw her next, and resented all our jokes with her on ROBERT's disappearance. I had formed my own conjectures, and subsequent events confirmed them.

As soon as grandmother had finished her story, which I strongly suspected to be a page in her own life-history, we hastened down stairs to enjoy a quiet hour of music before tea. Cousin HELEN, after much persuasion, had consented to play for us, and was in the midst of that beautiful German song, "When the Swallows," when there was an outcry among the children, and Uncle JON appeared with one upon his shoulder and another clinging to his great coat. And who do you think was with him, besides? Why, ROBERT FIELDING, to be sure!

There was not any scene at this discovery, so I shall not attempt to get up one. Cousin HELEN greeted him very much as the rest of us did, and all made him very welcome. Late in the evening I had occasion to enter the room which had formerly been the doctor's study. A bright fire blazed upon the hearth, and the wintry moonlight streamed in, for the storm had ceased. My entrance was unperceived by two figures upon the sofa, and I beat a hasty retreat just as one of them said in a subdued and tearful voice, "I know, ROBERT, that it was but a trifle, not worth quarreling about, but if sorrow could do it, I have earned your forgiveness."

Could that have been Cousin HELEN—our *quarrelsome* cousin, as we often called her? I never asked, but this I know, that we all went to her wedding about Valentine's time the next spring, and the bridegroom was not Mr. MOSLEY, the rich old bachelor who had for a long time been trying to win her favor, to the great alarm of her anxious relatives.

After all, what a common-place affair our Thanksgiving was! I don't doubt that a great many of you think so, but what is human nature, the world over, but commonplace?

TALENT AND GENIUS.—Very felicitous is Dr. Holmes when he says, "the world is always ready to receive talent with open arms. Very often it does not know what to do with genius. Talent is a docile creature. It bows its head meekly while the world slips the collar over it. It backs into the shafts like a lamb. It draws its load cheerfully, and is patient of the bit and the whip. But genius is always impatient of its harness, its wild blood makes it hard to train."

"A goose flies by a chart which the Royal Geographical Society could not mend. A poet, like the goose, sails without visible landmarks to unexplored regions of truth, which philosophy has failed to lay down upon its atlas. The philosopher gets his track by observation; the poet trusts to his inner sense, and makes the straighter and swifter line."

"Talent is a very common family trait; genius belongs rather to individuals; just as you find one brood or one dwarf in a family, but rarely a whole brood of either. Talent is often to be envied, and genius very commonly to be pitied. It stands twice the chance of the other of dying in a hospital, in jail, in debt, in bad repute. It is a perpetual insult to mediocrity; its very word is a trespass against somebody's vested ideas."

If a man cannot find ease within himself, it is to little purpose to seek it anywhere else.

For Moore's Rural New-Yorker.
MISCELLANEOUS ENIGMA.

I AM composed of 8 letters.
My 8, 7 is an exclamation.
My 4, 6 is a river in Europe.
My 3, 2, 8 is a certain kind of fish.
My 5, 7, 7 is the peculiar noise of a common bird.
My 1, 3, 8, 4 is a plant.
My 4, 7, 7, 8 is a small collection of water.
My 4, 8, 5, 1 is a grain measure.
My 3, 8, 8 is a measure of length.
My 8, 6, 5, 1 is sometimes troublesome to burglars.
My 5, 8, 7, 5, 1 is a very useful instrument.
My 4, 6, 2 is the name of a celebrated poet.
My 8, 7, 5, 1 is a part of a gun.
My 1, 2, 8, 8 is a part of a ship.
My 4, 6, 1, 8 is a machine, the purpose thereof is to keep unruly animals within bounds.
My whole would be well for every passionate person to remember.
Fayette, Seneca Co., N. Y., 1859.
Answer in two weeks.

ILLUSTRATED REBUS.

The Answer will be given in two weeks.

For Moore's Rural New-Yorker.
GEOMETRICAL PROBLEM.

WHAT is the diameter of a circle, within which is inscribed four circles, each six inches in diameter?
North Bergen, Gen. Co., N. Y. E. W. HOTT.
Answer in two weeks.

THE LOVER'S PUZZLE.—To learn to read the following, so as to make good sense, is a mystery. If any of our lady friends can do so, they may call and get the printer's hat:

I then read that me
Love is down with I'll have
But that and you have you'll
One and up and you if.

ANSWERS TO ENIGMAS, &c., IN No. 513.

Answer to Geographical Enigma:—An editor's office without a longer.
Answer to Miscellaneous Enigma:—Pleety is the best practice.

Answer to Algebraical Problem:—He had traveled 88 miles; he traveled $2\frac{1}{2}$ miles an hour; police traveled 4 miles an hour.

TERMS OF THE RURAL FOR 1860.

FURTHER REDUCTION TO CLUBS!

Single Copy, One Year, - - -	\$2
Three Copies, " " " " " "	\$5
Six " " " " " " " "	\$10
Ten " " " " " " " "	\$15
Fifteen " " " " " " " "	\$21
Twenty " " " " " " " "	\$25

And any additional number at the latter rate—only \$1.25 per copy!—with an extra free copy for every Ten Subscribers over Twenty. Club papers sent to different post-offices, if desired.

Subscriptions can commence with any No.

PUBLISHER'S NOTICES.

THE BEST WAY to obtain subscribers for the RURAL is to show a NUMBER. With a paper to exhibit, almost any person can take the Prospectus on opposite page and get from five to thirty subscribers among his neighbors and townsmen. Please try it, and "report progress." If you do not get as large a club as you wish, join with some other person, or add your club to that of the P. M. or other nearest agent. By so doing you will confer a benefit upon all interested.

THE MONEY WE RECEIVE.—Bills on all solvent Banks in the U. S. and Canada taken at par on subscription to the RURAL, but our agents and other friends will please remit New York, New England or Canada money when convenient.—Postage stamps taken for fractional parts of a dollar. For all amounts over \$15 we prefer Drafts on either New York, Philadelphia, Boston, Albany, Rochester or Buffalo (less exchange), payable to our order—and which may be sent at our risk.

SPECIMENS FREE.—We always take pleasure in sending specimens free of charge. Reader, if you have any friends, near or distant, that you think would subscribe for the RURAL, or act as agents, please give us their addresses and we will send them specimens, &c. No matter how many names—"the more the merrier."

Any person who remits pay for a club of 6, 10 or 15 at the specified rates for such club, and adds a sufficient number within one month thereafter can avail himself of the advantage of the price of large club, and retain the amount overpaid.

Any person so disposed can act as local agent for the RURAL, and each and all who volunteer in the good cause will receive gratuities, and their kindness be appreciated.

MOORE'S RURAL NEW-YORKER,
THE LARGEST CIRCULATED
Agricultural, Literary and Family Weekly,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Office, Union Buildings, Opposite the Court House, Buffalo St.

TERMS, IN ADVANCE:

Two Dollars a Year—\$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for \$3; Six, for \$5; and one free to club agent, for \$10; Ten, and one free, for \$15; Fifteen, and one free, for \$21; Twenty, and one free, for \$25.—with an extra free copy for every Ten Subscribers over Twenty. Club papers sent to different post-offices, if desired. As we pre-pay American postage on papers sent to the British Provinces, our Canadian agents and friends must add 12½ cents per copy to the club rates of the RURAL.—The lowest price of copies sent to Europe, &c., is only \$2.50—including postage.

ADVERTISEMENTS.—Twenty-Five Cents a Line, each insertion. Our rule is to give no advertisement, unless very brief, more than six to eight consecutive insertions. Patent Medicines, &c., are not advertised in the RURAL on any conditions.
THE POSTAGE ON THE RURAL is only 2½ cents per quarter to any part of this State, and 6½ cents to any other State, if paid quarterly in advance at the post-office where received.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it zealously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other journal,—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

For Terms and other particulars, see last page.

INQUIRIES AND NOTES.

Potatoes Changing in the Hill.

LAST SPRING I cut three potatoes into thirty six and planted them. The potatoes were red and white. To-day I dug them. About half are red and white, the rest are all white. On one stalk there were red and white potatoes and some all white. Can you explain the cause.—W. M. BEAUCHAMP, Skaneateles, N. Y., Oct 29, 1859.

Part-colored potatoes, as white and red, sometimes grow almost, or entirely, of one color. The White Peach Blow, for instance, we have grown this season with scarcely a shade of red, while other specimens are almost entirely of this color, with only a faint show of white. If they are alike in other respects, this cannot be called a change. With a change in the hill further than this, or a mixing of varieties in the hill, we have no experience, having never seen the like, nor do we pretend to account for some strange statements which we have seen. They are beyond our comprehension.

Root Cutters.

SOME of the farmers in this section, myself among the rest, are beginning to learn the value of roots as a help in winter feeding. What we want now is some simple and cheap machine for cutting them up. If something that farmers could make themselves, all the better.—T. S., Orleans Co., N. Y., 1859.

The simplest arrangement for a root-cutter, is to fasten a knife in a block of wood, and attach a handle, which will be like a heavy clothes-pounder—the knife inserted in the lower end. The roots must be placed in a strong trough for chopping. This is rather slow work, but where only a few are needed every day, it can easily be done during the leisure time of winter, when work is scarce and time not very precious. The next most simple form is the arrangement of knives, so that they can be operated by a lever, somewhat in the fashion of a nut-cracker.

LEVER ROOT-CUTTER.

The above shows a lever cutter in use in England. One cheek is an open "harp" of edges arranged in a cup-shape manner, and the other a block fitting those edges, so that anything placed between the two is forced by the former through the latter. But one root at a time is cut, and is delivered in slices below. The most approved cutters now in use in England are called *pulpers*, and they coarsely grind the roots into a pulp, and this is the favorite form for feeding. Advantage is said to be derived from the evaporation of moisture, which takes place rapidly when the roots are in this condition, and also from the convenience of mixing with meal, shorts, &c.

Quite a good machine is made by several manufacturers of agricultural implements, called the *Vegetable Outter*, and is sold by many of the dealers throughout the country, at \$12. The engraving above will give a very good idea of its appearance.

ROTARY ROOT-CUTTER.

The large wheel shown, is the cutting wheel, made of cast iron and faced on one side, through which is inserted three knives, like plane-irons. These cut the vegetables into thin slices with great rapidity, and then by cross-knives they are cut into strips of convenient form and size for cattle or sheep to eat. It is said to cut sixty bushels in an hour.

The Way to Approach a Bee-Hive.

A MULTITUDE of your subscribers will be everlastingly obliged to any aparians who will give us a lesson or two upon the right and safe way to approach a bee-hive when you desire to inspect it, or take honey from the boxes. It is not enough with our bees to put on a bold front, and pretend to be at home and fearless, for a sentinel always armed to the teeth ready to report, without waiting for the counter-attack, the approach of any one. It is a fact that some individuals, for some unexplainable reason, can handle bees with impunity, while others, for some reason, cannot. Singing masters say all can sing; patent bee-hive vendors say all can handle bees, if they only think so. But facts, stubborn facts, upset each theory. We are told, "disturb the bees and they will fill themselves with honey, and when so filled, they are good-natured, and not disposed to sting." Well, if this is necessary, how shall we do it—with a long pole, at a safe distance, or otherwise? Let us, Messrs. Editors, have the A, B, C, of the matter, commencing at least two rods from the hive. Or say plainly, you probably are not a favorite with the bees, and might as well give them up.—J. B., Batavia, Kane Co., Ill., 1860.

It is said that some persons are so offensive to bees, that they will never allow them to approach their hives, and will sting them whenever they get a chance; but such cases, if they exist, are rare, and if our correspondent finds himself one of these rare exceptions, he had better keep as far from the bees as possible, and obtain the sweets of life from some other source. As a general thing, the hives may be approached and handled sufficiently to remove the surplus honey boxes, without the least danger. All that is necessary is to be careful, slow, and graceful in all your motions. Any jarring or blundering work of any kind around the hive, will cause a commotion among the bees. A clumsy, careless, slovenly, bungling man will never make a successful bee-keeper, unless he turns over an entirely new leaf. These are the kind of folks, we rather suspect, to which the bees show such aversion.

But, our correspondent says, "it is not enough with our bees to put on a bold front, and pretend to be at home and fearless." When the coward puts on airs and pretends to be bold and fearless, he generally makes very bad work of it, and shows his fears more than though he had not attempted to appear in a false character. So our correspondent, we fear, when he pretends to be "at home and fearless," is watching narrowly every bee, expecting every moment to have his mortal body pierced with a poisonous dart. How seldom are children stung with bees, even though they play around and among the hives. Their confidence is not pretended. The present summer a child about fifteen months old wandered from its mother, and made directly to one of our hives. Placing himself at the front he commenced playing with the bees, as they crawled over his hands, and was engaged in this play for some time unharmed, before his mother discovered his dangerous situation, when she rushed to the rescue.

The A, B, C of Bee Culture is just what we need at this day, for most of the recent writings on the subject have been more curious than useful. But there is no use in commencing two rods from the hives, nor will J. B. find that distance any safer than two feet from it. The bees are long-sighted, and we have often noticed that if any one is stung during any operation with the hive, it is some fearful man who is standing "at least two rods from the hive," so as to be out of danger. If you are very much afraid, don't assume a confidence you do not feel, but attend to your surplus honey boxes in the cool of the evening, or very early in

the morning, when the bees are quiet. If you wish to examine the condition of the bees and the comb, and use a LANGSTROTH hive, which gives the keeper almost as much control over his bees as he has over his chickens, then roll up a piece of old cotton cloth, and light it so that it will make a good smoke. Take off the top of the hive, and blow a little smoke among the bees, and they will become quiet. Then go to work, and if at any time during the operation the bees show signs of discontent or anger, give them a little more smoke, and all will be quiet, the bees becoming as harmless as flies. Your confidence must be real, and not assumed, which is somewhat difficult for the beginner. As a sure protection against the sting of the bee, get a piece of wire cloth, such as the bottoms of sieves are made of, eighteen inches wide and three feet long; fasten this together in the form of a large hat, so that it will cover the head and rest upon the shoulders. The top may be of cloth or a thin piece of board. On the bottom edge sew a piece of cloth one foot in width, something like a frill. Put on the hat, tuck the frill under your coat, and button it up, and then put on a pair of India rubber gloves, and no bee can possibly inflict a sting. These can be used until you gain confidence, but you will soon throw off the gloves, and use the hat only occasionally when performing some important operation, like changing bees from one hive to another. The fact is, bees seldom sting unless pinched, or hurt in some way, unless they get among the hair, in which case they almost invariably use their stings. Bees filled with honey seldom sting. A sprinkling of sirup from a watering pot will quiet, in a minute, the most angry swarm.

EUROPEAN AGRICULTURE.

CHANGE OF SEED WHEAT.—Early Ripening, &c.—During the present year the RURAL NEW-YORKER has contained a considerable number of articles upon Wheat, its Cultivation and Characteristics, and, among the subjects discussed, the advantages to be derived from a change of seed, have had a full share of notice. Our brethren across the water are agitating the question, and we may be able to draw something of benefit from their conclusions. In the London *Agricultural Gazette*, of October 1st, a correspondent wants a change of seed. He has asked advice from one of his neighbors, who recommends him to go to the north and obtain from a colder climate the change he needs; he has asked another of his neighbors, and by him he is recommended to go to the southern counties and obtain his seed where the harvest is three weeks earlier than it is in Scotland. Now, whose recommendation is he to adopt?

This is the query, and the editor replies as follows:—"Let it, in the first place, be admitted, that a healthy grown, thoroughly ripened seed is perfect of its kind, and that, these conditions being fulfilled, it matters nothing whether it be grown on chalk, or clay, or sand. A 'change' from one geological formation to another, or from one farm to another, is not, as some seem to think it, necessarily an advantage. But you can obtain healthy grown and thoroughly ripened wheat in any county in the kingdom, and if, having it, you have that which is perfect of its 'kind' it is plain that you need not travel for a 'change.' The question, however, is—what of the character of a grain is involved in this term 'kind,' and the answer we presume to be—all that it inherited or can transmit. Now nothing is more certain in agricultural experience than that, besides those characters of plants which botanists admit as the permanent distinctions of species, there are other habits or features, of greater or less permanence, which plants acquire by the constant treatment of the cultivator or the constant influence of habitat and climate, and which, though capable of alteration and ultimate extinction by other treatment, are yet not altogether transient, but will re-appear in subsequent seasons in greater or less degree according as the circumstances of the locality or season are favorable or otherwise. Thus we doubt not that a 'kind' distinguished for several years under good cultivation for extraordinary productiveness will be more likely than one of inferior character in this respect to yield well under inferior cultivation. And the advice which we should offer to our correspondent would be, simply to look out for seed of a sort which has been known for many years to yield most bushels per acre of good grain. If he can get it from his neighbor then he will be saved the trouble of sending to either end of the island for it.

"There are, however, characters which grain from Sussex and from Aberdeen respectively are likely to bring with them in addition to the quantity or quality of the produce; and if a choice must be made between the two it must hinge upon the relative value of those characteristics which the respective climates of those counties are likely

GROUP OF SILESIAN MERINO SHEEP.

Our engraving represents a group of Silesian Sheep, owned by Mr. GEORGE CAMPBELL, of West Westminster, Vermont, who has the reputation of being a good shepherd and honorable man. The first importation of Silesians into this country was made within the past ten years, they have been somewhat widely disseminated, and there are now many fine flocks in this State, Vermont, Ohio, and elsewhere. These have principally sprung from the importations of Messrs. SANFORD & CAMPBELL, of Vermont, WM. CHAMBERLAIN, of Dutchess Co., N. Y., and WM. H. LADD, of Jefferson Co., Ohio. Perhaps we cannot better give the history and characteristics of this breed of sheep, than by copying the following paragraph from an excellent series of articles written by SANFORD HOWARD, and published in a former volume of the RURAL NEW-YORKER:

The Silesian Merino.—This breed was derived from one hundred ewes and four rams taken from the Infanado Negretti flock in Spain, and carried to Prussian Silesia, in 1811. Such, at least, was the origin of those which have been introduced

into the United States under this name. The first were imported by WM. R. SANFORD, and GEO. CAMPBELL, of Vermont, in 1851. Other importations have since been made by Messrs. CHAMBERLAIN, CAMPBELL & LADD. It is yet too early to pronounce, positively, as to what these Silesian Merinos will do in the country, generally, but so far as experience with them has gone, we believe it to be highly in their favor. The sheep appear to excel in the following points:—1st, the thickness of the wool as it stands on the skin, growing to an unusual extent on the belly, and covering nearly every part, giving an uncommon weight of fleece in proportion to the size of the carcass; 2d, the fineness of the staple considered in reference to the weight of fleece; 3d, the uniform character of the fleece, the wool on the belly and thighs approximating, to a remarkable degree, the quality of that on the back; 4th, the fullness, evenness, and elasticity of staple. They have rather small bones, and the body is symmetrical. The different animals are quite uniform in their appearance and properties.

to have encouraged, and as it were imprinted. Its hardness and ability to withstand severity of winter and spring especially desired, then seed from the northern county will probably be preferred. Is earliness of ripening desired, then though this is probably a less certain character than the other, yet it is more likely to be found in grain from Sussex than in that from Aberdeen. It is probable that the latter is generally in this country the most valuable character of the two, and that if our correspondent cannot get what he wants at hand he had better apply to some wheat grower in the South."

CINDERS FOR PIGS.—J. J. MEYER, of Triptree Hall, England, has been publishing his experience in fattening swine, and, among other things, he has learned the fact "that pigs are very fond of coal ashes or cinders, and that you can hardly fat pigs properly on boarded floors without giving them a moderate supply daily, or occasionally." He says: "In the absence of coal ashes, burned clay or brick-dust is a good substitute. If you do not supply ashes they will gnaw or eat the brick walls of their sheds. I leave to science to explain the cause of this want. It is notorious that coal dealers, where pigs have access to the coals, are generally successful pig feeders. Those who find that their pigs, when shut up, do not progress favorably will do well to try this plan; a neighbor of mine found that a score of fat pigs consume quite a basket of burned clay ashes daily; we know that there is an abundance of alkali in ashes. I wish some of your practical correspondents would communicate their experience on this matter, and I also want them to state how many pounds of barley meal it takes to make 1 stone (14 pounds) of pork, not dead weight."

CULTIVATING HOPS.—A valuable discovery in the cultivation of hops, has just been communicated to the French Academy. Like some agricultural improvements, it has been the result of observations made by a laboring peasant. It consists in making the plant run in a horizontal direction, instead of climbing up the pole. This is managed by means of a low trellis-work of the simplest construction. The advantages of this mode of culture are numerous. In the first place, it enables the grower to investigate the plant while growing, and cleanse it from the numerous insects which injure it to so vast an extent; then

it is protected from the sun, which always destroys the upper shoots; it obviates the great destruction of hops in very stormy weather, when the wind lays low whole hop grounds from the height of the poles; and, most of all, it enables the gathering of the cones to take place without uprooting the plant, besides permitting the selection of the ripest ones at first, and preventing the great loss which arises from the necessity of tearing down the whole plant to get at the ripest blossoms.

GROWING THE SAME CROP TOO OFTEN.—It has been a practice on many of the light or mixed soils of England, to follow what is called the four course rotation—that is,—1st, turnips; 2d, barley; 3d, red clover; 4th, wheat. It will at once be seen that this system required heavy manuring, and is one of the most profitable courses adopted in Great Britain. At a late meeting of the Farmers' Club of London, the subject was brought under discussion, as it had been found by a long experience that the frequent return of the turnip crop had rendered the land unable to produce this crop, even with the most liberal aid of artificial manures. The crop grew, but it was not healthy; the turnips were diseased. Some of the speakers recommended an application of common salt and guano. On the light soils, the salt was found very beneficial; it had a marked effect in stiffening the straw of the grain crops. On clay land it was found to make the soil more adhesive, and was therefore considered to operate injuriously.

WINTERING STOCK.

How to Winter Stock on a short supply of forage, seems just now an important question. I can tell how a very intimate friend of the Colonel's did last winter, and perhaps somebody may be the better for it.

This gentleman had a pretty good pile of cornstalks, well saved. His stock consisted of cows, and his team of horses, but he had little straw and less hay. He's a great believer in the virtues of cornstalks, and thinks he knows how to feed them. The first thing he did was to buy of Fowler & Day, of Fowerville, one of their straw-cutters and get it home. Then he fixed some tubs, by sawing good stout barrels in two, and made a good warm stable for his cattle.

The stocks were all cut, and more or less straw was cut with them. Each cow was allowed all she could eat three times a day, and the mess night and morning was fixed in this wise:—The cows a noon had a feed of dry cut stalks and straw, which they would eat pretty clean except the coarser bits. At about 3 o'clock these were gathered into the tubs and enough more added to make the evening meal. To this was added two quarts of corn meal and two quarts of bran, and hot water turned on, as much as would well moisten the whole, and all well mixed. The morning meal was the same, being mixed over night or early in the morning. In this way no stalks were wasted, the cows gave a good supply of milk, and increased in condition. It was some trouble, but the manure paid for that abundantly. On Long Island, where it is the custom for the farmers to sell their hay, they keep their horses mainly on cut stalks and ground feed, and their teams look well.

The Colonel's friend and I agree that we can winter four times as much stock upon an acre of corn and stalks as upon the hay from an acre, and that there is no profit in growing hay for stock upon land that will produce good corn. But the corn must be ground, and the stalks cut, and cooked with the meal.—P.

WHAT HAS BECOME OF THE BUTTER?

THE above question, so emphatically asked in the RURAL of the 5th of November, I will answer briefly—it was not made. And by the first of March or April next, the inquiry will be as anxiously made, *What has become of the Hay?* The answer is equally short—it did not grow.

The same reasons that caused a failure in the hay crop apply with equal force to the butter. A large falling off from both may be attributed to the two frosts of June. The frost not only reduced the quantity but deteriorated the quality of both. The same bulk of hay that grew on the weak meadows that did not head out would not weigh more than three-fourths as much, and would not contain more than half the nutriment of good hay; and pastures suffered equally as much. I do not believe that the pasture lands of the severe frost-bitten districts afford more than one-third their usual supply—that is, for fattening or making butter. This estimate is perhaps too low for keeping the breath of life in cattle, which is nearly all that has been done where the pastures were stocked up to their usual capacity.

The frost-bitten, bitter grass will tell, in more ways than one, "What has become of the Butter?" A firkin that opens fair, will, before it is consumed by a small family, in many instances, become rancid, and in more, nearly rotten by May. This is not the fault of the dairyman, as it is out of the question to make first quality, or even good butter, that will keep good through the winter, out of frost-bitten grass. Those who have butter to buy will do well to look for it in sections of the country that have escaped the frost.

The frost was a most singular one. It ruined some meadows and pastures, and left others entirely unharmed, on the same farm; and so with fruit. In some instances it killed three spears of corn and left the fourth, in the same hill. There are a few dairymen who saw the condition of their pastures, and disposed of their butter to be used whilst fresh, (as it lacked solidity and flavor,) so that what they have on hand is good. These causes will not affect cheese so essentially as to raise the price materially, as a table can be set and a good meal made without it. Without butter the table has a bad look.

These calamities must not all be attributed to the frost, as there are some portions of the country that are good grazing land that did not suffer from the frost.

The drouth of May told with severity on all, as well as the unprecedented drouth of '53, which killed out some of the timothy—and the severe winters of fifty-eight and nine disposed of at least one-half the clover in some sections where the soil was unprotected by snow. The next inquiry will be, "What has become of the corn?"—for a farmer that has no hay or grass has not much of anything by the time his cattle have raised May hill; and add to that no corn and he has got nothing. I never saw a country where there was no grass that had much personal property; and whenever I get where there is no grass, and no butter, I take the back track. Having found but little on this side, I am sure there will be less on the other, and "Nothing in the House or in the Barn either." A. B. DICKINSON.

Hornby, N. Y., Nov., 1859.

SMALL AND LARGE POTATOES FOR SEED.

EDS. RURAL NEW-YORKER:—I have often seen it published, and more often heard it asserted, that farmers used too much seed in planting potatoes, which induced me to try a small experiment the past season. The kind chosen was what is known as the *Round Pink Eye*, the length of rows fifty-one hills. Row number one was planted with the largest that could be selected, and number two with those of the size of a good butternut. The soil had been cultivated for two years, and slightly manured, with the exception of a small strip on the west end of the rows, which had been a pasture for hogs for three years. The treatment was in all respects alike, after they were planted.

Now, mark the result. The large tubers produced from eight to thirty vines in a hill, the small ones from two to eight. The potatoes were of more uniform size where the small ones were planted, owing no doubt, to a much smaller number setting. The row where the small ones were planted produced a fraction less than two bushels. The row where the large ones were planted produced three bushels and one-eighth of a bushel. There was a much greater difference in the yield on the soil which had been cultivated two years, than on the rich green sward. It took one-fourth more hills to make a bushel on the sward, and more than double the number on the old soil of the small potato row to produce a bushel, as compared with the row planted with large ones. The number of tubers varied in the large row from eight to thirty-seven; the small row from three to twelve.

Newark, N. Y., 1859.

A. G. PERRY.

PRIVATE NOTES WORTHY OF PUBLICITY.

In giving the following extracts from a private letter, we have no intention of transcribing "As the modest prescriptions of Quaker discipline." As the remarks are from a long-time correspondent of the RURAL, and pertinently refer to and review matters which appeared in its last number, we see no impropriety in presenting them to our parish of readers:

A CRITIC CRITICISED AND COMPLIMENTED.

I COULD but feel that H. T. BROOKS criticised GREENLEY a little too roughly, transcending as he did the modest prescriptions of Quaker discipline. True, GREENLEY is a little vain, and not always alive to the adverse side of his argument; but what would he be without his vanity, or what could he do to interest others, if he was visited by the swoons of self-esteem? If he was more profound, and less dogmatical, he would be a sealed book to at least one-half of the million that now endorse his specious, ill-digested theories; but his untiring industry, energy and confidence in himself entitles him to become an institution of the age in which he lives. I like H. T. B. There is a quaint, epigrammatic originality about him, not borrowed from the schools; and his truly practical, farm education gives him a great advantage over all mere theorists and amateurs in farming. He will neither be carried away by a Comstock, or batten in the rut of tradition.

VALUE OF STRAW—ITS PROPER OFFICE.

I can also but think that the RURAL *avait beau*, as the French say, to publish that table from Dr. PLAYFAIR. Regal chemist as he is, he evidently lacks BOUSSINGAULT's farm-life experience, when he says that 100 lbs. of wheat straw contains as much organic matter as 100 lbs. of linseed meal, beans, &c. He should also say that the organic matter of the straw was nearly all carbon, about as nutritious as charcoal, and altho' serviceable to distill, and keep up animal heat in the stomach in cold weather, it has very little intrinsic nourishment if fed alone. SCOTCH JOHNSTON never compels his stock to eat straw, but he invites his sheep to do it by adding to it the most nutritious food—oil meal, oat meal, &c. Every farmer knows that cattle will hardly eat straw until they need it to burn in their stomachs in cold or stormy weather. At the great livery stables they cut hay instead of straw, on which to put the meal. The proper office for wheat straw is to litter cattle rather than to feed them; it is a great absorbent of the wealth of animal manures. It is early cut hay, cured with its juices intact, well saved stalks, meal, &c., that makes the bone, muscle and flesh of animals on the farm. Hence, when the Royal chemist says that 100 lbs. of straw contains as much "real food" (nitrogenous, of course,) as 100 lbs. of hay, he certainly brings chemistry into disrepute with those farmers whose faith in science is not as well grounded as yours or mine.

MANURING PASTURES AND MEADOWS.

Your correspondent, O. D. HILL, of Jefferson Co., "needs not that any man teach him." His plan of manuring in the spring with fresh stall manure turned under, is very economical, and so is his succeeding mode of plowing and culture.—Yet, on large dairy farms, top-dressing meadows in early winter, or as long as the snow lasts, may be equally economical; but if manure is kept over the summer it must be saved from waste by fire-fang as well as washing. If there is any farm to be envied it is one whose meadows and pastures need no renewing. I have seen white clover half-leg high in August, in the pastures of a dairy region, when, in our grain region, farmers milked seven cows into one pail. These pastures had not been plowed in the last twenty years. Yet many of these highly-favored dairy farmers sign for farms at the West, where they can grow the large Dent corn, fat plenty of pork, and enjoy the fever and ague!

HOW TO MAKE BEESWAX—A NEW PROCESS.

EDS. RURAL NEW-YORKER:—The methods of making Beeswax, in large or small quantities, are known to be many, but as only a few are supposed to be acquainted with my method, I shall take the liberty of making it public, hoping that others, having a better one, or as good, even, will do likewise.

Before giving the process of making, I would state that the bee-keeper should look well to his own interests before he suffers his comb to be made into wax. Combs—pure white combs—and those even, of two to three years' use, are of inestimable value,—that is, if they are bright and healthy, of much size, and not too much marred or bruised. To prove this assertion, it needs only be said that it is now pretty generally conceded by our best Apianists, that it requires *twenty pounds of honey*, for the elaboration of *one pound of wax*; hence, it will be seen that whoever melts his good combs is not a very good economist. Those who use *movable frames* can fasten their good combs in the frames to be used the following season; or, as may be wanted. The nicest combs may be used as guides in the surplus honey boxes. This process is intended *only* for manufacturing wax out of combs that are *unfit* for the above purposes. Yet those who will persist in following the error of their ways, may, of course, adopt the same means of procuring the wax from combs of two to three years' use.

THE PROCESS.—Fill a kettle, of any desirable size, part full of water, bring it to a boiling heat, and then, or before, if desired, put in the combs. It will require but a short time to reduce them to what is termed a *pulpy state*. In the meantime, fill a tub or tin boiler full of cold water. This latter is the preparatory step to straining. Cover, or place over the top of the tub or boiler a strainer—it being supported by two narrow strips of wood, or what is better still, two nail rods. The strainer is made in the following manner:—Take a wooden rod, 20 or 22 inches in diameter. The strainer should be somewhat *concave*, to aid in straining. Everything being in readiness for straining, take a dipper and bail out the boiling mixture, and let

what may, run through the strainer, occasionally pouring a quantity of boiling water upon the refuse matter, as the melted wax quickly cools and collects thereon.

If the foregoing directions are strictly adhered to there will be no need of re-boiling and re-straining the coarse refuse matter; if not, it will have to be resorted to to get it perfectly free from wax.

THE WAX.—Let the wax remain in the tub of cold water until it is thoroughly hardened, then remove it—put it into a kettle and let it melt. This should now be strained, as it contains much refuse matter of minute particles. Strain into a tub of cold water as before. This time it will be expedient to use a strainer of fine material, which may be done by hanging it over the circular one. It should be cloth. There will, doubtless, be some refuse matter still adhering to the bottom of the hardened wax. This may be separated by a knife, leaving the wax, in many instances, perfectly pure. It will now be necessary in order to have the wax in a good salable condition, to re-melt it. The melted wax may be poured into pans, forming cakes of any desirable size or shape. Pure, white, new combs, may be converted into pure wax, simply by putting them into a kettle and melting them. It has been said that *bleaching* the wax renders it perfectly white. This is done by melting the wax, and dipping shingles into the liquid, then laying them upon the snow,—if in summer, in the sun,—frequently turning them over. After the wax is thoroughly whitened, it may be cut off with a knife, melted, then made into cakes as above stated.

It will be perceived that this mode of procedure answers equally well for either large or small quantities. MAHLON M. BALDRIDGE, Middleport, Niagara Co., N. Y., 1859.

WEEKLIES PREFERABLE TO MONTHLIES.

HAVING made an effort in this locality for the RURAL, and wishing that its influence should be felt as powerfully here as in the Genesee Valley, I send a thought or two consequent thereon.

In canvassing I have urged, successfully, the decided advantage which a weekly has over a monthly. The trouble with the latter is like Paddy's chicken—it *speaks too late*. If we are to be benefited by the aggregate experience of our co-laborers in the field of Agriculture and Horticulture, we must have it in time. Contracted as most of our operations now are, by good implements, superior management and improved machinery, the chances are that a monthly will be behind time, and the information can do us no good till next year, and then we may probably forget it. For this reason I never took a monthly. This and the facts that my reading time is more equally distributed, and that I have four times as many opportunities to read a weekly as a monthly, have always been insuperable objections. A monthly is like one meal a day, we are in danger of surfeit; whereas, a weekly we can leisurely read and digest, sugar-coated as it is with an endless and pleasing variety on other subjects. We consider a farmer's wife who has long been in the habit of reading the RURAL, as fully competent to manage affairs discreetly, in case of the absence or death of the husband. Of the many intelligent people with whom I have conversed, all have agreed, without one dissenting voice, that if we are to have agricultural information at all we should have it weekly. I trust the time is at hand when we shall not only have it semi-weekly, but daily, needing line upon line as we do, and groping amid the darkness led only by the hand of experiment. Cambridge Valley, N. Y., 1859. H. K. F.

REMARKS.—Though the above is truthful, we have hesitated somewhat about publishing it, and would not but for the fact that a neighboring monthly some time ago gave what it called a prize essay on the other side of the question. The superiority of weeklies is too apparent to require argument.

CORN STOOK JACK—SHORT NAMES NEEDED.

EDS. RURAL:—In your issue of November 12th, I notice a description of a contrivance for stooking corn. We have used one of this character, and have found it very handy. But it does not seem that the instrument has been properly christened yet. The name given it in your paper is "Corn Stook Jack," but this is decidedly too long to be in keeping with the genius of the age. One of the wants of the agricultural world is a system of correct nomenclature for the "thousand and one" farming inventions that are daily coming into use. And it is almost a wonder that some genius has not thought of calling a convention to effect this. A name of over one or two syllables should never be affixed to a tool, otherwise it will be discarded by the mass. In the case of the above mentioned contrivance, we would suggest the name *stookhold*, a combination of *stook* and *hold*, as being not inappropriate. *Stooker* is objectionable, as this is applicable to the workman.

A word in regard to "stook." There seems to be considerable diversity in the use of terms, some writing "shock," some "shook," and some "stook." The first has been as widely used, perhaps, as any, but it will be seen by reference to WEBSTER that "stook" is the only term primarily entitled to represent the action, or kind of work, it indicates. "Shook" is the name of a barrel filled with staves, and it is possible that a *transfer of idea* has led to its use in farming. J. D. YOUNG, Plymouth, Mich., Nov. 15, 1859.

WHAT IS A "PURE BLOOD?"—I have heard it stated by some that four crosses of a Durham bull on common cattle makes a pure blood—or at least fifteen-sixteenths, which is considered to be pure blood—and I have also heard this statement denied. Can you, or some of the Rural cattle-breeders, satisfy me on this subject, and give me the reasons for their decision, and thereby greatly oblige—JAMES S. McCALL, Geneva, N. Y.

FROST-BITTEN STRAW FOR FODDER.—Will some of the RURAL's correspondents give information whether or not frost-bitten wheat straw is injurious when fed to horses. A rumor is abroad that the beards will choke and kill a horse. A reliable answer will oblige more than one of your subscribers, as well as several individuals that should be.—B. F., Painesville, Ohio, 1859.

Rural Spirit of the Press.

Contraction of the Feet of Horses.

R. JENNINGS, Professor of Anatomy in the Veterinary College of Philadelphia, gives the causes for contraction and the remedy therefor, as follows:—The tendency of a horse's feet, in a healthy condition, are to expand whenever the weight of the body is thrown upon them. Being a very complicated piece of mechanism, they are very easily disarranged, and hence the necessity of preserving them in a sound condition.

CAUSES.—1. By cutting away the bars of the feet, which are the main stays for the support of the quarters. 2. By opening the heels as the smith calls it, cutting away a portion of the frog, in consequence of which the moisture of the frog becomes absorbed, loses its elasticity, and destroying its function, thus exposing the feet to injury by the concussion. 3. By standing upon plank floors. 4. By improper shoeing. An ordinary observer will, upon an examination of the common shoe, notice that it inclines from without inwards at the heels, thus forming a concavity for the feet to rest in; the consequence is a lateral resistance to the expansion of the hoofs, when the weight of the animal is thrown upon them. The effects of this resistance is to force the heels together, creating pressure upon the sensitive parts within the horny case; establishing fever by which the moisture of the hoofs are rapidly absorbed, rendering the hoofs hard, brittle, and liable to crack and frequently causing corns, navicular joint lameness, bony deposits to be thrown out from the lateral wings or processes of the coffin bones, rendering the animal permanently lame or unsound. These are but few of the bad effects arising from contraction; enough, however, to serve our purpose at present.

REMEDY.—Preserve a level bearing by making the shoes perfectly flat on the quarters, so as not to interfere with the expansion of the feet. Should contraction already exist to a considerable extent, bevel the shoes slightly outward at the heels, in order to facilitate expansion. Care should be used not to bevel too much, or bulging of the lower part of the hoofs at the quarters will be the result. The shoes should in all cases be forged and not twisted, as is sometimes done to save trouble by the bungling smith. Proper applications, to soften the horny parts and promote elasticity, should also be used. Such preparations are put up in the form of hoof ointments.

Manures—An Experiment.

A CORRESPONDENT of the *Ohio Valley Farmer* writes:—"I had seen it asserted in a paper that the solid and liquid manure of one cow, carefully saved, and carefully composted with other materials, such as every farm affords, was sufficient to keep one acre of ground in the highest state of fertility. I was then paying two dollars per month for very poor pasture for my cow, besides losing all the manure. I was paying one dollar and fifty cents to a neighbor for each wagon load of manure he delivered inside my gate. Determining on trying an experiment, in 1853 I kept my cow up and fed her at an expense of one dollar per week, including also the tending of her, and bedding her with dry leaves from the woods. During this time her health remained perfect, her milk was richer, and her manure—properly saved and composted with the ashes, wood chips, etc., from the house, and weeds and refuse straw from the garden, including also her bedding which was removed daily—was worth one dollar per month, at the prices I had been paying. It was amply sufficient to enrich an acre of our ground for ordinary purposes of culture. With two or more cows the expense would be proportionately less, and the yield greater."

Kidney Worms in Swine.

In answer to an inquiry the editor of the *Maine Farmer* replies, that it is not very uncommon for swine to be troubled with loss of power in the muscles of the back and loins to support the hind quarters of the animal. This is sometimes occasioned by a worm which lodges itself in the kidneys and by the irritation it produces there, brings on a weakness of the loins. Sometimes it is caused by a disease of the spinal column, by which the nervous action from the spinal column to the several muscles of the loins is stopped and renders the animal unable to raise up and use the hind quarters. At the South, where the kidney worm in swine prevails more than here, they give in the swill, wood ashes, salt and red pepper, with a view, we suppose, of their acting on the kidneys and destroying the worm. In the other case, tonics, such as a little copperas in the swill, and external applications, such as cold water dashed on to the loins, followed by brisk frictions. Liniments of a stimulating kind freely applied and rubbed in, clover tea and green clover fed freely are often useful as a corrective to the digestive organs.

Cider-Making Without Pressing.

It is stated that a man at Parkersburg, Va., is successful in making cider by the following process:—He grinds the apples, and fills casks with one end open, the bottom having some sticks and straw, like a leach for ashes. On the pumice he pours as much water as it would yield juice by pressure, and that displaces the juice, and sends it to the bottom, from which after two days, it is drawn by opening the faucet, and as the cider is heavier than water, it runs off at first pure. The pumice, too, having no affinity for water, absorbs that, which displaces the natural juice, and leaves the pumice quite tasteless. This process may be useful to persons who have a few apples and no cider-mill.

Wheat Planted in Hills.

MR. YANT, near Bolivar, Ohio, writes to the *Ohio Farmer*, that he has planted an acre of wheat, about 20 by 15 inches apart, in hills, using a little over five and a half pounds of seed to the acre.—He put five kernels to the hill, but thinks one-third failed from grubs, cut-worms, etc., and this he has replanted. A part has been hoed; the growth is splendid—as far as that is concerned he has no fears. As to the expense, compared with the yield of grain, next harvest will show.

Agricultural Miscellany.

THE WEATHER of last week was unusually warm and pleasant for the season—more like September than November. The bright and balmy days were just what farmers needed to perform and close up fall work, and especially to secure the corn and potatoes yet afloat. The present week opened with chill blasts, but the temperature moderated Monday night, and now (Tuesday noon) the sun shines bright and warm—indices of continued favorable weather for out-door operations.

HUMBUG ADVERTISEMENTS will occasionally creep into the RURAL, in spite of us, though our aim and desire is to ignore every thing of the kind. During the past year we have refused numerous advertisements which had a suspicious, deceptive, catch-pony look. Within the last week alone, we have refused three, retaining the money. Two of these asked for money—one a dollar and the other fifty cents—for some pretended valuable secret or recipe, and the other wanted all who were afflicted with the gravel to address box No. —, Syracuse P. O., for relief! We are disgusted with the whole race of scoundrels who are trying to "steal the liver of heaven" wherein to serve their own selfish purposes—the more so because they are so artful that we are often unable to decide whether an advertisement (sent, with the money, by a respectable advertising agency), is honest or a lying cheat. For instance, a subscriber in Cayuga Co., writes us (relative to an advertisement which we supposed to be from an honorable source), as follows:

"In your valuable paper dated Aug. 20, 1859, I read, 'Astounding Improvement'—Elastic and Combination Stitch sewing machine, using one, two, or three threads, at the option of the operator, &c. Now, this is to inform you, and the public (if you see fit to insert it), that there is no such machine, neither such a company as H. Ballou, Carter & Co. But there is a (claims to be) man by the name of Ballou, that is swindling the credulous out of their \$15 each; and then, to pacify the would-be agent, sends him a printed document stating that the company that manufactured his machine has been burned out, that he has made arrangements with another company to make his machines, and that he is to receive his first lot at such a date, and will fill their order and send it on. But the machine does not come, from the fact that there is no such machine or company."

—Now, our advice is to beware of all advertisements offering to make you rich, impart a wonderful secret, &c. *et id omne genus*, for a small consideration. In vulgar parlance, "don't buy a pig in a poke," but keep your money until you see or are satisfied (from known character of the advertiser) as to the value of the *anomite* or article advertised.

THE TRIBUNE ON TERRA-CULTURE.—A late number of the N. Y. Tribune contains a "first-rate notice" of terra-culture, for which HONOR or SOLOH will probably be indicted for libel, ("the greater the truth the greater the libel") or cruelty to animals. Here it is:—"A friendly puff of 'Professor Comstock,' and what he calls his system of terra-culture, appears in yesterday's Courier and Enquirer, with the information that the said 'Professor' is now in this city delivering lectures on his system. This moves us to say that in our humble judgment 'Professor' Comstock is a bore, and his system worthless. It was exposed several years ago by the late A. J. Downing. Terra-culture consists in putting the seed on the top of the ground, and covering it with straw. Whoever pays money for lessons in such a system is either a dupe or an ass—perhaps both."

—A friend suggests that the "Professor" is shrewd in selecting N. Y. City to deliver his lectures in, as fools there predominate in direct ratio to the great population. But we think it is "Hobson's choice"—for, after being kicked out of the rural districts, he must perforce flee from the wrath which had come to the great "city of refuge" for fools and knaves!

PROSPERITIES FOR MANURE.—The New York Tribune says:—"M. DE MOLIN in a late work establishes the fact that fossil phosphates, although containing 5 per cent. of Phosphate of Iron have always given results in agriculture superior to those obtained from the phosphates taken from bones. The same results have been observed and particularly commented on by Prof. MAPPEZ for several years."

If fossil phosphates have always given better results than phosphates from bones, it is strange that the fact has not been discovered by practical men, and especially by the farmers of England, who use immense quantities, and pay \$5 per ton higher for the bone than for the fossil phosphate.

A "FAIR" SNOW.—At the Gibson Co. (Ky.) Fair, recently, Mr. STEPHEN MEADE and his wife entered the ring, followed by twelve sons and two daughters, each on a gray steed, and in the order of their ages. They proceeded around the ring, while the band struck up Hall Columbia, and drew up in front of the Executive, when the President made some very appropriate remarks, after which the mammoth family was vociferously cheered from one side of the grounds to the other. The old gentleman was born in 1792. Mrs. MEADE was born in 1804. The two were married in 1831. The oldest son is 38, and the youngest 14. The oldest daughter is 19, and the youngest 17. Eleven are married, and have 23 children. The fourteen children of Mr. MEADE were all born in Gibson county, and all now live there but one, and are the best of citizens. None of the family have died, and all now look hale and hearty. So says a Kentucky paper.

THE MAN WITH A GRIEVANCE of a personal, and perhaps private, neighborhood nature, who flies to the RURAL or some other paper for defence or redress, is respectfully requested to read and inwardly digest this truthful passage from a recent Ode by HONORABLE, sir-named GREENLEY:—"One of the chief terrors of an Editor's harassed lot is—not, by any means, the libel-suits with which paitry pettifoggers contrive to infest him, nor yet the indignant nuisances who stalk into his office to talk of cowardices and revolvers when he wants to be quietly attending to his own business, but—the good people who most unreasonably insist on engraving his columns with replications to attacks made upon them by somebody else. 'Take any shape but that!'—come armed with writs or bludgeons—and he meets you with smiling composure, but the man with a grievance for which said editor is nowise responsible, is his despair."

THOMAS HUBBARD SQUARES sent us, a few days since, by Mr. E. N. LANGWORTHY, of Greece, fully sustain the reputation of the variety and the cultivator, and are therefore worthy of honorable mention. A decade of years ago, Mr. L. cultivated the "Boston Marrow"—a good baking squash when pure—but it was difficult to keep the variety distinct and it soon "ran out." The Hubbard is much better, and will prove a lasting blessing if it will only "hold its own." What is the experting of Mr. L. and other cultivators as to the best mode of keeping the variety pure and distinct?

A WEIGHTY AND STABLE TURNIP.—In a recent note, Mr. J. H. STANLEY, of Le Roy, writes:—"I noticed in the Rochester Democrat, not long since, that its editor had been presented with a turnip weighing 19 pounds. Mr. CHARLES ANNIS, of this place, laid a White Swedes Turnip on my table, a few days since, which weighed twenty-one pounds, and measured 8 feet 2 inches in circumference! When Monroe county boasts that, Old Genesee will try again."

HORTICULTURAL.

AMERICAN FRUITS IN EUROPE.

Under the title of "Old World Conservatism," the *Scientific American* gives an article from another journal, which it says "forcibly illustrates the slowness of the English in adopting any improvements from abroad, and especially from this country." It further remarks:—"While Americans engaged in calico-printing, in ship building, in agriculture, in every department of industry, are always on the alert to adopt any improvement from whatever source it may come, the French, the German, and the English, each deems his own nation so superior that it has nothing to learn from any other. This contrast between Americans and Europeans has been exemplified a hundred times. "Some years ago the Messrs. Hovey, of Boston, embarked in an extensive series of trials to produce an improved strawberry; it was said that they fruited over 2,000,000 of new seedlings, and out of these they selected two remarkably large and fine varieties. Has any one ever heard of these being cultivated in Europe? On the other hand, our nurserymen are so eagerly on the watch for any new varieties of fruit that may be originated in Europe, that, when the 'Victoria Currant' was first produced, the Messrs. Parsons, of Flushing, Long Island, paid \$30 for the first bush which they could procure."

It is not our object to defend Europeans from the charges thus made in the *Scientific American*, and other journals, and which are copied and reiterated from time to time. But the truth will do no hurt, although in some respects it may destroy our self-complacency, and cause us to examine the foundation on which we build our boasts. The same mail that brought us the Journal containing the article from which we have quoted above, brought us the *London Gardener's Chronicle* containing Vilmorin's Catalogue and descriptions of Strawberries, and among them we find two American varieties, one of them being *Hovey's Seedling*, which the *Scientific American* thinks no one ever heard of being cultivated in Europe.

It would be difficult to find an English Horticultural Journal that does not contain advertisements or notices of American Plants, the Azaleas and Rhododendrons, and every garden of any pretensions, contains a department for American plants, called the American garden. Our *Virginia Creeper* is a universal favorite, and can be found much more frequently in English than in American gardens. *George the Fourth* and *Early York Peaches* are generally cultivated in England, and the latter is a great favorite for forcing. The *Seckel Pear* is acknowledged to be unsurpassed in all the long catalogue of European varieties, while our *Jefferson Plum* stands at the very head of the list of fine plums.

The great California tree attracted attention in Europe, and received its name, *Gigantea Wellingtonia*, before it was hardly thought of by American horticulturists, who at last awoke to the importance of the subject, and claimed the privilege of giving it a new name, *Gigantea Washingtonia*. Probably more young plants of this tree have been shipped from one establishment here to England, than have been planted in this country.

Whatever may be true of England in regard to the adoption of the mechanical improvements of other lands, the people of that country have always evinced the greatest zeal to obtain for their little island everything valuable in the World of Nature. She has sent her explorers to every land, and every mountain's side. To the English explorers are we indebted for many of the beautiful things that adorn our gardens, and the rich stores of our own country were first laid open to the world by Europeans?

HEDGE GROWING—THE HAWTHORN.

EDS. RURAL NEW-YORKER:—I did not intend when I finished my last to you, to again take the trouble of writing on the subject of the so-called English, but what is there termed the Hawthorn. The only thorn, I believe, that is truly English, is the Blackthorn, which makes a formidable barrier in the fence line, but is apt to throw up suckers, as do our native thorns here.

I did not intend writing again on this subject, but seeing an article in your last by S. G. GAGE, I am induced once more to write. He gives the opinion of an English Tenant respecting the growth of the hedge. Is S. G. GAGE sure that the said tenant knows any thing about the planting and management of hedges? I have seen thousands of Englishmen that never saw a Hawthorn hedge, or that knew the plant from a Gribble, and I suppose I have seen ten times that number that never saw the process of planting. This reminds me of a man that applied to me for work—had long worked at hedge-planting, and told me he assisted in planting a hedge that I knew had been planted 30 years. I asked him his age. He answered, 36! A fine hedge-planter I found—but such an one as expected—I kept him part of a day, and then got rid of him. It is such as these that profess to know what they do not. I do not say that Mr. G. GAGE is of that sort, but is he acquainted with the kind of soil most suitable for the Hawthorn, the diseases to which the plant is liable and the remedies? From Mr. GAGE's failure, I presume not. From the statement, I am led to infer that the plants were forced by manuring. I may be in error on this head, but I think I am not. The plants too may have been diseased before their transfer from the nursery to the hedge-row. I could give the remedy in all such cases, and even now—if no more damage had accrued than is stated, a good substantial fence may be made, that in two years would create consternation in any biped or quadruped that was forced through it, and I think no inducement would gain consent to a second trial.

I see, too, by "the Register of Rural Affairs, for 1860," that the hackneyed tale of the White Hawthorn having been formerly tried, had proved a failure, and they had been swept off by miles together, is now ascribed to the native Newcastle and Washington thorns, brought into notice I think, by A. J. DOWNS. There appears to be an eminent personage ever at hand, but never seen named—"they say." This personage has a great influence with some, but you seldom find him backing up his adherents. This has been the case in the alleged charge of the English Hawthorn demise, as was once told by a gentleman, a nurseryman. It took place in the unprecedented short period of 24 hours time. You know the tale of the Three Black Crows.

About 40 years ago, Col. LIVINGSTONE, of this place, had over some plants from England for a hedge. He employed incompetent persons to plant it—now the fences this farmer had been used to were Dikes or Ditches, where hedges would not grow. The result proved as may have been anticipated—even worse, the hedge from improper treatment rather retrograded than advanced. It continued in this tantalizing state for years, an eye-sore to the owner, and ominous to the beholder. The property fell into the hands of a thorough, go-ahead gentleman, who set about renovating it, and in a few years it was impervious to man or beast. Some few spots where the plants had died out soon after planting, are now obliterated by the adjacent plants. It is now a formidable fence, but occupies, to my liking, too much width—about the same as allowed for an Osage Orange hedge. We have good hedges from 24 to 30 inches thick.

As I expect to give you this coming Winter a demonstrable proof of the application of the Whitehorn for hedges, I will say no more—leaving you to contradict or confirm me in my confidence in this plant for hedging purposes.

I think the *Viburnum* may make a pretty screen fence, and perhaps, by interweaving, a sufficient barrier against cattle. It is handsome in appearance, and of low size. The English Hazel, too, makes a fence almost impregnable, when properly managed.

W. M. BEAUCHAMP.

REMARKS.—We think our correspondent must be mistaken, in the statement that he "has seen thousands of Englishmen that never saw a Hawthorn hedge, or that knew the plant from a Gribble." There is scarcely a square mile of cultivated land in England, where the Whitehorn is not found in abundance, and even in *coppes* and wild land, the Hawthorn is everywhere to be met with. There is scarcely a child in England but has gathered its sweet *Mayflowers* in early summer, and every school-boy fills his pockets with its bright scarlet fruit, after the first frosts of Autumn. It is the only plant in general use for a good protective hedge, and an English tenant farmer, or even a farm laborer, who has not worked weeks and months at pruning and training Whitehorn hedges, must be something of a curiosity. The *Blackthorn* is but seldom used, and then generally as a protection from winds, and is not kept closely pruned.

FLOWERS FOR THE PARLOR.

MANY plants are kept with difficulty in the parlor or sitting-room, on account of the dryness of the atmosphere, and the irregularity of the temperature. There are a few things, however, that can bear rooms as hot and dry, and ill-ventilated and irregular as man. The *Cactus* family will bear a temperature from anything above freezing point to more than 80°. They require but little attention, fresh earth once a year and watering once a week in winter and twice or three times in summer is sufficient. They are curious and beautiful. The *Bulbous Roots*, such as the *Hyacinth*, *Crocus*, *Narcissus*, *Tulip*, &c., will grow and flower well in a room where there is a stove, if kept near the window, and if properly cared for will furnish plenty of flowers most of the winter. Turnish of our readers who cannot procure plants from green-houses, can mostly obtain a few dozen bulbs from some nurseryman or seedsman, as they can be done up in small packages and sent by Express safely almost any distance. The *Hyacinths* and *Tulips* cost from \$2 to \$3 per dozen, the *Narcissus* \$2 and *Crocuses* about 25 cents. They were advertised by many dealers in the RURAL during the month of October.

CULTURE OF THE HYACINTH IN POTS.

The soil most suitable for the *Hyacinth* is composed of two parts sandy loam, one-quarter leaf mold from the woods, and one-quarter thoroughly decomposed manure. The common pots, rather deeper than wide, will answer. A succession of flowers may be had for two or three months, by adopting the following method:—Fill as many pots as you desire to have plants with the compost already described, in November, insert the bulbs and put them in some cool place, where they can be kept for some time without being excited into growth—a cool, dry cellar is about as good a place as any. Then, at intervals of a fortnight, or so, remove some of them to the parlor and give them a good watering with tepid water, and they will immediately commence to grow, and the result will be a succession of fine flowers for a long period.

CULTURE OF THE HYACINTH IN GLASSES.

This is also a very simple way, and one in which any person may succeed in having fine flowers. The bulb may be either placed in the glasses of water at once, or they may be planted in sand until they emit roots, and the leaves begin to grow. When this latter mode is adopted, previous to placing them in the glasses, remove them from the sand, and thoroughly wash the roots and straighten them. The water in which they are grown should be changed, from time to time, as it appears to be the least discolored or muddy, which may be about once each week. The red and blue flowered single sorts are preferable for sitting-rooms, as the light colored varieties emit a fragrance far too powerful to please many. On this subject a correspondent sends us the following:

MESSRS. EDITORS:—As the winter season is at hand, when flowers are scarce and highly prized, I wish to recommend all your readers to cultivate

a few *Hyacinths* in glasses or pots, as they will afford more pleasure even than costly plants from the green houses. The bulbs, fit for flowering, can be obtained at most of the seed-stores, and from the nurserymen.

Procure as many pots as you wish to fill, and if you desire a succession of flowers the bulbs may be planted in the pots at different periods in November and December. Prepare a rich compost as for out-door culture, only a little richer, fill as many pots as you wish very lightly with the compost. The pots ought not to be less than six inches in diameter. Place the bulb on the soil in the centre of the pot and press it firmly down with the fingers and thumb, covering it with a little more compost, and set the pots away in a cool dark cellar, and keep them perfectly dry. In about five or six weeks they will be in a fit condition to remove into the house. The balance may be planted at intervals of a fortnight, and treated in the same manner. By this means a succession of fine flowers may be obtained.

For Culture in Glasses.—Light colored glasses are inferior to dark colored ones, because the roots do not bear the light well—place the bulb in the glasses and fill up with rain water to within half an inch of the bulb. Put the glasses away in a cool, dark place. At the end of three or four weeks they will have emitted roots sufficient to admit of their being removed into the house. They must not be placed in the windows immediately, but be kept in a moderate light until such time as the leaves have assumed a fine green color, when they may be placed in the windows. Turn the glasses frequently round, to prevent their growing too much to one side, and change the water about once a week. To invigorate them, dissolve an ounce of guano in a quart of rain-water, adding about one quarter of an ounce of chloride of lime, and apply about two teaspoonfuls twice a week, after the flowers begin to show themselves. *Hyacinths* treated in this manner will bloom finely, and amply reward the florist for his trouble.

CULTURE OF THE CROCUS IN POTS.

Crocus Pots are now in common use, and are of various patterns, and may be obtained at almost every seed store and at some of the crockery stores. The most popular is the kind in imitation of a hedge-hog, and there are also other patterns, two of which we give. It is perforated throughout its outer surface with holes, large enough to admit the bulbs, so that the pots after being filled with a compost such as is recommended for *Hyacinths*, may have the bulbs or tubers inserted through the holes. There are a large number of varieties of the *Crocus*, some of the best of which are, *Crocus Versicolor*, or Feathered Purple; *Suisians*, or Cloth of Gold, striped orange and purple; *Biflorus*, striped, white and purple; *Sulphureus*, or Cream Colored; and *Luteus*, or Common Yellow. These require about the same treatment as *Hyacinths* in pots. The *Crocus* is very pretty when grown in a common pot, the surface being covered with moss. Nothing could look finer than a wire basket suspended and filled with moss, in which the bulbs of the *Crocus* may be planted. If the moss is kept constantly wet they will flower beautifully. Those who live near cities can obtain hanging vases of porcelain and other materials, in which the *Crocus* may be grown in earth, as in pots; and those who

have not the means or opportunity to obtain them in this way, can go to the woods some fine Indian summer day, and find knots that will make vases as beautiful and more appropriate than anything to be found in the stores.

Inquiries and Answers.

CRANBERRY CULTURE.

EDS. RURAL NEW-YORKER:—Having noticed in your most valuable paper, of November 13th, an item in regard to the enormous yield and profits of the Cranberry, it led me to refer to the number of March 19th, which gives direction as to the soil and mode of culture best adapted to it; but not being satisfied, and wishing for further light upon the subject, I thought I would trouble you—one of the most patient of all men—with a few inquiries. 1st. How many varieties are there, and which is the most prolific? 2d. Where can they be obtained, and at what price per hundred? 3d. Does once setting suffice, or will they run out? 4th. How are they propagated? 5th. How soon will they come into full bearing? If you, or some one of your numerous correspondents, who has had experience in the matter, will answer the above, you will oblige many readers of the RURAL.—W. F. S., Maple Grove, N. Y.

Will you be so kind as to inform me, through the pages of your excellent paper, where Cranberry bushes can be obtained, the price, the manner of culture, and what soil is best adapted, &c., &c.—A. S. S. S. S., Durham, N. Y., 1859.

1st. There are several varieties of Cranberries, how many we cannot say. We planted a variety called the *Cherry Cranberry*, and another named the *Low Land Belle*, both were productive, but our experience with the Cranberry is not very extensive. 2d. Plants, we think, can be obtained of D. L. HALSEY, of Victory, Cayuga county, and NOBLE HILL, of Caton, Steuben county, in this State. The latter advertised plants in the RURAL last year at \$1 per hundred. 3d. Once setting plants is sufficient, as, if taken care of, they grow and increase very rapidly, and even if entirely neglected they struggle manfully for an existence among the weeds. Good plants can generally be found in an old bed that has been neglected for many years. 4th. The vines run on the ground a great length, and throw out plenty of roots, so that each branch can be cut into several pieces and transplanted. 5th. About the third year a full crop may be expected. We have had some fruit ripen in the autumn on plants set in the spring, and the second autumn a pretty good crop.

Mr. HILL, who is an extensive grower and usually exhibits fine fruit at our State Fair, sends us the following in regard to soil and mode of culture:

Soil Best Adapted to Cranberry Raising.—Low, swampy lands, in my opinion, are preferable.—Nature herself seems to teach this lesson. Travel from Maine to Minnesota and you will meet with the Cranberry growing in a state of nature only in some swamp, or on its margin. You will also find that it has selected a swamp which is likely to be moist throughout the season, thus showing its great affinity for water. The swamp commends itself to the would-be-cultivator of the Cranberry for another reason, viz:—that in its natural state it is generally useless for other purposes; and to fit it for other purposes would require a greater outlay than to fit it for Cranberry raising. For the latter, you need only a sufficient number of drains to remove surface water; more are not only unnecessary, but, in my opinion, detrimental. Then again, the ease with which most swamps can be flowed during fall, winter and spring, gives the cultivator an advantage over weeds, which, on dry land, are not only more annoying, but can only be kept in check by a persevering use of the hoe or some equivalent. To accomplish this, one has only to close the outlets of his drains in fall as soon as the crop is gathered, and let them remain closed until the return of warm weather in the spring—a course which I would recommend wherever it is practicable. When this can be done, very little, if any, weeding or hoeing will be needed.

Mode of Culture.—Having drained the land as already intimated, those portions on which the water formerly remained most of the year, will usually be sufficiently clean for the immediate introduction of the plant. That part covered with a thick sod, I pare off, and throw the sods into heaps for decomposition,—the result of which forms an excellent manurial preparation for fruit trees. In the clean surface thus exposed, I make shallow parallel trenches eighteen inches or two feet apart, and in the trenches place my vines, varying from one to eight feet in length. A slight covering every six or eight inches, completes the work of transplanting. At each point so covered, roots will be formed, and new vines will shoot off. Set in such soil, no loss from drouth need be feared. In two or three years they will cover the ground. Being an evergreen, the month of May is a very good time, if not the best, for transplanting. If set in the fall, having no time to root, they are liable to be thrown out by frost.

ONONDAGA PEARS AND ISABELLA GRAPES FROM ONONDAGA.—I enclose I send you the compliments of Mr. ALVIN COOPER, of this city, in a specimen of his Isabella Grapes, which I have before referred to. And, lastly, I thought perhaps you would not object to an Onondaga Pear, of my raising.—S. N. HOLMES, Syracuse, N. Y., 1859.

With the above we received a box of Isabellas, very large, well ripened and well preserved; and some fine Onondaga pears.

WILLOW STRAWBERRIES, &c.—I received the enclosed willow some years since, from JEREMIAH FROST, to grow stocks, on which to graft the New American Weeping Willow. 1st. Is this "Salix Purpurea" so much approved for? 2d. I have a one thousand of strawberry plants which I necessarily have to take up this fall—what is the best method of wintering them? 3d. I wish to prepare a piece of land next season to plant, in 1861, with new native grapes. If I should buy the young vines now, could I forward them by growing them in a nursery row, and their future vigor and fruitfulness be unimpaired by removal? Your advice in next RURAL, on these three questions, will greatly oblige.—A. CONSTANT READER, Woodstock, C. W., 1859.

1st. The willow you sent us is not the *purpurea*, but the *Black Willow*, (*Salix nigra*), which makes a good, strong, stock. 2d. We would heel in the strawberry plants in a dry place, and then cover them with leaves. They will come out all right in the spring. 3d. By obtaining small plants, and giving them good culture in nursery rows for one season, you will make good plants, just right to transplant into the vineyard, and they will hardly notice the second removal.

USE OF SALERATUS AND CREAM OF TARTAR.

EDS. RURAL NEW-YORKER:—In reading recipes in your valuable paper, particularly in the "Cake Department," I observe that all, with scarcely an exception, contain a quantum of soda, saleratus, or cream of tartar. Now, why this should be I have ever been at a loss to imagine. By using a few more eggs, (and are they not as plenty as anything else?) the cakes, &c., will be quite as light, and far more nutritive and healthy than with such an eternal putting in of soda, etc. Eggs are as cheap as butter, and those who make cake at all, ought to afford to use them, and their cake will taste and be much better for it. A great deal has been written against the use of saleratus, and yet it seems indispensable, judging from the many recipes recommending it. For my part, I am afraid of it, and prefer doing without cake if I can't afford eggs. Besides, if a housekeeper has it in her kitchen, the girl or help she has, will, without her knowledge, clandestinely put it into the bread, under the idea that it makes it lighter, prevents sourness, and, thereby, will spoil many an otherwise good batch of bread. Though not partial to sour bread, I prefer it to saleratus bread.

TEA CAKE.—Take one pound of flour; one pound sugar; three-fourths pound butter, and ten eggs—cream the flour and butter together, beat the eggs light,—the yolks and whites separately,—leaving out the whites of two eggs. Mix and beat well. Take one-third of the mixture and put it in a square pan and bake it plain,—take another third and mix with it slips of citron, and bake in a square pan,—with the remaining third put French currants, well washed, dried and rolled in flour, and bake as above. Take a cup of sugar to the whites you reserved, and make an icing for your cakes, which spread on while warm, and mark into squares or diamonds with a knife to make it cut better. This will make two cake baskets full for a tea-drinking, and is a good and easy recipe.

FRENCH LOAF CAKE.—Eight eggs; 3 cups sugar; 1 of butter; 4 of flour; half cup sweet cream; 1 lemon, and a glass of brandy—with or without fruit.

QUEEN CAKE.—Two cups sugar; 1 of butter; 1 of sweet milk; 4 of flour, and 6 eggs.

RURAL READER.

ROASTING CHESTNUTS.

EDS. RURAL NEW-YORKER:—This favorite nut is abundant this season. Most people are very fond of them, especially children. They delight to have a chestnut roast, and when fire-places were in common use the hot ashes was a favorite place to cover up the nuts to get "done brown." Now stores are in general use, and this favorite plan is obsolete. The best way to serve them under the existing state of things, is to cut a small piece off from the shell—just enough to show the meat,—then place a cup full in a corn-popper, and shake over a clear fire, or hot coals. They will soon become mealy, and when thus roasted are truly delicious. Every family who have not thought of this method should adopt it? Raw chestnuts are extremely hurtful, particularly to children, but when roasted this objection is entirely done away with, and old folks can enjoy a chestnut roast with the young ones, and all have a good time, and pass an hour of an evening with pleasure and delight, these cool nights. They make a palatable desert after dinner. Serve warm from the corn-popper.—Box 1,334, Syracuse, N. Y., 1859.

INQUIRY—ROLLED JELLY CAKE, &c.

DEAR RURAL:—Allow a young housekeeper, who has been greatly aided in learning the art of cookery by your valuable recipes, to add two others which cannot fail to please the taste of the most fastidious. Also to ask through your columns the best methods for making almond custards.

ROLLED JELLY CAKE.—One cup sugar; 8 eggs; 1 cup flour; half cup butter; half teaspoonful of soda; teaspoonful cream tartar. Dissolve the soda and cream tartar in half a teaspoon of sweet milk. Bake on two flat tins. Spread each cake with jelly and roll when hot.

COMPOSITION CAKE.—One-half pound butter; three-fourths do. sugar; 2 do. flour; 6 eggs; half cup of sweet milk; 1 teaspoon cream tartar; half teaspoon soda. Bake in a slow oven one hour and a half.

MRS. F. T.

Westfield, N. Y., 1859.

PORK CAKE.—I have a long time been a reader of the RURAL, and its recipes have helped to fill my book. Please accept one from me which I assure you is very good. One pound salt pork, chopped very fine, dissolved in 1 pint of boiling water; 2 cups of brown sugar; 2 do. molasses; 2 tablespoons cinnamon; 1 do. cloves; 2 grated nutmegs; 1 pound of raisins, seeded or chopped fine; 1 heaping teaspoon of soda.—MYRA, Hammondsport, N. Y., 1859.

POTATOES.—How few cooks know how to fry potatoes. There is nothing so easy to get and yet so palatable for breakfast, with a thick, tender beef steak, or a mutton chop sizzling from the gridiron. To fry raw potatoes properly, they should be pared, cut lengthwise into slices an eighth of an inch in thickness, dropped into a pan over the fire, containing hot beef drippings, turned frequently, nicely browned all over but never burned. The addition of a little salt and pepper while in the pan, and a little flour dredged over them, is an improvement.—Selected.

TIP-TOP CAKE.—One and one-half cups of sugar; 1 cup of milk; 2½ cups of flour; 1 egg; 1 tablespoon of butter; 1 teaspoon of soda; 2 teaspoons of cream tartar.—B., Hampton, N. Y., 1859.

LADIES' QUIDO.

[It is seldom that two such poets live under one roof, as some of our readers may have visited in a cottage on the Merrimac, in Amesbury, Mass. The following, graceful tribute to Lady Franklin is from the pen of Elizabeth H. Whittier, sister of John G. Whittier:]

For thy hands, thy work is over!
Cool thy watching eyes with tears,
Let thy poor heart, overwinded,
Rest alike from hopes and fears.

Hopes that saw with sleepless vision,
One and picture fading slow;
Fears that followed, vague and nameless,
Lifting back the veils of snow.

For thy brave one, for thy lost one,
Truest heart of woman, weep;
Owning still the love that granted
Unto thy beloved sleep.

Not for him that hour of terror,
When—the long ice-battle o'er—
In the sunless day his comrades,
Deathward trod the Polar shore.

Spared the cruel cold and famine,
Spared the fainting heart's despair—
What but that could mercy grant him?
What but that has been thy prayer.

Dear to thee that last memorial,
From the calm beside the sea;
Evermore the month of roses
Shall be sacred time to thee!

Sad it is the mournful yew tree
O'er his slumbers may not wave;
Sad it is the English daisy
May not blossom on his grave.

But his tomb shall storm and winter
Shape and fashion year by year—
Pile his mighty mausoleum
Block by block, and tier and tier.

Guardian of its gleaming portal
Shall his stainless honor be,
While thy love, a sweet immortal,
Hovers o'er the winter sea!

Written for Moore's Rural New-Yorker.

"WEDDED TO GOLD."

No wonder she was so strangely sad as they bound the orange blossoms amid her golden curls,—no wonder that her brow was pale as marble, as they threw the long snowy veil back from her lovely face; and as a joyful child went past her, tripping lightly on its way, no wonder that in her heart arose the prayer, "God save thee, little prattler, from a like fate!" They looked upon her as the hollow laugh rang from her lips, when the fitful jest passed round, and they thought she was happy. Oh, human nature! how many there are who part with every noble affection,—with every feeling of the heart, for paltry gold. He whom they had chosen for her was rich, and why should she not be happy?

As she spoke the words which bound her to another, her face was illumined by a smile, and she was clasped among those enjoying fortune's favors; but they could not look into her heart,—could not see the affection which had long ago brightened her way,—the childish love which she had once possessed. The mournful spectre which haunted her by day and night was unseen, unknown by all others. None could open the secret doors of her heart, and go far back through all the silent halls, and gaze upon a little mound with the inscription: "Buried Hope." None witnessed the throbbings of the young heart which beat so wildly, and none knew the constant prayer to God, "that He would send her rest,—rest, though it came with the bier, the pall, and all that mortals dread. Gladly would she have wrapped a shroud of withered hopes around the heart which had so often been swayed to and fro in the tempest of grief—like a willow by the water's edge, ever bending to drink the bitter waters, yet not breaking—gladly would she have done this, and found rest beneath the coffin lid; but no, she must live on, smile on, and be happy, though her heart were breaking.

Was she not rich?—then, why not happy? Aye, why? No wonder that, as time passed on, she changed. They called her cold, proud, haughty,—but they knew not how long and earnestly she had struggled to cloak her inner life, that those gazing on the calm and placid exterior should never dream of what was passing beneath—well had she accomplished her object.

At length her prayers were answered,—the rest so long sought was found. They laid the form, which had moved so sadly through the halls of pleasure, in the silent coffin, and she was free. No longer must she carry on the work of deceit—no longer need she endure the crushing weight—they put back the hair from the fair white brow, folded the hands over her pulseless breast, and laid her where the spring flowers blossomed, and the autumn song-birds carolled above her. That life of weariness had closed—she was happy.

Hilldale, Mich., 1859.

THE ABSENT.

There is a hallowed pleasure in the memory of absent loved ones who have long wandered from our side, and who we may never behold again on earth. As we revert to the glad hours we spent in their society, we seem to feel the warm pressure of their hands, and to hear again their well known voices utter words of hope and cheer which strengthen us anew for life's great conflict. To-night I am thinking of a dear, absent brother who, one year ago, was amid our household circle, but now is far away in a western land,—far from the home that gave him birth, and the many loved friends and companions of earlier years. As memory her vigils keeps, a fervent prayer ascends to God to guide and protect him through the many snares and temptations of life.

There come to me to-night many fair forms

which I shall never more behold but in memory. How natural—how life-like they look. They speak to me of departed joys, and gently whisper of those which never die. My spirit seems entranced as I listen to their strains of melody, and I forget for awhile earth's cares and griefs in the contemplation of all that is pure and lovely. Though absent in body, yet, methinks, on angel's wings they hover near me, whispering of their better home on high.

As I take a retrospective view and dwell for a moment upon the many changes marking the past—bringing to mind the children who are now men and women—I am lost amid its field of thought. How great the contrast. Where is the youthful band which once mingled together? Ah, Time, that insatiable destroyer, has separated them by land and sea. To-night I sit wondering where they all are. In memory's hall they flock around me, and I seem to hear again their merry laugh as in days of yore. Some are instructing the young immortal mind. *NELLIE* is teaching where she and I oft have sported. There stands the old shade tree (only its shadow has a little broader grown,) where happy children with me have gathered, but are now far from the rural retreat. I cannot enumerate the memories of those who are far away, yet are bound to my heart by a thousand ties and recollections which strengthen with each fleeting year. How oft some old familiar lay brings the absent back again,—they loved and sang the same in the days of "auld lang syne." Their parting token, how dearly we prize it. Oft we bathe it in tears to keep remembrance sweeter and purer. I love to think of absent loved ones, and when we've crossed the ocean billows of life, may those who have long been severed here meet, no more to part, around the Throne of the Great Eternal.

Marcellus, Onen, Co., N. Y., 1859.

GROW BEAUTIFUL.

PARSONS may outgrow disease and become healthy, by proper attention to the laws of their physical constitution. By moderate and daily exercise, men have become active and strong in limb and muscle. But to grow beautiful, how?—Age dims the lustre of the eye, and pales the roses on beauty's cheek; while crow-feet and furrows, and wrinkles, and lost teeth, and gray hairs, and bald head, and tottering limbs, and limping feet, most sadly mar the human form divine. But dim as the eye is, as pallid and sunken as may be the face of beauty, and frail and feeble that once strong, erect, and manly body, the immortal soul, just fledging its wings for its home in heaven, may look out through those faded windows as beautiful as the dew-drops of a summer's morning, as melting as the tear that glistens in affection's eye—by growing kindly, by cultivating sympathy with all human kind, by cherishing forbearance towards the follies and foibles of our race, and feeding day by day on that love of God and man which lifts us from the brute and makes us akin to angels.

ABOUT THE EDUCATION OF YOUNG LADIES.—Lady Morgan, the gifted Irish authoress, whose novels delighted the higher circles in former years, when conversing with a friend about some young ladies who had lost their fortune, made the following very sensible remarks concerning the proper education of young women:—"In the *tert-a-tert* conversation with Mrs. Hall, on the subject of some young ladies, who had been bereft of fortune, Lady Morgan said, with an emphatic wave of her green fan, 'They do everything that is fashionable—*imperfectly*! their singing, and drawing, and dancing, and language, amount to nothing. They are educated to marry, and had there been time they might have gone off with, and hereafter from, husbands. They cannot earn their own salt; they do not even know how to dress themselves. I desire to give every girl, no matter what her rank, a trade—a profession, if the word pleases you better; cultivate what is necessary in the position she is born to; cultivate all things in moderation, but one thing to perfection, no matter what it is, for which she has a talent—drawing, music, embroidery, housekeeping, even; give her a staff to lay hold of, let her feel this will carry me through life without dependence. I was independent at fourteen, and never went in debt.'

SIMPLICITY OF DRESS.—Prentice of the Louisville Journal, speaks thus to his readers:—"Those who think that, in order to dress well, it is necessary to dress extravagantly and gaudily, make a great mistake. Nothing so well becomes true feminine beauty as simplicity. We have seen many a remarkably fine person robbed of its fine effect by being over-dressed. Nothing is more unbecoming than over-loaded beauty. The simplicity of the classic taste is seen in the old statues and pictures, painted by men of very superior artistic genius. In Athens the ladies were not gaudily, but simply arrayed, and we doubt whether any ladies excited more admiration. So also the noble old Roman matrons, whose superb forms were worthy of them, were always very plainly dressed. Fashion often presents the lines of the butterfly, but fashion is not a classic goddess."

BABYHOOD.—We are profoundly convinced that the first year of a child's life is the most tremendously important of any succeeding twelve-month, though the creature shall number three-score and ten. Consider the blank sheet of paper with which the head of every baby, according to the philosopher, is lined. Think of it and shudder, when you see nurses and nurse-maids writing their pot-hooks and hangers upon it, as though they wrote with rolling-pins, or, at best, wooden skewers!—Poor human papyrus! How many after-scratchings and cuttlefish-rubbings it will take to rub out the marks—that, after all, may never wholly be effaced, but remain dingy and dark under snow white hairs.—*Jerrold.*

HAPPINESS in part is imaginary, and its possession depends almost entirely upon ourselves; contentment is the key which unlocks the treasure house, and with "godliness is great gain."

Written for Moore's Rural New-Yorker.
ON THE RIVER.

BY J. M. DEEREN.

A child stood by a river;
He spied a poor old man
Whose form was bent and shrunken,
His features old and wan;
Floating down the current,
'Twas smooth and easy now,
Clear and unobstructed
As the youth's unclouded brow.

The old man moored his bark
By the still and silent shore,
Never to guide its rudder,
Never to ply its oar,
Never to breast the current,
Never to face the gale,
Never, in all his future,
To trim the laboring sail;

But to rest for a single moment
Beneath the spreading trees,
To breathe the fragrant odors
That float upon the breeze;
To feel a shade of sadness,
A lingering 'mid the toll
Of the endless river running
O'er Time's absorbing soil.

The child unmoored the vessel,
And launched upon the tide;
Hope, Courage, in his bosom,
And angels at his side;
He gave no look behind him,
As he plied the tiny oar,
His gaze was to that future
Which he must now explore.

The old man's labor finished—
The infant's just began—
And this is but a picture
Of the life of child and man;
For each must breast the currents
That beneath their vessels glide,
And each must steer his journey
On a deep and dangerous tide.

The old man's course is ended—
He finds his fated grave;
The child embarks his fortunes
Upon life's troubled wave.
Thus pass the generations—
Thus do our moments go—
Like the gladness of a wedding,
Like the sadness of a woe!

CULTIVATE THE BEAUTIFUL.

NUMBER II.

We are many times of that class, "which, having eyes see not," and debar ourselves of much of the enjoyment Heaven has bountifully spread for us. We become buried in self, forgetful that we live more, enjoy more, are better and nobler by living in the world around us. The larger the draughts made upon the fountains of the human soul, the more copious they become. There is a taste for the beautiful implanted in our natures, and God has spread around us ample means for its gratification. Shall we not cultivate it? They are but sorry philosophers who would teach us to be simply utilitarians. They err (if I mistake not,) not only in education, but in morals and religion, who fail to make them attractive and beautiful. God has not made them so, why should we deform them? Why desecrate and despoil what he has beautified?

Acute observers tell us that the surroundings of a people has to do, not only with the formation of their characters, but that the lineaments of the face are moulded by them. And does not our own observation confirm it? You find the rugged mountaineer a counterpart of his home. Why is Italy the foster-mother of the arts? Is it not that her beautiful landscapes, and soft and sunny skies, tend to develop the beautiful in the soul? The atmosphere we breathe, joyful or sad, thankful or complaining, slowly but surely stamps itself upon us. If our homes and our school-rooms are surrounded with lovely objects—if only the good, the true, and the beautiful are inculcated, will they not gleam from the countenance, and sparkle in the eye?

Aside from the service of our Creator there is no pleasure deeper or purer than the cultivation of the beautiful in nature and in art. It may serve not only as an agreeable pastime to fill up the intervals occurring amid severe studies, but may be combined with them. Unlike other enjoyments it does not satiate, but elevates and ennobles the other faculties. It would seem as though beauty begat beauty in its tendency upon the human heart, for, ever softening and purifying, it unfolds a higher life,—engenders a new existence,—creates a new sense the enjoyment of which renders life more blissful. Can that individual be truly said to live who sees in an external world, with all its nice dependencies and adaptations, nothing beautiful?

It is true, literally and proverbially, that Americans who have bidden defiance to everything where intellectual or mechanical skill is concerned, have forgotten one great item, viz., the art of rendering existence pleasant. The child, instead of being permitted to give expression to the natural emotions of its heart, is taught to repress and cloak in stoical indifference the finest feelings which Heaven has implanted. It is but a little thing for a parent or a teacher to mould the plastic mind of a child in such a manner, that it may seek its own enjoyment within itself. A timely word, an allusion, a thought, may enable it to discover beauty in an act, in a landscape, in a blossom; or, perhaps, in the embodied conception of some more fertile mind. Nature, ever prodigal in her gifts, has surrounded us with inexhaustible sources of delight; but neglecting these we chase phantoms and dreams that end in disappointment and dis-

gust, and delude ourselves in the vain effort to delude the world.

There is beauty everywhere, yes, and joy, if we will. Experience and observation every day demonstrate that they are not confined to condition. They exist in the soul, and will respond when called upon. We are seldom unhappy from reflecting too much, but often from reflecting too little. We never repine at the dispensations of Providence, except when we undervalue the blessings which we receive, and then we cheat ourselves instead of the Giver. Nobler is the wisdom and benevolence of Divine care more beautifully shown than in this,—our highest enjoyments are universal. All the charms of the outer world are a common feast. Air and water, dew and sunshine, are without money and without price. The luxuries of life, are the bane of our existence.—They enfeeble our bodies, weaken our minds, blur our eyes, benumb our faculties and warp our judgments. It is well for us as a nation that they are confined to the few. It is the mechanic, and the farmer's son that steps into the halls of legislation. Their children in turn become pampered, and again the poor boy steps up to fill the post of honor and emolument.

The Englishman, in the quiet of his home, contenting himself in the adornment of his grounds, or the pleasures of the chase, forms a striking contrast to the bustling money-making American. So long as we pay a premium for rogues to sit in Legislative Halls, and lend our devotions to wealth, while artists, the literary, and the scientific, starve, just so long shall we have of these, second-rate individuals. It is no wonder that we have not painters like the old Italian school; or poets such as England has produced. The talent which might have generated these have been drawn to another channel—statesmanship,—and is, too often, perverted to unholy purposes. If this ambition to rule were at an end, and merit, only received preferment, we might hope for a revolution in society. But it is possible to awaken a love for the *truly beautiful*, which shall grow with coming years.

"There's beauty all around our paths, if but our watchful eyes,
Can trace it 'mid familiar things, and in their lowly guise."
Lockport, N. Y., 1859. B. A. M'N.

POVERTY NOT SO GREAT A CURSE.

If there is anything in the world that a young man should be more grateful for than another, it is the poverty which necessitates his starting in life under very great disadvantages. Poverty is one of the best tests of human quality in existence. A triumph over it is like graduating with honor from West Point. It demonstrates stuff and stamina. It is a certificate of worthy labor creditably performed. A young man who cannot stand this test is not good for anything. He can never rise above a drudge or a pauper. A young man who cannot feel his will hardened as the yoke of poverty presses upon him, and his pluck rise with every difficulty that poverty throws in his way, may as well retire into some corner and hide himself. Poverty saves a thousand times more men than it ruins; for it only ruins those who are not particularly worth saving, while it saves multitudes of those whom wealth would have ruined. If any young man who reads this letter is so unfortunate as to be rich, I give him my pity. I pity you, my rich young friend, because you are in danger. You lack one great stimulus to effort and excellence, which your poor companion possesses. You will be very apt, if you have a soft spot in your head, to think yourself above him, and that sort of thing makes you mean, and injures you. With full pockets and full stomach, and good linen and broadcloth on your back, your heart and soul plethora, in the race of life you will find yourself surpassed by all the poor boys around you, before you know it.

No, my boy, if you are poor, thank God and take courage; for he intends to give you a chance to make something of yourself. If you had plenty of money, ten chances to one it would spoil you for all useful purposes. Do you lack education? Have you been cut short in the text books? Remember that education, like some other things, does not consist in the multitude of things a man possesses. What can you do? That is the question that settles the business for you. Do you know your business? Do you know men and how to deal with them? Has your mind, by any means whatsoever, received that discipline which gives to it action, power and facility? If so, then you are more a man, and a thousand times better educated than the fellow who graduates from a college with his brains full of stuff that he cannot apply to the practical business of life—stuff, the acquisition of which has been in no sense a disciplinary process so far as he is concerned. There are very few men in this world less than thirty years, of age, and unmarried, who can afford to be rich. One of the greatest benefits to be reaped from great financial disasters is the saving of a large crop of young men.—*Timothy Tycumb.*

NOVEMBER.—The following lines by Hartley Coleridge are beautiful:

THE mellow year is hasting to its close;
The little birds have almost sung their last,
Their small notes twitter in the dreary blast
That, shrill piped, harbingers early snows.
The patient beauty of the scintillant rose,
Oft with the morn's hoar frost quaintly gilded;
Hangs a pale mourner for the summer past,
And makes a little summer where it grows.
In the chill sunbeam of the faint brief day,
The dusky waters shudder as they glide;
The russet leaves obstruct the straggling way
Of oozy brooks whose no deep banks define;
And the gnarl woods, in ragged, scant array,
Wrap their old limbs with sombre ivy twine.

OLD AGE.—Beautiful is the old age of the righteous, beautiful as the slow, drooping, mellow autumn of a rich, glorious summer. In the old man, nature has fulfilled her work; she loads him with the fruits of a well spent life, and surrounded by his well trained, obedient children, and his children's children, she rocks him away softly to the grave, to which he is followed by blessings.

THE RAINY DAY.

BY ELLIEN LEE.

THE mist is on yon mountain's brow,
A cloud hangs o'er the vale—
The sunset leaves no cheering glow
Upon Night's darkness veil;
But all is dark, and lone, and drear,
For deeply groans the dying year.
Its race is almost run—
Its spring of light and joy is gone,
Its summer vanished all too soon,
And autumn now, with shortening days,
Bathes in the light of golden rays,
And sighs upon the listening ear,
The grave is cold, and damp, and drear,
Its portal knows no sun,
Yet through this cloudy, dreary day,
And through the darker drearier night,
We see the light of Hope's bright ray,
How glad it beams upon our sight;
No clouds can dim its cheering rays,
Mid darkest storms it brightly plays,
Dispelling all their gloom.
Its gentle light foretells the day
When wintry aches shall pass away,
When singing birds and fragrant flowers
Shall gladden fairy-shaded bowers,
E'en "Death shall lose its venom'd sting,"
And the cold grave merge into spring,
A spring of Heavenly bloom.
Scipio, N. Y., 1850.

VOICES.

THE voice was the crowning gift of God to man. By means of it we can most readily convey our thoughts to our fellow-creatures, and through this medium the most of us can exercise the greatest influence. The different tones of the voice have great power over the emotions of the soul,—if they are gentle and kind, a kindred feeling will be awakened within our own breasts; if harsh and unfriendly, like emotions will be aroused. How carefully then should we guard this delicate instrument, so that its keys, when touched, shall ever send forth sweet, harmonious music.

But there are voices, myriads of voices, breathing everywhere. 'Tis not alone to man that God has granted this great gift. Ah, no. Who has not heard another voice—even the voice of Nature, either amid the loud roaring of the cataract, the howling of the storm, or in the musical plash of the mimic waterfall. There may be much in her sublime tones to stir the quick perceptions of the soul, but her gentle whisperings have so much of beauty and sweetness they cannot fail awakening deep emotion. Glad songs have the little babbling brooks sung to us in our childhood, and now we can never watch their silvery waters, murmuring so peacefully along, without having our thoughts wafted back to happy by-gone days.

But the human voice and the voice of Nature are not the only ones we may hear; for there are voices, sweet spirit voices, that thrill through the soul, and echo there long after the tones that awakened them have died away. When the heart is sad and weary, soothing whispers are heard telling of a Land of Rest where the cares and sorrows of earth have no entrance. They speak of unfading flowers,—of trees that always are green,—of bright, beautiful waters, ever flowing peacefully,—of angel bands with snowy wings and golden harps,—of music more melodious than e'er was struck from earthly lyres,—of a starry crown to be exchanged for the burdensome cross, and we long to say to the fettered soul, "Plume thy pinions for thine everlasting flight,—leave far behind the sin and sorrow of earth, and find an eternal rest amidst the glories of the Better Land." At such moments, when we feel an impatient restlessness of soul, and find it well nigh impossible to exclaim, "Thy will be done," one spirit voice, superior to all others, will speak to the heart, and if we but listen it will teach us the difficult lessons of heroic endurance and patient waiting, till we be called to inherit our eternal reward.

LOUISE LINDEN.

Gainesville, Wyoming Co., N. Y., 1859.

TRUE CONTENTMENT.—In this age of restlessness and wild speculation, when so many are searching eagerly for happiness, and sighing, after numerous disappointments, "Who will show us any good?" it is refreshing to meet with a contented Christian heart, which has found true peace by living in constant communion with God. In one of our exchanges we find the following:—Said a venerable farmer, some eighty years old, to a relative who had lately visited him,—"I have lived on this farm for more than half a century. I have no desire to change my residence as long as I live on earth. I have no desire to be any richer than I now am. I have worshipped the God of my father's with the same people for more than forty years. During this time I have rarely been absent from the sanctuary on the Sabbath, and have never lost one communion season. I have never been confined to my bed by sickness for a single day. The blessings of God have been richly spread around me, and I made up my mind long ago, that if I wished to be happier, I must have more religion."

SPEAK LOW TO ME.

SPEAK low to me, my Savior, low and sweet
From out the hallelujahs, sweet and low,
Lest I should fear and fall, and miss thee so,
Who art not missed by any that outlast.
Speak to me as to Mary at Thy feet—
And if no precious gems my hand bestow,
Let my tears drop like amber, while I go
In reach of Thy divinest voice, complete
In humanest affection—thus, in sooth,
To lose the sense of losing! As a child
Whose song-bird seeks the wood for evermore
Is sung to, in its nest, by mother's mouth,
Till sinking on her breast, love reconciled,
He sleeps the faster that he wept before.
(Mrs. Bruening.)

ACQUIREMENT OF TRUE PRINCIPLES.

When we place our estimate upon individuals, the first thing to be considered is moral principle. All other possessions sink into insignificance when taken in connection with this. It is the real, genuine stamp which characterizes individuals, keeping their memory sacred in the hearts of others. No person can be truly educated without it. He may have all the knowledge of books which one mind can contain, and still, without correct principles—a keen and just perception of right, and a desire to do that right—there is a great mental deformity marking such a person just as perceptibly as outward deformity.

When, if ever, are these principles to be obtained? May we, after years spent in vice and wickedness, hope to reform and entirely undo those habits which were formed in childhood? There is an old saying, and a true one, though couched in simple language:—"As the twig is bent the tree's inclined." These principles, then, must be instilled into our being from our earliest years; or, when that little twig shall have become a tree, we will behold a knotted and gnarled oak. Fellow teachers, upon you and me devolves a part of this great work,—how are we to accomplish it best?—The stamping of the foot, and the throwing of the ruler, may frighten the child into obedience, yet they will not give anything *real* when the principles come to be tried and refined, and the dress thrown aside. We want something *eternal*, then—something that will withstand the tests to which we are obliged to submit before we are pronounced ready to take a part in the "great concerns" of life. For one, I do not want that obedience which only moves the hand subservient to my will, and leaves the heart in entire rebellion. I want to reason with the child, and convince him that a certain course is *right*, and he must pursue it because it is *right*, and for the same reason neglect to do *wrong* because it is *wrong*. Here we have the standard course of action, which will be continued without our keeping an "eye watch" over every movement. I argue that children never do wrong in early life because the evil yields pleasure. Children err many times from an inability to determine what is right, and if left to continue in a wrong course, think there is no other way; or, become so accustomed to wrong practices, and find it hard to change, yet if taught the *right* at a time when the *will* is more *flexible*, learn to love it, and by-and-by will act from a natural desire to do right which has taken possession of the heart.

Talking to children about the necessity of having good principles, will not suffice to teach them,—we must ever live and act them ourselves, and let them be adorned with perfect kindness, that they may seem more beautiful and inviting. Ever place a proper estimate upon every childish act in which the least principle is involved, thus teaching the just appreciation which those acts deserve,—over be truthful, as truth lies at the foundation of all other principles. But I need not enumerate the little links which, when united, form the great chain of true principles.

EMILY ELLIS.

New Lebanon, Col. Co., N. Y., 1859.

THE OLD SCHOOL-HOUSE.

How many pleasant memories, how many endearing recollections, come thronging to my brain as I look back to boyhood's sunny hours, when, with my books under my arm, I went whistling with gay, light-hearted companions towards the old school-house, by the big pine tree. How joyous and full of gladness were those days, when, after reciting our lessons, (which we sometimes thought outrageously long,) we were let out upon the grassy lawn to make things "bum" for awhile with our noisy glee. How we tumbled, wrestled, and played the thousand games and sports known only to the school-boy, and then, when we heard the tinkling of the good old master's bell, with what a happy shout would we disperse, each trying to outstrip the others in the race for the school-room door. How we loved that old master, and how patiently would we sit, and with the strictest attention, listen to him, while he recounted anecdotes without number, of terrible deeds performed in battle,—of men who crossed the sea to find new worlds—all of which we, with big eyes, and wide open mouths, would swallow with heart-felt admiration. Ah! those were happy days—but they have passed never to return.

Where now are the boys that thronged that grassy lawn?—where now is the old master?—where the old school-house? The boys are gone; some of them to take an active part in business life; some to hold the reins of government; some are great and famous; others are lowly and obscure; while some, alas,

"Life's fitful fever over, sleep well."

The kind old master, who labored so hard to make us useful and prominent members of society, was long since gathered to the graves of his fathers.—The old, time-worn school-house has given way to a more costly edifice, which looks too cold and formal to me, as I think of the little brown building of years ago. But the old tree stands there, more beautiful and majestic than ever,—other boys play beneath its broad-spreading branches, making the welkin ring with their thoughtless gaiety, while it looks down as smilingly upon them as it did upon us, in the years long since gone.

Geo. H. Worden.

It is not wisdom, but ignorance, which teaches men presumption. Genius may be sometimes arrogant, but nothing is so diffident as knowledge.

Thus greater a man is, the less he necessarily thinks of himself; for his knowledge enlarges with his attainments.

THE EDUCATION MOST NEEDED.

The question is often asked why it is that so few people are successful in business, and why property finds such an unequal distribution? This man, they say, received the advantages of a good English Education, and that man was educated at one of our best colleges. Both have been industrious, honest and economical, and yet neither of them has been successful in business. Why is it? asks the New York Express, and that journal proceeds to point out the cause, and, in the course of its remarks, observes:

"The idea too commonly prevails that a mere knowledge of books is the beginning and end of education. The sons and daughters, especially of the rich, grow up with this notion in their heads, in idleness, as it were, with little idea of the responsibilities that await them. Their natures revolt at the mention of 'labor,' not dreaming that their parents before them obtained the wealth they are so proud of by industry and economy. How many young men, college-bred though they may be, are prepared to manage the estates which their fathers possess, and which it may have required a lifetime to acquire? How many young women, though having acquired all the knowledge and graces of the best schools, know how to do what their mothers have done before them, and which the daughters may be compelled to do at some period of their lives? The children of the poor have to labor or starve, and as far as that goes they are educated to be practical. The education that scoffs at labor, and encourages idleness, is the worst enemy for a girl, man, or woman. Instead of ennobling, it degrades; it opens up the road to ruin. The education which directs us to do what we are fitted to do—that respects labor—that inculcates industry, honesty, and fair dealing, and that strips us of selfishness, is the education we do need, and that which must become the prevailing system of the country before we can be a people either happy or prosperous."

RUDIMENTAL ACCURACY IN EDUCATION.

At the distribution of certificates to the successful candidates at the late Oxford Local Examination, at Exeter, a few days ago, the Right Hon. Sir J. Coleridge delivered an address, in the course of which he said:—"I would press the importance of that which the University of Oxford adhered to, to the great disappointment of many persons, namely, the sticking to the elements, and saying that nothing shall supersede accuracy in the lower and rudimental parts of education. An examiner had a class before him—the first class in arithmetic. They were able to answer questions; they had gone through all the higher branches of arithmetic, and were prepared to answer anything. But he said, 'I will give you a sum in simple addition.' He accordingly dictated a sum, and cautiously interspersed a good many ciphers.—Suppose, for instance, he said, 'a thousand and forty-nine.' He found there was not one in the class who was able to put down that sum in simple addition; they could not make count of the ciphers. That showed him the boys had been suffered to pass far too quickly over the elementary parts of arithmetic. The examiner took them in grammar, and quoted a few lines from Cowper:

'I am monarch of all I survey,
My right there is none to dispute.'

'What governs right?' There was not a boy could say, till it was put to them 'none to dispute my right.' Then:

'The beasts that roam over the plain,
My form with indifference see.'

None could tell what governed 'see' or what 'see' governed after it. These are instances that I think it not useless to mention, for the purpose of drawing the attention of intelligent schoolmasters to the necessity of attending—not merely once in the beginning, but going back from time to time—to the elements."—*English paper.*

THE TEACHINGS OF ARITHMETIC.

When the pupil does not understand the question or proposition, he should be allowed to reason upon it in his own way, and agreeably to his own associations. Whether his way is the best or not, on the whole, it is the best way for him at first, and he ought by no means to be interrupted in it, or forced out of it. The judicious teacher will leave him to manage it entirely by himself, and in his own way, if he can. Or, if he meets with a little difficulty, but is still in a way that will lead to a proper result, he will apply his aid so as to keep him in his own way. When the scholar has been through the process in his own way, he should be made to explain how he has done it; and if he has not proceeded in the best way, he should be led by degrees into the best way. Many teachers seem not to know that there is more than one way to do a thing, or think of a thing; and if they find a scholar pursuing a method different from their own or that of the text book, they suppose of course he must be wrong, and they check him at once, and endeavor to force him into their way, whether he understands it or not. If such teachers would have patience to listen to their scholars, and examine their operations, they would frequently discover very good ways that have never occurred to them before. Nothing is more discouraging to scholars, than to interrupt them, when they are proceeding by a method which they know to be right; and to endeavor to force them into one which they do not understand, and which is not agreeable to their ways of thinking. And nothing gives scholars so much confidence in their own powers, and stimulates them so much to use their own efforts, as to allow them to pursue their own methods, and to encourage them in them.—*Warren Colburn.*

THE HUMAN MIND.—How vast, how marvellous the amplitude of the human understanding!—a principle so nearly allied to the Divine, that, like images of the resplendent worlds above, impressed on a tranquil sea, the thoughts of God glance upon the peaceful, meditative soul, and the Infinite is reflected through the finite, for the improvement and elevation of the whole race of men.

WEYER'S CAVE.—NO. IV.

At the entrance of Jefferson's Room is an oval stalagmite of enormous size, gradually diminishing toward the top, and having the appearance of being left in an unfinished state. It is thirty-six feet in length, by about thirty in breadth, and the same in height. "The peculiarity and beauty of this stalagmite consist in its being composed of several stories or stages, which are separated by several horizontal layers of crystal spar, and from layer to layer the space is filled up with perpendicular flutings, formed by the dropping stalactites descending from stage to stage. This is most happily denominated the Tower of Babel, for the tower strictly resembling the mass that yet remains of this stupendous edifice on the plains of Shinar, it is nevertheless very like the popular representations of the Tower of Babel accompanying the old editions of the Bible." Behind this Tower we find Sir Walter Scott's Hall, and Sir Walter's Library. In the center of the former is an elevation called the Tomb, and fancy has not failed to find, in the numerous incrustations which adorn these rooms, many imitations of the armor and baronial trophies which filled the classic Hall and Library of Abbotsford.

Snow Hill resembles in form and size the Tower of Babel, but its top is crowned with a mass of dazzlingly white spar, suggesting the name it bears. Near the Hill is a formation bearing the names of Oyster Shell and Fly Trap. "Both of these names," says Miss Carry, "are in some sort descriptive, but neither in poetical keeping with the object designated. The stalactites of which it is formed are two thin layers, nearly circular in shape, and from five to six feet in diameter. These hollow sheets are joined at their smaller end precisely like the shells of an oyster, and stand apart at the larger and outer end until they gap open a width of several feet. The inner surface of these shells is perfectly smooth, but their exterior is covered with all sorts of strange appendages. From the under one hangs a collection of folds resembling the bosom ruffle of a shirt, or the full lace trimmings of a lady's cap, depending edgewise, and so translucent as to admit of candle light shining through them. Some of these ruffles are of the purest snowy white, others are of a dull yellow, and others again of a brown color. Nature has done her starching so well that notwithstanding the continual moisture to which they are exposed, they do not in the least grow limp."

A little beyond these, a recess in the wall leads to the termination chamber, a room situated two thousand five hundred feet from the entrance of the cave. Here is a fine spring of water covered over with a very thin, yet strong lid of rock. This is the last point to which visitors penetrate, and as it is somewhat difficult of entrance, the name of the traveler, Bacon, has been given to the stalagmite at the entrance, and the fountain has been appropriately named the Source of the Nile.

The return may be made much the most interesting part of the route, since many of the rooms present a very different appearance when viewed from different points. But many become too much fatigued, and too anxious to look again upon the smiling earth and the o'erarching heaven, to linger long in these subterranean caverns. Miracles of beauty and wondrous freaks of fancy were hurriedly noticed, and at midnight our party emerged from the mouth of the cave, and with glad hearts entered the grove through whose leafy arches the blue sky and the silver stars looked down with a gentle radiance, never before so beautiful.

There is much to awaken poetic fancy in the darkness and silence of this strange palace—in the patient toil of Nature through unknown ages—in the strange creations which start up like pale ghosts at almost every wave of the torch, and in the solemn vigil of "the Guards" watching out the long procession of centuries, but neither poet's pen nor artist's pencil can convey an adequate impression of the wonders which fill this celebrated cave.

BERTHA MORTIMER.

Newark, N. Y., 1859.

ECONOMIES OF MODERN SOCIETY.

We seem to be approaching a time, says Dr. Potter, when valuable use will be found for everything, however vile and apparently worthless. Take rags, for example; when they have ceased to be fit covering even for a beggar, and are cast out, loaded with filth, they are carefully collected, transported as precious freight from one country to another, and, after being washed and bleached, and subjected to the operation of cutters and presses, come forth a beautiful white fabric, ready to receive and transmit to distant places or ages the records of wisdom, or the messages of business, or the confidential breathings of friendship. So bones and offal, which have been thrown into the streets, are picked up and carried to the sal-ammoniac factory, where, after being boiled, distilled, &c., they yield grease for soap; and oil which, on being burned in close apartments, deposits the black soot called lamp-black, and affords at the same time the carbonate of ammonia, or hartshorn; the sulphate of soda, or glauber salt, and lastly, sal-ammoniac. Horns, which are attached to hides when purchased by the tanner, are separated, sold to the makers of combs and lanterns, who make combs of one part; knife-handles, tops of whips, &c., from another; glue again from another; fat for soap from another; the transparent part of lanterns from another; and finally, by grinding down the bony substance which remains after all these operations, they have a manure which they sell to the farmer. The prussiate of potash, a beautiful mineral, by which we obtain prussian blue, is produced from the hoofs of horses and cattle; a black dye, for the use of calico printers, is extracted from old tin kettles

and worn out coal scuttles; bread, which, though not very palatable is still nutritious (?) and digestible, has been obtained from sawdust! and linen rags, mixed with a common acid, have been made by chemists to yield more than their own weight of sugar.—*Scientific Artisan.*

DAMASCUS.

DAMASCUS is the oldest city in the world. Tyre and Sidon have crumbled on the shore; Baalbec is a ruin; Palmyra is buried in the sands of the desert; Nineveh and Babylon have disappeared from the Tigris and Euphrates; Damascus remains what it was before the days of Abraham—a centre of trade and travel—an island of verdure in a desert—"a predestinated capital," with martial and sacred associations extending through more than thirty centuries. It was "near Damascus" that Saul of Tarsus saw the "light from heaven above the brightness of the sun;" the street which is called Strait, in which it was said "he prayeth," still runs through the city. The caravan comes and goes as it did a thousand years ago; there are still the sheik, the ass, and the water-wheel, the merchants of Euphrates and of the Mediterranean still "occupy" these "with the multitude of their waters." The city which Mahomet surveyed from a neighboring height, and was afraid to enter, "because it is given to man to have but one paradise, and for his part, he resolved not to have it in this world," is to this day what Julian called "the eye of the East," as it was in the time of Isaiah, "the head of Syria." From Damascus came the damson, our blue plum, and the delicious apricot of Portugal, called damaso; damask, our beautiful fabric of cotton and silk, with vines and flowers raised upon a smooth, bright ground; the damask rose, introduced into England in the time of Henry VIII.; the Damascus blade, so famous the world over for its keen edge and wonderful elasticity, the secret of whose manufacture was lost when Tamerlane carried off the artists into Persia; and that beautiful art of inlaying wood and steel with silver and gold, a kind of Mosaic, engraving and sculpture united, called Damas-keening—with which boxes, bureaux, swords and guns are ornamented. It is still a city of flowers and bright waters; the streams from Lebanon, the "rivers of Damascus," the "rivers of gold," still murmur and sparkle in the wilderness of "Syrian gardens."

WANT OF AIR.

A LATE writer thinks that the "old fashioned fireplace" was one great source of health. We quote: "Now it is remarkable to observe how simultaneously the gradual introduction and use of stoves, and the diminution of life, and the increase of mortality in the United States, have advanced together. Fifty or sixty years ago, stoves were not much in use. In all the old houses, which have been built for that length of time, and in many built long since, we find the old, open fireplace—but now no longer in use; being either permanently or temporarily closed up, and replaced by a close iron stove, or at best by a small grate, or else by a furnace. And correspondingly we find, wherever we have the records from which to determine, a deterioration of life and health regularly progressing with the change in our domestic habits and arrangements. Thus we have seen the average age at which death takes place has, within the last half century, diminished from six to nine years; that in Philadelphia and New York, the age at which half the deaths occur, has receded within the same period, from twenty-four years to less than five years. And that the rate per cent. of infant mortality in Boston nearly doubled in twenty years, and in New York city actually trebled in forty-seven years; the deaths of children under five years of age in 100,000 inhabitants of all ages, having regularly increased from 688, in the year 1816, to 2,004 in an equal population in the year 1857."

These facts are worthy of consideration. Without proving that stoves are unwholesome, they do prove, we think, that our houses should be properly ventilated, and our rooms better supplied with oxygen. The old-fashioned fireplace ventilated the room in which a fire was kindled. The part formerly played by the open fireplace should now be performed by some other opening.

THE RIVER JORDAN.

A CORRESPONDENT of the Utica Herald thus describes the River Jordan:—"A line of low green forest trees betrayed the course of the sacred river through the plain. So deep is its channel, and so thick is the forest that skirts its banks, that I rode within twenty yards of it before I caught the first gleam of its waters. I was agreeably disappointed. I had heard the Jordan described as an insipid, muddy stream. Whether it was the contrast with the desolation around, or my fancy had made its green banks so beautiful, I know not, but it did seem at the moment of its revelation to my longing eyes, the perfection of calm and loveliness. It is hardly as wide as the Mohawk at Utica, but far more rapid and impassioned in its flow. Indeed, of all the rivers I have ever seen, the Jordan has the fiercest current. Its water is by no means clear, but it is as little deserves the name of muddy. At the place where I first saw it, tradition assigns the baptism of our Savior, and also the miraculous crossing of the children of Israel on their entrance to the promised land. Like a true pilgrim, I bathed in its waters and picked a few pebbles from its banks as tokens of remembrance of the most familiar river in the world. Three miles below the spot where I now stand, the noble river—itsself the very emblem of life—suddenly throws itself on the putrid bosom of the Dead Sea."

TEMPERANCE.—Solly, the great French statesman, always kept up at the table the frugality of which he had been accustomed in early life in the army. His meal consisted of a few dishes dressed in the plainest manner. The courtiers often reproached him with the simplicity of his table; and he would reply, in the words of an ancient:—"If the guests are men of sense, there is sufficient for them; if they are not, I can very well dispense with their company."

We devote the whole of the YOUNG RURALIST's column the present week to answering a number of inquiries from our young friends, and have others still on hand that will receive attention in a week or two.

MAKING PICTURE FRAMES.—Will some Young Ruralist inform me how to make picture frames from pine burrs, acorns, beech nuts, &c.? What kind of frames should be used, in what order should they be placed, and how fastened to the frames? Any information on the subject will be kindly appreciated by—G. B. W., Penn Yan, N. Y., 1859.

ARTESIAN WELLS.—I see occasional notices in papers of what are called artesian wells, which are sunk from 900 to 2,000 feet. What is the object of boring so deep in the earth for water, when it can be found almost anywhere, from 20 to 50 feet from the surface? And what kind of machinery is used to do the work?—J. H., Glens Falls, N. Y., 1859.

ARTESIAN WELLS are bored through rocks by a heavy steel borer, moved by a spring, as common drills are by hand. They are only 3 to 5 inches in diameter, and bored so deep because water enough is not found at 30, or 300, or 2,000 feet deep. These wells raise the water above the surface of the well 50 to 150 feet deep, so that the power of the water is easily applied to desired purposes. J. H. should read the account of the well at Louisville, Ky., 2,050 feet deep, in this paper half a year since.

SUN-DOG.—Will some one please explain the philosophy of what is called a sun-dog, supposed to be an indicator of storms?—C. H. T., West Northfield, Mass., 1859.

A SUN-DOG, or mock-sun, is caused by the reflection or refraction of light from a cloud or hazy atmosphere, so as to give light like a far inferior sun. It is one of the common halos or parhelia, and seems to occur when the state of the atmosphere is fitted for storm or change.

FREEZING BOILED WATER.—Seeing that you reserved one column of your paper for the children, I thought perhaps I might gain some information respecting a question which I am unable to answer. Why does water that has been boiled freeze sooner than that which has not? I have not the means to find the true answer, as I reside in the country, but I hope you will not deem it too simple to respond to.—P. S., Purcellville, Va., 1859.

LET P. S. expose two equal portions of water in similar vessels, in a cold day or evening, one having been boiled and the other not, and see what the trial will show; a good experiment for him. Then let him report to us the result, and offer his question. He will receive the due answer.

ELECTRICITY IMPONDERABLE.—If the theory, as taught in chemistry and philosophy, that electricity is *imponderable* is correct, how is it that a flash of lightning can penetrate the air, a ponderable body, and what causes the report?—E. S., Crum Creek, N. Y., 1859.

ELECTRICITY is said to be *imponderable* because it cannot be weighed; this does not prevent its being being very elastic and powerful. The explosion (thunder) is caused by the air, separated by the passage of lightning, closing again with great force.

PRESSURE ON A MILL-DAM.—Please inform me, through the columns of the RURAL, whether there will be more pressure on a mill-dam in which the water stands back from the dam ten miles, than there would be in the same dam if the water stood back only ten feet, provided that in each case the water is of the same depth?—J. B., Kilmarnock, 1859.

ANY common school philosophy will show J. B. that the pressure of water is proportional to the depth.

MINERAL ROD.—Will you, or some of your able assistants, please give me through the columns of your paper information as to a mineral rod—whether there be such a thing—if so, where I can get one, and also the price?—S. C., Pembroke, N. Y., 1859.

MINERAL RODS have gone out of use, because they are good for nothing. If S. C. wished one, he can make one out of a forked limb of the apple tree, or of witch-hazel, which will work admirably, if he knows how to use it—all depends on this.

WATER-PROOF CEMENT.—I have a favor to ask of you. Can you, or some of your numerous readers, inform me how to make a cement that will adhere to glass, wood, or stone; and harden under water, and not injure animal or vegetable life? I have tried several kinds, but do not succeed, and presume I do not use the right material. By giving me the desired information, you will confer a favor on one of your—CONSTANT READERS, Phelps, N. Y., 1859.

PUTTY and litharge, well mixed together, makes a good cement, but it must be well dried before water is applied. Want of patience in this respect causes failure. Let it dry three weeks. We presume "Constant Reader" is endeavoring to make an aquarium. Rosendale cement is good for the bottom, but will not adhere well to glass, and does not make a neat job for the corners. The English use what is called Roman cement, but we have not been able to obtain it in this country. Geo. Fraunberger, of this city, the artist who makes most of the engravings for the RURAL, prepares cloth, with a water-proof composition, which makes a very neat job, and never fails. Strips sufficient to make an aquarium about eighteen inches square, would cost about fifty cents.

GENESSEE MODEL SCHOOL FOR BOYS.—Will you, or some of your numerous correspondents, please inform me if the "Genessee Model School for Boys" is in operation now or not. If it is I would like to know the address necessary to send for a circular to that institution. As I have no other means of ascertaining whether the above school keeps now or no, an answer through the RURAL will greatly oblige—JOS. R., Geneva, N. Y., 1859.

THE building of the Model School was burned several years since, and the school in consequence broken up. Prof. SARGENT, the Principal, we believe is now the Principal of a school in Dansville.

CONTENTS OF THIS NUMBER.

AGRICULTURAL.	
Inquiries and Notes.—Potatoes Changing in the Hill; Root Cutters—Lever Root Cutter, (Illustrated); Rotary Root Cutter, (Illustrated); The Way to Approach a Bee-Hive.	381
European Agriculture.—Change of Seed Wheat, Early Sowing, &c.; Orders for Pigs; Cultivating Hops; Growing the Same Crop Too Often.	381
Group of Shesha Merino Sheep, (Illustrated).	381
Wintering Stock.	381
What has Become of the Butter?	382
Small and Large Potatoes for Seed.	382
Private Notes Worthy of Publicity—A Critic Criticized and Complimented—Value of Straw—Its Proper Office—Manuring Pastures and Meadows.	382
How to Make Beeswax—A New Process.	383
Weeklies Preferable to Monthlies.	383
Corn Stock Jack—Short Names Needed.	383
What is a Pure Blood?	383
Frost-Bitten Fodder for Poultry.	383
Rural Spirit of the Press.—Contraction of the Feet of Hens; Muttons; An Experiment; Kidney Rot in Swine; Cider Making Without Pressing; Wheat Planted in Hills.	383

HORTICULTURAL.	
American Fruits in Europe.	383
Hedge Growing—The Hawthorn.	383
Flowers for the Parlor.	383
Culture of the Hyacinth in Pots.	383
Culture of the Hyacinth in Glasses, (Illustrated).	383
Culture of the Crocus in Pots. (Two Illustrations).	383
Inquiries and Answers.—Cranberry Culture; Onondaga Pear and Isabella Grapes from Onondaga; Willow, Strawberries, &c.	383

DOMESTIC ECONOMY.	
Use of Saleratus and Cream Tartar; Tea-cake; French Loaf Cake; Queen Cake; Toasting Chestnuts; Rolling Jelly Cake; Compotition Cake; Pork Cake; How to Cook Potatoes; Tip Top Cake.	383

LADIES' OILIO.	
Lady Franklin, (Poetical); Welcomed to Gold; The Absent; Grow Beautiful; About the Education of Young Ladies; Simplicity of Dress; Babyhood.	384

CHOICE MISCELLANY.	
On the River, (Poetical); Cultivate the Best Soil—No, It, Poverty Not So Great a Curse, November, (Poetical); Old Ace.	384

SABBATH MUSINGS.	
The Rainy Day, (Poetical); Voices; True Contentment; Speak Low to Me, (Poetical).	384

EDUCATIONAL.	
Acquirement of True Principles: The Old School House; The Education Most Needed; Rudimentary Accuracy in Education; The Teachings of Arithmetic; The Human Mind.	385

USEFUL OILIO.	
Weyer's Case—No. IV; Economics of Modern Society; Danacuss; Want of Air; The River Jordan; Temperance.	385

YOUNG RURALIST.	
Making Picture Frames; Artesian Wells; Sun-Dor; Freezing Boiled Water; Electricity Impenetrable; Pressure on a Mill-Dam; Mineral Rod; Water-Proof Cement; Genesee Model School for Boys.	385

STORY TELLER.	
November, (Poetical); Kate Richmond's Bouquet; and What Became of It.	388

ROCHESTER, N. Y., NOVEMBER 26, 1859.

DOMESTIC NEWS.

Matters at Washington.

The estimate of the War Department has been reduced \$2,000,000 for next year, and half a million below the actual appropriation made by Congress.

The War Department has received a dispatch from Gen. Twiggs, dated San Antonio, 12th inst., saying that an express had just arrived from Rio Grande city, stating that Cortinas had laid Brownsville in ashes, killing a hundred American citizens, and Cortinas, with 800 men, was marching toward the Nueces. Full credence was not given to the report.

Mr. Ward, Minister to China, recently expressed a wish to return home after exchanging the ratification treaty, but the President objects, and wishes him to go to Shanghai and settle the American claims for which the treaty provides.

The correspondent of the N. Y. Tribune writes that Secretary Cobb has not commenced writing his Annual Report, and will not until the latest figures are received. The clerks are now digesting information already obtained from his notes and references. Besides apparent balance of \$4,700,000 in the Treasury, the Secretary has \$5,000,000 in notes received from customs during the heavy imports, which are capable of re-issue, and about \$1,000,000 anticipated by miscellaneous securities. These two sums, with a temporary draft upon the working margin of the Department, will enable him to meet the Post Office demand of about \$3,000,000 by about the 1st of January, and \$1,000,000 for Congressional mileage. If the revenue fulfills his anticipations afterwards, he can get on; if not, a new law will be necessary.

Upwards of twenty members of Congress are now here, and others have been here to make arrangements for accommodation during the Session.

Nothing can yet be positively ascertained concerning the precise object of sending large bodies of troops to the Rio Grande further than the protection of that frontier from the attacks of the force of Cortinas, to utterly destroy which it is the purpose of the Administration. As it was but recently supposed, in official quarters, that two companies from Fort Clark and one from Baton Rouge would be sufficient to check the movements of that brigand, the augmentation just ordered has naturally excited suspicions of other contemplated measures. Various speculations are indulged in, but the most plausible theory, formed on certain revelations deemed to be reliable, is that Spain, France and England meditate prompt action in satisfying claims in which their subjects are interested, and which may involve the national existence of Mexico, or the substitution of a monarchy under the protection of those powers. In

view of these circumstances, the probabilities are that our Government may feel constrained to occupy the Northern part of Mexico to secure the ratification of the claims of our citizens against that country, as well as for the security of Americans on the frontier. From all that can be ascertained, it is fair to presume that some of the vessels of the home squadron will soon proceed to Vera Cruz, and other ports of Mexico. Indeed this seems to be certain, so impending are the reported purposes of France, England and Spain now regarded in official quarters.

Personal and Political.

The official returns of the late election in this State have not all been received as yet, but sufficient intelligence has come to hand to show that Jones, Richmond and Skinner, Democrats, have been elected by majorities ranging from 400 to 1,200. Forrest, Republican candidate for State Prison Inspector, has between 500 and 600 majority over his Democratic competitor.

Augustus Belmont, our former Minister at the Hague, is to remove to Europe, to take the place of head of the house of Rothschild.

Ex-Gov. Gilmer died at Lexington, Ga., Wednesday afternoon, 16th inst., after a month's illness.

A writer in *Once a Week*, gives the following account of the death of the great Pitt:—"Pitt died at his house on Putney Heath, near the spot where Canning and Castlereagh fought their duel, in a very neglected state, none of his family or friends being with him at the time. One, who was sincerely attached to him, hearing of his illness, rode from London to see him. Arriving at his house, he rang the bell at the entrance-gate, but no one came. Dismounting, he made his way to the hall door, and repeatedly rang the bell, which no one answered. He then entered the house, wandered from room to room, till at last he discovered Pitt on a bed—dead and entirely neglected. It is supposed, that such was his poverty he had not been able to pay the wages of his servants, and that they had absconded, taking with them what they could."

The vote called out in New York was only 56,353 in all, where One Hundred and Four Thousand stood on the Registers.

Senator Douglas' physician considers his condition considerably improved, and he is considered convalescent.

The Brooklyn Star seriously and strongly urges Horace Greeley for President.

The returns of the election, in Louisiana, for Governor, thus far, foot up 9,688 for Moore, Dem., against 6,775 for Wells, Opp. The Representatives stand 42 Democrats to 22 Opposition and six Independent.

The London papers are remarkably well informed upon the personnel of American politics. The latest evidence of this is the announcement in one of them that "among the candidates of the Democratic party for the Presidency, the most prominent is Stephen A. Douglas, a black man, who for many years has conducted an abolition and emancipation paper with signal success."

The Dubuque Herald gives the following footings of the official vote on Supreme Judges at the late election in Iowa:

	Republican.	Democrat.
Rowe.	56,040	59,885
Stockton.	55,767	57,625
Baldwin.	55,740	58,418

An election for State officers takes place in Kansas on the 4th of next month. Samuel Medary is the Democratic candidate for Governor, and Gov. C. Robinson the Republican candidate.

The official vote of Maryland at the recent election foots up Democratic 83,468, Opposition 48,806. This, however, includes the vote of Baltimore, much of which is claimed to be fraudulent.

The Milwaukee Sentinel now has returns from all but eleven counties in Wisconsin. The majority for Randall, Rep., thus far is 3,000, and the counties to come will probably increase it.

The Provisional Government of Nebraska has gone into operation by the organization of both branches of the Legislature. Mr. Steele, the Governor elect, delivered a message in which he urges the necessity of the present form of government until Congress shall take action in reference to the Territory.

News Paragraphs.

A firm in Minneapolis is engaged in building eight large ice boats, which they intend to load with ice at the foot of Lake Pepin, during the winter, and run in the spring to Memphis and other southern markets. The boats will hold in the aggregate about 29,000 tons.

The Elmira Female College is in a flourishing condition. President Cowles informs us that the aggregate attendance is greater at this time than ever before since the opening of the institution, the number of pupils now in regular attendance being about one hundred and sixty.

CALIFORNIA bids fair to excel Ohio in the production of native wine. Most of the wine made there is consumed in the State, and hence very little of it is seen in this quarter; but one of the San Francisco papers advertises a list of 26 brands.

The Secretary of the Treasury has received through the mail an anonymous letter enclosing sixty dollars, with a statement that it belongs to the Indian Department. The conscience of some defaulter has been touched.

The last overland news received in San Francisco was telegraphed from a new station, Pochocho Pass, about one hundred and ten miles from that city, the operator seated on a box, and holding the machine in his lap, while the files of the Eastern papers are spread on the grass around him. The telegraph line is slowly creeping eastward at the rate of about four miles per day.

The Bordens, who solidify milk up in Litchfield county, Ct., have also succeeded in solidifying sweet cider, so that five quarts are reduced to one, which becomes a jellyish substance, and can always be made sweet and liquid again by adding water. The *Winsted Herald* editor, who ought to know, seems to like the article.

A Vermont paper states that a short time since

a man in Coventry, while engaged in digging a well, came upon a quantity of frogs, embedded in the clay, about twenty feet below the surface. After exposing them to the air a short time, they became active and hopped off.

A hard winter is predicted in California. The crop of mast is enormous. The trees in many places are literally loaded down with acorns. The Indians predict, "heap snow, heap snow—much wet."

The foundation of a new Fort on Hog Island Ledge, Portland Harbor, has just been completed. The foundations could only be worked at low water, and the process was a long and tedious one. The cost of the Fort is \$480,000, and it is to be fitted to mount ninety-three guns.

At the first census of the United States, which was completed in 1791, the population was 3,921,326; revenue, \$4,771,000; exports, \$10,000,000; imports, \$20,000,000.

The government of Peru has entered into a contract with Dr. Edward Cullen for the introduction of 25,000 Irish emigrants. The principal stipulations are that the emigrants shall renounce allegiance to their government, and must become Peruvian citizens. The government of Peru has to pay their sea passage, and every colonist is to have about nine English acres of land, at an elevation of 4,000 feet above the level of the sea.

A LITTLE plant is found upon the prairies of Texas, called the "compass flower," which under all circumstances of climate, changes of weather, rain, frost or sunshine, invariably turns its leaves and flowers towards the north, thus affording an unerring guide to the traveler who, unaided by the needle, seeks to explore those vast plains alone.

The last *RURAL* contained the offer of a Southerner for Mr. Giddings, dead or alive. The reward has met the eye of Mr. G., and he replies that "when he has done with his *caput*, the enraged Southerner can have it for \$5,000."

The Jews of Cincinnati have agreed to close their places of business on the Christian Sunday, and to allow no business to be transacted on that day in their stores and offices.

FURS EXTRAORDINARY.—A New York correspondent of a Charleston paper says, our leading fur manufacturers have been working up, during the past summer, skunk skins, exclusively intended for the foreign market, where the skunk and his remarkable qualities are entirely unknown. Large quantities of them go to Europe, and they are highly prized there under various fictitious and fancy names.

SAFETY OF THE NORTH STAR.—For some days a great deal of anxiety has been felt in reference to the safety of this California steamer, as she was nearly two weeks overdue, and had not been heard from. On the 17th inst., the joyful intelligence was received that all was right with the steamer, and the 878 souls on board, by a letter to the *Charleston Courier*, stating that she got ashore about the 26th of October on the French Keys and remained on the Keys six or seven days, but finally got off without extra assistance by throwing over some coal and with a loss of anchors, and proceeded on her voyage on the 2d inst.

RESCUE OF FORTY-THREE PERSONS FROM A SINKING VESSEL.—The Hungarian which arrived at Portland last week, put into St. Johns, N. F., on the 9th inst., for the purpose of landing forty-three persons who had been rescued from the British schooner John Martin, bound from Labrador to Carbonifer. In addition to her own crew, the John Martin had on board the crew of another schooner which was wrecked on the coast of Labrador in September. The rescue was not made without considerable difficulty and danger, the sea running so high that it was next to impossible for the life-boat to approach the sinking vessel without being stove to pieces. But the task was finally accomplished without accident. The crew who manned the life-boat were presented by the passengers of the Hungarian with two sovereigns each, and a silver cup was also voted to each one of the brave fellows.

GLOOMY PROSPECTS FOR RAILROADS.—One hundred million dollars of railroad bonds mature within the next five years. It is estimated that not five per cent. of this amount will be returned from the earnings of the roads. From a table of one hundred and twenty roads, not one-third of them declared a last half-yearly dividend.

EXPORTS.—The statement is made that the exportation of specie, from the first of January to the first of November, reached the sum of \$53,270,614, while the exports of produce amounted to \$48,223,748, or only fifteen million more specie than produce.

SCHOONER WRECKED.—The schooner Charles S. Peaslee, Capt. Baker, from Jacksonville for Philadelphia, was totally wrecked in a gale while at sea, when all hands perished except one seaman. At the commencement of the gale the vessel was thrown on her beam ends, the sea sweeping over her, filling the cabin and fore-cabin, drowning the captain's wife, who was below, and dashing the man from the wheel. The captain perished in an effort to save his wife, and all the sailors excepting one were washed overboard in attempting to cut away the masts. The seaman who was saved was named George Satterly. He was taken off the 2d inst., lat 31° 18', lon. 77° 55', by the bark Samuel Shepherd, Capt. Hathaway, which arrived at Boston. The C. S. P. was 164 tons burden, and owned by Mr. Hoffman, of Philadelphia.

FROM MEXICO AND BROWNSVILLE.—The *Indiana Courier* of the 25th, says that an express from the Sheriff of Mercer county, has arrived, and reports Cortinas with 1,500 men and nine cannon in full possession of the Rio Grande, from Brownsville to Rima. His forces are scouring the country. All communication west of the Nueces was cut off with Corpus Christie. Capt. Tobin, with 100 men from Corpus Christie, had been defeated, and it is feared that he is cut off. The reports, however, are conflicting, and probably exaggerated. The latest reliable accounts from Brownsville, are received by the New Orleans merchants, direct from Brownsville to the 4th, when affairs were unchanged.

NEW LINE OF SUBMARINE CABLE.—Mr. Sam'l. C. Bishop, of New York, has just completed an

important length in our Cape Cod telegraph facilities by laying a very substantial submarine telegraph cable of his own manufacture, from Edgartown to Nantucket, a distance of from eight to ten miles. This new line will supply a want much felt by the people of Nantucket. The new line connects with the Boston and Cape Cod line at Edgartown.

FOREIGN NEWS.

GREAT BRITAIN.—It is asserted that England will join the Congress, and that the French and English Governments have agreed on a basis for the settlement of the Italian question.

The Great Eastern left Holyhead on the 2d, and reached Southampton on the 4th. She experienced very rough weather and a heavy sea on the passing round. The *Times*' account of this third trial says that when the ship was exposed to the roll of the Atlantic, she rolled and dipped with ease. The ship seemed to swing herself with a side-long gentle motion over every wave, dropping deeply and easily beyond them. The whole roll of the vessel is calculated at only eight degrees each way, or sixteen degrees in all, an every-day amount to smaller vessels, though something for one which was supposed to be almost immovable by wind or sea. The greatest speed attained was 15½ knots, close on to 18 miles per hour. However, the run from Holyhead to Southampton is pronounced far more satisfactory than either of her previous trips. The engines were under the sole control of Mr. McLennan, Chief Engineer of the ship.

FRANCE.—The organization of the French army for China is considered definitely settled, and the preparations at the seaports for embarkation have already commenced.

Cholera had broken out among the French troops destined to invade Morocco, and carried off several distinguished officers, including Colonel Lafout, commanding the engineers. The ravages exceeded fifty per day, and the total deaths were 1,500.

ITALY.—It was vaguely reported that Garibaldi, in his interview with the King of Sardinia, declared that Italy was betrayed, and that he would lead the revolution. The King protested against such proceeding.

The Sardinian Plenipotentiaries have received orders from Turin to sign the treaty of peace. It is believed that the treaty will be signed tomorrow, and the convocation to be held at Paris will immediately follow.

The elections of members of the Municipality at Florence and other places have terminated without any result, almost all the electors having abstained from voting. The National Assembly has been convoked for Nov. 7th.

AUSTRIA.—The Vienna correspondent of the *Times* says it is tolerably certain that the moment in which the Austrian Government will have to make concessions to Hungary, is not far distant.

COMMERCIAL.—Breadstuffs.—Market quiet, though wheat and corn were slightly higher. Richardson, Spence & Co. quote flour dull, with sales of new State at 24s 6d. The range of prices were 22s 6d to 24s 6d. Wheat steady, and inferior and heated descriptions 2s 3d better. Red 9s 3d to 9s 6d; white 9s 3d to 9s 6d. Corn firm and advanced 6d to 1s on the week. Yellow 3s 6d to 3s 8d; white 3s 6d to 3s 8d. Provisions.—Market dull. Bigland, Athya & Co., James McHenry & Co., Richardson, Spence & Co., quote beef heavy, and holders offering a decline of 2s 6d. Pork steady at 50s. Lard firm at 56s 6d for refining extra.

From the Pacific Side.

The Overland Mail arrived at St. Louis on the 17th inst., with California dates of the 28th ult. The accounts from Carson Valley and Walker River Mines continue to excite great attention. A stampede of Californians in that direction has already commenced, and a promised emigration equal to that of Fraser River. These mines are on the east side of the Sierra Nevada, and are supposed to extend from Honey Lake on the south about 200 miles. The principal discovery is called Gold Hill. It is a mound 60 feet high, and 5,000 feet long, and 200 feet wide, and lies 20 miles north of Carson Valley. It is traversed by veins of quartz, a part of which when decomposed, realized from \$500 to \$2,500 per ton.

Gov. Walker had appointed Judge H. T. Haron, formerly of Ky., as United States Senator, to fill the vacancy caused by the death of Mr. Broderick. The new Senator was to leave for Washington on the steamer of Nov. 5th.

Colonel Lander, Superintendent of the Fort Kearney and Honey Lake Wagon Road Expedition, had completed his work in season, and was about to repair to Washington, having in hand an unexpended balance of \$17,000. His stock, purchased in Missouri last spring at \$13 per head, had been sold for the benefit of the Government, at over \$200 per head.

Business was more active at San Francisco, but without improvement in prices.

The dates from the Sandwich Islands are to Oct. 3d. The prospects of business were poor, and the community was troubled by reports from the Atlantic States, relative to the cheapness of coal oil, which it was thought would diminish the demands for whale oil, and injure the whaling business of Honolulu. Some of the sugar plantations were paying moderately well, but the coffee crop was an entire failure.

The British ship *Achilles*, Capt. Hart, which arrived at Honolulu on the 27th of September, reported that the American clipper ship *Mastiff*, Capt. Johnson, from San Francisco to Hong Kong, having on board one hundred and eighty passengers, of whom one hundred and seventy-five were Chinese, was burned at sea on the 15th of September. The passengers, with the exception of one Chinaman, who was smothered, were safely taken off by the *Achilles* and conveyed to Honolulu. Among the passengers were Richard H. Dana, of Boston, C. O. Harris, George Clifford, and I. H. O. Richmond. The Chinese are said to have lost a large amount of treasure. The cargo, consisting of about 500 tons, was lost. The fire originated between decks from the Chinamen allowing sparks to get among their combustible articles, which soon had the whole ship in a blaze! The escape of passengers was owing to the intrepidity and coolness of Capt. Johnson and his officers, and the fortunate appearance of the *Achilles*. The *Mastiff* was a Boston first class clipper, valued at \$90,000, and was insured for \$80,000 in Boston.

The News Condenser.

- The population of Mobile is set down at 82,000.
- Money is worth in San Francisco from 24 to 30 per cent.
- The mines at Frazer river, it is said, are doing well.
- Two men were suffocated in a corn bin at Chicago last week.
- Amicable relations are established between Turkey and Persia.
- The Canadian Parliament is to meet at Quebec December 7th.
- The wreck of the steamer *New World* has been towed to New York.
- One hay speculator in Canada has purchased 22,000 tons of the article.
- A tree lately cut near Placerville, Cal., furnished 10,240 feet sawed lumber.
- During the week ending Nov. 7, the number of deaths in New York was 301.
- Frederick Douglas sailed from Quebec, for England, on Thursday, 17th inst.
- The aggregate value of the taxable property in the city of New York is \$592,908,476.
- The American treaty with China has been ratified by the Chinese Commissioners.
- A census of Iowa just completed shows that the State has a population of 538,540.
- A spring of salt water has been struck at East Saginaw, Mich., at the depth of 500 feet.
- Vulcanized India rubber is found to be the best material for the manufacture of futes.
- Col. Fremont gave \$500 towards the erection of the Broderick Monument in California.
- It is said that a Mr. Wells has sold a patent for a new kind fish hook, in England, for \$25,000.
- There is an immense amount of prairie on fire in the Northern and Central parts of Illinois.
- The Philadelphia *Advertiser*'s advertisements fill 17 columns of one of the largest papers in that city.
- The taxable property in Texas this year is \$125,343,366, being an increase of thirty millions over last year.
- Six murderers were arraigned on Monday week in the Court of Oyer and Terminer in the city of New York.
- Thomas A. Green, of New Bedford, gathered from one tree, this season, 1,450 perfect pears, of excellent flavor.
- There is talk in England of a World's Industrial Exhibition for 1860 or 1861, the Prince of Wales to be President.
- Baron Liebig says that the quantity of soap used by a nation furnishes a pretty correct indication of its civilization.
- The first hoghead of the new crop of tobacco has been sold at Richmond for eight dollars per hundred weight.
- It is said that Dr. Hayes, who accompanied Kane in his Arctic explorations, intends going again to the North Seas.
- There is a mare near West Troy thirty-four years and six months old. Rather an antiquated specimen of horse flesh.
- Mr. Carey of late has been giving gratuitous exhibitions of horse taming to the carter, cab and omnibus men of Glasgow.
- At the opening of the Court of Common Pleas in Cleveland last week, there were 35 applicants on the docket for divorce.
- An editor down South apologizes for delay in the issue of his paper, as he had an extra "male" to attend to during the week.
- M. Victor Mennet, a well known scientific writer, informs the world that the next deluge will not take place for 6,800 years.
- There are large plantations of pecan-nuts in California, and the article will eventually be exported in considerable quantities.
- A correspondent of the West Randolph Statesman says that gold has been found in the bed of White river, in Bethel, Vermont.
- It is now reported that Senor Oviedo, whose marriage has made such a talk, is an oil merchant, and not worth over \$100,000.
- The exodus of slaves from the borders of Missouri continues unabated. White labor is coming in and that of negroes going out.
- A vein, supposed to be inexhaustible, of the real old-fashioned Pittsburgh coal, has been discovered in Van Buren Co., Iowa.
- The Chicago *Prairie Farmer* speaks of the increase in the culture of Sorghum at the West. It has thus far met with much success.
- Chicago is cursed with obscene hand bills to such an extent that an abatement of the nuisance is urged in some of the papers.
- Ell Thayer keeps at work at Cereso his Virginia free colony. Several New England families have lately purchased homes there.
- An apple, grown this season by Thos. R. Fatten, of Vallejo township, Cal., weighed 82 ounces and was 16 inches in circumference.
- The New Orleans papers estimate the losses by fire in that city for this year to have been one million seven hundred thousand dollars.
- The American Ambassador, in his Chinese box—Solus—"I go to Peking to see the Chinese; the Chinese come to peek in to see me!"
- At the late railroad accident at Albany the locomotive ran through a brick house and carried away the gable end of a frame building.
- A London writer shows that the report that John Bunyan did not write the *Pilgrim's Progress*, is wholly without foundation, and untrue.
- A firm in Bangor purchased five tons of spruce gum, and estimate their sales of the prepared article will this year reach 20,000 boxes.
- A man in Kalamazoo is training an elk to trot. The elk has already trotted against a horse for a purse of \$700, winning by a long distance.
- The silver mines of Arizona are again advertised as very promising. Lt. Mowry has brought away with him 46 pounds in various conditions.
- A letter from Baltimore states that the dead body of one of Old Brown's sons was carried off by the Virginia medical students for dissection.
- One of Van Amburgh's elephants escaped Friday week from his keepers at Williamsburg, and went into the street, smashing things generally.
- The number of hoop skirts made in Danby since April 1st is said to be 950,000, consuming at least 9,100,000 yards of tape and 440 tons of steel.
- A London letter-writer says Kossuth has yet the 60,000 old muskets he purchased in this country. The great Magyar ought to set up a gun shop.

Markets, Commerce, &c.

From remains at last quotations.
Grain—Very choice White Wheat is moving on a little; the advance of the week being equal to 4 cents a bushel. Corn dropping. Barley down about 2 cents; Buckwheat has lost 95 cents.

Pork is coming in pretty freely, and we hear of no sales exceeding 65 1/2 cwt. The decline all round is about 25 cents on the 100 pounds.

Poultry—We have our quotations unchanged. There is a little comparatively speaking, next Thursday being Thanksgiving; in market; the extreme mildness of the weather compelling the farmers to put off dressing until the latest moment.

Butter—Considerable quantities of butter have found their way to market during the past week, and a decline is observable. Eggs are up to 17 1/2 cents a dozen.

Hay is unchanged in price. There is on sale this morning several loads that have been drawn from Murray, Orleans county, about 30 miles distant. Mr. Rooms, the weighmaster, informs us that a considerable quantity of that sold in this market during the past week was brought 40 miles and upwards.

For all other matters see following table:

NOVEMBER.

BY JAMES G. CLARK.

Turn red sun gathers up his beams
To bid the withered earth farewell,
And voices from the swelling streams
Are singing with the evening bell;
The cold lake sobs with restless grief,
Where late the water lilies grew,
While autumn fowl and autumn leaf
Are sailing down the rivers blue.

Forsaken are the woodland shrines,
The robin and the wren have fled,
And winds are wailing through the pines
A dirge for summer's glorious dead;
Even man forsakes his daily strife,
And muses on the bright things flown,
As if in Nature's changing life,
He saw the picture of his own.

I often think, at this sad hour,
As evening weeps her earliest tear,
And sunset glides the naked bow,
And waves are breaking cold and clear,
Of that glad time, whose memory dwells
Like starlight o'er life's cloudy weather,
When side by side we roved the dells
Of proud New England's coast together.

'Twas on old Plymouth's rock-famed shore,
One calm November night, with thee
I watched the long light trembling o'er
The billows of the eastern sea;
The weary day had sunk to rest
Beyond the lines of leafless wood,
And guardian clouds, from south to west,
Arrayed in hues of crimson stood.

We climbed the hill of noble graves,
Where the stern Patriarchs of the land
Seem listening to the same grand waves
That freed them from the oppressor's hand;
We talked of a life's pure and kind,
With gentle forms and loving eyes,
Of happy homes we left behind
In vales beneath the western skies.

A few brief days—and when the earth
Grew white around the traveler's feet,
And bright fires blazed on every hearth,
We parted never more to meet
Until I go where thou art gone
From this dark world of death and blight,
And walk with thee above the sun
That sank upon thy grave to-night.

I hear the muffled tramp of years
Come stealing up the slope of Time;
They bear a train of smiles and tears,
Of burning hopes and dreams sublime;
But future years may never fling
A treasure from their passing hours,
Like those that come, on sleepless wing,
From memory's golden plain of flowers.

The morning breeze of long-ago
Sweeps o'er my brain with soft control,
Fanning the embers to a glow
Amidst the ashes of my soul;
And by the dim and flickering light,
I see thy beauteous form appear,
Like one returned from wanderings bright,
To bless my lonely moments here.

Written for Moore's Rural New-Yorker.

KATE RICHMOND'S BOUQUET;
AND WHAT BECAME OF IT.

BY KATE CAMERON.

It was a clear, sunny day in the latter part of Winter—one of those bright days which sometimes come at that season, as a harbinger of returning Spring—and the streets of our "Modern Athens" were thronged with gaily-dressed belles and fashionable exquisites. Prominent among the stylish equipages passing through Washington street, was an open carriage, containing four ladies—the Misses Richmond and their cousin, Miss WASHBURN. A merry and an interesting group they were, wrapped in velvets and furs, and decked with plumes, laces and flowers; but far more attractive than their French artificials, were the elegant bouquets which they all carried; for during their drive about town to show the "lions" of their native city to their guest, GEORGIA WASHBURN, they had called at a favorite greenhouse and procured these costly blossoms, in view of a grand levee to which they were that evening invited—for, fair and fashionable as these ladies were, they had not as yet succeeded in attaching to themselves those most desirable appendages, admiring beaux, who would have furnished them, as a matter of course, with the coveted bouquets; but very fortunately their wealthy papa supplied this deficiency, as far as money could do it.

Owing to the crowd of vehicles, the driver found it necessary to stop for a few moments near one of the crossings, and the youngest of the company, KATE RICHMOND, perceived a little boy standing very near, and gazing wistfully at the flowers in her hand. There was a sad and earnest expression in his clear blue eyes, which pleaded more eloquently than words, and obeying the generous impulse of her sympathizing heart, KATE reached out her hand, saying, "Here, little boy, you may have these flowers, if you would like them."

The boy looked at her with a glance of eager surprise, then exclaimed, as he grasped the bouquet, "Oh! thank you, thank you!" and disappeared quickly in the crowd, while Miss KATE received the wondering stare of the passers-by, and the rather uncharitable comments of her companions, with the unfeigned good nature which ever irradiated her face with smiles.

The united voices of sisters and cousin, denounced her proceeding as absolute folly. "Why, KATE RICHMOND! I'm positively ashamed of you!" was Miss JULIA's exclamation. "Giving those splendid flowers to a dirty beggar!" chimed in Miss AMELIA. "Decidedly 'casting pearls before swine,' simpered Miss GEORGETTE. "I think papa will give you no more five-dollar bills to throw away." "And what will you do for flowers to

wear at Mrs. REVERE's this evening?" "A very refined taste, surely, you display in the selection of the recipients of your bounty."

By this time the carriage, extricated from the crowd, was being rapidly whirled towards its destination, the handsome residence of Mr. RICHMOND, on Chestnut street, KATE remaining silent and smiling, while her elder sisters entertained their cousin with a graphic account of her "oddities."

"She is always patronizing some beggar or other, stopping to bid the dirty street-sweepers 'Good morning,' or to drop some money into the blind organ-grinder's cup, or help some old woman pick up her oranges, which the boys have upset. If she happens to stumble over a boy who stands staring into a shop window, she always says, 'I beg your pardon,' or 'Excuse me,' as if he were a lord of the land; and whenever the children come for cold pieces, if KATE is in the basement, they are called in, to be warmed and fed. Oh! she will make a benevolent, philanthropic old maid!" And the sister of eight-and-twenty looked compassionately upon the maiden of eighteen, as though she regarded her doom as inevitable.

"But here we are at home," and the ladies alighted, and, ascending the broad stone steps, entered the mansion.

We will leave them there, and follow KATE's little protegee as he wends his way through narrow streets and alleys, in an opposite direction from the current of fashion still sweeping down Washington street. He holds his bouquet with a tight clasp, as if fearful of losing the new-found treasure; and as he hurries along, old and young eyes look with wonder at the strange apparition,—flowers, and such flowers, in winter!—and little hands are stretched out eagerly, but in vain; for CHARLEY knows there are dear eyes at home that will brighten at the unexpected sight, and he must show the gift, unmarred, to them.

At length he pauses before a large tenement building, where families are crowded in with but little regard to comfort, and none to convenience. Ascending two flights of stairs, he enters a room, which, despite the visible poverty, is scrupulously clean, and the humble furniture is arranged in a tasteful manner, imparting a home-like look to the narrow limits. There are two women busily sewing; one, with silvered hair and careworn brow, the other young and fair, but there is a hectic flush upon her cheek, and now and then her hand is pressed involuntarily upon her sides, while a dry, hacking cough is echoed by a sigh from her mother's lips.

"Do lay aside your work, ANNE, for a little while, and go down stairs and see MARY SPRAGUE. She may like a little assistance from you, for this is her wedding night, you know."

"Sure enough, mother; and I promised to plait her hair. But there'll be time enough, by and by; and here comes CHARLEY."

"Mother! ANNE! guess what I've got!" he exclaimed, holding his hand behind him. "But, oh! you never can, so I'll show you." And with childish delight he displayed his floral prize.

"Beautiful! beautiful!" exclaimed Mrs. WESTON and her daughter, as they examined the flowers. "But, CHARLEY, where did you get them?" was his mother's inquiry.

"Oh! a lady gave them to me, and she had such a sweet, kind face."

"But how dared you ask her for them?" said ANNE; "these flowers must have cost a great deal of money."

"I didn't ask her," answered CHARLEY; "I only looked at them, and she gave them to me; but I thanked her, I did, and I shall always love her."

"She was indeed kind," said ANNE, "and I wish I could thank her too; for I have been pining for the flowers to come once more, and these will do me more good than medicine. But we mustn't be selfish about them," she continued, as she unwound the bouquet, carefully laying the flowers in her lap; "this japonica, and these sprays of white jasmine, will be just the thing for MARY's hair."

"And I," added her mother, "would like to carry a few of them to poor Mrs. BROWN, whose baby died last night."

"Oh! do, mother; these white rose-buds and geranium leaves will be so sweet!"

And mother and daughter, intent on sharing their happiness with their friends, left CHARLEY to arrange the remaining blossoms in a large tumbler, while one ascended the rickety stairs to the death-chamber, and the other went down to the cosy rooms of the old shoemaker, SIMON SPRAGUE, on the second floor.

Mrs. BROWN had just completed the sad task of preparing the lifeless form of her infant for its last resting-place. Very plain was the little pine coffin; but the mother's tears fell upon the coarse pillow with as much heartfelt grief as was ever manifested above the costly rosewood and satin-lined casket, in the stately abode of the wealthy. True, they were very poor, and the 'hard times' made it indeed a difficult task to procure needful food and decent raiment, but what parent would ever willingly resign a child for the sake of abridging the family expenses?

Mrs. WESTON entered quietly, and placing a tiny rosebud in the waxen fingers, and laying a few flowers about the little face, bent down and kissed the baby brow with that reverence which one cannot but feel in the presence of the dead. "Bless you,—bless you!" was all that the sorrow-stricken mother could say; and her husband coming in at that moment, she pointed silently towards the beautiful blossoms, which were so strange a sight in that dark dwelling, and he, rough and uncultivated man that he was, gazed at them with tear-dimmed eyes, and thanked Mrs. WESTON in a husky whisper.

Meanwhile, ANNE was seated in her friend's little bedroom, and MARY knelt at her feet, looking with delight at the unexpected offering which would be so appropriate for a bride, and talking in the low tone which seems ever to be the chosen medium of happy thoughts. She had long been betrothed to WILLIAM MASON, an honest, industrious mechanic; and now that her younger sister, to whom she had been as a mother since the death of their kind parent, had grown to woman's estate,

she felt that she could safely leave her to take care of their old father, and she was now to become the light of another home, humble indeed, but rich in a pure love, which gold can never buy.

ANNE plaited the long raven tresses, and twined therein snowy blossoms and dark green leaves; and when MARY, attired in her simple muslin dress, went to her father's side to receive his approving smile, no wonder that he gazed upon her with admiring fondness; and when the entrance of the happy bridegroom called the rose-tint to her cheek, WILLIAM might well say, with affectionate pride, "You never looked half so pretty before, my MARY!"

But we may not linger in that humble abode, nor watch the fading blossoms which for many days were so carefully treasured, and when all their beauty had fled, little CHARLEY laid away the dry stalks and withered leaves as a memento of "the dear, kind lady," for whose well-remembered face he long looked whenever he passed through the fashionable thoroughfares of the city.

Two slips of geraniums there were, which, set out in broken pitchers, grew green and thrifty. One stood in the window near which old SIMON SPRAGUE sat on his bench, plying his awl and waxed ends. He would pause in the midst of some psalm-tune which he was humming, to count the leaves and buds on what he always called "MARY's posy." The other plant was carefully tended by gentle ANNE WESTON for a few months, when its leaves shed their fragrance within her coffin—a fitting emblem of her sweet memory, as it lingered in the heart of her mother and brother; but oh! far more transient was that perfume than the deep, abiding affection which enshrined that lovely girl in the inmost souls of those who had best known and loved her on earth.

Thus much for the history of the bouquet. Let us resume our acquaintance with the kind donor and her fashionable friends.

We will precede them to the stately mansion of Mrs. REVERE, on the evening of the same day which witnessed our introduction to them. The hostess was a wealthy and beautiful widow, and her only brother, PERCY LINCOLN, having recently returned from a three years' sojourn in the old world, she determined to honor the event with an assembly which should be the most elegant and attractive of the season. The brother and sister stood together in the princely suite of rooms, marking the effect of the lights and the arrangement of the furniture, and chatting merrily of the anticipated pleasures of the evening. "Grant me one favor, sister mine," at length he exclaimed. "Anything you may ask," was her reply; "could I deny you aught, PERCY?"

"Then allow me to ensconce myself behind the velvet drapery, which nearly conceals the bow window in the library from view. I wish to see awhile, without being seen, and I will join you by and by;" and, bowing with mock reverence, he touched his lips to the daintily-gloved hand of Mrs. REVERE, and retired to his chosen retreat before the door-bell commenced giving its continual summons. Mrs. REVERE received her guests with that perfect ease and affability which had ever made her a favorite in her large circle of acquaintance. The parlors were soon thronged with lively groups of fair and graceful forms, clad in costly robes of every hue. Ladies there were who might have passed for queens, with their jeweled diadems; others haughtily tossed the flowing plumes which adorned their hair; and others still, with studied simplicity, wore no other ornament save Nature's gems—beautiful flowers.

Prominent among the gay crowd were JULIA and AMELIA RICHMOND and GEORGIA WASHBURN. Their silks were of the richest texture, but too showy to please a fastidious taste; their silver bouquet-holders contained the choicest exotics, and pearls were gleaming among the dark tresses of the two sisters; while their cousin had encircled the heavy braids of her hair with a golden wreath; and the pins, rings, chains and bracelets, which they all so lavishly displayed, could not but suggest to the beholder their resemblance to a jeweler's show-case.

And KATE was there, too, but without a single ornament. Her dress of azure-hued moire-antique was rich but simple, and the luxuriant waves of her soft brown hair needed no adornment. Her sisters had relented while performing their toilette, and offered to share their flowers with her, or lend her some of their jewels; but while she thanked them for their proffered kindness, she declined availing herself of it, and seemed perfectly willing to abide by the consequences of what they had termed her rashness and folly, while they prophesied that if she went dressed in that plain and unheard-of manner, she would not receive a single attention from any gentleman the whole evening, "unless," suggested Miss JULIA, "some prim old bachelor, or fatherly widower, takes pity on you, and takes you out of the corner for a promenade."

Such remarks were too frequent from her sisters to make any very deep impression on KATE's spirits. Never had she felt more happy, and her blue eyes shone with an unwonted radiance as she glided through the splendid apartments at Mrs. REVERE's. There was a child-like simplicity and grace in her movements which could not fail of winning the admiration of all who prefer Nature to Art; and Mrs. REVERE was not surprised an hour later to hear her brother's whispered request for an introduction to "that charming fairy," who, he declared, had at last lured him from his secluded nook in the library. Nor did he afterwards seem inclined to return thither, but through the remainder of the evening he hovered about KATE RICHMOND—now talking of a favorite author, or recounting some of his foreign adventures; then examining a choice engraving, or looking at a costly painting; anon asking her opinion on some of the leading questions of the day, and listening with pleased attention to her views, at once caudally and politely expressed; and if he were called away to greet an old acquaintance, or be presented to a new one, he invariably sought out that modest girl, whose unaffected nature and well-stored mind had a peculiar charm for him. Nor could she be quite insensible to the attentions of one so noble and gifted as PERCY LINCOLN;

one, whom to know was but to admire and love. And yet, true to herself, she received the half-erotic congratulations of her sisters upon what they termed her "splendid conquest," with the same gentle and unaltered spirit which had enabled her to bear their reproaches so meekly.

Need we go on to relate how, a year from that memorable evening, there was a select party at Mr. RICHMOND's, on which occasion his elder daughters, still left to their maiden meditations, appeared in their gay dresses and jewels, while our friend KATE, again leaning upon PERCY LINCOLN's arm, wore white satin and orange blossoms. After the solemn and impressive rite had been performed, and the newly wedded and truly happy husband and wife had received the congratulations of their friends, PERCY reminded his lovely bride of their first meeting just one year previous. "But," added he, "I saw you once before, on the afternoon of the same day, when you gave a bouquet to a little boy in the street. I was attracted by the novel spectacle, and thought I had never witnessed a more beautiful tableau than the whole scene presented. I determined at any rate to learn your name, and to ascertain from personal acquaintance if that generous and unprecedented deed were in keeping with your real character. I at once recognized you in my sister's house,—and you know all the rest. Blessings on you, my true and noble KATE!"

Rochester, N. Y., November, 1859.

Wit and Humor.

THE BASHFUL MAN.

WASHINGTON IRVING at a party in England, one day playfully asserted that the love of annexation which the Anglo-Saxon race displayed on every occasion, proceeded probably from its *mauvaise honte*, rather than its greediness. As a proof he cited the story of a bashful friend of his, who being asked to a dinner party, sat down to the table next to the hostess in a great state of excitement, owing to his reclusive life. A few glasses of wine mounting to his brain, completed his confusion, and dissipated the small remains of his presence of mind. Casting his eyes down he saw on his lap some white linen. "My heavens," thought he, "that's my shirt protruding at my waistband." He immediately commenced to tuck in the offending portion of his dress, but the more he tucked in, the more there seemed to remain. At last he made a desperate effort, when a sudden crash around him, and a scream from the company, brought him to his senses. He had been all the time stuffing the tablecloth into his breeches, and last time had swept everything clean off the table. Thus our bashful friend annexed a tablecloth, thinking it the tail of his own shirt.

THE SIDEWALK CEMETERY.—One of our Massachusetts exchanges tells a good story of a jolly fellow who, on the "Glorious Fourth," passing along the streets of Springfield, in that State, saw the inscription, "B. K. Bliss, Apothecary," neatly chiseled on a marble slab in the centre of the sidewalk. Stepping reverently over the stone, he turned round, and reading slowly, "B. K. Bliss, Apoplexy," exclaimed, "Apoplexy—yes—well—but what in creation did they bury him under the sidewalk for?"

A STRONG RECOMMENDATION.—A peddler wishing to recommend his razors to the gaping crowd, thus addressed them:—"Gentlemen, the razors I hold in my hand were made in a cave by the light of a diamond in the province of Andalusia in Spain. They cut as quick as thought, and are as bright as the morning star. A word or two more, and I am certain you will buy them. Lay them under your pillow at night, and you will find yourself clean shaved in the morning."

A PERSON'S FEELINGS AT SEA.—The first hour that a person spends at sea is commonly devoted to admiring man's triumph over the deep—the next in admitting that the deep is gradually triumphing over him. "Steward, where's my room? I begin to feel as if I should very soon need a little weak brandy, or a good deal of tin basin."

A STRING OF LITTLE JOKERS.

"THAT, sir, is the Spirit of the Press," said a lady, as she handed a glass of cider to a gentleman.

EXTREMES meet. Civilization and barbarism come together. Savage Indians and fashionable ladies paint their faces.

THREE things that never agree—two cats over one mouse, two wives in one house, and two lovers after one young lady.

A NEGRO's instructions for putting on a coat were:—"Fust de right arm, den de lef, and den gib one general convulsion."

PAWNBROKERS and hard drinkers often take pledges; we fear that the former generally keep them longest.

A LEADING maxim with almost every politician is always to keep his countenance, and never to keep his word.

Any paper can publish the appointments after the coming in of a new administration, but what paper in the world is large enough to publish half the disappointments?

One day Jerrold was asking about the talent of a young painter, when his companion declared that the youth was mediocre. "The very worst picture an artist can set to work with," was the quiet reply.

A NOOK about England has just been published in Germany, in which the author mentions, among other equally interesting facts, that thieves are so scarce in that country, that a reward is often offered for the discovery of one.

SOME rude country critic quoting the London Times' remark that our Secretary of the Treasury has woven "some curious financial webs," remarks that they are like other Cobb-webs. We wonder is the critic intentionally personal?

MISCELLANEOUS ENIGMA.

I AM composed of 33 letters.
My 13, 30, 22, 26 is the name of a State and river in the United States.
My 19, 17, 21 is a kind of fish.
My 11, 6, 13, 4, 22, 16 has been witnessed during the past summer.
My 27, 7, 20, 2 is what a husband does over buttonless shirts.
My 24, 14, 1, 32, 25 grows only in summer.
My 32, 4, 10, 1, 21 is what every farmer should have.
My 23, 5, 8, 14, 23, though human, is brought into bondage.
My 16, 31, 8, 7 is an adverb.
My 23, 15 is a preposition.
My 12, 9, 22, 23, 15 is what a refined lady loves to do in company.
My whole is essential to good manners.
Oakstone Dell, Wis., 1859. CHARLEY.
